Now it may be asked what do these two theories of the human body treat of? Do they treat of the bones, muscles, arteries, veins, nerves and ligaments? Do they describe the several organs of the human body, external and internal, such as the eye, the ear, the nose, the lungs, the stomach, the liver, the intestines, &c.? No! These are common-place things, and therefore they are left to the observation of the vulgar. The Tantric theory, on which the well-known *yoga*, called Shat-chakra-bheda is founded, supposes the existence of six main internal organs, called Chakras or Padmas, all having a general resemblance to that famous flower, the lotus. These are placed one above the other, and connected by three imaginary chains, the emblems of the Ganges, the Jumna and the Saraswati. Here we take only a cursory view, referring to Plate III. and the *note*, for a more minute detail of the theory. The first Chakra (A), called Muládhára Chakra, has four petals, and is placed in the pelvic cavity. The second (B), called Linga Chakra, is said to have six petals, and supposed to be in the middle of the intestines. The Chakra (C), placed under the navel, is called the Nábi Chakra, and has 10 petals. The fourth Chakra (D), seated at the heart, and containing 12 petals, is called the Hrit Padma. That placed in the thoracic cavity (E), containing 16 petals, is known by the name of Kantha Chakra. The sixth or last Chakra (F), is seated in the forehead, and called the Atma Chakra. The small circle marked (a), is the seat of the moon in the navel, and that marked (b), is the seat of the sun.*

Such

* We have been favoured by a friend with the following literal translation of all the writing on the original drawing, of which Plate III. is a copy. It gives a full explanation of this really curious sketch:—

1. After the perforation of the six wheels (the mantra is) *shwetang o mahashetang*; after that (it is) *kulluka*; after that the real work of *jap* (or repeating the name of some deity).

2. While contemplating form, taste, smell, touch, &c., the establishment of these by meditation is effected.

F. In the brow is the *atma chakra* (wheel of the soul); in that locality are (two petals designated by) two letters ka and ksha, of golden colour. There flow the three streams *Ganga*, *Jamuna* and *Saraswati*.

E. The *kantha chakra* (wheel of the throat) has 16 petals, and is like a white water lily. The (presiding debatas deities) are *Mahadeva* (Shiva), *Bhagavati* and *Shakti*. The petals are designated by the 16 vowels having the chandrabinda attached to each, viz. ang, áng, ing, íng, ung, úng, ring, ríng, ling, líng, eng, aing, ong, aung, ang, angh. Its corresponding *mantras* are *kurchchah, máyá*.

D. The *Hritpadma*, or water lily in the region of the heart, has 12 petals, and is of blue colour. The presiding deities are *Bhagaván* (*Vishnu*), *Lakshmi*, *Shakti*. In the hand of Bhagaván are the shangkha, the chakra, the gadá and the padma (the conch, the discus, the mace, the water lily). The corresponding *mantras* are *Kámo* and *Lakshmi*. The (petals are designated by) 12 letters, from ka to tha inclusive, viz., ka, kha, ga, gha, gnua, cha, chha, ja, jha, gnia, ta, tha.

C. The *nábi chakra*, or wheel of the navel, has 10 petals, and is of red colour. Its petals are designated by 10 letters, from da to pha inclusive, viz., da, dha, ána, ta, tha, da, dha, na, pa, pha. The presiding deity is *Bramha*, and the *mantra* is *chamiti bijang*. There is the position of the moon and others, as it is said.

Beside the navel is the moon, beside the moon the Lord of day.
Beside whom flows the air, and in front of the air is the place of the mind.

B. The Linga chakra has six petals designated by six letters, from ba to la inclusive, viz., ba, bha, ma, ya, ra, la. The presiding deity is *Kandarpa*, without bodily form. The corresponding *mantra*, *káma-bijang*. There are 108 japs.

A. The lowest chakra has four petals designated by the four letters from wa to sa inclusive, viz., wa, sha, sha, sa. Its face looks upward. The presiding deities are *Maha Vishnu* and *Ganesha*. In this place *Shakti* has a spiral form, and is resplendent as *Bramha*. It encircles two and a half times.

In the posterior region of Meru, on whose head are the moon and sun (in the region of the spine, on which is supported the head, containing the two eyes), are the left, the right, and middle *naris* (veins or arteries). On the left are the Shiba-arteries, resembling fire. On the right are the Vishnu-arteries, resembling sunshine.

In

Appendix G.

Such are the main outlines of the first of the two great theories of the human frame, according to the Hindu Shastras. With regard to the six Chakras or Padmas, it should be remarked, that they are even to this day believed really to exist within the body of every individual. What then are we to think of those who could believe such absurdities? We have already had the Vedas, and the Puránas, and now we have the Tantras before us. We find them all much alike; imagination is the foundation of them all, and truth has little share in any. It would be idle waste of time to point out the errors and absurdities contained in this theory; but such is the obstinacy with which the Hindus adhere to these erroneous notions, that even when we show them, by actual dissection, the non-existence of the imaginary Chakras in the human body, they will rather have recourse to excuses revolting to common sense, than acknowledge the evidence of their own eyes. They say, with a shamelessness unparalleled, that these Padmas exist as long as a man lives, but disappear the moment he dies. Those who will not believe their own senses, what can be said by us to convince them?

The second theory, which is a mixture both of anatomy and phrenology, is still more grand. Its main doctrine is, that the seats of all mental faculties, passions and feelings are within the great trunk of the body; and that each of the faculties and passions has its respective material organ by which its function is carried on; so that the brain, which is the real seat of all the mental faculties, is altogether put out of the question. Here, therefore, we have a sort of compound absurdity. In the first place all the mental functions are made the result of matter, for material organs are assigned to them; and in the second place, not one of these organs is placed in the head. This latter circumstance does strongly incline us to believe that the ancient anatomists of Hindustan possessed no brain at all. It is not our business to refute, in this place, the doctrine of Materialism; allowing it to be true, the absurdity of the theory is not in the least diminished.

But this is not all. In the middle of the lowest extremity of the trunk of the body is placed a tortoise (A), as will be seen by referring to Plate II. Above this, we see a small serpent (B), the representation of the great Ananta. Above this is a Chakra (C) of four petals, called the Adhára Chakra, the seat of Ganesha. Then in regular gradation, one rising above the other, we have the following wonderful objects: (D), the Adhishtán Chakra of six petals, the seat of Brahmá; (E), the navel, like the Roman figure XX; (F), the gastric fire; (G), the Padma, called Manipura, where Vishnu is said to reside; (H), the Mánasha Chakra, the seat of the mind; (I), the Anáhata Chakra, the place of Shiva; (J), the Bishunda Chakra, the seat of life; and (K), the Triganti, three small circles, the meaning of which we do not know. In the head, under the eyes, are the Agyankhya Chakra on the right, and Balaban Chakra on the left side; and in the forehead is placed the king of the birds, the Goose (L). Within the cranium is the Karpara Chakra, at the top of which is the Brahma-Randra, the passage through which the souls of virtuous men are said to ascend to heaven. All these unheard of and unseen objects, the tortoise, the serpent, the gastric fire, the Chakras, the goose, are believed *literally* to exist within the human body, of which we have received several testimonies from the mouths of the Brahmans. If this be not fanaticism, carried almost to insanity, we know not anything in the world more appropriately deserving the name.

As for the internal organs, by which the faculties of the mind are said to be manifested, we give here a translation of their names, referring to Plate II. for the corresponding numbers:—

1. Covetousness.
2. Envy.
3. Wickedness.
4. Irreligion, or Impiety.
5. The waking state.
6. The faculty leading to seek the Supreme Being, or Spirituality.
7. Compassion.
8. Good sense.
9. The love of one's own religion.
10. The mind.
11. Religious penance.
12. Anger.
13. The dreaming state.
14. Goodness.
15. The vowel a.
16. Bramha.
17. Pedantry.
18. Intelligence.
19. The place of the mind.
20. Fire.
21. The state of profound sleep.
22. Passion.
23. The vowel u.
24. Vishnu.
25. False ostentation of wisdom.
26. Attention.
27. The place of intelligence.
28. Water.
29. Orjya.
30. Ignorance, or darkness.
31. The letter m.
32. Shiva.
33. False ostentation of bodily accomplishments.
34. Egotism.
35. The place of life.
36. The air.

37. Bramha

In the middle are the Bramha-arteries, of excessive splendour. As regards the rules for performing the *six works* (which are effected by the recital of magical texts, viz., killing, infatuating, enthralling, expelling, exciting animosity and privation of faculties), and other similar performances,—by the left (the Shiba-arteries) may be effected, *killing, disease, the destruction of enemies, expelling, deprivation of faculties* and the *hatha yoga* and other acts of austerity, by which victory over the senses is obtained; by the right (the Vishnu-arteries) *subjection to control*, and every species of work can be effected; by the middle (or Brahma-arteries) everything mentioned above can be effected; and by the middle one of the Bramha-arteries can be attained the perfection of intellect. The middle arteries are of a white colour; the left and right are red.

81. Charitableness.
82. Pride.
83. Ignorance.
84. Want of knowledge.
85. Self-conceitedness.
86. The habit of reproaching.
87. The fruits of virtue.
88. The fruits of vice.

Having taken this brief view of the two main anatomical theories contained in the Tantras, we next turn our attention to some isolated notices on the same subject, found in the Vedas.

The Vedas maintain that in the heart of every person there is a corporeal being, of the size of the thumb, called *Linga Sharira*; this is the whole man in miniature, and at death goes out through an artery, called Shusamna. The Vedantists try to evade the absurdity of supposing the existence of this *little man* in the heart of every body, and, to escape detection from actual dissection, they assert that it does not remain in its place after death—a sophistry too common among the Hindus, who always attempt to explain one absurd supposition by another; yet they have every reason to say that the existence of the Linga Sharira is as true as the Chakras, the tortoise and the serpent.

Moreover, the Vedanta Sutras say, "A hundred and one arteries issue from the heart, one of which passes to the crown of the head." Nothing can be more flatly contradictory to truth and observation. Let the Vedantist but once enter the dissecting room of the medical college, and there he will find a practical refutation of his opinion. We see only two arteries, the great aorta and the pulmonary artery, issuing from the heart; by the former, and its ramifications, the blood is conveyed to the extremities of the body; by the latter, and its branches, it is carried over the lungs, that it may be aerated or purified in that organ. Besides, instead of one artery, several are known to enter the crown of the head.

The Vedanta Sutras furnish as with some further notices on two very important functions of the animal frame, the processes of assimilation and respiration. "When nourishment," say they, "is received into the corporeal frame; it undergoes a threefold distribution, according to its fineness or coarseness. Corn, and other terrene food, becomes flesh; but the coarser portion is ejected, and the finer nourishes the mental organs. Water is converted into blood; the coarser part is ejected as urine. Oil, and other combustible substances, deemed igneous, become marrow; the coarser part is deposited as bone, and the finer supplies the faculty of speech." (Brahmá Sutra, 2. 4 § 9.)

From this physiological extract, it sufficiently appears how much the sages of Hindustan rely merely on external appearances, and draw their inferences from these alone. It contains nothing more than such easy guesses as would occur to the most vulgar and untutored mind: solid food is turned into thick flesh, water into liquid blood, and oil into the greasy substance, marrow. Is not this natural enough to strike the fancy of the most ignorant and careless observer?

But natural as it is, there is not the least trace of truth in it. Whatever substances are taken into the stomach, they are all dissolved by the action of the gastric juice, and converted into one uniform pulpy mass, called chyme. Here, we may as well remark, that there is no such thing as fire in the stomach. What the Hindus erroneously take for fire, is in reality the gastric juice, which is secreted from various small glands placed between the coats of the stomach. Chyme next passes through the pylorus into the intestines, where, after undergoing some changes by the action of the bile and the pancreatic juice, it becomes capable of affording a fluid, somewhat resembling milk in appearance, called chyle, which is, in fact, the real blood. This fluid, after several processes, becomes red blood, which supplies nourishment to *all* the parts of the animal frame. Thus we see the error of the Vedantists, who suppose different kinds of substances to nourish different parts of the body. What they mean, when they declare that the finer particles of water and oil severally support the breath and the faculty of speech, it is impossible to say. It is, however, an affirmation which, notwithstanding the absurdity it implies, "is in exact harmony with the

Appendix G.

the mode of guessing at the operations of nature, admired as philosophy among the Hindus."

There is another point in the physiology of the Vedas that deserves some attention: it respects the process of respiration. The account is as follows:—"Respiration is a vital act, and comprehends five such. 1st, Respiration, or an act operating upwards. 2d. Inspiration, one operating downwards. 3d. A vigorous action, which is a mean between the foregoing two. 4th. Expiration, or passage upwards. 5th. Digestion, or circulation of nutriment throughout the corporeal frame." Numerous are the errors contained in this account of the process of respiration, of which we shall mark only one or two. Respiration is confined only to the action of the lungs, and has no connexion whatever with any other functions of the internal organs. But the Hindu philosophers would make it a compound process, consisting of different operations, which have no connexion with one another. But the grossest of all the errors committed by them on the subject is the supposition by which the processes of digestion and the circulation of nutriment are reckoned as parts of the action of respiration. We need not, however, dwell any longer on this point. If the opinions of the Hindus are found to be erroneous on subjects which a mere child can understand, how can we expect them to be accurate in describing such a difficult process as respiration?

Here we bring our subject to a close. We have examined in order the Geography, Astronomy, Chemistry, Botany, Anatomy and Physiology of the Hindus, and we have found them abounding in errors of every description. We have not even met with any isolated point belonging to any of these sciences, as treated among the Hindus, which is altogether free from mistake. Now, we turn against the defenders of Hinduism, the Brahmans and others who so strenuously uphold that system, and ask them, do they know what they are doing? "What!" they reply; "we are doing nothing, but maintaining the Shastras of our forefathers, and defending our own faith." "And in so doing," we say, "you are fighting against truth, and heaping on your heads the responsibility of corrupting the minds of your children and your fellow-creatures, by leading them in the dark, and storing their minds with nothing but errors and falsehood."

Again we ask them, "Is this the boasted religion of their forefathers? Is this the best of all creeds in the world? Is this the faith, every part of which is said to be received by inspiration of Heaven?" It will not do now to say to us, "What do you know of the Hindu religion that you come to decide upon its merits?" Though we may not be able to understand your dark metaphysics, your intricate logic, and your obscure religious dogmas, yet we have discovered in your religion many things which can be brought down to the level of the understanding of a mere boy. Your Shastras interfere with scientific subjects, of which we possess the best knowledge, and in these we find them blunder in a most ridiculous manner. We take not your metaphysics, or logic, or religious doctrines, but your science only, to falsify your religion, and lay the axe to the root of its claim to divine origin.

We may now perceive the policy of the Hindu sages in having prohibited all men, except the Brahmans, the brothers of the same fraternity, from reading the Shastras. The door was kept close shut, lest LIGHT should enter in and discover what is within the closet. But the bar is broken, and we have got into the room. The golden days of the Brahmans have passed away. Hindus have now begun to think for themselves. The sun of knowledge has begun to shine over the night-brooding soil of Hindustan. Light has begun to enter into the minds of her children. Neither the Brahmans nor their Shastras are now held peculiarly sacred. Men have begun to ask for evidence. What is then to become of its defenders—of the Hindu religion itself? But we must stop here. All beyond is dark.

APPENDIX H.

(Referred to in the Evidence of the Rev. ALEXANDER DUFF, Quest. 6247, page 84.)

EXTRACTS from the MADRAS "CRESCENT," &c. &c. relative to the Value of Religious or Bible Instruction in Native Education.

From the MADRAS "CRESCENT," 13 December 1851.

Appendix H.

ONE of our members of Council is thought by the natives to be ill-disposed to the diffusion of European education among them, and so perhaps may be Sir Henry Pottinger, but his avowal has gone as far as that of Sir Henry Young, "the placing within the reach of the people the means of having their children taught the elements of knowledge and of morals."

He has not indeed encouraged the course of education pursued at the High School, neither have the Court of Directors; but those who have discouraged it the most are the natives themselves, all along, by declining to send their children in any respectable number; and latterly, by the few who are sent attempting to monopolize the instruction to the castites, and the extrusion of those who are without caste.

How

How far our Governor may be blameworthy for not having yet introduced the provincial schools, for that course of inferior instruction of which he has declared his approval, it is impossible for us to say: his hands may be tied up by orders from the Court of Directors, or he may not be cordially supported in the matter by his colleagues; one of whom, as we have remarked, is said to be adverse to the education of the masses; and another, probably, declines to interfere unless permission to read the Bible is made one of the regulations. To this permission we were opposed, when the Minute of Lord Tweeddale made it apparent that convertism was directly looked for as its contemplated and intended sequence, and while we thought it would have the effect of keeping away the scholars; but as the High School has not increased, but declined in number ever since the advent of Sir Henry Pottinger, whom no person will suspect of having missionary predilections; and as Mr. Anderson's schools, where the study of the Bible is compulsory, are unable to meet the eagerness of the natives for the attainment of western information, we no longer see any sufficient reason to oppose a measure which would conciliate the conscientious feelings of the honourable member last alluded to, and induce the many influential persons who have adopted the same opinion as himself to co-operate in the work which is certainly calculated to ameliorate the condition of the natives, but who, having shown such utter disregard to the education of the High School, whence the Bible has been sedulously excluded in compliance with their prejudices, have no longer any claim to consideration on the score of those prejudices, with regard to whatever system of instruction the Government may think it prudent to adopt, short of enforcing the study of the Scriptures with a view to their conversion.

From the Madras "Athenæum," 15 December 1851.

If a cause which has been abandoned, and a belief which has been renounced within the last few days, by our cotemporary of the "Crescent," had never been taken up and avowed by him, a great deal of mischief and misconception might have been avoided. At the end of many years' energetic labour, he has given up the hope of defeating the efforts of his countrymen to truly enlighten the Hindus.

He has long been in the condition of a general without an army, a leader without any credentials from the party whom he claimed to represent; but how many, both in India and at home, were induced to believe that it was the "Hindus" and not the "Crescent" that held the missionaries in such intense abhorrence! We proclaimed, more than three years' since, the real character of the agitation against Bible teaching, that it had no basis in the national opinion, and now a frank admission of its hollowness is made to the world. The disgusted Hindoo is a myth, but his place is occupied by a disgusted European, who, sick of all creeds, and disliking all races of mankind, must needs take refuge in the "Eremite's cell," and become the Timon of the 19th century.

The "Crescent" may complain, with Kossuth, that he has been deserted by those whom he trusted, but we are unwilling that he should arrogate to himself the credit of conducting "the only paper," through whom the alleviation of their (*i. e.* the Hindus) trodden-down condition has found an advocacy in Madras.

If attempts to promote the material prosperity of the country, and to urge the Government to carry out plans of useful reform, have any thing to do with the labour in question, we think the honour may be divided at least with a couple of his cotemporaries.

From the Madras "Spectator," 17 December 1851.

We are glad to see that the "Crescent," resting on the preference shown for missionary schools, has abandoned his opposition to the use of the Bible as a class-book, for those who are disposed to use it.

From the Madras "Spectator," 24 December 1851.

The progress of the Scottish Free Church Schools, as evinced by the statistics brought forward at their examination last week, is exceedingly satisfactory. It proves how untenable are the fears of those who dread converting influences on the natives of the country, and how safely the Bible may be brought into contact with the rising generation of the heathen, as a book of religious instruction.

While the Government High School, with all its official recommendations and prospects, numbers a handful of scholars scarcely increasing, the Free Church Seminaries boast of a roll which includes 2,300, and this prosperity is unaffected, at least permanently, by the missionary successes of the teachers. In former years we have had the pleasure of recording the encouraging experience of those agents with reference to male converts, and can now speak as favourably of their endeavour on behalf of female pupils.

Before June last, when several baptisms took place, the number of these was 160.

After those events the withdrawals were so many that the attendance declined to 34, but the rise of scholars was so rapid that they now amount to 210. Indisputably, therefore, the missionary schools have grown in favour rather than diminished under the circumstances of conversion.

There are also other indications of the acceptance which they find among the heathen.

Appendix H.

We are told that natives come in to listen to the preaching in their own tongues, on the premises of the Free Church; that they show no repugnance to the instruction given, which is avowedly directed to their proselytism.

This is highly satisfactory. When scholars abound, notwithstanding that fact, it is clear that scriptural tuition creates no obstacle of moment, and that it may safely be introduced as a voluntary element into the Government school.

EXTRACT from REPORT to the AGRA GOVERNMENT, March 1844, by H. C. TUCKER, Esq., C. S.

THE Bible is read (in the Juonpore Free School) at certain hours by such boys as are willing. Those who have scruples as to reading it sit down. It is *not* compulsory.

This appears to me the turning point of the system, which brings it within the scope of Government patronage. In directly missionary schools, when the perusal of the Bible is compulsory upon all the pupils, it may admit of a doubt how far Government ought to interfere. But when this is not the case, where it is entirely optional with the boys to read the Scriptures, and where a good secular education is given, I do not see why Government should not give some support to those who are working out its object, in the moral and intellectual improvement of the people. The *principle* is conceded by para. 7 of the letter of the Court of Directors, No. 3, dated February 23d, 1842, in which they say: "The Court considers the circumstances of Assam eminently favourable to the introduction of civilization and *religion*," and "do not think that in encouraging efforts for its accomplishment to the extent proposed (*'a grant of land to the Moravian missionaries'*) the Government in any degree violates its engagements, actual or implied, to any class of its subjects. As far, therefore, as regards the consideration of the most effective means for extending civilization in Assam, the views of Mr. Robertson and Captain Jenkins have our entire concurrence." "We shall be prepared to sanction a grant of land of the description proposed, as an experimental trial." Still stronger precedents are supplied by the Cawnpore Free School, and Jye Nurain's school at Benares, which are supported mainly by Government, and yet carried on by clergymen on a strictly Christian basis. With reference to the latter admirable institution, the orders of Government, dated March 6th, 1819, were to the following effect: "The Governor-general in Council, approving the laudable objects of the institution, and 'anticipating the beneficial consequences which it is likely to produce, has resolved to afford public encouragement to the undertaking, by authorizing you to apply, on the behalf of Government, a monthly donation of *Rs.* 252. 12. towards the expenses of your school.'"

I would, therefore, respectfully beg to propose that 100 rupees per mensem, with any other assistance in books, apparatus, &c. &c. &c. be granted by Government to the Juonpore Free School, on the following conditions:

1st.—That the study of the Bible, and direct Christian instruction, be limited to certain fixed hours.

2d.—That attendance upon such instruction be strictly voluntary, and dependent on the permission of the parent or guardian.

3d.—That Government have the power of inspection.

Hereafter, as the school improves in numbers, attainments and usefulness, the allowance may be increased.

The principle of AFFORDING CHRISTIAN INSTRUCTION DURING A FIXED PORTION OF EVERY DAY TO ALL WHO DO NOT OBJECT TO IT, involved in such a grant, is a deeply important one, and worthy of the most serious consideration. It appears to me just and equitable, and what a professedly Christian Government is bound to adopt. As bearing on the subject, I may mention, that Mr. Barron, M. P., states, that in the great model school at Frankfort-on-the-Maine, where both Protestants and Catholics are educated, the former are taught religion in the school at specified hours, and apart from the other children, who *go* to their own religious instructor three times a week.

Were the Bible admitted into all the Government Schools, but its perusal limited to the half hour previous to the general meeting of schools, and no boys admitted whose parents or guardians objected to their attendance, I do not think that either Hindoos or Mahomedans could reasonably object. Half an hour so spent every morning would give quite a different tone and character to our instructions, and obviate the reproach of irreligion to which they are now deservedly subject.

Such a Bible class should, perhaps, under present circumstances, be optional to the master, as well as to the scholars; as no good could be expected from Bible reading under a master whose heart was not in the work.

OPINION of J. KERR, Esq., Principal of the Government College, Húgly, in his Account of Government Education, Bengal.

THE question of introducing the Bible as a class-book appears to me to turn upon another question, viz., whether such a measure would be acceptable, or at least not positively unacceptable, to the natives.

All

All that I have observed from personal intercourse with the students leads me to believe that the introduction of the Bible, in a quiet and unostentatious manner, would in the present day create very little alarm. The more intelligent students would view it with satisfaction, and welcome it as a new means of improvement.

But would not the parents be alarmed and dissatisfied? The parents, if left to themselves, would look on with a feeling of indifference. Few of them would be aware of the change, or feel any interest in it, unless pains were taken to excite their prejudices.

By introducing religious instruction, two objects would be gained, to which the Government might lend its support, without being blamed for an undue desire to propagate the Gospel. First, the students would be supplied with the means of forming a correct estimate of the Christian religion, which has exercised such an undeniable influence upon the progress of society. Secondly, the introduction of religious instruction in a suitable manner might be expected to improve the moral character of the students.

Sir Emerson Tennent, in his recent work on Christianity in Ceylon, in bearing testimony to the Tamul schools and boarding institutions of the American missionaries in Jaffna, clearly shows how little prejudice there is in the native mind against the study of the Bible.

"These," (Tamul schools, &c.) says he, "were begun in 1830, and it is evidence sufficient of the influence which had been already attained by them, and of the appreciation in which their labours were held by the people, that they found themselves in a position not only to enforce the payment of an annual fee from the pupils in their English schools, but to maintain, with a firm hand, but without any discouragement or diminution of their numbers, a discipline which is essentially and avowedly Christian. No profession of Christianity is required as a preliminary to admission; but once enrolled as a scholar, the little Hindu must show such an outward respect for the religion to whose charities he is so deeply indebted, as to lay aside for the moment the distinguishing symbols of his own idolatry. He is not permitted to enter with the mark of ashes on his forehead; and every pupil, whether heathen or converted, is obliged not only to attend public worship on the Sabbath, but to join in the daily reading of the Scriptures, and the study of the first principles of Christianity.

"Strange as it may seem, their parents entertain no apprehensions of this course, and they urge no objection to the rule. And it is a fact suggestive of curious speculation as to the genius and character of this anomalous people, that in a heathen school, recently established by Brahmans, in the vicinity of Jaffna, the Hindu community actually compelled those who conducted it to introduce the reading of the Bible as an indispensable portion of the ordinary course of instruction."

From a Correspondent at Madras.

Madras, July 1852.

I am anxious that you should be fully apprised of all that is going on here in the question of education. I will tell you briefly how the question now stands. It is proposed, as right in principle, that the Government should aid private institutions, giving religious instruction or not. It is submitted further to the Court, that the Government should make grants in aid to missionary schools giving a superior secular education, such as the Government would give.

Further, the Board of Governors of the Madras University are prepared to establish an *optional* Bible class: Mr. ——— has retired on this ground, and the Government has accepted his resignation from the Presidency of the Board. This settles the question, so far as this Presidency is concerned, for he is the representative of the old opinions; and the Board by whom he is out-voted is the only one which could be found to act with him, and there is no "saint" upon it, but one, of the East India community among them.

Further, it is not so clear that the Government is prepared to support and apply its funds to education, though superior, where the little that is useful is mixed up with very much that is otherwise; *e. g.* the Nowaub proposed to establish, at his own expense, a school, to give a superior, but purely Mahomedan education, and asked the aid of Government: it is declined.

From this you will see we are here in advance of your proposals, and I would earnestly advise that you do not bring us down to the level of Bombay or Calcutta views. Sir Henry Pottinger has originated and proposed every point but the Bible class, and he will sanction *that*; and surely he is not chargeable with religious enthusiasm. The real point about him is, that he knows the native mind thoroughly; and knows well, therefore, that all the objections urged, and supposed to be against Bible instruction, are not native, but European prejudices and figments.

This progress with us is now in our records, which must be in England three or four months hence.

We stand chiefly in fear of prejudices reigning at the Board of Control, and it is to that quarter you should direct your attention, that we may not be thrown back by Anglo-Indians of a generation back; and ask the good folks to let us follow out, at Madras, our plans, though they may not be suited to the Calcutta baboos and the Parsee community.

I think you would do well to advert to Lord Hardinge's Order, of 10th October 1844, suppressed practically by the Council of Education in Calcutta; and do not overlook *schools*

Appendix H.

for the females, for which the Government make no provision, but private Christian schools do. For if the women of the country are left in Asiatic ignorance, do they think the country can advance in the social position? If the female mind is untouched, the country must remain semi-barbarous, as the rest of Asia; and can the woman of India be raised to her just, social position and elevation as woman, by science and Shakspeare, and the course of instruction followed in the Bengal Institutions? Assuredly not. What, then, is proposed to be done for them? Again, is caste and class-exclusiveness to be put down by scientific and literary attainments? They can only do so, as they tend to un-Hindooize, if I may use the term; and what is this but to strike at the religion of the people, and to leave them sceptics and heartless infidels? They must be this, or Hindoo caste remains in all its force; and whence can there be national and social progress if caste remain?

EXTRACT LETTER from a Gentleman high in the Madras Civil Service.

BUT now I come to another and the most important point. The present system of Government education shuts out the truths of the Bible, and practically proscribes the New Testament and the light of God's truth from ever penetrating a Government institution. By its instruction in Western learning, the present Government education uproots to the very core Hinduism and every faith from the human heart, and leaves the highly-educated man without one restraint of conscience, or a knowledge of true morality: it leaves him without a guide for his moral nature, and, in reality, he is as uninformed of, and as uninfluenced by, truth, as far as his moral duties and obligations are concerned, as the least educated and darkest amongst his countrymen. And what is this but to half educate a man, if his intellect alone is cultivated and his moral character uncultivated? What is the tendency of such an education? Blink at it as we will, its tendency is to make men, as the Duke of Wellington forcibly expressed it, "Clever devils."

But thus, whilst I entirely condemn a system which proscribes, as the only book not to be tolerated in a Government institution, the Bible, I do as fully and heartily condemn any coercion of the Hindu or Mahomedan conscience. My view is, that the Government should leave it perfectly optional with every scholar to read the Bible or not, as he chooses; but for a Christian Government to overthrow the faith of the Hindu and Mahomedan by Western science and literature, and then place its brand upon the Bible as a proscribed book, is, I think, at once a grievous error—a gross injustice to this people, as well as an opprobrium to Christianity.

Let the statements of Lord Tweeddale's minute on the subject be met one by one, and then overthrow it: it has been assailed through thick and thin; but that is a matter of course: no truth but must go through this, if it is to stand at all, and put down error and old prejudices, which, as you know, has upheld and patronized for years, polluting Hinduism with caste and all its debasing influences.

SIR HENRY POTTINGER'S Opinion respecting the value of the Bible in Native Education.

HIS Excellency the Governor, in January 1853, after distributing with great kindness the prizes to the deserving pupils of the Free Church Institution, in the various classes, spoke as follows:—

"Pupils and Boys,—From what I had formerly heard, I will not deny that I came here with somewhat high expectations; these, I am bound to add, have been more than exceeded. I am not only gratified, I am surprised, by what I have now heard. Such an education I was not prepared to meet with in any school of this land. I congratulate Mr. Anderson and his coadjutors on their success. I rejoice to learn from Mr. Anderson's communications about the branch schools, that the Bible and other good books are not only well but enthusiastically received in various parts of this Presidency. I rejoice that you have been taught the Bible; prize it above all other books: I trust you will continue to study it, for this is *the best book to show you the path of life.* I may not be present at another examination of this institution, but I hope that in future years the results of your labours will be as great as in years past. To yourself, Mr. Anderson, I must say I cannot go down stairs without expressing my high satisfaction with what I have seen and heard. Your pupils answered fairly every question put to them; there was no evasion of difficulties in any of the classes: in every department examined, they were perfect. I congratulate you, and all who have assisted you in this great work, on the results of your labours; I trust you will go on and prosper. Though in a short time I shall be far removed from you, yet I will always remember what I have heard this night, and will ever regard your efforts with deep interest. Be pleased to convey to the monitors and gentlemen who have assisted you my deep respect for them. I pray that God may bless you and your labours."

LORD WILLIAM BENTINCK'S Declaration in favour of Religious Education in India.

IN a letter addressed to me after his return from India, dated Frankfort, August 27, 1835, the ex-Governor-general of India thus expresses himself:—"I have always considered the Hindu College as one of the greatest engines of useful purpose that had been erected since our establishment in India; but that institution, in point of usefulness, can bear no comparison with yours, in which improved education of every kind is combined with religious instruction."

Appendix I.

(Referred to in the Evidence of Sir Charles Edward Trevelyan, Quest. 6625, page 152.)

EXTRACT from the Report of the General Committee of Public Instruction of the Presidency of Fort William in Bengal, for the Year 1835.

This year constitutes an epoch in the history of our Committee. In the early part of it, a well-defined principle of action was, for the first time, prescribed to us; and the remainder of it was occupied in bringing the system, with the superintendence of which we are entrusted, into gradual conformity with that principle. Our arrangements for this purpose are now nearly completed, and we propose to commence this Report by describing the Government system of Education as it is at present organized.

The General Committee consists at present of 17 members, one of whom (the Secretary to Government for this Department) is so *ex officio*; two are elected in rotation by the native managers of the Hindoo College, and the rest are appointed by Government indiscriminately from among the society of the capital: none of them are paid. The Secretary alone receives a salary of 500 rupees a month.

The General Committee seldom meets: its usual course of proceeding is for the Secretary to note points which require decision in a blank book, which is circulated among the members, and the majority decides.

The transaction of business is very much expedited by the appointment of Sub-committees chosen from among the members of the General Committee. There is a standing Sub-committee for the management of our finances, another for the selection of books and other instruments of instruction, another for the selection of schoolmasters, and one for each of the colleges at and in the immediate neighbourhood of Calcutta, besides others which are occasionally appointed for temporary purposes. The members of the Sub-committees are generally proposed by the President, and approved by the members of the General Committee. They usually transact their business by meeting in person, and they send up their recommendations to the General Committee, which adopts or rejects them as they think proper. The Sub-committees seldom consist of more than three members, who are selected with a particular reference to their own wishes and means of information. The President and Secretary are members of all the Sub-committees.

The following Seminaries were established previously to the year 1835:—

Calcutta	Hindu (Anglo-Indian) College. Mahomedan College. Sanskrit College
Maulmain.	
Hoogly.	
Moorshedabad.	
Bhaugulpore.	
Benares	English Seminary. Sanskrit College.
Saugor.	
Allahabad.	
Agra.	
Delhi	English College. Oriental College.

The following were established in the year 1835:—

Medical College, Calcutta.
Pooree.
Gawahati.
Dacca.
Patna.
Ghazeepore.
Meerut.

And the following are now in the course of being established, and will be reported on at the beginning of next year:—

Rajshahi.
Jubbulpoor.
Hoshungabad.
Furruckabad.
Bareilly.
Ajmere.

Being in all 27 institutions; and it has been resolved to establish another at Sehore, if the neighbouring

Appendix I.

neighbouring Native States will consent to bear half the expense. The positions of the different seminaries will be seen by a reference to the accompanying map, executed by Sree Nath Ghose, a student of the Hindu College.

Each of these institutions is under the charge of a Local Committee, selected from among the European and Native gentlemen of the place, who take the greatest interest in the cause of education. In all the recently-formed Local Committees, the duties of secretary, which are very light, are performed gratuitously, and we hope that this arrangement may soon be made general. The officers of the seminaries are in every respect under the orders of the Local Committees, and the Local Committees are in every respect under the orders of the General Committee. Copies of circular instructions will be found in the Appendix, which will give some idea of the kind of control which is exercised by us over the whole system. It will also be seen that, with the double view of stimulating exertion and providing ourselves with a certain test of the progress of the pupils, we have desired that the two best essays and translations may be regularly forwarded to us after the annual examination; and we assign to the authors such pecuniary rewards as they may seem to deserve. A Sub-committee will probably be appointed from among our number, for the purpose of accurately examining these exercises.

In extending our operations we endeavour to keep two objects simultaneously in view. We try to widen the foundations of the system, at the same time that we consolidate and improve it. It would be our aim, did the funds at our command admit of it, to carry the former process on, until an elementary school for instruction in the vernacular language should be established in every village in the country, and the latter, until a college for Western learning should be endowed at the principal town of every Commissionership, or circle of two or three zillahs, and ultimately in every zillah.

When a school at any principal station has been established for a sufficient time, it will become our object to engraft a College upon it; for this purpose, when circumstances admit of our effecting it, a qualified person is appointed on a handsome salary, who holds the united office of "Principal and Professor." In the former capacity he is charged with the entire control of the institution, subject to the authority of the Local Committee, and in the latter he gives personal instruction to the more advanced pupils in some branch of knowledge. As the necessity arises, and means are found available, more professors are appointed. We consider it of importance that both masters and professors should reside in the immediate neighbourhood of the institution, and for this purpose we are always ready, when we have funds at command, to build houses for them, which they occupy rent-free.

The first lectureship which we shall always wish to see established, as the studies of the youths in our institutions become more advanced, is one on "English Composition and Literature." The object of this is not merely to enable the young men in the senior classes to acquire a good style of English composition, but also to give them a general acquaintance, before they leave college, with the extent and nature of the existing English literature. We expect by these means to increase their taste for reading, at the same time that we enable them to select proper subjects for study in after-life. In order to serve as a class-book for these lectures, we have induced the School Book Society, by offering to take half the impression, to undertake the publication of a Book of Selections from the English Poets, from Chaucer downwards, in the order of their dates, and we shall shortly commence the preparation of a corresponding volume in prose.

As another means of enabling the pupils to cultivate and indulge a taste for reading, we have resolved to annex a good library to each institution. A supply of entertaining and instructive juvenile books has been ordered by us from the United States of America, part of which has already arrived; and we have prepared with great care a list of standard works, which will form the staple of these libraries. Raja Bejai Govind Sing's donation of 20,000 rupees has been appropriated to this object; and a bookseller at this place has contracted to supply us with from 6 to 14 copies of each book included in the list, at about the London cost price. A copy of the list and of the circular which we have issued to the Local Committees, prescribing rules for the management of the libraries, will be found in the Appendix. We are in great hopes that the libraries will receive many accessions from donations of books by persons anxious to promote the spread of knowledge in this country.

Next in order to a Professorship of Literature, we conceive it to be desirable to proceed to establish at each of our institutions a Professorship of Mathematics and Natural Philosophy. Law would occupy the third place; but at present this branch of instruction is attended with many difficulties, arising from the number of conflicting systems of law which prevail in this country, and the various languages in which they are embodied. The labours of the Law Commission will, we hope, soon supply a condensed body of Anglo-Indian law in the English and vernacular languages, and it will then be proper to adopt measures to procure qualified legal instructors for each of our more important seminaries. We conceive that great advantages must result to the judicial administration from encouraging the best educated, who are also, we hope, the most moral and upright of the native youth, to seek employment in it.

We are anxious to give a liberal degree of encouragement to the study of surveying. Practical surveyors of respectable character and attainments are much required, both in the Judicial and Revenue Departments, particularly in the Lower Provinces. The experience of some of our members leads us to believe that every Zilla and City Judge's Court should possess one, if not two, such surveyors, capable of making a field survey, and of furnishing an intelligent and scientific exposition of any points dependent upon personal inquiry. In the Revenue Department, also, we are informed that there is not a greater desideratum

desideratum than a set of Surveyors of scientific acquirements, respectable character, and unconnected with the Native Amla, to conduct the very extensive field operations which are continually in progress, and to secure the interests of Government in resumed and purchased estates. As yet, surveying is taught only at two of our institutions, the Hindu and Mahomedan Colleges at Calcutta; but we are very desirous that the study should be commenced at some of the others. Until this takes place, it will be impossible to raise up an adequate supply of Surveyors, who will be content with moderate rates of remuneration. The exertions of Mr. Rowe, the Teacher at Calcutta, have been very successful, of which the Map which accompanies this Report is one proof.

The Sub-Committee for the selection of books is now employed in revising the class-books used in our different institutions. It is not intended to impose strict limits on the discretion of the Local Committees in this respect. Our object is to bring to their notice the best works on each branch of education, and to prevent the loss of time which often arises from the use of inferior books and methods at places far removed from the sources of information,

As yet no uniform system of elementary instruction has been prescribed to our school-masters. We thought that there was danger in insisting upon uniformity at so early a period in a matter which is only beginning to be understood in this country. Had we done so, inferior modes might have been enjoined by us, and many improvements, which have arisen out of the comparative freedom with which our schoolmasters have been left to pursue their own plans, would never have been suggested. We intend shortly, after full communication with the Local Committees and the professors and masters of the different seminaries, to draw up a plan for general guidance.

As we have often had reason to complain that prizes have been given with a degree of profusion which in a great measure counteracted their object, we issued a circular, of which a copy will be found in the Appendix, directing that only one prize be given in each department of study in each class. As the annual prizes consist for the most part of books, they offer an attractive mode of communicating a great deal of valuable information to the most intelligent portion of the rising generation, and it is therefore a great object to select for the purpose the most entertaining and instructive books procurable. We should be glad if the Local Committees would undertake this duty themselves, and the expense of the books might be defrayed out of the produce of an annual subscription to be opened for the purpose on the spot. We have neither the necessary leisure nor information to enable us from time to time to select appropriate prize books for all the 27 institutions under our charge; and this is also one of those fluctuating expenses which it is very desirable should be defrayed, to as great an extent as possible, from local resources.

We are deeply sensible of the importance of encouraging the cultivation of the vernacular languages. We do not conceive that the order of the 7th of March precludes us from doing this, and we have constantly acted on this construction. In the discussions which preceded that order, the claims of the vernacular languages were broadly and prominently admitted by all parties, and the question submitted for the decision of Government only concerned the relative advantage of teaching English on the one side, and the learned Eastern languages on the other. We therefore conceive that the phrases "European literature and science," "English education alone," and "imparting to the native population a knowledge of English literature and science, through the medium of the English language," are intended merely to secure the preference to European learning, taught through the medium of the English language, over Oriental learning, taught through the medium of the Sanskrit and Arabic languages, as regards the instruction of those natives who receive a learned education at our seminaries. These expressions have, as we understand them, no reference to the question through what ulterior medium such instruction as the mass of the people is capable of receiving is to be conveyed. If English had been rejected, and the learned Eastern tongues adopted, the people must equally have received their knowledge through the vernacular dialects. It was, therefore, quite unnecessary for the Government, in deciding the question between the rival languages, to take any notice of the vernacular tongues; and, consequently, we have thought that nothing could reasonably be inferred from its omission to take such notice.

We conceive the formation of a vernacular literature to be the ultimate object to which all our efforts must be directed. At present, the extensive cultivation of some foreign language, which is always very improving to the mind, is rendered indispensable by the almost total abstinence of a vernacular literature, and the consequent impossibility of obtaining a tolerable education from that source only. The study of English, to which many circumstances induce the Natives to give the preference, and with it the knowledge of the learning of the West, is therefore daily spreading. This, as it appears to us, is the first stage in the process by which India is to be enlightened. The Natives must learn before they can teach. The best educated among them must be placed in possession of our knowledge before they can transfer it into their own language. We trust that the number of such translations will now multiply every year. As the superiority of European learning becomes more generally appreciated, the demand for them will no doubt increase, and we shall be able to encourage any good books which may be brought out in the native languages by adopting them extensively in our seminaries.

A teacher of the vernacular language of the province is already attached to several of our institutions, and we look to this plan soon becoming general. We have also endeavoured to secure the means of judging for ourselves of the degree of attention which is paid to this important branch of instruction, by requiring that the best translations from English into

Appendix I.

the vernacular language, and *vice versâ*, should be sent to us after each annual examination, and if they seem to deserve it, a pecuniary prize is awarded by us to the authors of them.

The improvement of the vernacular literature, however, is most intimately connected with the measure of establishing a system of really national education, which shall in time embrace every village in the country. Should the series of reports on which Mr. Adam is now engaged lead to such a plan being even partially acted upon, the demand for improved school-books in the vernacular languages will then be such as to call for our utmost exertions to supply them. We have already received propositions from Delhi, Agra and Saugor, for establishing village schools; but we considered the agitation of the subject at present premature. Before we can successfully adopt any plan for this purpose, much larger means must be placed at our disposal, and a much larger number of qualified schoolmasters and translators must be raised up. The first of these desiderata does not depend upon us; but the last is every day approaching nearer to attainment. Our existing institutions form the nucleus of a much more general system of education, and they will ere long become capable of being extended to any degree that may be desired, by the formation of district schools in connexion with them.

The superior education imparted at the Government seminaries ought to be made available to the fullest practicable extent for the improvement of the Revenue and Judicial administration, and it is obvious that the patronage of Government would re-act upon the seminaries, and stimulate the students to increased exertions. What is at present most required is, the establishment of some regular channel through which the most distinguished students could obtain admission into the public service, without having to go through the ordeal of a long attendance at the Courts of Justice and the Revenue Offices, which may oblige them to court the favour of the ministerial officers, and often to become dependent on them. The plan adopted at the Mahomedan College at Calcutta, and more lately at the Agra College, appears to us well calculated to answer the purpose, and we hope it will be generally had recourse to. It is to circulate among the neighbouring functionaries, after each annual examination, a list of the students whom the Committee can recommend for appointments, with the necessary explanations on the character and qualifications of each, in order that those who have the disposal of the public patronage may have an opportunity of providing for deserving students.

Some information will be expected from us regarding the manner in which the abolition of stipends has worked, the simplest way of furnishing which will be to show the increase and decrease of pupils at each institution at which stipends are allowed since the new rule took effect. The following statements, therefore, include all, both stipendiary and non-stipendiary.

The most complete return on this subject has been received from Delhi. The following is the average monthly attendance of the pupils in each department of study at that place, for eight months before and after the order of the 7th March 1835 :—

From September 1834 to April 1835:	
English	198
Arabic	45
Persian	132
Sanskrit	66
From May to December 1835:	
English	197
Arabic	47
Persian	111
Sanskrit	60

In the Agra College, the students in the different departments stood as follows, at the two last annual examinations :—

On the 31st December 1834:	
English	36
Arabic	26
Persian	205
Sanskrit	113
On the 31st December 1835:	
English	75
Arabic	25
Persian	192
Sanskrit	113

In the Sanskrit College at Benares, there were 281 students at the end of 1834, and 282 at the end of 1835.

At the Benares Seminary, in which English is principally studied, the students have increased from 89 to 136.

At the Sanskrit College at Calcutta, they have fallen off from 181 to 135.

At the Mahomedan College, the number of stipendiary students in the Oriental Department has diminished, by the lapse of stipends, from 85 to 62; but the number of those who do not receive stipends, of whom from 60 to 70 are generally in attendance, remains much the same as before. Although stipends have been prospectively abolished, the students of this college still possess some advantages which the others do not, such as

as free quarters and a certificate on leaving college, which enables many of them to obtain employment in the Judicial Establishment. In the English department of the college, the students have increased from 31 to 134.

At the Hindu College, where only 10 stipends are given, the number of pupils has increased from 346 to 407.

Stipends are also allowed at the Medical College and the Bhaugulpore School; but as it is done in these instances with a view to particular objects, we do not consider it necessary to do more than advert to the fact.

Stipends are not allowed at any of our other institutions; while at the Hindu College, with the exception of the 10 stipends above mentioned, an exactly opposite practice is followed, money being there demanded from the students for their education, instead of their being paid to accept of it. We conceive this to be the correct principle; and we shall keep the general establishment of it in view. As a preliminary step, we hope, with the assistance of the Local Committees, to be able soon to require that every boy must pay for the books used by him. We are satisfied that after these changes shall have been effected, the advantages of our seminaries will be more highly appreciated, more regular attendance will be secured, and the means at our disposal for improving and extending our operations will be greatly augmented. Justice also seems to require that each individual who avails himself of the benefits afforded by the public seminaries for the education of his children should contribute as much as he is able to their support; and that what cannot be supplied from this source should alone be paid out of the general revenue.

Persons of all ages, religious opinions and castes, are admitted as pupils in all our institutions, except the Hindu, Mahomedan and Sanskrit Colleges at Calcutta, and the Sanskrit College at Benares. No inconvenience of any kind has been found to result from this rule; while the contrary one has encouraged the prejudices which it was meant to conciliate.

Appendix K.

(Referred to in the Evidence of Sir Charles Edward Trevelyan, Quest. 6794, p. 187.)

EXTRACT from a Work on the Education of the People of India, by Charles E. Trevelyan, Esquire, of the Bengal Civil Service. London, 1838.

THE PEOPLE OF INDIA.

Chap. VII.

The Political Tendency of the different Systems of Education in use in India.

There can be no dispute as to what our duty as the rulers of India requires us to do. But it has been said, and may be said again, that whatever our duty may be, it is not our policy to enlighten the natives of India; that the sooner they grow to man's estate, the sooner they will be able to do without us; and that by giving them knowledge, we are giving them power, of which they will make the first use against ourselves.

If our interest and our duty were really opposed to each other, every good man, every honest Englishman, would know which to prefer. Our national experience has given us too deep a sense of the true ends of Government, to allow us to think of carrying on the administration of India except for the benefit of the people of India. A nation which made so great a sacrifice to redeem a few hundred thousand negroes from slavery, would shudder at the idea of keeping a hundred millions of Indians in the bondage of ignorance, with all its frightful consequences, by means of a political system supported by the revenue taken from the Indians themselves. Whether we govern India ten or a thousand years, we will do our duty by it: we will look, not to the probable duration of our trust, but to the satisfactory discharge of it, so long as it shall please God to continue it to us. Happily, however, we are not on this occasion called upon to make any effort of disinterested magnanimity. Interest and duty are never really separated in the affairs of nations, any more than they are in those of individuals; and in this case they are indissolubly united, as a very slight examination will suffice to show.

The Arabian or Mahommedan system is based on the exercise of power and the indulgence of passion. Pride, ambition, the love of rule, and of sensual enjoyment, are called in to the aid of religion. The earth is the inheritance of the Faithful: all besides are infidel usurpers, with whom no measures are to be kept, except what policy may require. Universal dominion belongs to the Mahommedans by Divine right. Their religion obliges them to establish their predominance by the sword; and those who refuse to conform are to be kept in a state of slavish subjection. The Hindu system, although less fierce and aggressive than the Mahommedan, is still more exclusive: all who are not Hindus are impure outcasts, fit only for the most degraded employments; and, of course, utterly disqualified for the duties of government, which are reserved for the military, under the

Appendix K.

guidance of the priestly caste. Such is the political tendency of the Arabic and Sanskrit systems of learning. Happily for us, these principles exist in their full force only in books written in difficult languages, and in the minds of a few learned men; and they are very faintly reflected in the feelings and opinions of the body of the people. But what will be thought of that plan of national education which would revive them and make them popular; would be perpetually reminding the Mahommedans that we are infidel usurpers of some of the fairest realms of the Faithful, and the Hindus, that we are unclean beasts, with whom it is a sin and a shame to have any friendly intercourse. Our bitterest enemies could not desire more than that we should propagate systems of learning which excite the strongest feelings of human nature against ourselves.

The spirit of English literature, on the other hand, cannot but be favourable to the English connection. Familiarly acquainted with us by means of our literature, the Indian youth almost cease to regard us as foreigners. They speak of our great men with the same enthusiasm as we do. Educated in the same way, interested in the same objects, engaged in the same pursuits with ourselves, they become more English than Hindus, just as the Roman provincials became more Romans than Gauls or Italians. What is it that makes us what we are, except living and conversing with English people, and imbibing English thoughts and habits of mind? They do so too: they daily converse with the best and wisest Englishmen through the medium of their works; and form, perhaps, a higher idea of our nation than if their intercourse with it were of a more personal kind. Admitted behind the scenes, they become acquainted with the principles which guide our proceedings; they see how sincerely we study the benefit of India in the measures of our administration; and from violent opponents, or sullen conformists, they are converted into zealous and intelligent co-operators with us. They learn to make a proper use of the freedom of discussion which exists under our government, by observing how we use it ourselves; and they cease to think of violent remedies, because they are convinced that there is no indisposition on our part to satisfy every real want of the country. Dishonest and bad rulers alone derive any advantage from the ignorance of their subjects. As long as we study the benefit of India in our measures, the confidence and affection of the people will increase in proportion to their knowledge of us.

But this is not all. There is a principle in human nature which impels all mankind to aim at improving their condition; every individual has his plan of happiness; every community has its ideas of securing the national honour and prosperity. This powerful and universal principle, in some shape or other, is in a state of constant activity; and if it be not enlisted on our side, it must be arrayed against us. As long as the natives are left to brood over their former independence, their sole specific for improving their condition is, the immediate and total expulsion of the English. A native patriot of the old school has no notion of anything beyond this; his attention has never been called to any other mode of restoring the dignity and prosperity of his country. It is only by the infusion of European ideas, that a new direction can be given to the national views. The young men, brought up at our seminaries, turn with contempt from the barbarous despotisms under which their ancestors groaned, to the prospect of improving their national institutions on the English model. Instead of regarding us with dislike, they court our society, and look upon us as their natural protectors and benefactors: the summit of their ambition is, to resemble us; and, under our auspices, they hope to elevate the character of their countrymen, and to prepare them by gradual steps for the enjoyment of a well-regulated and therefore a secure and a happy independence. So far from having the idea of driving the English into the sea uppermost in their minds, they have no notion of any improvement but such as rivets their connection with the English, and makes them dependent on English protection and instruction. In the re-establishment of the old native governments they see only the destruction of their most cherished hopes, and a state of great personal insecurity for themselves.

The existing connection between two such distant countries as England and India, cannot, in the nature of things, be permanent; no effort of policy can prevent the natives from ultimately regaining their independence. But there are two ways of arriving at this point. One of these is, through the medium of revolution; the other, through that of reform. In one, the forward movement is sudden and violent; in the other, it is gradual and peaceable. One must end in a comp ete alienation of mind and separation of interests between ourselves and the natives; the other in a permanent alliance, founded on mutual benefit and good-will.

The only means at our disposal for preventing the one and securing the other class of results is, to set the natives on a process of European improvement, to which they are already sufficiently inclined. They will then cease to desire and aim at independence on the old Indian footing. A sudden change will then be impossible; and a long continuance of our present connection with India will even be assured to us. A Mahratta or Mahommedan despotism might be re-established in a month; but a century would scarcely suffice to prepare the people for self-government on the European model. The political education of a nation must be a work of time; and while it is in progress, we shall be as safe as it will be possible for us to be. The natives will not rise against us, because we shall stoop to raise them; there will be no re-action, because there will be no pressure; the national activity will be fully and harmlessly employed in acquiring and diffusing European knowledge, and in naturalising European institutions. The educated classes, knowing that the elevation of their country on these principles can only be worked out under our protection, will naturally cling to us. They even now do so. There is no class of our subjects to whom we are so thoroughly necessary as those whose opinions have been cast in the English mould; they are spoiled for a purely native regime; they have everything to fear from the premature establishment of a native government; their education would mark them out for persecution; the

the feelings of independence, the literary and scientific pursuits, the plans of improvement in which they indulged under our government, must be exchanged for the servility and prostration of mind which characterise an Asiatic court. This class is at present a small minority, but it is continually receiving accessions from the youth who are brought up at the different English seminaries. It will in time become the majority; and it will then be necessary to modify the political institutions to suit the increased intelligence of the people, and their capacity for self-government.

The change will thus be peaceably and gradually effected; there will be no struggle, no mutual exasperation; the natives will have independence, after first learning how to make a good use of it; we shall exchange profitable subjects for still more profitable allies. The present administrative connection benefits families, but a strict commercial union between the first manufacturing and the first producing country in the world, would be a solid foundation of strength and prosperity to our whole nation. If this course be adopted, there will, properly speaking, be no separation. A precarious and temporary relation will almost imperceptibly pass into another far more durable and beneficial. Trained by us to happiness and independence, and endowed with our learning and our political institutions, India will remain the proudest monument of British benevolence; and we shall long continue to reap, in the affectionate attachment of the people, and in a great commercial intercourse with their splendid country,* the fruit of that liberal and enlightened policy which suggested to us this line of conduct.

In following this course we should be trying no new experiment. The Romans at once civilised the nations of Europe, and attached them to their rule by Romanising them; or, in other words, by educating them in the Roman literature and arts, and teaching them to emulate their conquerors instead of opposing them. Acquisitions made by superiority in war, were consolidated by superiority in the arts of peace; and the remembrance of the original violence was lost in that of the benefits which resulted from it. The provincials of Italy, Spain, Africa and Gaul, having no ambition except to imitate the Romans, and to share their privileges with them, remained to the last faithful subjects of the empire; and the union was at last dissolved, not by internal revolt, but by the shock of external violence, which involved conquerors and conquered in one common overthrow. The Indians will, I hope, soon stand in the same position towards us in which we once stood towards the Romans. Tacitus informs us, that it was the policy of Julius Agricola to instruct the sons of the leading men among the Britons in the literature and science of Rome, and to give them a taste for the refinements of Roman civilization.† We all know how well this plan answered. From being obstinate enemies, the Britons soon became attached and confiding friends; and they made more strenuous efforts to retain the Romans, than their ancestors had done to resist their invasion. It will be a shame to us if, with our greatly superior advantages, we also do not make our premature departure be dreaded as a calamity. It must not be said in after ages, that "the groans of the Britons" were elicited by the breaking up of the Roman empire; and the groans of the Indians by the continued existence of the British.

We may also take a lesson from the Mahommedans, whose conquests have been so extensive and so permanent. From the Indian Archipelago to Portugal, Arabic was established as the language of religion, of literature and of law; the vernacular tongues were saturated with it; and the youth of the conquered countries soon began to vie with their first instructors in every branch of Mahommedan learning. A polite education was understood to mean a Mahommedan education; and the most cultivated and active minds were everywhere engaged on the side of the Mahommedan system. The Emperor Akbar followed up this policy in India. Arabicised Persian was adopted as the language of his dynasty; and the direction thereby given to the national sympathies and ideas greatly contributed to produce that feeling of veneration for the family which has long survived the loss of its power. This feeling, which in Europe would be called loyalty, is common to those who have been brought up in the old learning, but is very rarely found in connection with an English education. The policy of our predecessors, although seldom worthy of imitation, was both very sound and very successful in this respect. If we adopt the same policy, it will be more beneficial to the natives in proportion as English contains a greater fund of true knowledge than Arabic and Persian; and it will be more beneficial to us in proportion as the natives will study English more zealously and extensively than they did Arabic and Persian, and will be more completely changed by it in feeling and opinion.

These views were not worked out by reflection, but were forced on me by actual observation and experience. I passed some years in parts of India, where, owing to the comparative novelty of our rule and to the absence of any attempt to alter the current of native feeling,

* The present trade with India can give no idea of what it is capable of becoming; the productive powers of the country are immense; the population of British India alone, without including the native States, is more than three times that of all the rest of the British Empire. By governing well, and promoting to the utmost of our power the growth of wealth, intelligence, and enterprise in its vast population, we shall be able to make India a source of wealth and strength to our nation in time to come, with which nothing in our past history furnishes any parallel.

† The words of Tacitus are, "Jam vero principum filios liberalibus artibus erudire, et ingenia Britannorum studiis Gallorum anteferre, ut qui modo linguam Romanam abnuebant, eloquentiam concupiscerent. Inde etiam habitus nostri honor et frequens toga. Paulatimque discessum ad delinimenta vitiorum, porticus et balnea et conviviorum elegantiam; idque apud imperitos humanitas vocabatur cum pars servitutis esset."

Appendix K.

feeling, the national habits of thinking remained unchanged. There, high and low, rich and poor, had only one idea of improving their political condition. The upper classes lived upon the prospect of regaining their former pre-eminence; and the lower, upon that of having the avenues to wealth and distinction re-opened to them by the re-establishment of a native government. Even sensible and comparatively well affected natives had no notion that there was any remedy for the existing depressed state of their nation except the sudden and absolute expulsion of the English. After that, I resided for some years in Bengal, and there I found quite another set of ideas prevalent among the educated natives. Instead of thinking of cutting the throats of the English, they were aspiring to sit with them on the grand jury or on the bench of magistrates. Instead of speculating on Punjab or Nepaulese politics, they were discussing the advantages of printing and free discussion, in oratorical English speeches, at debating societies which they had established among themselves. The most sanguine dimly looked forward in the distant future to the establishment of a national representative assembly as the consummation of their hopes—all of them being fully sensible that these plans of improvement could only be worked out with the aid and protection of the British Government by the gradual improvement of their countrymen in knowledge and morality; and that the re-establishment of a Mahommedan or any other native regime would at once render all such views impracticable and ridiculous. No doubt, both these schemes of national improvement suppose the termination of the English rule; but while that event is the beginning of one, it is only the conclusion of the other. In one, the sudden and violent overthrow of our government is a necessary preliminary; in the other, a long continuance of our administration, and the gradual withdrawal of it as the people become fit to govern themselves, are equally indispensable.

Our native army is justly regarded as the pillar of our Indian empire; and no plan of benefiting either the natives or ourselves can be worth anything which does not rest on the supposition that this pillar will remain unbroken. It is therefore of importance to inquire how this essential element of power is likely to be affected by the course of policy which has been described. The Indian army is made up of two entirely distinct parts; the English officers, and the native officers and men. The former will, under any circumstances, stand firm to their national interests; the latter will be animated by the feelings of the class of society from which they are drawn, except so far as those feelings may be modified by professional interests and habits. The native officers rise from the ranks; and the ranks are recruited from the labouring class, which is the last that will be affected by any system of national education. Not one in five hundred of the boys who are instructed in the Zillah seminaries will enlist in the army. If the sepoys are educated anywhere, it must be in the village schools; and the organisation of those schools will be the concluding measure of the series. The instruction given to the labouring class can never be more than merely elementary. They have not leisure for more. But, such as it is, they will be indebted for it to us; and as it will form part of a system established and superintended by ourselves, we shall take care that it is of a kind calculated to inspire feelings of attachment to the British connection. After this the young men who enlist in the army will become imbued with the military spirit, and moulded by the habits of military obedience. I leave to others to judge whether this training is calculated to make better and more attached, or worse and more disaffected, soldiers than the state of entire neglect, as regards their moral and intellectual improvement, in which the whole class are at present left. I never heard that the education given in the national schools unfitted the common people of England for the ranks of the army; although the inducements to honourable and faithful service, which are open to them after they enter the army, are much inferior to those which are held out to our sepoys.

Religious instruction forms no part of the object of the Government seminaries. It would be impossible for the State to interfere at all with native education on any other condition; and this is now so well understood, that religious jealousy offers no obstruction to our success. The general favour with which English education is regarded, and the multitudes who flock to our schools, prove this to be the case. The Brahmins, it is true, ruled supreme over the old system. It was moulded for the express purpose of enabling them to hold the minds of men in thraldom; and ages had fixed the stamp of solidity upon it. Upon this ground they were unassailable. But popular education, through the medium of the English language, is an entirely new element, with which they are incapable of dealing. It did not enter into the calculation of the founders of their system; and they have no machinery to oppose to it. Although they have been priest-ridden for ages, the people of India are, for all purposes of improvement, a new, and more than a new, people. Their appetite for knowledge has been whetted by their long-compelled fast; and aware of the superiority of the new learning, they devour it more greedily than they ever would have done Sanskrit lore, even if that lore had not been withheld from them: they bring to the task, vacant minds and excited curiosity, absence of prejudice, and an inextinguishable thirst for information. They cannot return under the dominion of the Brahmins. The spell has been for ever broken. Hinduism is not a religion which will bear examination. It is so entirely destitute of any thing like evidence, and is identified with so many gross immoralities and physical absurdities, that it gives way at once before the light of European science. Mahommedanism is made of tougher materials; yet, even a Mahommedan youth who has received an English education is a very different person from one who has been taught according to the perfect manner of the law of his fathers. As this change advances, India will become quite another country: nothing more will be heard of excitable religious feelings: priestcraft will no longer be able to work by ignorance: knowledge and power

will

will pass from a dominant caste to the people themselves; the whole nation will co-operate with us in reforming institutions, the possibility of altering which could never have been contemplated if events had taken any other course; and many causes will concur to introduce a more wholesome state of morals, which, of all the changes that can take place, is the one in which the public welfare is most concerned.

There has been a time at which each of the other branches of the public service has particularly commanded attention. The commercial, the political, the judicial, the revenue departments, have in turn been the subject of special consideration; and decisive steps have been taken to put them on a satisfactory footing. My object will be sufficiently attained if I succeed in producing a conviction that the time has arrived for taking up the question of public instruction in the same spirit, and with the same determination to employ whatever means may be requisite for accomplishing the object in view. The absence of any sensible proof that increased taxation is attended with any proportionate benefit to India, has long been extremely disheartening both to the natives and to the European public officers serving in that country.* The entire abolition of the transit duties, and the establishment of an adequate system of public instruction, would furnish this proof, and would excite the warmest gratitude of everybody who from any cause feels interested in the welfare of India. The interest of a single million sterling,† in addition to what is already expended, would be sufficient to answer every present purpose as far as education is concerned. Even on the narrowest view of national interest, a million could not be better invested. It would ensure the moral and intellectual emancipation of the people of India, and would render them at once attached to our rule and worthy of our alliance.

Appendix L.

Referred to in the Evidence of Sir Charles Edward Trevelyan, Quest. 6794, p. 187.

EXTRACT from the Sixteenth Annual Report of the Calcutta Bible Association.

The Scriptures obtained from the Depository during the past year have been in the English, Bengali, Hindustani, Hindui, Orissa, Italian, French, Portuguese, and Hebrew languages, but by far the greater proportions have been in English and Bengali. The increased demand of the natives for the Scriptures in English has doubtless been in a great measure caused by the advancement of education in that language—the pupils of the various colleges and schools can take home a copy of the Bible or Testament in English, without exciting those fears on the part of their relatives which the same books in the native languages would be likely to excite. The English schools and colleges may be instrumental in preparing the mind of the natives for the appreciation of truth, and so far may prepare for the reception of the Gospel; the Committee therefore conceive it to be their duty to embrace the opportunities now afforded for supplying the New Testament in English to those institutions in which that book is customarily read, and of furnishing the same to the pupils of other schools wherein the New Testament is not admitted, who manifest a desire to search the Scripture for themselves.

---

* A large proportion of the land in the Bengal and Agra Presidencies is held tax-free; but although nothing can be more unreasonable than that persons who benefit by the protection of the Government should contribute nothing to its support, and throw the whole burden on the rest, it is impossible at present to induce the natives to view the subject in this light. Their invariable answer is, that while it is certain that some will be worse off, they see no reason to suppose that they will themselves be better off if the exempted lands are brought under contribution.

† The Parliamentary assignment of ten thousand pounds a year still remains to be accounted for to the Committee of Public Instruction, from July 1813 to May 1821, with compound interest up to the date of payment.

PAPERS given in by Sir C. Trevelyan, relating to the Testimonial to the late Mr. Donnelly, from the Young Men selected by him from the Dacca College for Employment in the Abkarree Department.

The following copy of a letter from Brojo Soonder Mitter, the Dacca Abkarree Superintendent, to Mrs. Donnelly, widow of the late Abkarree Commissioner, is worthy of being placed on record, in justice to the Hindoos, and as an encouragement to persons in authority who may be disposed to be of service to them. Mr. Donnelly was remarkable for his patronage of the young men educated at our seminaries, whom he almost exclusively employed under him in the management of the business of his Commissionership; and this letter affords interesting proof of the honourable and grateful feeling which this conduct has produced on the part of those benefited by him.

My dear Madam, Dacca, 23 February 1853.

I have much pleasure to inform you that, to commemorate the name of our late lamented patron and your beloved husband, Mr. A. F. Donnelly, Abkarree Commissioner, Dacca Division, we, his native subordinates, have entrusted to Dr. Mouat, Secretary to the Council of Education of the Bengal Presidency, a sum of 500 Company's Rupees, for the purpose of awarding, by the interest that would accrue thereon, an annual prize, to be called "The Donnelly Prize," to the best student of the College at Dacca, the scene of his actions.

I beg also to add, that we, the Native subordinates, intend to erect a tablet to your late lamented husband's memory, at a conspicuous part of the above college.

Extracts from the Reports of the Council of Education for 1849-50 and 1850-51, as also from the speech delivered by the Honourable the late Mr. J. E. D. Bethune, President of the Council of Education, at the Dacca College, on the 30th December 1849, on the occasion of awarding scholarships and prizes to the meritorious students, are herewith transmitted for your ladyship's information.

I remain, Madam,
Your most obedient servant,

(signed) Brojo Soonder Mitter,
Dacca Abkarree Superintendent.

EXTRACT from a Speech delivered by the Honourable the late Mr. J. E. D. Bethune President of the Council of Education, at the Dacca College, on the 30th of December 1849, on the occasion of awarding Scholarships and Prizes to the meritorious Students of that College.

The other element of success, of which I have spoken as being pre-eminently found in this college, is the great encouragement given to merit by the manner in which effect has been given, far more completely, as it seems to me, in this district than in any other, to Lord Hardinge's promise in favour of the educated natives. An impulse has been given in the right direction by one who has been a great benefactor to this college, whose premature death we had to lament last year, and shall have to record in our forthcoming Report. I need hardly add that I refer to the late Mr. Donnelly, whose generous exertions in favour of the educated young men of Bengal ought never to be forgotten by them, or thought on without feelings of the deepest gratitude. He openly avowed and acted on the principle of coming to this college for every situation in his power to bestow or to influence the disposal of; and the success of his experiment, if it may be so called, was so remarkable, that I must detain you while I read a few passages from his correspondence with the Council of Education. I have often been met, when endeavouring to exert my influence in favour of our young students in Calcutta, by the remark that what is wanted is not one who is conversant with Milton and Shakespeare, but one who understands business. Such men do not seem to comprehend how rapidly the same intellect, which is able to master the difficulties of a foreign

foreign literature, can become familiar with the easy details and routine of that which they term business; they undervalue the higher tone of feeling and greater grasp of comprehension which is possessed by those whose minds have been refined and opened by a liberal education. Now it is precisely to this question that Mr. Donnelly's experience bears ample and valuable testimony.

Mr. Donnelly says, in a letter to the Secretary to the Council of Education, 31st July 1846 :—

"I had the honour to forward a statement, showing the number of candidates said to "have received an English education in India, who up to that date had held appointments in "this office. In the year preceding the date of the letter, the yearly emoluments of the "offices of this Commissionership, filled up by young men born and educated in this country, "was 31,620 rupees. I have great pleasure in stating that I have reason to be satisfied "with the conduct of the students generally; they have done their work well, and I am "glad I have made the experiment of employing them. It must be borne in mind that I "have not, from my position here at a distance from Calcutta, been enabled in every case to "train up the best young men in my office. The students of the Hindoo and Hooghly "Colleges prefer a far smaller amount of salary in Calcutta, and do not appear inclined to "commence on a low salary in the hope of future promotion."

This remark corresponds with what I have sometimes myself observed. You young men are eager to begin at the top instead of the bottom, and do not show sufficient alacrity and readiness to prove yourselves worthy of employment in higher situations, by faithful and zealous service in lower ones. This must in fairness be stated as one obstacle to your receiving appointments; it is a great mistake on your part, and you will do well to profit by this notice of it. Mr. Donnelly continues :—

"I returned last year from circuit, after an absence of two months. My return was not "expected, for a letter, which I had sent from Pubna to announce it, did not reach this "station till after my return. I came to office at 12 o'clock, and immediately requested "the Principal to come over and judge for himself how the young men had acted during my "absence. I forward a copy of Dr. Wise's letter :—

"Dr. Wise says :—'It must have been very satisfactory to you, on your unexpected "'return from your circuit after an absence of more than two months, to find that the work "'of your office had been proceeding with as much despatch and efficiency as when you are "'present, and it was highly gratifying to me to find young men, only a few months ago "'students of the Dacca College, carrying on the duties of a complicated office with the "'correctness and punctuality of an English banking establishment. I was equally grati-"'fied and surprised at so remarkable an example of the advantage the natives of this "'country derive from the system of training pursued in the Government colleges, when "'assisted by such an excellent system of forming business habits as is followed in your office.'
"The annual saving of 6,240 rupees has been solely caused by the employment and train-"ing of educated young men in my office, for, had I not always two or more officers qualified "to take charge of a district, I should be forced to employ two Superintendents instead of "one in each district, to guard against the chance of injury to the public service, by the "indisposition of the officer in charge, and the appointment of an inexperienced person, who "might cause great loss while he was learning his duty. At present I can from my office "despatch at a few hours' notice a man fully qualified to carry on the business of any dis-"trict subordinate to me. The Council will not, I hope, suppose that I am an advocate for "restricting the amount of pay; I think, on the contrary, that each man ought to be paid "in proportion to his work, and I take every opportunity of recommending an increase, when "I can do so with propriety; but I also think that, if the employment of young men edu-"cated in the country enable a public officer to decrease expenditure till they shall have "fairly earned an increase by good service, he has an additional reason for employing them. "A saving in establishments would be prejudicial instead of useful, had their efficiency been "impaired. My Report to the Board and the Government will show that, tested in this "manner, the new system has not anything to fear."

You see that Mr. Donnelly very properly did not look on the pecuniary saving which he effected as his primary object; at the same time he very reasonably refers to it as an additional recommendation of his system. Now I make this public protestation, that it is not my fault if Mr. Donnelly's noble example is not followed every where with equal zeal I lose no opportunity, of which I can avail myself, of holding it up for imitation.

In the conclusion, Mr. Bethune announced the special prizes offered for the ensuing year, among which he said that he felt particular pleasure in announcing that the native officers employed in the Abkarree Department had requested permission to offer a prize of 100 rupees, to be called "The Donnelly Prize," in token of their gratitude for that lamented gentleman's services to the cause of education.

Appendix M.

EXTRACT from the REPORT of the COUNCIL of EDUCATION of 1849-50.

A MUNIFICENT present of 300 rupees from the native Abkarree officers in the Dacca Division. The terms on which this handsome donation was made are recorded in the letter from Baboo Issur Chunder Mitter, noted in the margin,* and were considered so creditable to the parties concerned as to have been brought to the special notice of the Government. The Honourable the Deputy Governor of Bengal directed the Council to inform Baboo Issur Chunder Mitter and the native officers of the Abkarree Department, that his Honor had perused with interest the account of the liberality and public spirit manifested by them on the occasion. The prize will be awarded in accordance with the wishes of the donors.

* "At the last distribution of prizes and scholarships in the Dacca College, I offered, on the part of the officers of the Abkarree Department, a prize of 100 rupees, under the name of 'The Donnelly Prize,' to be awarded, at the close of the present session, to the first student in any of the subjects of the senior scholarship examinations which the Principal might determine upon. With a view to this object, I now have the honour to send, through the Principal of the College, the sum of rupees (300) three hundred, being the amount of the subscriptions made to do honour to the memory of the lamented Mr. A. F. Donnelly, realized up to this date.

"But since there is still hope that an equal amount may be collected within the next academical year, my brother officers have requested me to suggest, for the consideration and orders of the Council, that the value of the promised prize for the present year may be reduced to 50 rupees, converted to a silver medal, to be called 'The Donnelly Medal,' with a view to the application of the balance to the purchase of a Government promissory note, in case the expected contributions shall have been realized before another year passes away. A permanent annual prize of the value of not less than 25 rupees may then, it is expected, be founded, to perpetuate the name of one who was so devoted a friend in the cause of native education. Should these hopes be frustrated, the balance of rupees (250) two hundred and fifty, may, after the expiry of the year in question, be subjected to annual deductions, not exceeding 50 rupees, for the value of a silver medal, till the whole is expended.

"I am further requested to suggest that 'The Donnelly Prize' or medal may be awarded to the best native student in history or Bengali (of the senior or junior scholarship examinations, according as the value of the prize may be 50 or 25 rupees), the award being withheld should the candidate fail to obtain 30 or at least 75 per cent. of the number of marks attached to the subject of examination."

EXTRACT from the REPORT of the COUNCIL of EDUCATION of 1850-51.

"THE DONNELLY MEDAL."

IN the last annual Report of this College, it was stated that "the officers employed in the "Abkarree Department of Dacca subscribed 300 rupees, which they hope to increase to "500, that the interest may give a perpetual prize of 25 rupees, to be entitled 'The Don-"nelly Prize.'" This hope, the Principal is now happy to state, the officers of the Abkarree Department of Dacca have been able to realise. A Donnelly prize of 50 rupees having been promised to the College for the last distribution by these officers, the Honourable Mr. Bethune, as soon as he was informed that they were endeavouring to raise a fund for a perpetual prize, presented this 50 rupees from his own purse.

Appendix N.

GENERAL REPORT, &c. &c.

The control of the educational institutions in the North-Western Provinces having, in pursuance of the Resolution of the Government of India, dated 29th April 1843, been transferred to the Agra Government, it became necessary to assign for the support of those institutions a fixed annual payment out of the General Education Funds, which, together with the separate funds belonging to the Agra, Delhie and Benares Colleges, and all local resources, should be at the exclusive disposal of the Lieutenant-governor; and also to effect a separation between the accounts of the Education Department in the two Divisions of the Presidency of Fort William. With this view, the allotment proposed by the late General Committee in 1840, on the occasion of applying for further assistance from the Government of India, was assumed as the basis of a calculation, by which the annual sum of *Rs.* 1,23,991. 10. is now set apart out of the general funds in favour of the North-Western Provinces, in addition to the separate and local funds specially available for the purposes for which they were originally assigned. The resources of the department in the Lower Provinces are now as follows:—

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Interest of General Fund - - - -	24,155	1	–			
Parliamentary Grant - - - - -	1,06,666	10	8			
New Grant - - - - - - -	1,49,740	12	–			
	2,80,552	7	8			
Deduct in favour of N. W. P. - - -	1,23,991	10	–			
				1,56,560	13	8
Separate Grants - - - - - -	-	-	-	88,885	5	–
Interest of Local Funds - - - - -	-	-	-	49,107	9	–
Schooling (estimated) - - - - -	-	-	-	38,000	–	–
Miscellaneous Receipts (ditto) - - -	-	-	-	10,000	–	–
TOTAL - - -			*Rs.*	3,42,553	11	8

exclusive of the expenses of the Medical College, which are not provided for by any assignment of the Education Funds, but form an item of the general expenditure of the State.

An application for assistance towards establishing a school at Mymunsingh was submitted by a Committee of the Public Officers at that station, who had associated themselves for the purpose. It was stated that donations to the amount of 1,818 rupees had been promised, and a monthly sum of 179 rupees for the first year, and 78 rupees for subsequent years, had been subscribed, but the Government was unable to appropriate any funds in support of the undertaking. A similar application was made by the native inhabitants of Rugonathpore in Manbhoom for the establishment of a vernacular school at that place; and on the 20th July the Judge of Rajshahie forwarded a petition from some native youths at Pubna, praying that the Government would establish a school in that district; but the state of the Education Funds precluded compliance with either of these requests. The magistrate of Nuddea reported that 3,600 rupees had been collected towards the establishment of an English school at Kishnagur, and requested that as that sum was insufficient for the purpose, a special grant might be made from the Education Fund. The magistrate stated that there was already an English school at the station, conducted by a clergyman in the employ of the Church Mission Society, containing 60 or 70 pupils, which would suffer by the establishment of another; and that a majority of the subscribers had consented to a transfer of the funds to the missionary, should Government decline to interfere: under these circumstances the request was not complied with.

The want of a definite set of rules, prescribing the terms on which leave of absence would be granted to masters, and regulating their acting and travelling allowances, having been much felt, a draft of the same was laid before the Council of Education; and the rules, as approved by them, and passed by the Government on the 28th February 1844, will be found in the Appendix.

Some modification has been made in the manner of conducting Scholarship Examinations at the colleges and schools in the interior, and the award of Scholarships is now entrusted to the several local Committees, subject to the approval of Government.

On the 4th September 1843, the Council of Education were called upon to report the success which had attended the adoption of the plan recommended by the late General Committee, and sanctioned by Government on the 2d February 1842, for the preparation of vernacular class-books. In reply, the Council entered into a detailed account of their proceedings since that date, the most important of which are adverted to in their Report for 1842–43. The duty of providing for the preparation of a series of vernacular class-books has now devolved upon the Government, and measures have been taken in communication with the Government of Agra to promote this most important object. Translations into Oordoo and Hindee will, in future, be prepared under the superintendence of the Agra Government, and into Bengali, Oorya and Burmese under that of Bengal.

The Oordoo translation of Marshman's History of India, by Mr. J. Muir, alluded to at page 28 of the General Report for 1843–44, has been approved, and is now introduced as a class-book into the institutions in those districts of which that language is the vernacular.

Mr.

Mr. Marshman, on being called upon to state what progress had been made in the preparation of the English and Bengalee works which he had agreed to provide, expressed much regret that other engagements, apparently of more urgent necessity, had interfered with the accomplishment of the charge entrusted to him by the late General Committee; he had, however, been gradually collecting the materials, and would now allow as little time as possible to elapse before their completion. The translation of the History of Bengal into Bengalee is nearly finished, and the other works will be furnished in the following order--1st, the History of India; 2d, the History of England; 3d, the Wonders of Art and Nature in India. Dr. Yates has completed the Bengalee Reader which he undertook to prepare, and the book has been introduced into several of the schools under the Government. On the 11th March a circular was issued to the different institutions, authorizing the admission of boys for instruction in the vernacular language alone.

The Principals of the several Colleges were directed to inspect and report upon some of the Zillah schools, according to the following distribution:

Mr. Seddon, Principal of the Nizamut College—Patna, Bhagulpore and Bauleah.
Mr. Ireland, Principal of the Dacca College—Burrisaul, Commillah and Chittagong.
Mr. Sutherland, Principal of the Hooghly College—Midnapore.
Mr. Kerr, Principal of the Hindoo College—Jessore.

The result of the inspection of each of the above-mentioned schools will be found in the Special Reports. The other institutions, by reason of their great distance, could not be conveniently inspected.

The Council of Education, on the 30th April 1844, was composed as follows:

MEMBERS:

President, the Honourable C. H. Cameron.

The Honourable F. Millett.	Baboo Russomoy Dutt.
F. J. Halliday, Esq.	Rajah Radhakant Deb.
J. Edwardes Lyall, Esq.	F. J. Mouat, Esq., M.D., Sec.
C. C. Egerton, Esq.	

The Report of their proceedings during the year is subjoined at length:—

The Honourable W. W. Bird, Governor of Bengal.

Honourable Sir,

Our last Report contained a narrative of our proceedings for 1842-43.

2. Our present Report will comprise the matters which have occupied our attention from the 1st May 1843 to the 30th of April 1844; and consist of general introductory remarks, the Special Reports of the Hindu, Sanscrit, Medical and Hooghly Colleges, with that of the Calcutta Madrussa, and such documents, in an Appendix, as may be necessary to illustrate the state and condition of the institutions referred to during the past year.

3. The changes in the constitution of the Council, with the removal of the office to the Medical College, and alterations in the system of business referred to in paras. 4, 5, 6, 7, 8, 9, 10 and 11 of our last Report, have all been duly carried into effect.

4. During the past year we have to regret the loss, by death, of Mr. J. C. C. Sutherland, whose long and valuable services in the Education Department, combined with his profound acquirements as an Oriental scholar and intimate acquaintance with the manners, habits and prejudices of the native community, rendered him an able and efficient member of our body.

The departure for Europe of Major J. W. J. Ouseley, likewise an eminent and talented Oriental scholar, has deprived us of his services as Secretary to the Calcutta Madrussa, and Examiner of our Oriental Scholarship papers, in both of which capacities his assistance has always been of great value to us. Our Secretary has been directed to officiate in the former capacity, pending the appointment by Government of a permanent Secretary.

Mr. J. E. Lyall, Advocate-general, has been added to our body, and from his ability and advice we hope to derive much valuable aid in the discharge of our duties.

5. With reference to paras. 41, 42, 43, 44 and 45 of our last Report, respecting the advantages of affording legal instruction to the more advanced pupils of our institutions, we have the sincere gratification of reporting that such instruction has not only been given, but has been attended with the best and most satisfactory results, as we shall presently proceed to show.

Mr. J. Edwardes Lyall, Advocate-general, having offered his services to Government to deliver Lectures upon Jurisprudence in the various forms in which it is administered* in the Courts

* Extract from a Letter addressed to his Honor the Deputy Governor, by Mr. Lyall, dated 4th August 1843:

"I believe it has been for some time past the anxious wish of the Government and the Council of Education that a professional chair should be established at the Hindoo College, for the purpose of instituting a regular course of lectures on the law in the various forms on which it is administered in this country.

"I understood, however, that some obstacles had arisen to the immediate adoption of any particular plan, and I resolved, after some consideration, to volunteer such services as it might be in my power to render in furtherance of this object. I have been induced to make this offer from the interest I take in the promotion of

Appendix N.

Courts of this country, commenced his course on the 12th of October 1843, by a general introductory discourse, which was attended by his Honor the Deputy Governor of Bengal, the Council of Education, Sir Henry Seton, and a large number of gentlemen of the Civil and other services. The course was continued subsequently once a week, and attended by the pupils of the senior classes of the Hindu and Hooghly Colleges, as well as by some of the students of the College of Fort William.

The Deputy Governor having entrusted to the judgment and intimate knowledge of the subject possessed by the Advocate-general the entire arrangement of a plan of instruction, practical in its nature, and suited to the attainments of the pupils as well as the circumstances of the country to which their knowledge is hereafter to be applied, that gentleman forwarded to us, on the 27th of March 1844, the following Report upon his first course of lectures, which we are anxious to present without curtailment, as a document of much interest upon a subject of considerable importance:—

"On the 12th of October 1843 these lectures were commenced, and they have been continued in a regular course until February last.

"The students of the Hindu and Hooghly Colleges assembled at the College of Fort William every Saturday at 11 A. M., and the lectures generally occupied from one to two hours in the delivery.

"Although the object was from the first to render them as practical as possible, it was absolutely necessary, before entering on a detailed consideration of any particular branch of the subject, to begin with some outline of the Law of Nature and Nations, of the general history of Jurisprudence, and of the different systems prevailing in British India.

"After a few mornings had been devoted to this introductory view, the subsequent lectures were mainly concerned with the English law of personal property, and more especially with that part of it relating to Commerce and Navigation. A knowledge of this branch was well calculated to attract the attention of the native students, as it is not only most interesting in itself, but exercises a powerful influence over the pursuits of the native community in Calcutta.

"A connected view of the Mercantile Law, which is derived from so many sources, and by which property is so variously affected, naturally embraced rather a wide field of investigation, including the leading principles of the Law of Partnership, of Principal and Agent of Shipping and Insurance, as well as the law relating to negociable instruments and other contracts, which the custom and convenience of merchants has rendered familiar to the tribunals of most civilized nations.

"In England it is deemed the best plan to commence a legal education with the study of the law of real property; but in India it appeared to me that this order should be inverted, at all events with regard to the *English* law of real property, which is peculiarly local in its character, and based on reasons which can only be deduced from a close research into the early history of the country. The commercial law is, on the contrary, for the most part, founded on reasons of utility, which are more readily perceived and appreciated by the mind; and it may also be said that, so far from being of merely local influence, its principles are generally recognized among all nations.

"The punctual attendance of the students at the lectures, their manifest attention, and the interest they appeared to take in them, has afforded me the greatest satisfaction, and led me to believe that, notwithstanding the novelty and difficulty of the subject, and the want of a proper supply of books, they would be found, at the termination of the course, to have made as much progress as could have been anticipated under the circumstances.

"On the 20th and 21st of February last, an examination took place, and the result has fully answered these expectations. The papers were, at my request, submitted by the Council of Education to Sir Henry Seton, who kindly favoured them with his opinion of the knowledge and ability displayed by the students who had undergone examination.

"The three following students of each College were selected as having acquitted themselves with the greatest credit:—

HINDU COLLEGE.

Isserchunder Mitter; Anundkissen Bose; Jogeschunder Ghose.

HOOGHLY COLLEGE.

Nowrutton Mullick; Hurrymohun Chatterjee; Gooroo Churn Doss.

"The most distinguished was Isserchunder Mitter, to whom the Council of Education propose to award a gold medal. Several other students appear to me deserving of great praise, and the examination generally has fully satisfied me with the success of this experiment;

---

of a sound and systematic education among the natives of this country, and from my earnest desire, during my residence in India, to devote to the public service all the time and attention I can bestow, consistently with my official and professional duties. It has been a great gratification to me to find this offer has been welcomed by yourself and by others in the spirit in which I intended to make it, and hoped it might be considered. It only remains for me to express my readiness to enter upon a course of lectures with all convenient expedition, and to request that I may be made acquainted with any views the Government may entertain in connexion with this subject, as I cannot but feel anxious on every account to see the proposed objects carried out in the most efficient manner."

ment; and I feel persuaded that the students of the Hindu and Hooghly Colleges only require due encouragement, to attain hereafter to a very considerable proficiency in these studies.

"It was the express wish of the Government that the students of Fort William College should also attend the lectures, and, considering the necessity of some acquaintance with law to those members of the Civil service whose principal duties are of a legal and judicial character, I could not hesitate to further an object of such paramount importance by any means in my power. As, however, the attendance was at my request made *optional*, and as the students of Fort William have only a limited time allowed them for those studies which are *obligatory*, few, if any, could reasonably have been expected to attend. A very strong sense of its importance could alone induce them to undertake so difficult a pursuit, in addition to their other labours. Messrs. Cust and Saunders have, however, attended regularly, as well as Messrs. Mactier and Strachey, during the time they were in Calcutta. With reference, however, to the wishes of the Government, so strongly expressed on this point, I submit that a knowledge of law being admitted to be of such consequence to a large portion of the Civil servants, it is for the Government to consider whether more decided measures should not be entertained, with a view to the continuance here of those legal studies which are so properly commenced at Hayleybury College.

"Many other persons have expressed a desire at different times to be present at the lectures, but it has been thought prudent to confine them entirely to the students, in order that their benefit might be alone regarded, both as to the selection of the matter, and the best method of treating it; I have not, therefore, allowed myself to be diverted from the original purpose of the lectures by any desire to make them popular to other persons, or by any object of an incompatible description.

"What the students chiefly require, is a good Law Library for reference, and adequate text books for their private use; and, from the well-known liberality of many leading members of the native community, I should hope these are wants which will not long continue to be felt. I mention the *native* community, because it is on their account alone that these lectures have been instituted; and, judging from the conversation I have had with several of them, there is no reason to doubt their cordial assistance and co-operation in this undertaking. They seem aware of the great value and importance of such pursuits to the rising generation, and to feel that they are deserving of encouragement, not merely as an intellectual exercise and accomplishment, but as opening a new and profitable field for their energies and abilities. It cannot, indeed, be objected to legal studies, that they have no other tendency than to puff up those who follow them with ridiculous aspirations, or exaggerated notions of their own superiority; in my opinion, such an objection never can be with justice alleged against any well-directed system of education, which, although it may have nothing for its object beyond the improvement of the mind, is nevertheless of inestimable value. The acquisition of knowlege, for its own sake, is a positive good of the most unequivocal description. That kind of self-respect, which has been called the main-spring of all virtue, it may engender; but it must be a strangely-perverted system, indeed, which should produce only vain philosophers, discontented politicians, and conceited men of letters. But even if this objection were tenable in some cases, it is wholly inapplicable here. Jurisprudence is a study which calls forth the highest powers of the mind, the judgment and the moral sense, as well as the memory and inventive faculties; it is, moreover, of great practical utility. There is no reason why it should not be pursued as a profession by the native community with the same advantage as the science of medicine, which has proved in every respect so great a blessing to this country. They are variously employed, as Deputy Collectors, Moonsiffs, Sudder Ameens, Pundits and Vakeels, in the Native Courts, and could not fail to execute their functions more efficiently, if they had some acquaintance with the principles of law. They might also fairly expect to participate in the practice of the Supreme Court itself, which is quite as frequently employed in adjudicating on their rights and properties, as on those of any other class of Her Majesty's subjects."

At the request of Mr. Lyall, the Honourable Sir H. Seaton, one of the Judges of the Supreme Court, kindly undertook to examine the answers of the candidates as mentioned above, and reported to us, that "the result of the examination, particularly with reference to the novelty of the subject, and the necessarily limited means possessed by the students of acquiring information respecting it, was highly creditable to them, and that the examination of *Isserchunder Mitter*, of the Hindu College, appeared to be of the greatest merit."

In consequence of the above, a gold medal has been awarded to Isserchunder Mitter, and a certificate of creditable proficiency to Nowrutton Mullick, of the College of Mahomed Mohsin, at Hooghly.

The lectures are now delivered at the Hindu College, and we have already brought to your notice our opinion respecting the attendance of the students of the College of Fort William, which we respectfully deemed likely to be attended with great advantage to those gentlemen, as nothing is more absolutely necessary for the proper and efficient administration of justice to the natives of this country than an extended knowledge of the general principles of jurisprudence, with their special applications to the regulations, and the Acts of the Supreme Government of India, as well as the Hindu and Mohamudan laws.

The law examination questions, and the answers of Isserchunder Mitter, to whom the Gold Medal was awarded, will be found in Appendix (A.)

Scholarship Examinations.

6. In August 1843, our Secretary was directed to draw up a special report respecting the system of conducting and reporting upon examinations which had obtained up to that time, as

Appendix N.

as the diminished number of the Council rendered it inconvenient for the members of that body to devote the amount of time required, for the due and efficient discharge of one of the most important duties connected with education.

The following extract from the report referred to will exhibit the changes proposed, which were approved by Government, and carried into effect.

" During the early years of the existence of the late General Committee of Public Instruction, the duty of conducting the public examinations of the schools and colleges under the immediate control and superintendence of that body, devolved upon the Secretary, and the results were detailed in special reports furnished by that officer. This continued in force until July 1856, when Mr. J. C. C. Sutherland, the Secretary for the time being, proposed a change in the system, from the increasing and heavy amount of his duties preventing his performing that of Examiner with the degree of efficiency required. He submitted two propositions to the Committee, that a paid examiner should be appointed, or that the duty should be distributed among the members composing the Committee. The latter plan was adopted and approved by Messrs. T. B. Macaulay, Trevelyan, Young, Cameron, Shakspear, Sir Ed. Ryan, Sir Benjamin Malkin, and Captain R. J. H. Birch.

" The only modification since introduced has been in the preparation of written questions for scholarship examinations, which are transmitted to every college to be opened and answered on a fixed day, in order to prevent the possibility of intercommunication or collusion.

" The Council now beg to propose that the examinations for Junior Scholarships shall be conducted, and the papers entirely examined and reported on by Messrs. Sutherland and Kerr, Principals of the College of Mahomed Mohsin and the Hindu College; and that, while the students at the Hindu and Sanscrit Colleges, as well as the Calcutta Madrussa, are answering the questions, a member of the Council shall assist with his presence, the duty devolving upon the members in rotation; and that the same duty shall be performed at the Hooghly College by the Secretary to the Council.

" With respect to the Senior Scholarship students, the Council determined that the papers should be examined and classified by Messrs. Sutherland and Kerr, and the results reported to the Council, and that they should, in addition, select the most advanced and proficient candidates for further examination before the Council, specially convened for that purpose. That, with a view to determine the amount of ready information possessed by each of the superior and selected pupils, a fixed number of *vivâ voce* questions should be asked upon the subjects of the written examinations, and replied to by each pupil separately; the results being duly registered, for the purpose of enabling the Council to determine to whom the Scholarships should be awarded.

" The general examination of the classes in the English departments, and the special examinations of holders of Scholarships to test that they have made the reasonable progress required to entitle them to retain the same, are to be conducted by the appointed Examiners, and the results reported to the Council."

Scholarships.

7. In other respects the examination for Scholarships was conducted upon the plan mentioned in para. 74 of the Report for 1840–41 and 1841–42, with the exception of the questions being printed, with every precaution to prevent their publicity, instead of being lithographed in the Secretary's office, as obtained upon the occasion referred to.

The questions will be found in Appendix (B.), and were drawn up by the following gentlemen, some of them not connected with the Council, who kindly undertook the task at their request.

Senior Scholarships.

Literature - - - - -	The Honourable C. H. Cameron.

Special Scholarship Examination.

8. The special examination of selected candidates was held in the Hindu College on Friday the 22d of December, by the Honourable President, the Honourable F. Millett, and Dr. Mouat, and of this as well as the general results of the other scholarship ordeals, the details will be found in the special report of each college. We will only observe here, that there was a very satisfactory agreement between the results of the *vivâ voce* and of the written examinations.

9. With

9. With respect to the preparation of vernacular class-books, no steps have been taken by us since the publication of our last annual Report, as the matter has been removed from our control and superintendence, by your Honor, and transferred to the Government of Bengal. Vernacular Class-books.

10. We have received private information from the Right honourable Sir Edward Ryan, that the apparatus referred to in para. 30 of our last Report will be selected by himself, in communication with Sir John Herschell and Professor Babbage, and transmitted for the use o our colleges with the least possible delay. Apparatus.

11. The building adjoining the Hindu College, designed for a Normal School, is nearly completed, but we regret that we have not yet been able to furnish the scheme referred to in para. 23 of our last report, quoted in the margin * for readier reference. Normal School.

Our Secretary is now engaged in drawing up a plan upon the subject; but much inconvenience has been experienced from the absence of the published European works of reference mentioned in para. 77 of the same Report; viz.

Reports of the Select Committee of the House of Commons on the state of Education in England and Wales, from 1834 to 1838:

Cousin's Report to the French Government on Education in Prussia.
Ditto ditto in Holland.
Hudson's Account of Dutch and German Schools.
Quarterly Journal of Education.

12. With the Principals of the College of Mahomed Mohsin and the Hindu College we have every reason to be satisfied, and have much pleasure in recording our high sense of the valuable services of Messrs. Sutherland and Kerr, whose ability and zeal in the discharge of their responsible duties and eminent acquirements, have been of continued service to the institutions under their control and management. Conduct of Principals, &c.

From the Hindu College management, the Council of the Medical College and the Secretary to the Mudrissa, we continue to receive every assistance in the discharge of our duties; and during our periodical, as well as unexpected visitations, the state of those Institutions, with the exception of the English department of the Calcutta Madrussa, has been found to be generally satisfactory, and reflecting much credit upon the officers immediately in charge. All details respecting each of them will be found in their special reports.

13. The books referred to in para. 78 of our last Report, have been forwarded to His Royal Highness the Prince Governor of Azerbeejan, through the Government of India. For their selection we were indebted to the kindness of our late colleague Mr. J. C. C. Sutherland, Major J. W. J. Ouseley, and Captain G. T. Marshall. Prince Governor of Azerbeejan.

14. In para. 79 of our last Report, it was mentioned that certain Arabic works printed at Cairo, were shortly expected for the use of the Oriental Colleges under our control. These reached us in July last, and consisted of the following works: Books from Egypt.

Pathology, by Mahomed Herawee. Treatise on Descriptive Geometry, by Mahomed Bagumi. Geography, by Leich Ruffeah Bedmoe. Biography of Celebrated Philosophers. Physio, Abrégé de l'Histoire Ancienne, Physical Geography, Traité d'Agriculture, Tables des Logarithmes, Geométrie de Legendre, Legigne de Darmarsais, Hygiene, Algebra.

The late Mr. Sutherland undertook to examine and report upon them for our information and guidance; but his death having prevented the execution of this design, the task has been kindly undertaken by Dr. Aloys Sprenger, an Arabic scholar of some repute in Europe, who has recently arrived in this country in the medical service of the Honourable East India Company.

15. Mr. Boutros, Principal of the Delhie College, having compiled from the works of Bentham and Dumont, an elementary treatise on the Principles of Legislation, forwarded it to us, for introduction as a class-book into our colleges, should it be approved of. It was accordingly carefully examined by the Honourable Mr. Cameron, who recommended it for the purpose, and copies have been supplied for the use of the senior classes in the Hindu and Hooghly Colleges, and English Department of the Madrussa. Boutros' Principles of Legislation.

16. In January last the Government directed us to take into our consideration, and report our opinion as to whether any objections existed to such a modification of the present system, as would allow senior scholars in the Government Institutions to hold their Scholarships simultaneously with other employment, subject to the prescribed annual examination. Employment of Scholarship Student.

The following extract from the Government letter exhibits the reasons assigned for, as well as the cause of the reference:

" It is not clear that any precise orders on this subject have ever been passed either by the

* "We are not at present, however, in possession of sufficiently detailed and specific information as to the exact method in which it would be most advisable to organize and conduct a Normal School of the nature and for the objects required; but as the subject is one of great interest and importance, it shall receive our earliest and best attention, when furnished with the necessary documents from Europe regarding the systems of primary instruction adopted in Prussia and Switzerland, with the modification of them that has been more recently introduced and followed in England. By means of these, we hope to be able to suggest a plan especially adapted to the peculiar state and wants of education in this country."

Appendix N.

the Government or the late General Committee of Public Instruction; and though the acceptance of employment has been commonly held to vacate a scholarship, yet the expediency of this practice in regard to senior scholarships appears to his Honor deserving of careful deliberation, and whatever be the result arrived at, it may be at all events advisable to lay down a definite rule for the future."

"By the rules in force Senior Scholarships are tenable for six years, subject to an annual examination, for the purpose of testing whether the incumbents have or have not made during the preceding year a reasonal progress in their studies. What the requisite degree of comparative proficiency may be, has never been, and perhaps could not easily be defined, and is properly left to the discretion of the examiners; but it may be a subject of reasonable question how far it is advantageous to the scholar or to the public, that he should be obliged to acquire that proficiency by a constant attendance at the school or college, rather than by a partial attendance, or even by prosecuting his studies whenever it may be most convenient for him to do so.

"So long as a senior scholar is enabled to prove at the annual examination that his studies have not been neglected, and that he has made during the year sufficient progress to enable him to retain his scholarship, it would appear to be of at least equal advantage, that the rest of his time should be devoted to active employment without, rather than to inaction within, the walls of the college; and if he fails to evince the necessary progress, the argument would still more forcibly apply, for the rules prescribe no intermediate test; and as they contain nothing to prevent a scholar from spending a whole year after the examination in doing nothing, why, it might be asked, should they be held to prevent him from spending the same interval in useful and profitable pursuits? The result at the ensuing examination would probably not be less favourable in the latter case.

"It frequently happens, as the Council must be aware, that the junior masters of the Government schools are obliged, by sickness or other causes, to be temporarily absent on leave from their duties. Their places could on these occasions be most readily and fitly supplied from among the most successful students of the colleges, who would, while so employed, be acquiring experience most useful to them and to the public in the profession of teaching, to which they are, in many cases, eventually to belong. But no scholar will give up a stipend which he knows he can, with ordinary exertion, retain for a certain number of years, for a salary of slightly greater amount, which in all probability he will not be able to retain for as many months. It is, therefore, necessary to look to an inferior class of students for filling up temporary vacancies, as well as those permanent teacherships, of which the salaries are not higher than the stipends of senior scholars.

"A case of this description has very recently occurred, and has given rise to the present reference."

We reported, that as Scholarships were instituted for the express purpose of enabling students to devote themselves entirely to literary pursuits, and thereby attaining a higher standard of acquirement than they could or would otherwise do, it was feared that the application of scholars to other subjects would tend in a great measure to defeat the object for which their Scholarships were bestowed. At the same time we were of opinion, that the rule might be relaxed without injury, in the case of Scholarship holders performing the duties of junior masters in the institutions to which they belonged; the more especially as these would always be only acting appointments, and for a limited period. In all other respects, it was deemed desirable to adhere strictly to the regulations now in force.

Hooghly College Visitation.

17. In August our Secretary was directed specially to visit and report upon the state of the College of Mahomed Mohsin at Hooghly, and its branch institution. An abstract of the Visitor's remarks will be found in the Special Report of the college to which they refer. In consequence of the state in which the Oriental Department was found, it was deemed advisable to introduce a plan for greater regularity and duration of attendance, as well as a graduated system of study. Upon the recommendation of the head Mouluvees, the following scheme was adopted experimentally by the Council, and the Principal of the college has been directed to forward a Special Report of the results of its introduction, when it shall have been in force a sufficient length of time to enable him to judge of its effects.

Specification of Books for the classes in regular gradation.

1st Grade, Soonnee Law.

Hidayah, Touzeeh, Tulmeeh, Moosullum and Dair.

1st Grade, Shia Law.

Mafateeh Shurhi Loom Sharaya, Zubdatool-Usool Maalunooloosool.

Books.

1st Grade, common to both Soonnee and Shia Head Mouluvees.

Sudea, Shumsbazgah, Shurah Chughuminee, Mootnubbee, Qazee Moobaruck, Mootoul, Hindoollah, Tareekh Tymooree, Mybizee Qoothee, Zahidya.

2nd Grade, Books common to two Mouluvees.

Ashbah, Soolum, Mookhtasaremanee Qootbee Narool Anwar, Sharh Viqaya Tuhreer, Ooqlidis, Kholasatoolhisab, Tymooree Traez.

Books

Appendix N.

Books to be taught by the two Mouluvees of the 3d Grade.

Qualuqool Shurhi, Tuhzeeb, Shurhi, Waqaya Nooroolanwar, Nafatoolyaman, Nimut Khan Ali, Zoohooree, Qusayied, Oarfier.

Books to be taught by the four Mouluvees of the 4th Grade.

Ajaeb ul oojab, Mirzan, Munteg, Shurah Moolla, Hidayetul noho, Hafiqa Toosool Akbary, Nufhutool yaman, Bidaya, Clami Abassee, Hydayet ul Suruf, Akhowan ul Suffa Allamee, Asool Joomool, Tutimma Shurh Imal, Anwar Soheilee.

Books to be taught by the three Assistant Teachers.

Muzan, Moonshaub, Tusrief, Kholosutool-towareekh, Dastoorool, Sikunder Namah, Yewsufzelukha, Ghulistan, Boastan, Akhlay Mohsinee, Roushun Ali Nami Hag Pundnamah. The Alphabet.

Second visitation in April.

18. In April last a second visitation took place, partly in consequence of a riot which had occurred in the Oriental Department, when the Council directed the following address to be read to the students in Hindoostanee, for the purpose of expelling those who were mentioned, and deterring others from banding together to interrupt the harmony and discipline of the institution. Dr. Mouat reported that he assembled the Mouluvees and scholars, and thus addressed them :—

" The Council of Education have heard with much regret and unqualified disapprobation, that a disgraceful riot has occurred in the Oriental Department of this college, produced by direct and wilful disobedience of their orders, on the part of certain evil-disposed and unworthy students. It appears from the ample evidence which has been afforded to the Council, that several students attempted to pass out of the college gates before the proper time for doing so had arrived, and on being prevented by the Durwan, they afterwards united with others in considerable numbers, and assaulted the man in a cowardly, unmanly, and highly insubordinate manner, being neither checked by the active remonstrances of Mouluvee Akber Sha, nor the passive presence of the other Mouluvees, for whose position no proper respect or deference was exhibited.

" The Council cannot deprecate in too strong terms such improper proceedings, and, to show their firm determination to check and crush all insubordination and disobedience of their orders, have authorized me publicly to expel those who have been convicted of taking part in this transaction; viz.

Ghoolam Mahboob,	Syud Aman Ullah,
Faizelut Hossen,	Mahomed Hossein Kermani,
Athar Ali,	Ahmedhi,
Syud Abdoollah,	Hyder Alee,
Sheik Abdoollah,	

as utterly unworthy to remain longer within the walls of this college, which they would disgrace by their presence. A similar punishment will be hereafter inflicted upon any others who may be convicted of being implicated in this, or any similar riotous and unscholar-like proceeding. To Mouluvee Akber Sha I am directed by the Council to return their best thanks, and to express their high approbation of his proper and spirited interposition in favour of the Durwan, who was illegally assaulted in the faithful discharge of the duties entrusted to him. With respect to Meer Mohomed and the remaining Mouluvees, the Council regret that they cannot approve of their conduct upon the occasion, in having passively witnessed so discreditable a proceeding, without exerting at once their authority in repressing it, and assisting Mouluvee Akber Sha. The duty of the teachers in every institution, is not only to instruct the classes entrusted to their care, but to exercise a moral control over the pupils, and assist the heads of the establishment in maintaining strict order and discipline. The Council trust they will never again have to complain of any hesitation or want of proper spirit, in the due and efficient discharge of *all* their duties on the part of the Mouluvees in this Madrussa.

" In conclusion, I am ordered by the Council distinctly to declare, that they will never hesitate to punish every dereliction from duty, and support the authority of the Mouluvees and Principal in maintaining good order and discipline, and that they will use every means in their power to procure the punishment of all who are found to encourage the students of this Madrussa in resisting their authority and control."

New Scholarship Regulations.

19. The Scholarship rules heretofore in operation, and contained in pp. 206 to 211 of the Report of the late General Committee of Public Instruction for 1839–40, having been found in many respects unsuited to the present state of our institutions, and generally too indefinite, we have drawn up, in communication with Mr. Beadon, Under Secretary to the Government of Bengal, and Messrs. Sutherland, Ireland and Kerr, a complete and new code of regulations upon the subject, applicable to the Mofussil institutions, as well as to those under our immediate control, which is at present under consideration, and will be submitted at an early period for your Honor's approval. Our best attention has been directed to the framing of such rules as shall provide against many of the difficulties inseparable from every system of examination, as well as raise gradually the standard of knowledge acquired by the pupils in our colleges.

In connexion with this subject, we directed the Principals of our colleges to introduce into their senior classes the systematic writing of themes and essays as a distinct branch of

Appendix N.

study for all pupils who are candidates for senior scholarships, upon the following plan; viz. that a fixed period for writing and presenting essays be adopted, so as to interfere as little as possible with the other studies of the students, that the subjects selected be such as will tend to exercise the mind of the students in reasoning generally, as well as enable them to acquire a pure style of composition, and that a few of the best essays be occasionally forwarded to the Council for their perusal, and to enable them to judge of the degree of attention bestowed upon the subject, as well as the progress of the pupils. The themes are intended to be prepared at their own houses by the students, with free reference to all acces sible authorities, so that when called upon to compose an essay in the Scholarship examination, they may be prepared to do so, with a knowledge of the best mode of treating any subject generally, with order, method and perspicuity.

Vernacular Studies.

20. Our attention has been specially directed during the past year to the state of vernacular studies in our schools, particularly as respects the causes of the decline of the Patshala. These were found to arise from the daily decreasing demand for vernacular information in Calcutta and its vicinity, the raising of the fees for studying in the Patshala, and the withholding of admissions to the Hindoo College at a more advanced age than our rules permit of, to the most proficient pupils of the Bengalee school. With a view to obviate some of these difficulties, and at the same time give the greatest possible amount of encouragement to vernacular studies consistent with the present general system of education pursued in our institutions, we called for reports from the Hindoo College management, and the Principal of the College of Mahomed Mohsin.

The primary objects contemplated in the establishment of the Patshala were to "provide a system of national education, and to instruct Hindoo youths in literature, and in the sciences of India and of Europe, through the medium of the Bengalee language." To carry out these objects, the school was placed under the control and direction of the Hindoo College management. When the school began to decline, with a view to raise its importance in the estimation of the native community, an application was addressed by the management to the Council of Education to relax the 37th rule (quoted in the margin * for readier reference), but the Council would not sancion the proposal, as it was never contemplated that the Patshala should form a stepping-stone to the college, with exclusive privileges contrary to general rules; besides which, the very different designs of the two institutions rendered such a proceeding incompatible with the professed objects of either.

The management reiterated their proposal, on the grounds that the system of vernacular tuition pursued in the Patshala required at least five years to make tolerable progress; *that no native of Calcutta would consent to give his children Vernacular to the detriment of English education*; that under the operation of the 37th rule, a boy educated in the Patshala, allowing time to make reasonable progress, was not admissible to any of the Government Englsh schools; that the middle and lower classes of native society were hardly sensible of the importance of a superior system of vernacular education at a higher rate than that charged in the indigenous village schools, and that consequently, unless specific inducements were held out, they would not send their children to the Patshala. The inducement proposed, was the modification of the rule above quoted, substituting ten years for eight, and the bestowal of five free admissions to the Hindoo College as prizes to the most successful students. Unless this were done, it was reported that the institution would cease to exist.

Our opinions upon the matter remained unchanged; but, to encourage the acquisition of a good vernacular education, we called for information as to the actual amount of vernacular knwledge now generally possessed by candidates for admission to the English departments of the Hindoo and Hooghly Colleges, for the purpose of elevating, if necessary, the standard of Bengalee acquirement, at the limitations of age at which applicants are now admitted, in conformity with our regulations. Our late colleague, Mr. J. C. C. Sutherland, together with Baboo Prosoono Coomar Tagore, reported as follows:—

"In pursuance of the resolutions of the managing Committee, we attended at the college to investigate the attainments of the younger elèves of the institution in their vernacular tongue.

"We examined six boys of the lower school, all of whom, except one, had been recently admitted, and with the exception of that one, their ages are those of seven or eight years. The age of the other boy alluded to is eight years, and he belonged to the 1st division of the 4th class.

"We also examined three pupils of the Patshala, the age of each of whom is eight years; some of them had been two years attached to the institution.

"The attainments of the examined boys of the Hindoo College in Bengalee were very indifferent. The younger read with much difficulty passages from Æsop's Fables in Bengalee, composed in an easy style. The lad aged 12 years was also an indifferent Bengalee scholar. On the other hand, the examined boys of the Patshala read with fluency and explained with accuracy, and appeared to be well grounded in grammar as far as they had read.

"It thus appears that the Bengalee instructions received by children in the houses of their fathers is very limited and indifferent.

"We are of opinion also, that the system of Bengalee instruction in the Hindoo College is imperfect. The teachers complain of want of class-books, a complaint which ought to have been before made and remedied.

"We

* No boy, whose age exceeds eight years, shall be admitted, unless he can read correctly, and with a good pronunciation, the Second Number of the English Reader of the School-book Society.

"We recommend that, in the junior department, the time devoted to writing and reading Bengalee be increased.

"With the exception of a Bengalee Dictionary, we believe class-books can be procured, and it only wants the encouragement of the Council of Education to supply the want of a dictionary. We understand that such a work has been compiled by Gopal-loll Mittre, and that competent native judges have approved of it.

"We also recommend that the Bengalee teachers whose classes are ill taught, after warning, be removed. The diligent teacher may be encouraged by increase of salary.

"We recommend that no candidate, whose age is that of eight years or more, be admitted in the college unless he can fluently read the Nithi Kotha or Æsop's Fables, and write from a copy."

This report was not adopted by us, because the standard already fixed by the rules of the Hindoo College is higher than that recommended. We, however, increased the time allowed for studying Bengalee, directed the necessary text-books to be supplied, and a more strict surveillance to be exercised over the Pundits, in order that any found guilty of inattention or neglect of duty should be at once dismissed. In addition to this, to compel our pupils not only to keep up their Bengalee studies, but to advance to a higher stage than they have yet attained, we have in our new rules determined that every candidate for a Senior Scholarship shall write an essay in Bengalee, upon some subject which will oblige him to convey European information through a vernacular medium. These measures will, we trust, prove adequate to arrest the growing neglect in this city of vernacular studies.

In the college of Mohamed Mohsin, the state of the Bengalee classes was found to be perfectly satisfactory, and no change of standard required.

Calcutta Madrussa.

21. In the English department of the Calcutta Madrussa we have, under the orders of Government, effected several important changes, the details of which will be found in the special report of that institution.

The dismissal of Mr. G. W. Bagley, the late Second Master, for inefficiency and gross neglect of duty, together with the other means adopted for stimulating the Mohamedan pupils to the acquisition of a sound English education, will, it is hoped, meet with a greater degree of success than we have heretofore succeeded in obtaining. We have not yet been able to overcome the prejudices of the higher classes of Mussulmans to European knowledge, the causes of their opposition to which are too well known to need repetition here. One of the chief drawbacks to their entering our English class, is the rule which precludes their admission after the age of eight years, unless they possess a certain amount of information, which none of them acquire at that early period. The children of the higher classes of Moslems seldom leave the parental roof before the age of 10 years, and their parents are unwilling to allow them, in public institutions, to associate in the same classes with those of inferior rank. These circumstances have been represented to us by Hafiz Ahmed Kubeer, and their accuracy is coincided in by the other Mouluvees of the Madrussa. We shall, therefore, direct our best attention to the subject upon the appointment of a permanent successor to Major Ouseley.

Rules for leave, &c.

22. A new code of regulations for leave of absence, and travelling and acting allowances to Principals and others employed in the education service, have been forwarded by Government to us, and adopted in the institutions under our charge.

Messrs. R. N. Cust and Seton Karr.

23. During the past year, Messrs. R. N. Cust and Seton Karr, of the Bengal Civil Service, presented certain sums of money to be bestowed as prizes to the students of the Sanscrit and Hindoo Colleges, in the manner detailed in the special reports of those institutions. Our best thanks were returned to those gentlemen for their liberal encouragement of education, and we were directed in addition to communicate to them the satisfaction with which your Honor witnessed, on the part of two of the most distinguished students in the College of Fort William, a disposition to advance the cause of native education, which reflected the highest credit on themselves, and afforded the most gratifying evidence that their minds were already imbued with a just sense of the obligation imposed upon them, of promoting to the utmost of their power the happiness and welfare of the people.

Having thus concluded our general introductory remarks, we proceed to lay before your Honor the Special Reports of the various institutions under our management, arranged as on previous occasions, and exhibiting an abstract of the proceedings of the year.

---

24. HINDOO COLLEGE.—28th Year.

Managing Committee on the 30th April 1844.

The Honourable C. H. Cameron	President.
Maharaja Mahatab Chunder, Bahadoor	Member and Hereditary Governor.
Baboo Prosonno Coomar Tagore	Ditto ditto.
The Honourable F. Millett	Member.
F. J. Mouat, Esq.	Ditto.
Baboo Radhamadub Banerjee	Ditto.
Rajah Radhakant Behadoor	Ditto.
Baboo Ram Comul Sen	Ditto.
„ Sree Kissen Singh	Ditto.
„ Dwarkanath Tagore	Ditto.
„ Russomoy Dutt	Ditto and Secretary.

Appendix N.

Establishment on the 30th April 1844.

Mr. J. Kerr, M.A.	Principal.
Mr. V. L. Rees	Professor of Mathematics.
Mr. J. Rowe	Professor of Surveying.

Senior Department.

Mr. G. Lewis (Mr. Halford acting)	Head Master.
Mr. R. H. Halford (Mr. Brennan acting)	2d ditto.
Mr. R. Hand, jun.	3d ditto.
Baboo Ram Chunder Mitter	4th ditto.
Pitumber Bhuttacharjea	1st Pundit.
Ramnarayen ditto	2d ditto.

Junior Department.

Mr. R. Jones	Head Master.
Mr. T. Sturgeon	2d ditto.
Baboo Iswer Chunder Saha	3d ditto.
„ Ram Tonoo Lahory	4th ditto.
„ Horo Chunder Dutt	5th ditto.
„ Gopee Kissen Mitter	6th ditto.
„ Bissonath Sing	7th ditto.
„ Coylas Chunder Bose	8th ditto.
Mr. A. Guise	9th ditto.
Brij Joy Gopal Set	10th ditto.
„ Sreenath Bose	11th ditto.
„ Horo Sunker Doss	12th ditto.
Juggomohun Bhattacharjea	1st Pundit.
Callydoss Bhattacharjea	2d ditto.
Gouri Churn ditto	3d ditto.
Luckhinarayen ditto	4th ditto.
Bacharam Goopto	5th ditto.

Establishment of the Patshala on the 30th April 1844.

Baboo Khetromohun Dutt	Superintendent.
Rommanath Surmono	1st Teacher.
Horonath Nyarutton	2d ditto.
Nemy Churn Dey	3d ditto.
Bissonath Goopto	4th ditto.
Soojokanth Surmono	5th ditto.
Treporaro Goopto	6th ditto.
Benymadub Dass	7th ditto.

Establishment of the School Society's School, on the 30th April 1844.

Baboo Radamadub Dey	Head Master.
„ Greesh Chunder Dey	2d ditto.
„ Saroda Persad Biswas	3d ditto.
„ Tarac Chundro Ghose	4th ditto.
„ Benylall Mittro	5th ditto.
„ Mudhusudon Mullic	6th ditto.
„ Sreenath Ghose	7th ditto.
„ Brejolall Mittro	8th ditto.
„ Khetro Chunder Sicdar	9th ditto.
„ Radhicapersad Goopto	10th ditto.
„ Sreenath Dutt	11th ditto.
„ Muttellall Mittro	12th ditto.
„ Oma Churn Banerjea	13th ditto.
„ Khetro Chundro Dhara	14th ditto.
„ Gopal Chundro Ghose	Supernumerary Master.
„ Gopal Chunder Ghose	Librarian.

25. Since the publication of the last Annual Report, the following changes have taken place in the instructive establishment of the College; viz.

Captain D. L. Richardson, the Principal, resigned on the 19th April 1843, and has proceeded to Europe.

Mr. J. Kerr, M.A., the late Head Master of the Senior Department, was promoted to the situation of the Principal on the same date.

Mr.

Mr. G. Lewis, late Head Master of the Allahabad School, was appointed Head Master of he Senior Department on the 1st September last.

Mr. E. Lodge, the Professor of Political Economy, having been appointed Principal of the Agra College, his place in this institution remains vacant, and with the last-mentioned exception, the instructive establishment is complete and efficient.

26. The construction of the two new buildings, or lecture rooms, is in a state of forwardness.

		Co.'s Rs.
The estimate of the cost sanctioned by Government amounts to		19,597 15 10
Funds on hand, and advance to the Civil Architect, amount to -		18,700 14 10
Unprovided for - - - *Co.'s Rs.*		897 1 –
Exclusive of the additional estimates for erecting two covered passages for easier communication between the old and the new buildings - *Co.'s Rs.*	491 – 8	
And for digging the foundation deeper, in consequence of the very bad ground on the eastern range of the buildings - - - - - -	65 – –	
		556 – 8
TOTAL unprovided for - - - *Co.'s Rs.*		1,453 1 8

27. The report of the Principal as to the regularity, cleanliness and general conduct of the students of the Senior Department, is as follows:—

"The boys in general behave well. In the book kept for the purpose of recording serious instances of misconduct, only 10 names have been entered during the year; and of these, the greater part are entered for faults arising more from thoughtlessness than deliberate insubordination, or wilful neglect of duty. Some of the cases occurred during the absence of the Head Master. It rarely happens, as far as I have observed, that the students, when in the class-room, under the eye of their teacher, are otherwise than most obedient and attentive."

28. In the Junior Department the Head Master reports, "The boys are in general clean, and neatly attired. The general conduct of the students during the past year has been very good."

It may be observed, that no decrease has taken place in the annual amount of collection for tuition; on the contrary, the present year has a slight advantage over the past; the amount realized being in 1842–43, *Rs.* 27,354. 13. 9.; and in 1843–44, *Rs.* 28,872. 8. 6.

In all the classes the interrogative system is followed. In no other way, the Principal thinks, can the attention of the students, more particularly of the younger classes, be effectually kept alive day after day, or so much knowledge be acquired in an equally short time. It is not, however, followed without deviation, so as to exclude every other method. As the students advance to the higher classes, they become more capable of deriving benefit from instruction conveyed in the form of lectures; and this method is in fact adopted to a considerable extent in the fisst class, in the subjects of law, political economy, general literature and mental philosophy. The Principal is at present engaged in delivering a course of lectures on the last of these subjects, treating it under the following heads:—

1. Origin of our ideas.
2. Of Memory.
3. Imagination.
4. Reason.
5. Association of ideas.
6. The distinction between the affections and the intellectual faculties.

Up to this time he has gone over the first three heads, each requiring for its full exposition three or four lectures, exclusive of revision by question and answer, which occupies several hours more.

29. On the last-mentioned subject the Principal remarks, "During the absence of Principal Richardson, on leave for four months, and the subsequent vacancy, for about the same period in the office of Head Master, Messrs. Halford and Giblin, in particular, exerted themselves strenuously to support the efficiency of the institution. I feel it to be due to Mr. Halford to take this opportunity of stating, that his abilities, long service, and enthusiastic attachment to his profession, point him out as peculiarly deserving of promotion when a suitable vacancy shall occur."

30. There is every reason to believe that the institution continues to be held in the highest estimation by the native community.

31. The conduct of the Scholarship holders is reported by the Principal to have been perfectly satisfactory.

Appendix N.

32. The Scholarship and Annual General Examinations of the Senior Department took place under the immediate superintendence of the under-mentioned gentlemen :—

For Senior Scholarships.

Literature, superintended by	- -	The Honourable C. H. Cameron.
History - - - -	ditto - - -	J. C. C. Sutherland, Esq.
Geometry - - -	ditto - - -	C. C. Egerton, Esq.
Algebra - - - -		
Trigonometry - -		
Natural Philosophy,	ditto - - -	J. Kerr, Esq.
Essay - - - -	ditto - - -	The Honourable C. H. Cameron.

For Junior Scholarships.

Grammar, superintended by	- - -	C. C. Egerton, Esq.
History - -	ditto - - - -	F. J. Halliday, Esq.
Geography -	ditto - - - -	Baboo Russomoy Dutt.
Arithmetic -	ditto - - - -	G. Lewis, Esq.
Translation -	ditto - - - -	J. C. C. Sutherland, Esq.

33. The Junior Department was examined by Messrs. J. Kerr and G. Lewis, the Principal and Head Master of this institution.

The Scholarship Examination Papers were examined by Mr. J. Kerr, Principal of this institution, and Mr. J. Sutherland, Principal of the Hooghly College, and they reported as follows :—

" In this college there were 61 candidates for Senior Scholarships, including the gainers of those awarded last year. Two have left the college, and the rest are entitled, on the principle then recognised, to a renewal of their tenure, having attained considerably above a third of the highest aggregate number assigned to the set of papers ; so that, according to that rule, none are forfeited. Chundichurn Singh and Chundronath Moitree, as will be seen by reference to the numbers attained by them, have acquitted themselves least creditably of the holders of Senior Scholarships : this is owing, probably, to their not having regularly attended ; one has been absent 67 days of the past year, when the college was open to study, or exclusive of all holidays, an absence for which he pleads sickness ; Chundronath Moitree, 73 days, on leave obtained from the managing committee.

" Although no Senior Scholarships are forfeited unless the Council should otherwise decide, two have been vacated during the year ; one of 30 rupees a month, by Gobindchunder Dutt, who has left college, and one by Nobinchunder Ghose, ditto ditto, of 12 rupees a month.

" These, we would propose, subject to the decision of the Council, to award thus : To Juggodishnath Roy, that of 30 rupees ; to Issurchunder Mittre, that of 12 rupees. The superiority of Juggodishnath Roy is so marked, and under the circumstances so very creditable, that we feel bound to bring it prominently before the Council.

" This youth is the holder of a Junior Scholarship, and yet he has attained a number that places him next to, and very nearly on a par with Pearychurn Sirkar, who is first among the candidates for Senior Scholarships, and has held one for two years.

" Of the holders of the last year's Junior Scholarships, Bissumbhur Banerjea has not made the reasonable progress required, and therefore that assigned to him is forfeited. One Scholarship is vacant, and another will be vacated by Juggodishnath Roy's advancement to a Senior Scholarship, should the Council concur in our award ; so that three will have to be filled up of the value of eight rupees each ; these we propose to award to—1. Harogobind Sen ; 2. Kedarnath Sen ; 3. Callyprosunno Dutt, who have attained numbers considerably above the standard required."

* The Hon. C. H. Cameron.
F. Millett, Esquire.
F. J. Mouat, Esquire.

† 1. Juggodishnath Roy.
2. Issurchunder Mittro.
3. Kissubchunder Ghose.
4. Nobinchunder Paulit.
5. Nilmadub Mookerjea.
6. Shibchunder Dutt.
7. Shamachurn Bose.
8. Coylaschunder Mookerjea.

After a special examination on the 22d December 1843, by the Members of the Council of Education, named in the margin,* of eight pupils named in the margin,† who attained the highest number in the Scholarship Examination, the Council of Education has awarded the appropriation of the vacant Scholarships as follows :

SENIOR SCHOLARSHIPS.

1. Rajnarayen Bose, holder of Senior Scholarship of 30 rupees for two years, promoted to the one vacated by Pearychurn Sirkar, of rupees - - - - - - - - - - - -	40
2. Dinnobundoo Day, ditto, ditto, ditto, by Madubchunder Rooder, rupees - - - - - - - - - - -	40
3. Juggodishnath Roy, holder of a Junior Scholarship, promoted to Senior Scholarship, vacated by Gobinchunder Dutt, rupees	30
4. Issurchunder Mittro, *vice* Rajnarayen Bose, promoted, rupees -	30
5. Chundronath Moitree, holder of Senior Scholarship of 18 rupees, for two years, promoted, *vice* Dinnobundhoo Dey, rupees - - - - - - - - - - - - -	30
Carried forward - - -	140

Brought forward - - -		140
6. Kessubchunder Ghose (Gopeemohun Deb's), *vice* Chundronath Moitree, promoted, rupees - - - - - - -		18
7. Nobinchundro Paulit (Joykissen Sing's), vacated by Nobinchundro Ghose, rupees - - - - - - - -		12
	Rs.	200

Junior Scholarships.

1. Horogobindo Sean, *vice* Juggodishnath Roy, promoted, rupees - - - - - - - - -	8	
2. Kiddernath Sen, vacated by Rajendernath Mittro, rupees -	8	
3. Callyprosunno Dutt, *vice* Bissumbhur Banerjea, failed to make reasonable progress, rupees - - - -	8	24
	Co.'s Rs.	224

so that all the Scholarships allotted to the institution continue to be filled.

34. Certificates under the printed rules are to be given to the four Senior Scholarship holders, viz.—1. Pearychund Sircar; 2. Madhubchunder Rooder; 3. Govinchunder Dutt; 4. Nobinchunder Ghose, who have left the college.

35. On the examination of the Junior Department the Examiners report: first class Reading and Explanation, very good; Grammar, generally correct; Geography, rather retrograding; Arithmetic, good; and "on the whole in a highly efficient state, creditable alike to the industry and intelligence of its immediate teacher, Mr. Hand, and to the able superintendence of the Head Master, Mr. Jones."

Second class, first division, very creditable, and "great equality of attainment; a result which reflects great credit on the system pursued by its teacher, Baboo Ramchunder Mittre."

Second class, second division, also very creditable, and "has been systematically well taught." Third division, a marked difference as regards progress between this and the second division, and pronunciation defective.

Third class, first division, satisfactory. The exertions of its teacher, Issurchunder Saha, are spoken of favourably.

Second and third divisions, not systematically examined.

Fourth class, first, second, third, and the fourth divisions good, and in good training.

36. In vernacular, the students of the Junior Department were examined by Premchand Turkobagish and Ramgobindo Seeromony, Pundits of the Sanscrit College; and they report that the third and fourth classes have given more satisfaction than either the first or the second; that no Bengalee class-book is used in either of the two last, and the boys are made to learn only by means of translations from the English works they read, a system which the Examiners recommend to be avoided, and the reading of suitable class-books introduced. This has been remedied, and the first and second classes will receive, like the other classes, combined instruction in vernacular, by means of translations and reading of class-books.

37. The library has, during the year, been increased by the addition of several valuable works, among which are Whewell's History of the Inductive Sciences, and Sharon Turner's Sacred History of the World; the latter presented to the library by the Honourable the Deputy Governor of Bengal.

38. With reference to the 39th para. of the letter from the General Committee of Public Instruction, No. 1,035, dated 30th October 1840, to Government, noted in the margin,* 22 students, named in the margin,† offered themselves as candidates to be examined for the prize; but they have not been examined this year in consequence of the candidates having expressed their wish not to be examined until after the Scholarship examination had been concluded, when there was neither time to arrange the manner, or select the matter, required for such an ordeal.

39. Mr. Seton Karr, of the Civil Service, has forwarded a donation of 50 rupees, to be bestowed in a prize or prizes to one or more meritorious students of this institution, at the discretion of the Council of Education. The Council has resolved to let the appropriation stand over until next year.

40. The finance of the institution continues in a healthy condition, the collection of schooling enabling the Committee to meet the disbursements without drawing on Government to the full extent of the assignments allotted to the college.

* 39th. We propose to award to the most deserving student who has made the greatest advancement in general knowledge, during the year, from the use of the library books, a gold medal to each college, and a silver medal to each preparatory school at the annual examination.

First Class.

† 1. Samachurn Bose.
2. Kessubchundro Ghose.
3. Rajnarain Bose.
4. Isserchundro Doss.
5. Issurchunder Mittre.
6. Gopallall Roy.
7. Greshchunder Ghose.
8. Coylas Chunder Mokerjee.
9. Nobocoomar Singh.
10. Shibchundro Dutt.
11. Kessenchundro Ghose.
12. Chundronath Moitree.
13. Juggodishnath Roy.
14. Omeshchundro Bose.

Second Class.

15. Sreekissen Dutt.
16. Nundolall Day.
17. Hurrydass Dutt.
18. Obhoychurn Bose.
19. Greshchunder Bose.
20. Gungadhur Cornocar.
21. Dwarkanath Day.
22. Boikantnath Sen.

Appendix N.

PAUTSHALA.

41. The number of students on the roll in the month of September was 174, and on this day (30th December 1843), 185; average attendance from 1st October 1842 to 30th September 1843, 156. The establishment has been proportionably reduced.

42. The students were examined by the two Pundits of the Sanscrit College named above, and they remark that all the classes have acquitted themselves very satisfactorily, which indicates that the teachers have diligently performed their duties during the past year.

SCHOOL SOCIETY'S SCHOOL.

43. There were on the roll of the school in the month of September 1843, 459 students; pay 153, and free, 306; and on this date (30th December 1843), pay 182, free 283; total, 465. Average attendance from 1st October 1842 to 30th September 1843, 397.

44. This school was examined in General Literature, &c. by Mr. Halford and Mr. Giblin, second and third Masters, senior department of the Hindoo College; and in Mathematics by Mr. Rees, Professor of Mathematics, ditto.

45. Mr. Halford examined the 1st, 2d, 3d, 11th and 12th classes, and reports, "My examination of the 1st, 2d and 3d classes consisted of oral reading (for which I selected a passage from Irving's Sketch Book, and another from Thomson's Seasons), a set of dictated questions on the meaning and grammatical constructions of two other pieces, the one from Brougham's Miscellanies, and the other from Cowper's Poems, and a set of questions on history and geography.

"The result was quite satisfactory to me as respected the general intelligence of the pupils; but the oral reading of most of them was very defective, and their handwriting more slovenly than I expected to find it. A remarkable exception, however, to these defects requires particular comment. The papers given in by Sreenath Bose, a little boy of the 2d class, were models of neatness and correctness (especially when his standing is considered), both in regard to handwriting and mode of expression, while his manner of reading was excellent, though inanimate.

46. "In examining the two junior classes which fell to my share, I found their reading and spelling, apart from idiomatic faults of pronunciation, very fair, and was struck with the remarkable equality of the greater portion of boys in each of these classes."

47. Mr. Giblin examined the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 13th and 14th classes, and reports, "I examined the boys in reading, with explanations in geography, English grammar and parsing, spelling, &c. as the enclosed papers show; and in general the replies were very satisfactory to myself, and creditable to both teachers and boys: much pains have evidently been taken with them. Their pronunciation in reading is somewhat deficient."

48. Mr. Rees examined the 1st, 2d and 3d classes in Mathematics, and reports, "I have much pleasure in reporting generally of the state of advancement in mathematics.

"Knowing Baboos Radhamadub Dey and Saradapersad Biswas to be superior scholars in mathematics, I proposed much more difficult questions than I should otherwise have done; but I was agreeably surprised when, on examining the papers, I found all the questions nearly and correctly answered not only by the first class, but by many of the second.

"I regret my inability to give expression in the language it deserves of the merits of the two above-named teachers."

49. With reference to the 94th para. of the Report for 1842–43, submitted to Government by the Council of Education (*vide* page 48 of the last Annual Report) on the subject of erecting a building for the school-house on the ground belonging to the Hindoo College, the Government has agreed to advance 3,000 rupees for the purpose, to be repaid by monthly instalments of 50 Company's rupees, provided private subscription to a similar amount could be raised. The private subscriptions up to this period amount to 1,720 Company's rupees, and the managers have no hope of obtaining much more, if any, so that it will be necessary to apply to Government for an increase of advance to the amount of of 4,000 or 4,500 rupees, repayable as conditioned, in which the managers anticipate no difficulty, out of the surplus schooling charges.

Law Lectures.

50. The senior students of the college have, during the past year, had the advantage of attending a course of lectures on law, delivered by the Advocate-general once a week, between the months of October 1843 and February 1844.

51. An examination of the students of this institution who attended these lectures took place on the 19th and 20th February last. The answers to the questions were examined by Sir H. Seton, who adjudged the prize of a gold medal to Issur Chunder Mittro.

Prize for proficiency in Adam Smith's Moral Sentiments.

52. The prizes for proficiency in Adam Smith's Moral Sentiments, given by the President of the Council of Education, were contended for at this institution on the 11th March.

53. The answers to the questions were all written in the presence of the President without reference to books or other assistance.

54. The

54. The answers were examined by the President, and he awarded the gold medal to Annundkissen Bose, and the silver medal to Rajnarain Bose, whose papers will be found in Appendix (C.) Appendix N.

---

55. SANSCRIT COLLEGE.—23d Year.

Conducted by the Council of Education.

Establishment on the 30th April 1844.

Russomoy Dutt	Secretary.
Ramchandar Bidyabageesh	Assistant ditto.
Haranath Tarkabhusen (Gangadhar Tarkabageesh Acting)	Professor 1st Grammar Class.
Gangadhar Tarkabageesh (Prancrishna Bidyasagar Acting)	Ditto, 2d ditto.
Ramgovind Gosye	Ditto 3d ditto.
Joy Gopal Tarkalankar	Ditto Sahitya ditto.
Premchandar Tarkabageesh	Ditto Alankar dito.
Yogadhan Misra	Ditto Jyotish ditto.
Joynarayan Tarkapanchanan	Ditto Nyaya ditto.
Bharetchandar Seromoni	Ditto Smrite ditto.

English Department.

Russiclall Sen	Head Master.
Syamacharn Sircar	Second ditto.

Office Establishment.

Ramdhone Gangooly	English Writer.
Madhu Rao	Librarian.
Narain Josee	Devnagree Writer.
Ramraton Chatterjee	Bengalli ditto.

56. The instructive establishment of the institution is complete and efficient, with the single exception of the class of Ancient Literature and History of the Hindoos, which was established last year on the abolition of the Vedant Class; but it not having succeeded so well as was expected, on the death of its Professor, Kumlakant, on the 8th October last, no successor to him has been yet appointed.

The number of students on the roll this year amounts to more than the last: at present (31st December) there are in the Grammar classes—

1st	23	
2d	25	
3d	33	
		81
Sahitya Class		24
Alankar Class		10
Nyaya Class		9
Smriti Class		19
Total		140

Total on the roll on 30th September	134
Average attendance between 1st October 1842 to 30th September 1843	89

In the English Department there are 75 students on the roll at present (31st December), and on the 30th September last there were 69. The average attendance during the period above-mentioned has been 55.

57. The three grammar classes were examined by the Assistant Secretary, Ramchunder Bidyabageesh, and the result is reported to be satisfactory. The Scholarship Examinations were conducted by Captain G. T. Marshall and the Assistant Secretary, and they report as follows:

"Of the candidates for Senior Scholarships, the first 14 in the tabular list submitted, are qualified; among these again, the acquirements of the first five on the list are of a distinguished character.

"Of the candidates for Junior Scholarships, the first 15 on the list have, in our opinion, established their claims.

"With reference to the general performances of the students examined by us on this occasion, we beg to state our opinion, that their acquirements are very satisfactory, and reflect credit on themselves and their teachers, and there is every reason to hope that this institution, if favoured with a share of attention and encouragement, will, by the joint

Appendix N.

operation of its two departments, Sanscrit and English, turn out men eminently fitted to become connecting links between the European and the Hindoo, and worthy channels of conveying a correct knowledge of the sciences, the literature, and the philosophy of the one to the other."

The Scholarships have been all taken up this year, with the exception of two of the Senior and one Junior Scholarship. One of the Junior Scholarships has been gained by an out-student. A list of the names of the Scholarship-holders is annexed.

58. The English Department was examined by Mr. George Lewis, the Head Master of the Hindoo College.

The 1st class was examined in History, Grammar and Geography, and the Examiner reports, " I think both master and pupils deserve credit for having effected so much as has been done in so short a space of time."

Of the 2d class the Examiner reports, " The studunts are grown-up young men, and have only recently commenced the study of English. They attempted to explain in English what they read to me, and succeeded but indifferently. Their parsing was also unsatisfactory; nevertheless, I am fully aware, that more could not have been effected by the master in the time, and under the circumstances referred to."

The circumstance alluded to by the Examiner is the difficulty of the class-books, both in this and the first class, which has been remedied.

Of the third class, the Examiner remarks, " I observed with pleasure, that these were nearly all younger than the pupils of the senior classes."

" They read more correctly, with reference to accent and pronunciation, than those youths, but they were unable to give answers in English to the questions I put to them."

The studies of the fourth, fifth and sixth classes being merely elementary, the Examiner says, " They explained in the Bengalli with facility what they read before me. These lads also pronounced what they read with considerable correctness."

And in conclusion, the Examiner remarks, " On the whole, I am of opinion, that as much has been achieved by both the teachers and pupils of the English Department of the Sanscrit College, considering the very brief period of its existence, as could reasonably have been expected."

59. Mr. Cust, of the Civil Service, having been present at the examination of the students of this institution, was much pleased with their performances, and generously placed 102 rupees in the hands of the Council of Education, to be distributed among the pupils according to the under-mentioned scheme, viz.:—

		Rs.	
English first class -	No. 1	16	
„ „	No. 2	12	
Second class,	No. 1	14	
„ „	No. 2	10	
			52
Best Sanscrit Essay -		30	
Best Bengalli Essay		20	
			50
		Rs.	102

Captain Marshall kindly offered to undertake the special examinations on the Sanscrit and Bengalli Essays, and it was Mr. Cust's wish, that the prizes for English should be awarded according to the result of the examination by Mr. Lewis.

Captain Marshall examined seven candidates on the 29th December 1843, in Sanscrit Essay, and 10 candidates, on the 2d January 1844, in Bengalli Essay; and awarded the Sanscrit prize to Neelmadhub, and the Bengalli prize to Srishchundur.

The English prizes are awarded in accordance with the result of Mr. Lewis' examination:—

		Rs.
First Class -	No. 1 to Dwarakanath	16
„	No. 2 to Joygopal -	12
Second Class,	No. 1 to Srischundur	14
„	No. 2 to Priyanath	10

60. On the 3d January 1844, Mr. J. C. C. Sutherland, Secretary to the Law Examination Committee, Sanscrit Department, held an examination of candidates for law diplomas, under Regulation XI. of 1826. Two students (Biswanath and Ramchunder) and two ex-students (Sumboonath and Kalidas) underwent the examination. They were tried by a scheme of 10 questions: the answers of Biswanath were adjudged to have entitled him to a diploma. There were 16 students on the Roll, of the Smriti Class, on the 31st December 1843; but the reading of Biswanath and Ramchundur only entitled them to challenge examinations for diplomas. In conclusion, the Examiner remarks, " It is expected, that next year the candidates will be more numerous."

61. List of the Scholarships awarded to the Students of the Government Sanscrit College, 1844.

			Rs.	Rs.
1.	Dinobundhu	(promoted)	20	
2.	Srishchunder	„	20	
				40
3.	Hurischunder	„	15	
4.	Chundramohun	„	15

23.	Ramgopal		8	
24.	Ramcrishna		8	
25.	Hullodhur (out student)		8	
				120
				Co.'s Rs. 280

62. The Honourable Mr. Bird was present at the distribution of prizes at the Hindoo and Sanscrit Colleges, and delivered the following speech:—

"Although there is nothing particularly calling for remark in the operations of the past year, yet I do not like to break up this assembly without expressing, generally, my satisfaction at the result of these operations, and my warm and sincere acknowledgments to the gentlemen under whose superintendence they have been conducted. I am quite sure that much good has been done, as much as under existing rules and regulations was practicable; and I am satisfied that, under the able direction of the President, Mr. Cameron, whose services in the cause of education, as well as government, I am happy to announce, has been secured for another lustrum, everything will be done to render the Hindoo College what it should be—an institution for promoting, in the utmost possible degree, the mental enlightenment and the moral regeneration of the native youth of Bengal.

"In one particular connected with the operations of the past year, I am, I confess, a little disappointed—I mean in regard to vernacular education. In the *Patsala*, which was established expressly for this purpose, the scholars, as appears from the Report, have fallen off from 252 to 158, without any reason assigned. But this is not all: the expectation entertained that the Sub-Committee would, before this time, have succeeded in compiling vernacular class-books, has been disappointed; I have, however, taken steps which I hope will accelerate this desirable object. You are all, of course, aware that the Supreme Government have transferred the superintendence of native education to the subordinate Governments of Bengal and Agra; and I have consequently made arrangements with the Lieutenant-governor for the preparation, under his superintendence, of vernacular class-books in Hindee and Oordoo, for the Provinces under his government, leaving only class-books in Bengallee to be compiled here. By these means, the object in view will, I hope, be speedily accomplished.

"I must now advert, on the other hand, to two circumstances which I think can only be viewed with gratification. The one mentioned in the report, namely, the lively interest taken in these institutions by two young gentlemen of the College of Fort William, Mr. Seton Karr and Mr. Cust. There is something peculiarly pleasing in the disposition thus evinced by the European students to promote the welfare of India, in the appropriation of a portion of the rewards earned by them for distinguished proficiency, to the encouragement of similar distinction amongst their native fellow-students: it may be said of this, as has been said of *mercy*, 'It is like the gentle rain from heaven falling on the place beneath.' The other circumstance, which is not alluded to in the report, is the offer of the Advocate-general, Mr. Lyall, to deliver lectures on law for the benefit of the Hindoo College. I am able to state on his authority, that the students are apparently profiting greatly by the lectures, and that their eagerness and application affords the learned Advocate the highest satisfaction. Such disinterested efforts to benefit our native fellow-subjects are highly creditable to the parties concerned, and are worthy of all commendation.

"I will now, gentlemen, detain you no longer. I will only add, that the deep interest I feel in the welfare of India will always incline me, wherever I may be, to hear with pleasure

Appendix N.

sure of your proceedings, calculated as they are to disseminate truth and eradicate error, and to direct the mind of the rising generation to those pursuits which can hardly fail, in process of time, to raise the character and promote the happiness of the population at large."

---

63. CALCUTTA MADRISSA.—20th Year.

Detailed Establishment of the Calcutta Madrissa on the 30th April 1844.

Arabic Department.

Dr. F. J. Mouat, M. D.	Officiating Secretary.
Hafiz Ahamud Kubeer	Native Assistant Secretary.
Molovy Mohommed Wujeeh	Principal.
Molovy Busheerooddeen	2d Preceptor.
Molovy Noorool Huq	3d Preceptor.
Molovy Mohommed Ibrahim	4th Preceptor.
Molovy Khadem Hossen	1st Preceptor.
Molovy Mohumud Muzhur	2d Preceptor.
Molovy Ahmud Hossen	3d Preceptor.
Molovy Hubeeboon Nubbee	4th Preceptor.
Molovy Abdoor Ruhem	Professor of Regulations.
Loke Nath Roy	Writer.
Molovy Ajeeb Ahmud	Librarian.
Hafiz Ahmud Kubeer	Khuteeb.
Mohomed Qudir	Mouzzin.
Molovy Mohomed Saweed	Pensioner
Hajee Mohomed Mahmood	Ditto.

English Department.

Mr. A. Y. Martin	Head Master.
Mr. F. C. Vaughan	2d Master.
Mr. J. E. Clinger	3d Master.
Mooktaram, Pundit	Bengalee Master.
Juggut Chunder Roy	Librarian.

64. The course of study for the past year in the Arabic Department of the Madrissa, has been the same as usual. Lectures have been daily delivered from 8 A. M. to 2 P. M. on the following subjects, viz., Law, Rhetoric, Logic, Mathematics, Algebra, Natural History, General Literature, Grammar, Arithmetic, and the Regulations of Government.

The Principal Molovy, Mohomed Wajeeh, gave lectures on Logic and on the higher Law Books; the Logic Class attached to the Professor consists of 32 students, and the Law Class of 16. The 2d Professor, Molovy Busheerooddeen, lectured daily in Rhetoric to 22 students, on the Initiatory Law Books to 10 students, and on General Literature to 14. The 3d Professor, Molovy Noorool Huq, lectured on Philosophy to 25 students, and on the Elementary Law Books to 13. The 4th Professor, Molovy Mohomed Ibrahim, gave lectures on Asool, or Principles of Law, to 41 students. Molovy Khadeem Hossen, 1st Assistant Professor, instructed 15 students in Geometry and in the Law of Inheritance. Molovy Mohummed Muzhur, 3d Assistant Professor, instructed 43 students in Arithmetic and Algebra. Molovy Hukeem Ahmed Hossen taught 30 students in General Literature, and 14 of the junior students in Logic. Molovy Hubeeboon Nubbee taught Arabic Grammar to 18 students, and the Law of Inheritance to seven more. Molovy Abdoor Ruheem lectured on the Regulations of Government to 20 students, and on General Literature to eight of the more advanced students in that department. The Assistant Secretary, Hafiz Ahmed Kubeer, occasionally gave lectures on General Literature, Law, &c.

65. The number of students attached to the Arabic Department of the Madrissa is 165: of this number 31 competed for Senior, and 20 for Junior Scholarships, at the late examination. Eleven succeeded in obtaining Junior Scholarships on that occasion.

Fourteen students having completed the period of study, obtained certificates, and have left the college.

The English Department consists of three divisions, containing 102 boys. The senior division, containing 17 boys, is instructed by Mr. Martin, the Head Master; the 2d, containing 27 boys, by Mr. Vaughan, the 2d Master; the 3d, containing 59 boys, by Mr. Clinger, the 3d Master.

In consequence of the reports of the Head Master and Dr. Mouat respecting the state of the 2d division, the Council of Education considered it necessary to dispense with the services of the 2d Master from the 30th September. His place has been supplied by Mr. Vaughan, late Head Master of the Chittagong School, and there is every reason to expect a speedy improvement in this division.

66. The

66. The examination for Scholarships in the English Department was held in September, and the following are extracts from the Examiner's report :—

" In this institution there are only three candidates, as per margin, for Senior Scholarships, not one of whom comes up to the required standard. Abdool Luteef and Wuheedoon Nubbee retain their Junior Scholarships."

Abdool Luteef.
Wuheedoon Nubbee.
Nuzur Alee.

" In the Mudrissa there are only two candidates for Junior Scholarships, neither of whom comes up to the required standard."

Rousheen Alee.
MohomudMuhmood.

67. The general examination of all the students attached to the Mudrissa took place in July last. Examination of the Arabic Department was conducted by Hafiz Ahmud Kubeer, Mooftee Wares Alee, Molovy Mohomud Wujeeh, Molovy Busheerorddeen, Molovy Noorool Huq, Molovy Ajeeb, Molovy Wares Alee, Moulvee Hubeeboon Nubbee, Molovy Ghoolam Abed and the Secretary; that of the English Department by Dr. Mouat, assisted by Mr. Kerr.

68. The following is the report forwarded by Dr. Mouat upon the subject:—

" I have the honour to report that, pursuant to instructions from the Council of Education, I conducted the examination of the English Department of the Madrissa on Saturday the 22d, and Tuesday the 25th days of July, the examination in both instances extending over the greater part of the day. On the latter occasion I requested the assistance of Mr. J. Kerr, Principal of the Hindoo College, which was kindly afforded, as I did not consider my acquaintance with mathematics sufficiently extended to enable me to elicit the actual amount of information on those subjects possessed by the pupils of the first class."

The following is an abstract of Mr. Kerr's report to me :—

Students.	*Subjects of Instruction.*
* Abdul Luteef.	History.
Waheedoon Nubee.	Geometry (3 Books of Euclid.)
Nuzur Alee.	Algebra (Simple and Quadratic Equations.)
Mohommed Hossen.	Arithmetic.
Mahamood.	Natural Philosophy.
Roushan Alee.	Geography.
	Grammar.

" The first class consists of the six students, whose names are given in the margin.* Only five, however, were examined, one of them, Roushan Alee, being absent.

" The first two in the list, who are holders of Scholarships, are quite ahead of the rest of the class. Abdul Luteef in particular passed a most creditable examination. He demonstrated with great readiness two propositions of the Third Book of Euclid, and two deductions from Euclid of moderate difficulty, besides answering correctly several questions in simple equations of algebra, and in fractions and proportion of arithmetic. In these same subjects, geometry, algebra and arithmetic, Waheedoon Nubbee, though inferior to Abdool Luteef in quickness, and also, as far as I could judge, in real proficiency, is very much in advance of the other three. Indeed these three know very little of arithmetic, and scarcely anything of geometry and algebra.

" In history, geography and grammar, there is not the same irregularity among the students. In the first of these branches, Nuzzur Allee is at least equal to any of the others, and even Mohomed Hossen and Mahamood, though decidedly the most backward of the class, gave very intelligent answers in this branch, as well as in geography and grammar.

" In natural philosophy only a few questions were proposed on the general properties of matter, the mechanical powers, vision and the construction of the eye. The answers were for the most part correct.

	Subjects of Instruction.
* Mouzzum Hosen.	History of England.
Abdool Wahed.	Euclid, 16 Propositions.
Futtey Khan.	Arithmetic, Prop. and Practice.
Deen Mohomed.	Geography—Grammar.
Waris Alee.	Dictation.
Ameen Ooddeen.	Lessons on Objects.
Mohomed Jan.	
Man Khan.	
Abdool Hameed 1st.	
Abdool Hameed 2d.	
Edoo.	
Asalut Khan.	

" As the pupils of the above class are about to contend for Scholarships, none of them are eligible or recommended for prizes. Of the pupils of the second class, 12 in number, as per margin,*—of whom two were absent, Waris Alee and Iman Khan—I regret that I am unable to give so favourable a report as I could wish. Part of the deficiency exhibited by the pupils was doubtless due to the prolonged illness and absence of the Head Master, Mr. Martin.

" In the History of England none passed a particularly good examination, their knowledge being confused and defective, and their pronunciation generally bad. In Euclid, in which they had only learnt as far as the 16th Proposition of the First Book, Mohomed Jan was very perfect, Abdool Hamed second, and Mouzzum Hosen pretty good, the remainder being all more or less deficient. In arithmetic, *Abdool Hamed* first and second, and Edoo, were very fair—the rest indifferent. In geography, none were above mediocrity; in grammar, *Ameen Ooddeen* and *Abdool Hamed* first were the only good ones; in dictation, *Mouzzum Hosen* was the best, *Mahomed Jan*, *Abdool Hamed* first, *Edoo* and *Asalut Khan* good, and the rest bad.

" The Lessons on Objects were of too trifling a nature and extent to demand the record of any judgment. With respect to attendance, *Mohomed Jan* and *Ameen Ooddeen* had each obtained 12 tickets, or one for every month in the year, and I beg therefore to recommend them for prizes. *Deen Mohomed* had obtained 11 tickets, and is therefore deserving of being mentioned with praise; *Asalut Khan* had nine tickets. The attendance of the remainder of the class was most unsatisfactory. In Euclid, I consider *Mohomed Jan* entitled to a prize, and in dictation *Mouzzum Hosen*; the proficiency in other branches I do not deem sufficient to entitle any pupil to any distinction. *Abdool Waheed*, a pupil aged 17, who has been in the institution since 1838 without making any progress, and is reported to be dull, idle

Appendix N.

idle and inattentive, I consider unworthy of being retained, there being little chance, from failure after so long a trial of his turning out well.

"With the second division, composed of the third and fourth classes, and consisting of 27 boys, I was not at all satisfied; their pronunciation was defective, their information limited, even in the books which they had read, and their general progress by no means creditable to the master by whom they were taught. I cannot attribute this deficiency to the lads themselves, some of whom appeared to be naturally sharp, intelligent, and quite capable of retaining instruction had they been properly and efficiently taught. I can only therefore suppose it to be due to the carelessness and inefficient method pursued by their teacher.

* Bhoday Alee.
Dhunun.
Imdad Khan.
Nessar Ahmud.
Dooman Khan
Abdool Quasem.
Velayet Hosen.
Nowab Jan.
Noor Allee.
Mehur Alee.
Kurrum Alee.
Abdoollah.

Subjects of Instruction.
History of Bengal.
Lennie's Grammar.
Geography, Europe, Asia and Africa.
Lessons on Things.
Arithmetic—Rule of Three.
Dictation and Writing.

"Of the third class, as mentioned in the margin,* in the History of England, *Nasserahmud* alone passed a fair examination; in grammar, none were above mediocrity; in geography, *Nowab Jan* only was tolerably proficient; in arithmetic, none were deserving of favourable mention, nor did any excel in dictation and writing. The lessons on objects they were better acquainted with, but their progress was not sufficient to deserve any testimonial. The attendance of the class was irregular, only one lad, *Abdool Qusem*, possessing 12 tickets; to him, therefore, I recommend the attendance prize to be given. *Nassir Ahmed* and *Nowab Jan* alone deserve favourable mention, but I do not consider them entitled to a prize.

* 1. Goolam Wahed.
2. Abdoolleh.
3. Zumeerooddeen.
4. Sheer Alee.
5. Sunaoollah.
6. Sultan Alee.
7. Ghoolam Usajud.
8. Kyash Khan.
9. Abdool Hulleem.
10. Mohamed Saber.
11. Peer Mohomed.
12. Nasseeroodeen.
13. Nooroollah.
14. Dabenooddeen.
15. Munur Khan.

"The fourth was somewhat better than its predecessor; it consisted of 15 boys, as noted in the margin,* of whom the last-named died of cholera during the past year.

"In reading, none were deserving of mention; in grammar, the progress of the class was only middling; in spelling, none were very perfect; in arithmetic, *Gholam Wahed* was very good, and deserving of a prize. *Suna Oollah* was very fair, and the rest good, with three exceptions, *Sheer Alee*, *Abdool Hallem* and *Nusser Ooddeen*. In dictation and writing, the result was only middling. *Abdool Kill* alone obtained 12 tickets of attendance, and is entitled to a prize for the same; three lads in the class, viz. *Sheer Alee*, *Abdool Hallem* and *Mooroollah*, appeared so deficient in industry and capacity, as to be unworthy of being retained in the college or class.

"With the Junior Department I was well satisfied, the boys, with very few exceptions, being quick, intelligent and evidently well taught. The fifth and sixth classes, consisting of 11 boys, as noted in the margin,* were generally well acquainted with most of the subjects taught, but their studies were of too elementary a nature to need any particular detail. *Fuzloor Ruhim*, *Jamsheer Khan* and *Faizallee* are deserving of prizes, but none merit any such distinction for regularity of attendance; two only, *Dost Mohomed* and *Abdool Ghoffoor*, possessing 10 tickets.

"The last class, consisting of 47 boys, whose ages varied from 5 to 10, is a very promising collection of lads, almost all of whom I consider likely to turn out well. Their studies were so perfectly elementary as to admit of no special report, nor am I able to point to the best two or three as deserving of prizes. This, I think, from the result of the examination, had better be determined on the report of the master, as to whom he considers best entitled to it from general good conduct and promise, their amount of information, as far as they have been taught, being so nearly equal, as to make it difficult for me to decide."

69. The Bengalee classes consisted of 24 students; the Pundit instructs them from half-past 6 until half-past 10 A.M. daily. The general proficiency of this department is considered satisfactory by Captain Marshall, who examined it.

Major J. W. J. Ouseley having embarked for Europe on furlough, Dr. Fred. J. Mouat was authorized by Government to officiate as Secretary, pending the appointment of a permanent incumbent to the office.

By the demise of Sreenauth Roy, the Bengalee Master, on the 15th June 1843, the office became vacant, and was filled up on the 26th of the same month by the appointment of Mooktaram, a Pundit in the Junior Department of the Hindoo College.

Abdool Wuhud, the Mouzzin of the Madrissa, having absented himself without leave for three months from his duties, was dismissed by order of the Council of Education, and *Mahomed Quader*, a pupil in the Arabic Department, appointed to succeed him from the 1st of May.

70. His Honor the Deputy Governor of Bengal presided at the annual distribution of prizes and diplomas to the students of the Madrissa, and, in consequence of the unsatisfactory state of the English Department, directed a communication to be made by the Secretary to the Government of Bengal to the Council upon the subject, of which the following extract will exhibit the tenor and purport:—

"The

"The Oriental Department is in all respects very satisfactory, and highly creditable to Major Onseley, the Superintendent, to whom his Honor requests that the Council of Education will have the goodness to express in suitable terms the acknowledgments of Government for his zealous and successful exertions in the cause of Mahomedan education.

"The English Department is not so satisfactory. There are only five students in the college who attend both the Oriental and English Departments. There is only one pay student, and the majority of the boys appear to be the sons of petty shop-keepers, who scarcely allow them to remain long enough at the college to acquire any thing beyond a very elementary and imperfect knowledge of English. The remainder are the sons of moonsiffs, pleaders, moulvees and writers in public offices.

"Not one of the pupils, his Honor understands, is likely to turn out a superior English scholar, so that the object originally in view, namely, to afford a sound English education to the Mahomedan community, is in danger of being lost sight of, and the sum of 8,000 rupees per annum, which is laid out for the accomplishment of this object, is most unprofitably expended.

"His Honor directs me to draw the attention of the Council of Education to the Rule passed by the late Committee of Public Instruction on the 5th of October 1838, which prescribes that pupils whose object is merely to obtain a smattering of English, and whose views in life do not extend to the attainment of a sound English education, shall not be allowed to attend gratuitously at the English school, unless they belong to the Arabic Department of the Madrissa, and he hopes that this rule in future will be undeviatingly adhered to.

"His Honor would also wish the Council of Education to consider whether, in conjunction with a more rigid enforcement of the rule above cited, English instruction in the Madrissa might not be placed on a less expensive, as well as on a more efficient footing; at present the expenditure is very large, no proportionate good is effected by it, and his Honor is rather inclined to apprehend that the system, as hitherto carried on, is making but little progress in reconciling the higher orders of the Mahomedan people to the advantages of an English education."

71. Dr. Mouat was directed by the Council of Education to examine into the subject, and report the result to the Council for the information of Government, which was accordingly done on the 8th of April, the whole of the English Department of the Madrissa having been specially assembled and examined for the purpose.

The following is an abstract of the report referred to, which was adopted by the Council of Education, forwarded to Government for information and orders, approved of, and directed to be carried into effect without delay:—

"I found that in the Senior and Junior Departments there were five students exempt from payment from studying in both the Arabic and English Departments, and amongst them the only pay scholar in the institution. Thirty-nine were willing to pay, according to their circumstances, from 1 to 3 rupees each; and the remainder, 56 in number, were both unable to pay and unfit to remain in the institution, as their object was evidently only to acquire a sufficient knowledge of English to enable them to accept menial employment in European families; I therefore directed their names to be struck off the rolls.

"I have no doubt that this measure will be attended with much ultimate good to the school, although it has reduced the number by more than one-half already.

"I enclose, for the information of the Council, copies of the muster-rolls of the pupils, together with lists of those who are willing to pay, and the sums they can afford for the purpose. I fear that if a fixed scale of payment be adopted, the numbers in the school will be still more considerably reduced, and that a sliding scale of from 1 to 3 rupees each, according to the means of the parents or guardians, is the best adapted for this institution.

"In consequence of the present decrease in the number of pupils, I beg leave to propose that the school be divided into two divisions, and that the first consist of the 18 most advanced lads, and the second of the remaining 26, to be arranged in two classes each, according to their relative proficiency.

"This will enable the Council to dispense, for the present, with the services of one master, and thus materially reduce the expenditure of the department. As Mr. Martin, the Head Master, has, however, proceeded to sea on sick certificate for 12 months, it remains for the Council to decide in what manner the reduction can be best effected."

Mr. Martin, Head Master of the English Department, having again become unable to discharge his duties from illness, was granted leave of absence for 12 months on sick certificate, and Mr. Vaughan directed to take charge of his classes. No new master has been appointed, in consequence of the decrease in the number of scholars above mentioned.

The triennial repair of the buildings having become due, has been ordered by Government to be effected by the Civil Architect under the direction of the Military Board.

73. Surgeon C. C. Egerton, Medical Member of the Council of Education, having been appointed by Government to succeed Dr. Grant as Examiner to the College, assisted by Surgeons Nicolson, Garden, Cameron, Forsyth, Thomson, Johnston, Stewart, Finch, and Chapman, as Assessors, conducted the annual general examination for certificates of qualification.

The following is a List of the Students who presented themselves for final examination, viz. :—

NAMES.	Age.	Caste.	Length of Time in the College.	Number of Days Absent during the last Year.	Character.	REMARKS.
Stipendiary Students :			*Yrs. Mths.*	*Days.*		
1. Kally Kisto Nundy	23	Telly	6 7	-	Dull, but well disposed	Gained certificate of honour.
2. Uzair Khan	19	Mahomed	4 0	3	Sharp, but inattentive	Clinical Clerk 2 months and Dresser 2 months; gained 2 prizes of 100 rupees and 32 rupees.
3. Dwarkanauth Chatterjee	20	Brahmin	4 0	None	Good	Ditto 2 ditto, ditto 2 months.
4. Purmesser Shaha	21	Banniah	4 0	Ditto	Unexceptionable	Ditto 6 ditto, ditto 4 ditto, Midwifery Hospital 4 months.
5. Dinnobundoo Day	21	Banker	3 11	Ditto	Ditto, a very superior lad.	Ditto 10 ditto, gained a prize of 150 rupees, and a circlet of merit.
6. Kally Churn Lahory	21	Brahmin	3 11	Ditto	Good and attentive	Ditto 2 ditto, and Dresser 2 months.
7. Russick Loll Dutt	21	Writer Caste	3 11	Ditto	Ditto	Ditto 2 ditto, ditto 2 ditto.
8. Dhurmodoss Bose	20	Ditto	3 11	4	Very good indeed	Ditto 2 ditto, ditto 2 ditto.
Free Students :						
9. L. D'Souza	20	Christian	4 5	4	Rather more attentive	Ditto 6 ditto, and Dresser 2 months.
10. E. Lazarus	19	Ditto	3 10	1	Very good	Ditto 9 ditto, ditto 5 ditto.
11. L. Weygesinghe	22	Ditto	2 5 and 3 years in Ceylon.	None	A steady, good student	Ditto 4 ditto, ditto 2 ditto.

74. The Examiner reported, that, " according to the established custom of the college, the first day was occupied by the candidates in writing a paper on two subjects submitted to them, the one to test their proficiency in medicine, and the other in surgery. From these papers it is satisfactory to observe, that they all appear to possess sufficient knowledge of the English language to express themselves neatly, readily and clearly; the only exception being Kally Kisto Nundy, whose paper is remarkably defective in construction and spelling. In the annexed sheet, the result of the several examinations from day to day is so completely given, that it needs but a few words to point out those candidates who were considered qualified to receive the letters testimonial of the college, and those who were rejected.

Of

Of the rejected, there are four, and of these *Kally Kisto Nundy, Uzair Khan* and *Dwarkanath Chatterjee* failed upon nearly all subjects; but when it is considered that they began their education at the college only four years ago, there is no reason to despair of their passing a very good examination next year. The disappointment they have experienced upon the present occasion will be a stimulus to greater exertion, and the advantage they will receive from a five years' education, instead of four, will very probably have the happiest effect upon their future career. The fourth rejected was Kaly Churn Lahory, who got on pretty well upon most subjects, but broke down in surgery: he has scarcely been four years at the college, and may resonably be expected to pass a very good examination next year.

75. "The following are those who are deemed qualified, and their names are given in the order of their respective merit:—

Purmessor Shaha.	L. De Souza.
Dinnobundoo Day.	Durmodoss Bose.
E. Lazarus.	Russickloll Dutt.
L. Weygesinghe.	

"The two first passed excellent examinations: it would be difficult to say which was the better of the two. The next four passed very good examinations; and the last, Russicklall Dutt, a very fair examination; and had he not been ill and nervous, would, no doubt, have passed a better.

"The excellent examinations passed by Purmessor Shaha and Dinnobundoo Day prove most satisfactorily that the means of acquiring knowledge are to be found at the college, and, therefore, that when students are deficient in their acquirements, it must arise from a want of application on their part, or from a want of capacity to learn, or from a want of sufficient time to acquire a requisite degree of knowledge, and the last is, probably, the true cause, four years being a very short time in which to acquire proficiency in the healing art.

"With regard to the last day's examination on practical anatomy and surgical operations performed on the dead body, it may be stated that several exceedingly neat dissections were made in a very short space of time, namely, of the neck, of the axilla, of the fore part of the thigh, of the parts of hernia, of the sacro-sciatic region, and Glissen's capsule; and with regard to the surgical operations, that the students appear to be gradually becoming more familiar with the mode of using surgical instruments. If there were but a hospital containing any tolerable number of surgical cases, so that the students might witness operations more frequently, there is no reason to doubt that they would acquire the usual facility of operating that students attain to in the hospitals of Europe."

76. Since the last annual report, no changes have occurred among the Professors. In the buildings, many alterations have been and are being carried into effect, which will add materially to the completeness and efficiency of the institution. The new operating theatre has been completed, and is in occupation, both for the special objects for which it was designed, and as a lecture-room. The building for the Ceylon pupils will be ready for occupation in a few weeks: that for the House Surgeon and Staff Serjeant is in the course of erection, and new dissecting-rooms have been commenced, as well as certain out-houses, which were much required for the comfort and convenience of the pupils.

The Secretary to the College now resides on the premises, and exercises (in conformity with the regulations sanctioned by Government), a general superintendence over the internal economy of all departments of the college, as well as the out-door dispensary, and has succeeded in putting a stop to most of the irregularities and mal-practices heretofore complained of. In the large central quadrangle a garden has been laid out, containing a considerable number of medicinal and other plants, which serve for the instruction of the pupils, as well as improve the appearance and neatness of the compound.

During the past session, the general good conduct and regularity of attendance of the great majority of the pupils have been satisfactory, many not having been absent once during the whole period of study. At the same time the College Council regret being compelled to report that, among a few of the idle and ill-disposed students—all junior in the institution—a spirit of quarreling, contention and neglect of their studies has occurred, which has been reported to and punished by the Council of Education. Two of these pupils, Nilcomul Mitter and Callychurn Doss, have left the institution, and their places have been supplied by others at the examination for the admission of candidates to fill up vacancies in the stipendiary class. The Council trust that they will not again have to report any misconduct or breaches of discipline on the part of the students, means having been taken to enforce proper obedience, put a stop to irregularities, and ensure regularity of attendance and diligent attention to their studies.

77. In the classes of Anatomy, Demonstrations and Dissections, Medicine, Surgery and Midwifery, no special record is required, the general condition of the classes being satisfactory, while the plan of instruction followed, and all other details, are in accordance with the reports already published.

In the classes of Chemistry and Materia Medica, the Professor has reported, that, in consequence of being unable, in the short time allowed, to complete the former course without neglecting the latter, he entrusted the second division of it to his assistant, Mr. Andrew Robertson, who cheerfully and willingly undertook this extra duty, and performed it with his accustomed zeal, ability and success, as ascertained by the results of the general examination.

Appendix N.

examination. The Professor is particularly anxious to place on record his high sense of the value of this excellent officer's services to the institution, by the aid of which the pupils have received, during the past academic session, an average of five lectures a week upon Chemistry and Materia Medica. The former course, in compliance with the instructions of the Council of Education, has been strictly confined to the relation which chemistry bears to medicine, with the occasional introduction, incidentally, of such subjects as are important in the arts and manufactures of this country. The second division of the course of Materia Medica was concluded, but in a more hurried manner than the Professor could have wished, from the limited number of lectures allowed, 16 instead of 12 per month being deemed the minimum in which justice can be done to so extended and complicated a subject.

78. The officiating Professor of Botany has forwarded a detailed report of the class, system of instruction pursued, and a general view of the subject, which the College Council are anxious to present without curtailment, as they deem it an important document upon a subject of much interest in this country.

78. Mr. Griffith states that, " In the class of Botany, the system of instruction followed was that published in the Rules and Regulations of the Medical College, section 2, in which the main object in view was to ascertain how far the students could profit by a course of philosophical botany, for it was presumed that general principles constantly and systematically presented to them would be of much greater interest and utility to them, than isolated, unarranged, and dry details of partial forms and partial properties.

"The course having been completed early in October, a few lectures on Physiology as applicable to Horticulture were given, and the course ended with a general view of the relations in sturcture and properties of the families which had been lectured upon.

" The system proposed in the rules was likewise followed up in the application of that part of the grant of money available for the class of Botany; and copies of Lindley's Elements, Introduction to Botany, Introduction to the Natural Orders, and the article Botany in the Library of Useful Knowledge, were placed in the Library.

" The attendance upon the whole was regular, that of the senior students especially so; so were likewise their weekly visits to the gardens, from which they returned with two or more specimens for examination and description in writing, which were submitted to my remarks on the ensuing visit.

" The result has been decidedly satisfactory. Two of the candidates* for diplomas have exhibited great proficiency; and three other students,† who will be candidates for diplomas at the end of the next session, promise then equal proficiency.

" Of the last-mentioned set of students, the oral were more satisfactory than the written examinations. This I attribute entirely to want of time to answer so many difficult questions on many subjects in one day, and to the students naturally preferring to answer those first and with most care which related to the more immediately necessary branches of their education. There was also remarked a general deficiency in knowledge of the character of the natural families, attributable to their not being able to visit regularly these gardens, the visits being confined, for want of sufficient conveyance allowance, to those who exhibited throughout the greatest proficiency, and who were candidates for diplomas. On this point I may express a hope that the students will soon begin to feel that kind of enthusiasm that will inspire them to overcome difficulties, and make the most of their means, however limited, by visiting the gardens in the most economical way of travelling, namely, in dinghies. Such sacrifices of comfort in pursuit of knowledge, I would take as an earnest of future eminence on the part of the students.

" The state of this class is nevertheless to be considered as very encouraging, and the number of proficients and of those who promise proficiency is not inconsiderable, when compared with the results of the sessions of even large botanical classes in England. It is the more encouraging to me because the duties were altogether novel to me, neither had I ever been accustomed to such a class of natives; more encouraging still, because the students had never before been able to attend a complete course, and because up to a late period of the course they had no books to consult,‡ nothing in fact to depend on but the lectures themselves.

" Moreover, the number of illustrative diagrams on my taking charge of the class was extremely limited, and the means of the class altogether insufficient. As a proof of this, I may state that, on the first visit of the students to the Botanic Gardens, I ascertained that no one, not even one of the passed students,§ knew the distinctive characters of monocotyledonous and dicotyledonous plants; not one of them had a definite idea of the fundamental parts of botanical science.

" Now, I have grounds for considering Denobundoo Day and Dhurmodoss Bhose as competent to explain any axiom in Lindley's Elements of Botany, to detect in most instances anomalous structures, and to reduce them to the ordinary type; and to refer in most instances

---

* Denobundhoo Day; Dhurmodoss Bose.

† Taruck Chunder Lahory; Hurronath Mitre; Bholanath Bose.

‡ Rather one, which they had, the Bengal Dispensatory, is, in the part relating to *Botany*, full of blunders and inaccuracies, besides being generally inefficient.

§ Of the passed students here alluded to, both have generally distinguished themselves, and one had gained the first botanical prizes. In justice to them, I must state, they exhibited proficiency equal to any of the rest, but circumstances prevented them from attending the whole of my course.

instances plants to their natural families, giving, at the same time, their probable medicinal or economical properties.

" My plans for the next session, from which I anticipate increased benefit, are—

" 1st. The organization of a botanical museum, for which the needful space has been allotted.

" 2d. The completion of an extensive set of diagrams, explanatory of structure.

" 3d. The weekly illustration of the lectures by the solar microscope, presented by Mr. J. W. Grant, Bengal Civil Service.

" 4th. The careful preparation of a manual, expressly adapted to Indian students by having all its illustrations taken from Indian plants; and by having general principles constantly brought to bear on practical points, such as medical and economical properties.

" 5th. The completion of a general systematic garden,* arranged according to the natural method in the Botanic Garden, to correspond with which there will be a natural medicinal and a natural economical garden. By the plan on which these gardens will be laid out, the three grand divisions of the vegetable kingdom will be seen at once, and their relative numbers and relative importance to the arts and sciences will be also exhibited. In contrast with these will be presented a Linnæan garden.

" My plans go further, for they embrace the laying out of a garden, in which the Flora of Bengal Proper will be arranged according to the natural method, on the same plan precisely as that of the natural gardens just enumerated; the whole numbered and referred to in a printed catalogue of the plants in the Botanic Gardens, to be supplied at the gardens to all who may visit them for the purpose of acquiring information.

" But they do not end here; for Government having wisely recognized the value of practical instruction, by insisting on the students visiting these gardens, and on their making botanical excursions, it becomes the duty of the superintendent not only to see that these gardens possess intrinsic means of instruction by possessing systematic gardens, which, since 1817, they have not had, but to provide for those botanical excursions by the preparation of a Flora of Lower Bengal, thereby placing in the hands of each student, as well as of those of the amateurs of Calcutta, independent means of determining any plant indigenous to this part of India, and consequently of determining its affinities and properties. Such means are acknowledged to be necessary to the complete organization of a botanical class. That great teacher, Dr. Lindley, prepared one expressly for his own class, because all the Floras of England were arranged by the artificial method. The same is the case with the Flora Indica of Dr. Roxburgh, which is, besides, by the progress of discovery now incomplete; and as the operations of the Medical College extended over India, it would equally become the duty of the superintendent of these gardens to prepare a more general Flora of India, therein keeping always in advance of the wants of his class, which would, if he managed properly, still consider itself as his class, though no longer confined within the walls of the college.

It is only by the completion of these things, which would entail pleasant duties, that the great desideratum of a set of men well grounded in botany diffused over India can be supplied; and considering the very deficient state of our knowledge of the vegetable products of India, even those which contribute largely to the revenue, and the acknowledged importance of a full investigation of the medicinal and economical plants of a country,† I can imagine few things more likely to be beneficial to the State at present than the dissemination of such a set. Each individual would become the investigator of a particular part: there would be laid the ground-work of so many Floras of so many districts; their medicinal and economical products would be explored, the plants that produced them identified, and doubts and difficulties that now encumber botany would cease. Moreover, from the diffusion of physiological knowledge of botany, its application to horticulture might lead to considerable improvement among the cultivators of each district.

To ensure so desirable an end, the students, however, require to be put in possession of the means of carrying on their observations after quitting college. It was with the view of supplying an essential part of these means that I took the liberty of addressing Dewan Ram Comul Sen, on the great advantage that would accrue from substituting microscopes for the gold medals he had so liberally presented for a period of three years. I have the pleasure of stating that Dewan Ram Comul Sen was only prevented from adopting this advice by the fact of the medals having all been struck off. I would venture to suggest that, on the part of Government, a microscope ‡ and several volumes of standard works § should be presented to the two best students among those who are to receive diplomas. So far as my own class goes, I have reason for believing that a microscope or books would be preferred to medals.

" On reviewing the whole business of the course, its popularity with the senior students, their evident aptitude to the acquisition of this kind of knowledge, and the philosophic spirit of some of their remarks, I am urged to express a hope that the Council of Education may

* Now in course of preparation.

† It is considered by the first authorities, that even in countries such as Great Britain, France, &c., the Floras of which are well explored, the application of those plants to the arts and sciences is, at the best, but imperfectly known. How much more necessary, then, must investigation be in India, a country of such great extent, whose climates are so varied, of whose Flora even so little is known.

‡ Excellent microscopes, sufficient for all the purposes in view, may be obtained from that very eminent optician, Mr. A. Ross, of Regent-street, London, for the sum of 5 *l.*

§ The books I would recommend are, Lindley's Elements of Botany, Introduction to Botany, Introduction to the Natural Families and Flora Medica, all purchaseable for 3 *l.* 10 *s.*

Appendix N.

may be pleased to recommend to Government the attaching of the best student of this year to these Botanic Gardens, principally for the purpose of opening a school of instruction in application to horticulture and arboriculture for the Malees and apprentices, and all natives anxious to acquire such knowledge. The importance of theoretical knowledge in leading directly to the best modes of practice, is now fully acknowledged in Europe; it still remains comparatively unacknowledged in India, and the plan suggested seems to me the best mode of supplying it. The amount of information among Malees is at its lowest ebb, more especially in these gardens, where they have not the same stimulus of pecuniary profit that many other Malees have; and so long as they possess only a most confined amount of empirical knowledge, it will be hopeless to expect to get them to adopt improved plans, hopeless to expect extensive propagation of any plants but those of the most hardy kind. The plan, if found successful, might then be extended to Seharunpore and Bombay, and, subsequently, to all the Government gardens in India, either alone or in conjunction with ordinary employment, as the Government might deem proper."

79. The lectures on minor surgery to first-class students have this year extended to four months, and were 32 in number. The increase of time allowed to the course, as compared with last year, has been occasioned by Mr. Webb's following up each demonstration by practical exercises on the part of the students themselves, in order to ensure the greatest accuracy and precision in their execution of the several operations and mechanical adaptations. Mr. Webb has reported his satisfaction with the manner in which these were performed by the students, and with the knowledge and manual dexterity displayed by them.

For the military class, a translation into Oordoo has been effected by Mr. Webb of such parts of his lectures as more especially concern them. This, it is hoped, will materially assist them in their studies, and in the practice of his instructions during the ensuing year.

80. At the recommendation of the College Council, the first annual general examination of all the students of the military class, was held in the month of May last. Seven were found qualified for admission to the service as native doctors, and the general progress and attainments of the remainder ascertained and placed on record.

Several applications have at various times been made to the college authorities for native doctors to take charge of emigrants to the Mauritius, which in three or four instances only they were enabled to comply with; but as the demand for this class of practitioners has greatly extended, and is likely to become of some importance to the State, the Council venture to recommend an extension of the school, sufficient to enable it to meet all the exigencies that may arise. It is also deemed worthy of suggestion as to whether a body of Bengalee Native Doctors, educated in their own vernacular, might not profitably, and with a large amount of benefit to their fellow-countrymen, be scattered over the provinces of Bengal and Orissa—in unhealthy districts, where the expense of a sub-assistant surgeon could not be afforded. They could be educated without much additional expense to the State, and would go far to produce confidence in European remedies, and prove of very great service in those periodical outbreaks of cholera, fever and other dangerous tropical diseases, which occasionally depopulate whole villages, and are always more or less destructive to human life.

81. The following extract from the Report of the College Council, will best exhibit the present state and future prospects of the school:—

"Although the state of the school was found on the whole to be satisfactory, the attendance of the pupils to be more regular than during any previous year, and their orderly deportment, regular habits, and the nearly total absence of riot and insubordination, deserving of the unqualified approbation of the Council, there are many points in which much room for improvement exists, and for which the College Council request the sanction of the Council of Education, to the remedial measures they beg to propose.

"The method of instruction adopted by the masters does not appear calculated to communicate the greatest amount of information to the pupils in the time allowed. Instead of *lecturing* upon the subject dwelt upon, it would be desirable that they should simply *teach* the various departments of medicine, with which a native doctor is expected, when in the service, to be acquainted; and for this purpose the school should be divided into classes, according to the relative standing of the pupils, gradually proceed from elementary to practical subjects, as in the Medical College.

"For example, the first-year pupils should be directed to confine their attention to anatomy, and such a simple elementary knowledge of chemistry as will be necessary for understanding the nature, properties and modes of preparing the various articles of the Materia Medica, which are found in the Pharmacopeia, or used in regimental and civil hospitals. In the second year, they should be taught physiology, Materia Medica, and more especially practical pharmacy and compounding, of which they are at present almost entirely ignorant, and which forms one of their most important and responsible duties as Native Doctors. During the third and fourth years, they should attend the practice of the hospitals, be taught medicine and surgery, embracing a general practical acquaintance with their various duties when in the service. At present, very few Native Doctors are sufficiently acquainted with these matters to be trusted on detached field duty to act as efficient field assistants to regimental surgeons, or to do any duty not under the immediate control and superintendence of an European medical officer, who is more often embarrassed by the ignorance and want of skill of his Native Doctor than assisted by him, a matter of very great consequence in Native Corps, where only one medical officer is allowed, whilst in action many urgent cases

may

may be brought in requiring immediate attention. The Native Doctor, instead of being a mere compounder, as at present, should be capable of affording such assistance; and it is to raise his qualifications to the required standard that the College Council venture to suggest the changes above mentioned in the method of teaching. From the instructions to be given in the various operations of minor surgery, by the Curator of the Museum, the Council anticipate that much practical good will result to the school, and are of opinion, as before specified, that it should be confined to the senior students, and perhaps a few of the junior lads, who may be considered sufficiently advanced to profit by such lessons.

"With respect to the masters, it is deemed advisable that they should be brought more immediately under the control and personal supervision of the college authorities—that the time and division of their duties should be more clearly defined than at present—that their attendance and mode of conducting their duties should be registered and reported—and that, in addition to the monthly visitation of the Council of Education, a member of the College Council, selected in rotation for the duty, should constantly visit, inspect, and, in communication with the Council, suggest any beneficial changes in the working of the system of instruction adopted, or report anything which he may consider worthy of observation.

"In the late examination, it was elicited that too much of the amount of information exhibited by the students was the result of mere learning by rote, and much too little acquired by practical information with the particular subject.

"This was apparent in many instances, of which the following may serve as examples:—One lad was able to describe with considerable accuracy almost any bone in the human body; but when the bone was placed in his hand, was quite unable to point out its different processes, articulating surfaces, prominent marks, or indicate to which side of the body it belonged. Very many were able to specify the properties, mode of preparation and action of various drugs, which they were unable to identify when presented to them. In this respect they were generally so utterly deficient as to call for the marked displeasure and disapprobation of the College Council; most of them pleaded in excuse that the objects had but once or twice been presented to them; and as the specimens of drugs in the college are only sufficient for the purposes of the students in the English department, it was proposed, if sanctioned by the Council of Education, to obtain an order from Government that the Medical Board be requested to furnish from the stores of the Honourable Company's Dispensary a small specimen of every article of the Materia Medica used in the civil and regimental hospitals of the Presidency, enclosed in a phial, sealed and labelled, and preserved in the college for the sole use of the students of the secondary school, to which they may at all times have access, for the purpose of becoming familiar with their appearance This has since been done.

"With respect to their knowledge of compounding medicines, and capability of reading prescriptions, the College Council regret to be compelled a third time to bring their extreme ignorance to the prominent notice of the Council of Education.

"The dispensary attached to the college is not sufficiently extensive to make them all practically acquainted with the subject; and with a view in some measure to supply the desideratum, it was proposed that Mr. George Daly, house surgeon and apothecary to the male hospital, should be directed to give in Hindoostanee, for which he is quite qualified, a short course of practical instruction to these pupils, illustrating his remarks by performing the various operations of pharmacy in their presence.

"This could not fail to be attended with beneficial results, although it is by no means intended that it should supersede the practice of compounding by each student in turn.

"With reference to their inability to read prescriptions, the Staff Serjeant, who has at present but little to occupy his time, might be profitably employed in instructing them for an hour, two or three times a week, in learning to read English letters and words, so that when acquainted with them they might pass on to a knowledge of the names of various drugs, and before their departure from the school, possess sufficient ability to read any prescription presented to them. For this purpose an extended knowledge of English would not be necessary, and the information would be hereafter of much use. During the late examination, one lad, named Bissessur Sing, was not only able to read prescriptions, but likewise to write them in a fair, legible hand, and as no one else in the whole school exhibited the same capacity, the College Council recommend that a reward of 10 rupees, or some small prize, be presented to him.

"In concluding this report, the College Council have only to remark, that the school has become so popular in the service, and the students so satisfied with the arrangements made for their comfort and convenience, that, notwithstanding the exercise of a very strict superintendence, on a recent occasion, 43 candidates, from various parts of India, some of them sons of native officers of high caste and rank, presented themselves as competitors for one supernumerary vacancy, of which the monthly stipend is *Rs.* 2. 8. Should the Government, therefore, at any time consider it advisable so to increase the school as to supply from it the whole establishment of Native Doctors required for the Bengal Army, there will be no difficulty in collecting almost any number of lads of good family and education."

Most of the suggestions contained in this report were approved by the Council of Education, sanctioned by Government, and are now being carried into effect. Baboo Modoosooden Goopta has been appointed Superintendent; the school is re-organised, divided into classes, inspected by a monthly visitor, taught practical surgery and pharmacy, and the pupils are affording good promise of realising the prospect of the improvement contemplated.

Appendix N.

The senior students now, for the first time, dissect, and take quite as much interest in so doing as the pupils of the Upper School.

82. In September last, the Honourable Mr. Bird, Deputy Governor of Bengal, placed at the disposal of the Council of Education, a handsome gold medal, to be given to the most proficient student in Materia Medica and Therapeutics. This subject was selected on account of its great difficulty, extent and importance in the practice of medicine, and with a view to encourage among the pupils of the college a scientific knowledge of the remedies used in combating diseases, as well as to induce them to seek from the indigenous riches of their own country efficient substitutes for the more costly and valuable drugs of Europe.

The examination was conducted in the usual manner, and in strict accordance with the wishes of the honourable donor, consisting of a written paper, and a practical trial of the power possessed by the students of identifying various chemical and medicinal substances, one hundred in number. Five candidates presented themselves,* four Native and one European free pupil, all of them known to be possessed of good characters, and to have been assiduous in their attendance upon the lectures.

The Examiner (Dr. Mouat) reported that he considered the result to have been satisfactory in every point of view, both as proving that the Native is capable of competing on equal terms with his European fellow-students, and as exhibiting the ultimate good that may reasonably be expected from their intimate knowledge of the nature, properties and uses of medicinal agents.

The medal was awarded, with some difficulty, to Dinnobundoo Dey; the paper of Dhurmodoss Bose being so nearly equal in merit as to have been placed in the second rank, merely on account of its being somewhat inferior in style and composition.

83. The examination for the Rustomjee medal was conducted by Professor Goodeve and Mr. O'Shaughnessy, and consisted of a written paper, with the dissection of an important surgical region of the body. No student was allowed to contend, who had not acquitted himself creditably at the general examination. The candidates were five in number,† and the palm borne off by *Doyal Chund Bysack*, a third-year student, who was superior in both trials; his written replies being the most ample, clear and correct, and in his dissection every part clearly displayed, evincing not only great facility in the use of the scalpel, but a thorough knowledge of the subject. Some of the other dissections were good, but all much inferior to Doyal Chund's.

84. The special Botanical examination for the *Wallich* medal, was conducted by Professor Griffith, who has reported that it consisted of "twelve written questions relating to structural, physiological and systematic botany, and the application of the natural system to medical botany; nine kinds of plants were presented to them for determination and description of their probable medical properties, and seven diagrams of theoretical botany had to be explained."

The candidates were three in number,‡ and the result stated to be decidedly satisfactory. Tarruck Chunder Lahoory, a third-year student, acquitted himself creditably, the answers of the two others being very successful. The medal was awarded to Dinnobundoo Dey; but the merit displayed by Dhurmodoss Bose was so great, and his whole course of study so promising, as to induce the Examiner to present him with the works of Dr. Lindley as a prize.

85. In the Museum important improvements have been made, equally conducive to its utility and security. Rules have been instituted for its regulation, having for their object to render it as efficient as possible for every purpose of practical instruction.

The additions during the last two years derived from the college and other hospitals in and around Calcutta, have doubled the number of specimens it contains; those chiefly relate to morbid anatomy, of which alone 150 specimens have been added during the last year.

The Museum is therefore rapidly becoming a most important institution, illustrating, in an especial manner, the medical and surgical pathology of India. In order that it may become more universally known as a central depôt for whatever is rare or instructive in this department of science, a catalogue raisonné is now in progress of publication by Mr. Webb, illustrated by original cases. His descriptive account of the greater number of those specimens, which have reference to the medical pathology of the Museum, has been submitted to the Council of Education, and forwarded by them to the Medical Board, with a view to obtain morbid or other specimens from the civil and military hospitals under the control of the Board. In the account of this portion of the Museum, the different preparations are compared together and made mutually to illustrate each other; whilst the whole of them, as well as the cases, are connected together and commented on in a familiar and practical manner. The work, when completed, will form a useful manual of practical pathology for the student, and has been conducted by Mr. Webb without any expense to Government.

86. During the past year, the Library has been much frequented by the students, and received an addition of nearly 600 volumes, chiefly from the allowance of 70 rupees per mensem,

---

* Dinnobundo Dey; Dhurmodoss Bose; E. W. Lazarus; Hurronauth Mitter; Purmessur Saha.

† Doyalchund Bysack; Obhoychurn Neugee; Hurronath Mittre; Bholanath Bose; Taruckchunder Lahory.

‡ Dinnobundoo Dey; Dhurmodoss Bose; Taruckchunder Lahory.

sem, which has been spent in procuring the most recent and esteemed works in every department of medical science; and in part from the Medical Board, the Medical and Physical Society, and Baboo Ramgopaul Ghose, to all of whom the college has been indebted for valuable donations of books.

In December last, Dewan Ram Comul Sen addressed a communication to the Council of Education, offering a sum of 1,000 Company's rupees, to be bestowed as a prize or prizes for the best translations from standard English works into Bengallee, upon the subjects of Anatomy, Materia Medica, and a populur account of the chief diseases to which natives of this country are liable, together with directions for treating them. The communication is at present under consideration.

The following is a list of the students to whom prizes were awarded :—

List of Prizemen, Session 1843–44.

NAMES.	PRIZES.	SUBJECTS.
Purmessur Shaha - -	Gold Medal - - -	General proficiency.
Dinnobundoo Dey - -	Hon. Mr. Bird's Gold Medal	Proficiency in Materia Medica and Therapeutics.
Ditto - - - -	Ramcomul Sen's Gold Medal	Botany.
Dhurmodoss Bose - -	Professors' Prizes - -	Botany and Materia Medica.
Doyalchund Bysack - -	Rustomjee Medal - -	Anatomy.
Hurronauth Mitter - -	120 Co.'s Rs., from Dwarkanauth Fund.	General proficiency.
Doyalchund Bysack -	90 Co.'s Rs., from ditto -	- - ditto.
Tarruck Chunder Lahory -	60 Co.'s Rs., from ditto -	- - ditto.
Bholanath Bose - -	50 Co.'s Rs., from ditto -	- - ditto.
Hurronoth Mittre - -	1st Gold Circlet of Merit -	General good conduct, and regularity of attendance.
Tameez Khan - - -	2d - ditto - - -	- - ditto.
Mr. Keane - - -	1st Ceylon Prize Silver Medal	General proficiency.
Mr. Vos - - - -	2d Ceylon - ditto - -	- - ditto.
Mr. Andree - - -	Clinical Prize - - -	Best Clinical Clerk,
Mr. E. Lazarus - -	Dresser's Prize - - -	Best Surgeon's Dresser.

87. In January last, an examination was held by the Secretary to the Council of Education, of candidates for admission to the stipendiary and free classes of the Medical College, for the purpose of filling up all vacancies in the former, and of affording the benefits of a complete medical education to as many of the latter as chose to avail themselves of the privilege.

Forty candidates presented themselves, and of these ten only were found qualified and recommended for admission. In consequence of this, and on account of the standard of age heretofore fixed being considered too limited to procure candidates possessed of the requisite qualifications, the Council of Education resolved that, in future, applicants for admission shall be received from the ages of 16—20, instead of 15—18 as before.

A second examination was then held by Dr. Mouat, occupying two days, at which 17 competitors attended, of whom five were selected, and the remainder rejected as incompetent.

From the North-West Provinces two pupils have been sent down to study in the college as Robertson Scholars, upon the stipend fixed in the regulations upon the subject; one of them, named Khyratee Khan, from Futtygurh, a Mahomedan, 19 years of age, whose qualifications being considerably below the standard, has been allowed to study for one year in Dr. Duff's school to qualify himself, and should he at the end of that time be still found deficient, he will forfeit the Scholarship, and be returned to the place from which he came.

Another lad from Loodeanah, a native of Hyderabad, aged 17, has also been admitted, and permitted to study for the same length of time in Dr. Duff's school; he is an active, intelligent, industrious lad, and very nearly qualified for admission at present.

The two remaining vacancies will, it is anticipated, be filled up by pupils of the Agra College.

88. The Honourable Mr. Cameron, President of the Council of Education, has announced his intention of presenting, during his stay in India, an annual prize of a capital case of Instruments to the most proficient pupil from Ceylon in each general examination; the same to be decided and specially reported by the College Council.

Four new pupils from Ceylon, arrived on the 18th of April 1844 for the purpose of studying in the college, and have been accommodated with quarters in the building specially designed for them within the college compound.

The period of four years heretofore allowed for all pupils to qualify themselves for admission to the service of Government as Sub-Assistant Surgeons, or for obtaining the college certificate of qualification, having been deemed too limited to admit of their acquiring the requisite amount of practical knowledge for independent practice, it was recommended by the

Appendix N.

Council of Education to be increased to five complete sessions, which has been ordered by Government to be carried into effect from the next annual examination.

During the latter part of the past session, on account of the prevalence and fatality of small pox, temporary hospitals were established by Government, in which the duties were performed by passed students of the college, under the superintendence of European medical officers.

89. In Appendix (E.) to this Report are contained the annual returns of the cases treated in the various hospitals attached to the college, exhibiting the practical means of instructions afforded to the pupils, which the College Council regret are not sufficiently extended for the growing wants of the institution, clinical instruction on an extended scale being an object of the greatest importance in every school of medicine, and more so in this country, if possible, than in Europe. A correspondence has taken place with the President of the Fever Hospital committee upon the subject of expending their funds in establishing a central Fever Hospital in connection with the college, which it is hoped may terminate in the attainment of so very desirable an object, as it will not only be of the greatest service to the native community in epidemic outbreaks of diseases, but afford a valuable extension of the clinical means at the disposal of the professors for the instruction of their pupils.

90. The following Reports of the Government Dispensaries have been received from the Medical Board, and contain an abstract of the cases treated in those institutions during the last six months of 1843. Detailed Reports have already been published by Government in a separate form.

BOWANIPORE.

Dr. Strong - - - - - - Superintendent.
Callachund Day - - - - - Sub-Assistant Surgeon.

House Patients.—Remained, none; admitted since, 11; cured, 11.

Out Patients.—Remained, 111; since treated, 2,828; cured, 2,084; relieved, 548; no better, and incurable, 5; ceased to attend, 196; died, 2; remaining, 104. Several surgical operations, mostly of a simple nature, were all successfully performed by the native medical officer, amounting in all to 33 in number; these were cataracts, excision of tumours, &c.

MOORSHEDABAD.

Dr. Kean - - - - - - Superintendent.
Punchannun Sreemony - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 2; admitted, 73; cured, 26; relieved, 1; absconded, 9; died, 37; remaining, 2.

Out Patients.—Remained, 74; since treated, 3099; cured, 1,975; relieved, 729; ceased to attend, 437; died, 1; remaining, 31. A branch dispensary, situated in a popular part of the town, has been temporarily set on foot by the Superintendent, and it remains to be seen whether it will prove useful. The plan and estimate of a permanent subsidiary dispensary will shortly be laid before the Government.

POOREE.

Dr. Cumberland - - - - - Superintendent.
Neel Money Dutt - - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 49; admitted, 159; cured, 69; absconded, 19; died, 73; remaining, 47.

Out Patients.—Remained, 45; treated since, 493; cured, 351; ceased to attend, 144; died, one: nothing more of sufficient interest deserving of remark in the report of this Dispensary. The deaths were chiefly from bowel complaints of long standing.

CHITTAGONG.

Dr. Duncan - - - - - - Superintendent.
Rajkristo Chatterjee - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 6; admitted, 33; cured, 21; relieved, 5; absconded, 2; died, 6; remaining, 5.

Out Patients.—Remained, 138; treated, 2,509; cured, 1,116; relieved, 1,000; incurable, and no better, 37; ceased to attend, 403; died, 3; remained, 88.

DACCA.

Dr. Taylor - - - - - - Superintendent.
Nobinchunder Paul - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 9; admitted, 54; cured, 26; relieved, 24; died, 13; remaining, none.

Out Patients.—Remained, 46; admitted, 2,869; cured, 2,435; relieved, 141; no better, and incurable, 41; absconded, 245; died, 28; remaining, 25.

A good number of surgical operations were neatly and successfully performed by the Sub-Assistant Surgeon.

PATNA

PATNA.

Dr. Davis - - - - - - Superintendent.
Ramessor Awastie - - - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 8; admitted, 22; cured, 21; died, 1; remaining, 8.

Out Patients.—Remained, 243; treated since, 3,892; cured, 3,472; relieved, 201; incurable, and no better, 14; ceased to attend, 146; died, 24; remaining, 278.

A goodly number of surgical operations had been performed; those of the eye have induced a better class of people to throw aside their prejudices, and they are now found to resort pretty generally, and with confidence, to the dispensary. The new building to be occupied by this charity is reported to be in a great state of forwardness, and will, in all probability, be ready for occupation very shortly; it is placed in a convenient and commanding situation.

BENARES.

Dr. Butter - - - - - - Superintendent.
Issurchunder Gungoolee - - - Sub-Assistant Surgeon.

House Patients.—Remained, 14; admitted, 134; cured, 121; incurable, 2; died, 5.

Out Patients.—Remained, 57; admitted, 8,155; cured, 5,375; relieved, 354; incurable, and no better, 183; absconded, 2,174; died, 35; remaining, 91.

A few minor surgical operations, one or two of an important character, were undertaken by the Sub-Assistant Surgeon, and cleverly performed. The surgical cases generally were very similar at the several dispensaries, varying only in numbers.

ALLAHABAD.

Dr. Marshall - - - - - - Superintendent.
Jadub Chunder Dharah - - - - Sub-Assistant Surgeon.

Remained, 113; admitted, 3,319; cured, 2,357; relieved, 719; incurable, and no better, 47; absconded, 228; died, 25; remaining, 26; of the whole number treated, 96 were house patients. The same remarks apply to this dispensary. The limit but to eight beds, or that number of cases as house patients, is considered prejudicial to the welfare of the natives, and ought to be increased to double that number; not only for the resident sick poor, but for the benefit of pilgrims, who resort for religious purposes from every quarter of Hindoostan to Allahabad.

CAWNPORE.

Dr. Wood - - - - - - Superintendent.
Ramnarain Doss - - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 16; admitted, 150; cured, 90; relieved, 9; absconded, 12; died, 41; remaining, 14.

Out Patients.—Remained, 46; admitted, 2,151; cured, 2,008; relieved, 19; absconded, 124; remaining, 46; surgical operations as at other dispensaries.

A case of stone in the bladder was operated on by the Sub-Assistant Surgeon successfully. The stone was made over to the College Museum.

FURRUCKABAD.

Dr. Hunter - - - - - - Superintendent.
Sadoochurn Mullick - - - - Sub-Assistant Surgeon.

Remained, 85; treated since, 1,678; cured, 1,104; relieved, 384; absconded, 212; remaining, 63. In a short time a building will be erected for the reception of in-door patients.

AGRA.

Dr. Shaw - - - - - - Superintendent.
Samachurn Sett - - - - - Sub-Assistant Surgeon.

House Patients.—Remained, 4; admitted, 29; cured, 18; relieved, 3; incurable, and no better, 3; died, 7; remaining, 2.

Out Patients.—Remained, 64; admitted, 2,851; relieved, 2,861; remaining, 54. Amputation of a limb by the Sub-Assistant Surgeon; other minor operations likewise by him. This dispensary, as others, continues to work satisfactorily; there is also a branch dispensary which has not worked so favourably as in former half years.

Appendix N.

MUTHRA.

Dr. M'Rae	Superintendent.
Moheschunder Nun	Sub-Assistant Surgeon.

House Patients.—Remained, 8; admitted, 79; cured, 55; relieved, 5; no better, 1; absconded, 9; died, 13; remaining, 4.

Out Patients.—Remained, 44; admitted, 2,325; cured, 2,028; relieved, 260; no better, 3; absconded, 9; died, 4; remaining, 65.

Surgical operations; three cases of lithotomy by Sub-Assistant Surgeon; calculi made over to the College Museum.

BARIELLY.

Dr. Balfour	Superintendent.
Joydub Chunder	Sub-Assistant Surgeon.

House Patients.—Remained, 6; admitted, 48; cured, 31; relieved, 5; absconded, 6; died, 5; remaining, 7.

Out Patients.—Remained, 153; admitted, 5,799; cured, 3,405; relieved, 1,189; incurable, 1; absconded, 1,180; died, 32; remaining, 145; lithotomy, cataracts, &c., in the surgical way.

DELHI.

Dr. Ross	Superintendent.
Chimun Loll	Sub-Assistant Surgeon.

House Patients.—Remained, 4; admitted, 77; cured, 66; relieved, 1; absconded, 6; died, 4.

Out Patients.—Remained, 62; since treated, 2,917; cured, 2,525; relieved, 372; ceased to attend, 45; no death.

A considerable number of sick above that in the previous half year have received relief. Ten operations for the removal of stone in the bladder performed by the Sub-Assistant Surgeon successfully, who is likely, from the number of such cases that yearly present themselves at the dispensary, to become in time a very expert lithotomist. An apprentice educated at this institution has lately been raised to the grade of native doctor, a further proof of the usefulness of these institutions.

MORADABAD.

Dr. Thomson	Superintendent.
Tarra Chund Pyne	Sub-Assistant Surgeon.

House Patients.—Remained, 14; admitted, 104; cured, 86; relieved, 12; absconded, 11; died, 9; remaining, 12.

Out Patients.—Remained, 73; admitted, 2,653; cured, 2,579; relieved, 62; absconded, 85. Nothing of further importance worthy remark. The arrival of a Sub-Assistant Surgeon at Moradabad has caused an increase of applicants for relief; he is reported to be an able and industrious servant of the Government.

JUBBULPORE.

Dr. Griffith	Superintendent.
Sama Churn Dutt	Sub-Assistant Surgeon.

House Patients.—Remained, 6; admitted, 78; cured, 53; relieved, 4; incurable, and no better, 3; absconded, 2; died, 14.

Out Patients.—Remained, 86; treated since, 2,360; cured, 1,594; relieved, 307; no better, and incurable, 19; ceased to attend, 16; died, 9. Certain minor and other important surgical operations have been performed by the Sub-Assistant Surgeon. Nothing of further interest in this report: the Sub-Assistant Surgeon is an active and careful man, and his abilities are of first-rate order, which remark applies equally to the rest.

In Appendix (F.) are contained statements of the conduct and character of the various pupils educated in both departments of the college, who have been transferred to the public service. To these documents the Council have much pleasure in referring, as exhibiting so very satisfactory and indisputable a proof of the good characters and superior qualifications of the pupils brought up in the Calcutta Medical College.

91. The Honourable W. W. Bird was present at the distribution of diplomas and prizes, and delivered the following speech:—

"It was my earnest hope that the Governor-general would have presided at this meeting. Knowing as I do the deep interest which he takes in the institution, and his desire to see its beneficial effects extended to the utmost degree throughout the country, I deeply regret that he is not here publicly to declare the same, and to infuse into our proceedings that vigour which characterizes all his undertakings. Matters, however, of the highest importance have rendered his absence unavoidable; but you may depend upon it, that, whether present or absent, the Medical College will always find in his Lordship one of its most effectual supporters, so long as it holds out the promise of continuing, what it has now become, a blessing to the country at large.

"In

"In his Lordship's absence, it has once more fallen to my lot to have to preside at these anniversaries, and to remark upon the peculiar circumstances by which the operations of the preceding year have been distinguished. On the present occasion the results are very satisfactory, and highly creditable to the talent and perseverance of the Native student, who has been found capable of competing successfully even with the European. Great progress has been made, under the able superintendence of Mr. Griffith, in the study of botany, a knowledge of which is so necessary to the medical practitioner, while there has been no falling off in other attainments. It is true that the number of students declared qualified for the public service is fewer than last year; but this may be accounted for by the absence of students from Ceylon; and however desirable it may be to qualify as many as possible, it would be a great mistake to pass any one without the requisite quulifications. If the examiners consult the interests of Government, the reputation of the institution, and the welfare of the community, they will never pass a single student who is not equal to discharge in the fullest degree the duties which will devolve on him.

"I am happy, however, to be able to say, that, as far as experience has yet gone, the Sub-Assistant Surgeons continue to bear the highest character, and that they are eagerly sought after in every department of the service. You have already seen, in the published Report of 1842, how highly they are spoken of as useful practitioners, and how extensively the dispensaries in which they have been generally employed, are gaining the confidence of the native community. But the report of the first half-year of 1843 has just been put into my hand, and shows, in a manner which leaves not the slightest doubt of the fact, the increasing utility of these institutions, the progressive advancement in professional knowledge of the Sub-Assistant Surgeons in charge of them, and the facility which they have attained in the expression of their sentiments in the English language. It also shows that thousands of natives in various districts have been cured by these medical officers, that skilful and difficult operations have been performed by them, and that they have been discharging their arduous duties in a manner which merits the highest approbation of Government and the gratitude of the people. This report I strongly recommend to the attentive consideration of those who feel an interest in the progress of medical science in this country. Some parts of it contain very curious information of a professional nature, and of the habits of the people, which reflects the highest credit on all the Sub-Assistant Surgeons concerned, especially on Callachund Dey, of the Bhowanipore Dispensary; Essur Chund Gangoly, of the Benares Hospital and Dispensary; and Jadub Chunder Dhara, of the Allahabad Dispensary. From the report of the Agra Dispensary it appears, so much are the Sub-Assistant Surgeons rising in general estimation, that they are consulted, not only by the more respectable Natives, but by Europeans.

"Having drawn your attention to these most interesting and valuable reports from the native practitioners, formerly educated at this institution, it only remains for me to say to the students now about to leave college, *go and do likewise*; go and do your duty in that state of life in which it hath pleased God to call you; go and reflect credit on the institution in which you have been brought up; go and gain the confidence of the native community. And to you whose turn of study is yet incomplete, let me say, make the most of your time; endeavour to qualify yourselves for pursuing the same creditable course, so that on future occasions the public authorities who will have in this place to perform the duty which I am now discharging, may be able in like manner to record your names on the list of those who are rising to professional eminence, and who are the chosen instruments in the hands of a humane and paternal Government, for dispensing amongst its subjects benefits of the highest value, which, with the blessing of Providence, are calculated in the greatest degree to promote the welfare and happiness of every part of the country to which they may be extended."

---

92. COLLEGE OF HADJI MOHAMMAD MOHSIN, AT HOOGHLY.—7th Year.

Under the immediate Superintendence of the Council of Education.

Establishment on the 30th April 1844.

English Department:

J. Sutherland, Esq. - - -	Principal.
L. Clint, Esq. - - -	Professor.
M. Rochfort, Esq. - - -	Head Master, U. S.
Baboo Essenchunder Banorjee*	3d Master (now acting 2d).
Mr. J. G. Beanland - -	4th ditto (now acting 3d).
Mr. A. Ure - - - -	5th ditto (now acting Master of 4th Class, Sec. A.)
Baboo Shamlall Shome - -	Master of 3d Class, Sec. A. L. S. (now acting Master of 4th Class, Sec. B. U. S.)
Mr. T. W. Clermont - -	Head Master L. S. (1st Class, Sec. A.)

Baboo

* These acting appointments are consequent on Mr. Kelly, the Second Master's absence—two years' sick leave from April 1843—sanctioned, together with the temporary promotions, in Council's Letter, No. 90, dated 7th March 1843.

Appendix N.

Baboo Madhubchunder Dutt -	Master of 2d Class, Sec. B. (now acting Master of 1st Class, Sec. B.)
—— Moheschunder Banorjee	Master of 2d Class, Sec. A.
—— Srenauth Dutt - -	Master of 3d Class, Sec. B. (now acting as Master of 2d Class, Sec. B.)
—— Bolloram Bisswas -	Master of 4th Class, Sec. A. (now acting as Master of 3d Class, Sec. A.)
Mouluvee Attawur Ruhman -	Master of 3d Class, Sec. C. (now acting as Master of 3d Class, Sec. B.)
Baboo Samachurn Mookerjee -	Master of 4th Class, Sec. B. (now acting as Master of 3d Class, Sec. C.)
—— Baneemadub Banorjee -	Master of 1st Class, Sec. B. (now acting as Master of 4th Class, Sec. A.)
—— Kristochunder Shah -	Master of 4th Class, Sec. B.
—— Kristomohun Sing -	—— ditto ditto C.
Mr. J. Vogel - - - -	Writing Master.
Mr. L. P. Vernieux - -	Drawing Master and Librarian.
Baboo Kunjoobeharry Chakrobutty,	Assistant Librarian.

Mahommadan Department:

Mouluvee Mohammad Akber Shah - - -	Head Mouluvee (Sunee).
—— Meer Mohammad - - - - -	Ditto (Sheeah).
—— Khadim Hossein - - - - -	2d Mouluvee.
—— Munsur Ahmud - - - - -	3d ditto.
—— Gholam Mukdhoom - - - -	4th ditto.
—— Mohammud Mustaqim - - - -	1st ditto L. S.
—— Rumzan Allee - - - - - -	2d ditto, Sec. A.
—— Furrghut Allee - - - - - -	Ditto, Section B.
—— Mohammad Taqi - - - - -	3d ditto, Section A.
—— Toluttuff Hossein - - - - -	Ditto, Section B.
Baboo Ramtarrack Roy - - - - -	Teacher of Govt. Regulations.
Mouluvee Nusseer Ooddeen - - - - -	4th Mouluvee, Section A.
—— Besharat Oollah - - - - -	Ditto, Section B.
—— Mohammad Moddesser - - - -	Ditto, Section C.
Abdul Ali - - - - - - - -	Librarian.
Mirza Mobarack Ali - - - - - -	Drawing and Writing Master.

Bengalee Department:

Obhoyachurn Turkopunchanun - - - -	Superintending Pundit.
Gobindchunder Seromonee - - - - -	Head Pundit, U. S.
Bhuggobanchunder Bisarad - - - -	2d ditto.
Kasseenauth Turkobhooshun - - - -	Head Pundit, L. S.
Hurrochunder Turkobagish - - - -	2d ditto.
Gobindchunder Bisarad - - - - -	3d ditto.
Gopaulchunder Beedyaneedhee - - - -	4th ditto.
Juggomohun Chowdhoory - - - - -	1st Arithmetic Teacher.
Ramchunder Mishro - - - - - -	2d ditto, ditto.

Hooghly Branch School. Establishment on the 30th April 1844.

English Department:

Baboo Khettermohun Chatterjee* - - -	Second Master, now Head Master.
—— Pearychurn Sirkar - - - - -	2d Master.
—— Srenauth Banorjee - - - - -	3d ditto.
—— Girishchunder Ghose - - - -	Master of 4th Class, Section A.
—— Prosonochunder Sirkar† - - - -	Ditto Section B.

Oriental Department:

Mouluvee Asud Ali - - - - - -	Head Mouluvee.
—— Ismut Oollah - - - - - -	2d ditto.
Sereram Seromonee - - - - - -	Head Pundit.
Srenauth - - - - - - - -	2d ditto.
Hullodhur Surma - - - - - -	Arithmetic Teacher.

Hooghly Infant School. Establishment on the 30th April 1844.

English Department:

Mr. T. M. Gomess - - - - - -	Head Master.

Bengalee Department:

Nobocoomar Gupto - - - - - -	Pundit.

Seetapore

* Baboo Parbutty Churn, the late Head Master, died on 11th November 1843.

† Baboo Bhuggobuttychurn Mullick, the former Junior Master, transferred to the Supernumerary Class at college, on 1st August 1843.

SEETAPORE BRANCH SCHOOL. Establishment on the 30th April 1844.

English Department:

Baboo Srenauth Somadar - - - - - Head Master.
——— Bhobaneechurn Mullik - - - - 2d ditto.

Bengalee Department:

Neersinghodeb Seromonee - - - - - Head Pundit.
Nundcoomar Banorjee - - - - - 2d ditto.

UMMORPORE PROBATIONAL SCHOOL. Establishment on the 30th April 1844.

English Department:

Baboo Pearymohun Banorjee - - - - Head Master.
——— Khettermohun Banorjee - - - - 2d ditto.

Bengalee Department:

Kaylashch Bidyaneedhee - - - - - Pundit.

The proceedings of the past year are arranged, as usual, under the heads, Number and Discipline of the College, Progress of Study, &c., and more in detail in the documents appended to the Report.

93. The following is the Return of the Number of Admissions and Withdrawals, and Daily Average Attendance since the 1st May 1843, the Grand Total on the Rolls at that Date, and on the 1st May:—

English Department: Number and discipline of the college and its subordinate institutions.

INSTITUTIONS.	Christians.	Mahommedans.	Hindoos.	Total. 1843.	Total. 1844.
College:					
Number of admissions	6	2	187		
Ditto, of dismissals	2	5	72		
Ditto, of withdrawals	6	4	46		
Ditto on the Rolls, ending 1st May 1843	12	18	542	572	
Ditto, ditto 1st May 1844	10	11	611	- -	632
Daily average attendance 485½.					
Branch School:					
Number of admissions	1	1	53		
Ditto, of dismissals	2	1	11		
Ditto, of withdrawals	- -	1	29		
Ditto, of promotions	- -	- -	11		
Ditto on the Rolls, ending 1st May 1843	5	3	242	250	
Ditto, ditto 1st May 1844	4	2	244	- -	250
Daily average attendance 206¼.					
Infant School:					
Number of admissions	- -	- -	24		
Ditto, of dismissals	1	- -	4		
Ditto, of withdrawals	- -	- -	19		
Ditto, of promotions	- -	1	7		
Ditto, on the Rolls, ending 1st May 1843	2	2	44	48	
Ditto, ditto 1st May 1844	1	1	38	- -	40
Daily average attendance 30.					
Seetapore School:					
Number of admissions	- -	- -	26		
Ditto, of dismissals	1	- -	35		
Ditto, of withdrawals	- -	- -	25		
Ditto on the Rolls, ending 1st May 1843	1	- -	134	135	
Ditto, ditto 1st May 1844	- -	- -	100	- -	100
Daily average attendance 80½.					
Umorpore School:					
Number of admissions	- -	- -	48		
Ditto, of dismissals	- -	- -	16		
Ditto, of withdrawals	- -	- -	44		
Ditto, of promotions	- -	- -	6		
Ditto on the Rolls, ending 1st May 1843	- -	- -	120	120	
Ditto, ditto 1st May 1844	- -	- -	102	- -	102
Daily average attendance 82.					
Grand Total on the Rolls, on 1st May 1843	20	23	1,082	1,125	
Ditto, ditto on 1st May 1844	15	14	1,095	- -	1,124
Ditto, of the daily average attendance 884½.					

These returns exhibit a decrease of one in the grand total on the rolls on the 1st May 1843 as compared with 1st May 1844.

Appendix N.

In the English Department of the College the returns show an increase of no less than 60 during the year, the greater part of which augmentation has taken place since July last.

The maximum number for the Branch School has, since 1843, been considered 250, that being all the portion of the building assigned to the English Department of this school can conveniently contain, the excess having been accommodated in a close and inconvenient out-house. The reduced number has been fully kept up without difficulty.

The applications for admission every month are as numerous as ever; but the strict limitation of age, and the rules as to admission into the higher classes, compel us to reject many candidates.

Order and Discipline.

94. The order and general discipline of the classes, though favourably reported on last year, have since improved. The attendance, which had not been quite satisfactory during the year 1843, has been much better since in the college. In the Branch School it has always been good. In the Seetapore and Umorpore Schools there has not been so much regularity. The rolls of each class of the College and Branch Schools are submitted to the Principal every month, and those who have been very irregular, are struck off. As they cannot be re-admitted without the sanction of the Council, which is not given without good cause, the dread of forfeiting their education has a most salutary effect in checking irregularity; and, in the whole college, the number reported irregular in any one month does not exceed eight or ten. In the Branch School some three or four.

Annual Examinations.

95. The annual examination of the Senior Department of the college was conducted, as usual, by the establishment, except as to the first class, which is taught, in its two sections, by the Professor of Mathematics, the Head Master and the Principal. The whole of this class competes for Senior Scholarships. The Examiners of the other classes of the Senior Department, were the Professor of Mathematics and the Principal. The Junior Department was examined by the Head Masters of the two departments, Messrs. Rochfort and Clermont, and other instructors, whose names are attached to the respective examination papers. The first class of the Branch School by the Professor of Mathematics and the Principal, the other classes by the head and other masters of the college. The Infant School was examined by the Principal. The Seetapore School by Baboo Moheschunder Banorjee, second Master of the Junior Department. The Umorpore School by Mr. Beanland, the third Master of the Senior Department. The Bengalee examinations were conducted by the Superintending and Senior Pundits. The detailed annual examinations commenced on the 14th of June, and ended on the 8th July 1843. The half-yearly general examinations commenced on the 9th and ended on the 23d of December.

College—English Studies.

96. The results of the datailed examinations of July are shown in the examination papers, and, on a review of the whole, may be considered satisfactory, although there are, as will generally be expected in so large an establishment, some exceptions to the remark. Even as to these exceptions of some classes, however, it is satisfactory to find, that the half-yearly examination in the latter end of December last, exhibited a marked improvement.

Law Lectures.

97. The Advocate-general having been so liberal as to give his permission, the students of the first class of the college regularly attended that gentleman's lectures, commenced in November last, the Government having authorized the disbursement of the charge of boat-hire for this purpose. As the lectures took place on Saturday, and Friday is a half holiday at this college, the students attending the Law Lectures lost by going down only one day of their regular studies, which was more than compensated by the valuable instruction they received in a most important branch of knowledge.

Supernumerary Class.

98. In April 1843, the Principal proposed to establish a supernumerary class, to occupy a vacant room in the Junior Department. The Council declined to incur the expence of 40 rupees a month for an additional master, but gave their sanction to the establishment of the class if it could be made to pay its expenses. It was doubted at first whether a sufficient number of paying candidates to meet the charge would offer themselves, but on the 1st August the class was opened with 32 young boys, paying altogether the sum of 36 rupees. It has since had as many as 50, reduced on the 31st December last to 45 by promotions, and has subsequently been increased to 60, the number now on the records. Baboo Bhuggobuttychrn Mullick, formerly a student of the college, and lately a Junior Master of the Branch School, was appointed to the Supernumerary Class, and receives as salary the amount of the charges for education levied therein. The class thus pays itself, and is no charge to Government, except for the use of elementary books.

Assamese Students.

99. The Assamese students referred to in the last Report, having been found to make no progress, and being, in consequence of their advanced age, not likely to be qualified in time to admit of their being entered at the Medical College as intended, were ordered to be sent back to Assam, and took their departure in September last.

Branch School.

100. Before the usual report of progress under this department is entered on, it is our painful duty to record the melancholy event of the death of Baboo Parbuttychurn Sircar, which occurred on the 11th November last. He was for upwards of six years at the head of this school, and discharged the duties of his situation with great ability and indefatigable zeal. By his death the education service has lost a valuable instructor. The Council expressed their great regret for this sad occurrence, and their high sense of the late Baboo's services,

services, in a letter, the contents of which were communicated by their desire to his widow and relatives.

Last year, although the general result of the examination was favourable, the first class was far from having satisfied the Examiners. At the detailed annual examination of July last a marked improvement was exhibited, and especially in the important studies of Geography and Arithmetic. This favourable result is in part owing to the number and nature of their studies having been brought more within the range of their time and capacity, but chiefly to the exertions of the late Head Master, Baboo Parbuttychurn Sircar. The other classes are, with one exception, improved; and the general discipline of the school reflects great credit on the deceased, who had well deserved the praise bestowed on him in the Examiner's report, for the systematic neatness and order of his class rolls, registers, copy books, and of every record of the Institution under his control.

Infant School.

101. A considerable improvement has taken place in this institution, and though there has been no increase of the number on the rolls, the attendance and general discipline of the school are very creditable to the Head Master, Mr. Gomess, whose system appears to be good, and whose rolls and records exhibit great neatness and order.

An appeal has been made to the Council by numerous inhabitants of Chinsurah, to have the Infant School removed to that place near the college, the neighbourhood being much more populous. To this change the inhabitants of Hooghly are naturally opposed; and on this account the Council have abstained from interference; but there can be no doubt that the school would have many more students at Chinsurah, although as none are now permitted to enter after they are five years old, it is possible that none would come from any considerable distance.

Seetapore School.

102. Although the Examiner's report of the annual examination in June was, on the whole, favourable, the school does not appear to be going on so well as it might be expected to do, and this may be in part ascribed to the absurd manner in which the classes were arranged.

This had previously been pointed out by the Principal, and was rectified soon after the July Examination. Since then it will be seen by the present returns, the number on the rolls has considerably fallen off, so that there is still less reason than there was before for any complaint of want of sufficient instructors. The general half-yearly examination of December last, does not, however, show any improvement; but it is right to observe, that the attendance has fallen off much lately, owing to the prevalence of cholera in the neighbourhood. Out of 102 on the rolls, only 75 were present at the last examination.

Umorpore School.

103. The general result of the annual examination of July was favourable, though there are some exceptions, and the same remark applies to the half-yearly examination in the past month. In the junior classes there are a number of boys far too old to succeed in English, and Mr. Beanland, the Examiner, suggests that these should be consigned to the Patsala, attached to the school, and that some support in Bengalee books should be given to the former institution, the students in which do not seek to acquire English. In the annual report of July an apprehension was expressed, that the Umorpore School would be given up, but the liberal proprietor, Baboo Kallykincur Paulit, continued it entirely at his own expense, with exception to the trifling aid afforded him by Government for the purchase of books up to the date of his death in December last. It was then found that his estate was bankrupt, and that there were no funds to carry it on. The Head Master, Baboo Pearymohun Banorjee, however, carried on the school for some time at his own risk, and without pay, and the second Master is now trying to keep it together on a reduced scale, and contemplates an application to the Council to continue to him the former monthly allowance of 20 rupees for books. The Head Master has left the school to seek employment, and the Pundit has been appointed, at the Principal's recommendation, to the Baulia Government School.

Study of the Vernacular.

104. In this branch of study the examination papers of the various classes show a most satisfactory progress, which reflects great credit on the Superintending Pundit and his subordinates, and on the students. With a view to encourage the attention of the latter to this important study, the promotions of those who were found deficient in this department of knowledge, have, during the past year, been stopped, which has had a good effect in stimulating their application.

School Fees or charges for Education.

105. The Committee of Masters referred to in the last Annual Report, have completed the labour of revising the rates of charge throughout the Institution, and the result is an increase on the average of last year, of *Rs.* 39. 6. 8.

In the Branch School the average amount of the monthly collections for the past, compared with that of the present year, shows an increase of *Rs.* 10. 9. 4.

In the Seetapore School the average monthly collections, out of 100 students, are only *Rs.* 17. 11. 8.

The Committee's duties are now chiefly confined to cases of appeal, and to regulating the rates of newly admitted students. Mr. Clermont, the Head Master of the Junior Department, is now President of the Committee, instead of Mr. Rochford, who has been relieved from this extra duty.

In connexion with the subject, the last Report suggested the propriety of fixing the number of those educated gratuitously, as is done in the Hindoo College. There are now on the free list of the College 260. It was suggested that the number might be gradually brought down

Appendix N.

down to 150, by admitting no more free students, save occasionally, as an exception to the general rule of payment, until the required reduction should be brought about. This suggestion has been approved of by the Council, and the limit proposed will be attended to in future admissions.

Changes of Instructors.

106. In the college there are no changes to record; but in the Branch School a vacancy occurred, owing to the appointment, on the 1st August 1843, of Baboo Bhuggobuttychurn Mullick, teacher of the junior class, to the supernumerary class in the college. Bhuggobuttychurn's place is supplied by Baboo Prosonochunder Sirkar, formerly a student of the Hindoo College. Another vacancy was caused by the lamented death of the Head Master, Baboo Parbuttychurn Sirkar. The vacancy has been filled up by the promotion of the second Master, Baboo Khettermohun Chatterjee, who had performed his duties most creditably since he was attached to the school. To Baboo Khettermohun Chatterjee's place, a brother of the deceased Baboo Pearychurn Sirkar, a young man, who held a Senior Scholarship for two years in the Hindoo College, has been appointed.

Oriental Department.

107. The number of admissions and withdrawals, and daily average attendance during the past year, and the grand total on the rolls on the 1st May 1843 and the 1st May 1844, are as follows:

INSTITUTIONS.	Christians.	Mahomadans.	Hindoos.	Total. 1843.	Total. 1844.
Mudrussa of Hadji Md. Mohsin.					
Number of admissions		73	6		
Ditto of dismissals		36			
Ditto of withdrawals		8	1		
Ditto on the rolls ending 1st May 1843		223	2	225*	
Ditto ditto 1st May 1844		252	7		259
Daily average attendance, 186.					
Muktub at Hooghly.					
Number of admissions		28	4		
Ditto of dismissals		13			
Ditto of withdrawals		15	2		
Ditto on the rolls ending 1st May 1843		52	4	56	
Ditto ditto 1st May 1844		52	6		58
Daily average attendance, 36.					
Mudrussa of Seetapore.					
Number of admissions		15			
Ditto of dismissals	—				
Ditto of withdrawals		16			
Ditto on the rolls ending 1st May 1843		41		41	
Ditto ditto 1st May 1844		40			40
Daily average attendance, 35.					
Grand Total on the rolls on 1st May 1843		316	6	322	
Ditto ditto 1st May 1844		344	13		357
Ditto of daily average attendance, 257.					

These returns exhibit a slight increase in this department, although 49 have been struck off the rolls during the year for irregularity of attendance.

The discipline of this department will be more particularly adverted to hereafter, in reference to the Visitor's report. It may be enough here to state that measures have been adopted for its improvement, though the system of study among Mahomadans does not admit of very efficient checks. One change has been introduced, however, which has secured better attendance. The class roll of each class is now submitted to the Principal every month, and the names of those who are very irregular are struck off, which has produced a better attendance.

Examinations and progress of Study.

The examination of this department was conducted by the Hafiz of the Calcutta Mudrussa, assisted by Mouluvees Abdurrahim and Mohammad Ujhi.

Attendance of the Mouluvees.

108. The Mouluvees have been regular in their attendance. The head professors, Mohammad Akber Shah and Meer Mohammad, have laboured assiduously in their departments, and have shown a disposition to aid the Principal on all occasions, in introducing rules

* The total number in the Mudrussa in the printed Report of April 1843, was stated to be 387; but that is a mistake which arose from the names being taken from the class rolls, in which they are frequently repeated several times, owing to many of the students being in several classes. The number should have been, as above, 225.

rules and changes intended to check irregularity, and the Mudderrasin generally have been attentive to their duties.

During seven years that Mouluvee Mohammad Akber Shah has been attached to this college, he has been absent only a few days of study, and that owing to sickness and unavoidable causes. Mouluvee Meer Mohammad, the head Sheeah Mouluvee, who has now been four years in the college, has also exhibited exemplary regularity in his attendance. He obtained leave in April last for five* months, to go to Lucknow on urgent private affairs.

109. The examination of the Branch School was conducted by the Head Mouluvees, and their report is favourable.

110. The examination of the Seetapoor Madrussa was conducted by Mouluvee Mohammad Akber Shah, and exhibits reasonable progress. The Examiner has recommended the following students for prizes:

1. Mohammad Tyaz.
2. Mohammad Rashed.
3. Moojeeb Ooddeen Ahmud.
4. Abdool Mabood.
5. Gholam Sufdar.
6. Qum Ruddeen.
7. Abbas Ali.
8. Rosool Bukhsh.
9. Syud Hyjut Oollah.
10. Najeeb Uddeen.
11. Tummeezooddeen.

Changes of Instructors.

111. Mouluvees Tofuzzul Ali, Teacher of Regulations, died on the 16th of August last; he was well qualified for his office, but his health had been long very delicate. Several candidates were examined for this appointment by the Principal, on questions sent to him for that purpose by the Council, to whom the answers have been returned. These papers having been submitted to Mr. Hawkins, Register of the Sudder Court, who had prepared the questions, his decision was in favour of Ramtarak Roy, whose answers were far the best, and the Council accordingly awarded the appointment to him on the 30th December 1843. Mohammad Idrees, a student of the Mudrussa, had officiated in the meantime, drawing half the allowance of the situation with the sanction of the Council.

The Principal had, in a letter of the 2d April 1843, suggested the abolition of the regulation class, with reference to the circumstance of one of the Mouluvees being allowed an addition of 20 rupees to his pay for the express purpose of teaching regulations; but on further consideration, as there were a number of Hindoo students in the regulation class, who could not be brought into one of the regular classes of the Mudrussa, he was induced, on being called on by the Council, to give his opinion against this measure.

In the acting appointment of second Mouluvee of the Branch School, referred to in the last Report, Mouluvee Ismut Oollah was eventually confirmed in June 1843.

Mouluvee Asud Ali, the head Mouluvee of the Branch School, applied for and obtained in November last, three months leave of absence on sick certificate. Seeraj Ooddeen, a student of the college, proposed by Mouluvee Asud Ali, and pronounced duly qualified by the Head Mouluvees, was permitted to act for him during his absence.

Scholarships.

112. On the 12th February last, his Honor the Deputy Governor of Bengal, the President, and several members of the Council of Education, went up to Hooghly, to distribute the Scholarships and Prizes awarded during the past year. His Honor first distributed the prizes of the Hooghly Branch and Infant School, and then proceeded to the college, where the distribution took place in the large hall, in presence of a numerous audience, to whom, at its close, his Honor addressed a brief and emphatic speech, which terminated the proceedings, and is appended to this Report.

The following is a return of the Scholarships awarded in the past year in both departments:

SENIOR ENGLISH.

Renewed.

1. Noruttun Mullick, third year, 40 rupees.
2. Hurrymohun Chatterjee, third year, 40 rupees.
3. Gungachurn Sirkar, third year, 40 rupees.
4. Degamber Biswas, second year, 30 rupees.
5. Nobinchunder Doss, second year, 30 rupees.

Awarded.

6. Jadobchunder Bose, first year, 30 rupees.
7. Gooroochurn Chatterjee, first year, 30 rupees.
8. Gooroochurn Doss, first year, 30 rupees.

The cases of the three last candidates being somewhat doubtful, they were subjected, in addition to the usual test of written questions, to an oral examination before the Council, which took place on the 28th December last.

These are all the Scholarships assigned to the Senior Department of this college, including the one open to general competition, for which there was no out competitor. Of the three awarded

* Under the former rules as his application was made before the new regulations were promulgated.

Appendix N.

awarded this year, one is that which fell vacant by the death, in April 1843, of Shamkristo Paulit, as mentioned in the last Report.

JUNIOR ENGLISH.

Renewed.

1. Jodoonath Doss, 3d year, 8 rupees.
2. Satcowry Roy, 2d year, 8 rupees.
3. Juggesser Ghose, 2d year, 8 rupees.

Awarded.

4. Baneemadhub Bose, 1st year, *vice* Hurrochunder Bose forfeited, 8 rupees.
5. Mothoormohun Ghose, 1st year, *vice* Kadarnath Bisswas forfeited, 8 rupees.
6. Kaliprosono Chatterjee, 1st year, *vice* Bhoobun Mohun Sen forfeited, 8 rupees.

Zemindary Scholarships.

7. Gopalchunder Bundo, 1st year, 8 rupees.
8. Shamachurn Ghose, 1st year, 8 rupees.

Of the Scholarships awarded, the three first fill up vacancies caused by forfeiture for not having made reasonable progress. The two last are Scholarships of 8 rupees each, respecting which some explanation is necessary. These do not form a charge to the Government; they will be paid out of the interest of the balance of about 5,000 rupees of the fund subscribed for building the Zemindarry, or, as it is now called, the Branch School at Hooghly. The interest was for several years paid in sums of two, three and four rupees to poor deserving students, recommended by the Principal, to enable them to continue their studies. The Committee of the Zemindarry Fund, however, having proposed last year that the interest specified should be applied to meet the charge of two Scholarships, to be called the "Zemindarry Scholarships," the Council assented to the proposal, and the money has been available for that purpose since September last.

A condition of the award of these Zemindarry Scholarships was, that when Branch School and College competitors coming up to the required standard were found equal, the former should have the preference; but the successful candidates this year belong to the College, though two Branch School students, Hurronauth Mittre and Koylashchunder Chatterjee, stand very high, and had none of the other candidates been superior, would have had Scholarships awarded to them.

Branch School, Junior English.

The Scholarship assigned to this institution was gained last year by Isserchunder Dass, since promoted to the college; and as he has made the reasonable progress required, he is entitled to a renewal of his tenure.

113. The following is Major Ouseley's report on the examination for Senior Oriental Scholarships:—

"On the 19th and 20th ultimo, I examined the candidates for Senior and Junior Oriental Scholarships at the Hooghly College.

"The number of candidates for Senior Scholarships was 28, including 10 who obtained Scholarships last year, and who, by the terms of their appointment, were required to undergo examination on the present occasion. The number of candidates for Junior Scholarships was 47 similarly, including 10 (ten), the scholars of last year.

"On a careful comparison of the papers performed by the various candidates, I have the honour to recommend the following 11 students for Senior Scholarships; viz.—

1. Abdoor Ruhman - - - -	For Mohammad Mohsin's Scholarships of 50 rupees each per mensem.
2. Feyzoollah - - - - -	
3. Fuzelut Hossein - - - -	For Scholarships of 20 rupees each per mensem.
4. Mohammad Idrees - - -	
5. Vukeel Uddeen - - - -	
and	
6. Ghoolam Mehdhy - - -	
7. Mohammad Ismail* - - -	Scholarships of 15 rupees each per mensem.
8. Abdool Moojeed - - - -	
9. Ghoolam Sufdar - - - -	
10. Mohammad Rashed - - -	
11. Seraj Ooddeen - - - -	

"Six of the students above named are senior scholars of last year. Abdoor Ruhman held a Scholarship of 20 rupees, Mohammad Idrees and Vukeel Ooddeenof 15 rupees each, and Mohammad Ismail of 20. The three first deserve promotion, but Mohammad Ismail seems to have fallen off, and is only entitled to the 3d (third) grade of Senior Scholarship, instead of the 2d, which he obtained last year.

"The four remaining Senior Scholars of last year have so decidedly failed in the performance of their exercises, that I am reluctantly compelledt or ecommend that their Scholarships be forfeited. The failure of Ameer Mohammad, who received one of the first-class Scholarships

* The Council did not sanction this renewal of a Scholarship of inferior grade to Mohammad Ismail, as it is opposed to the principle on which the Scholarships are conferred, according to which, falling short of the required standard, involves forfeiture.

ships of 50 rupees last year, is so egregious, that it is quite evident he must have obtained unfair assistance at last year's examination, notwithstanding all the precautions taken to prevent it. His performances on the present occasion do not entitle him even to a 15-rupee Scholarship. The names of the unsuccessful stipendiaries who ought to lose their Scholarships are, 1. Ameer Mohammad; 2. Allee Akbur; 3. Ghoolam Nujuf; 4. Zoolfokar Alee; the first receives 50 rupees per mensem, the remaining three 15 rupees each.

"For the Junior Scholarships of the present year, I beg to recommend the under-mentioned 16 students as the most deserving; viz.—

1. Inamool Huqq.
2. Mohammad Hossein Kermani.
3. Acnool Islam.
4. Hilal Ooddeen.
5. Shekh Abdoollah.
6. Ghoolam Akbur.
7. Alee Asghur.
8. Ghoolam Punjuttun.
9. Rosool Bukhsh.
10. Sukhawut Hossein.
11. Seyud Aman Oollah.
12. Zuhooral Hossein.
13. Noor Mohammad.
14. Seyud Khadim Hossein.
15. Nuzur Ali.
16. Hyder Hossein.

"I have assumed that, including the Junior Scholarships opened to public competition, there are 16 Junior Scholarships available; nine of the above list are Junior Scholars of last year: only one has subjected himself to a forfeiture of his Scholarship; his name is Suidar Alee.

"The Arabic examination papers of both Departments, Senior and Junior, are transmitted for the inspection of the Council of Education."

Report of the Visiting Member.

114. On the 24th of August last, Dr. Mouat, the member appointed to visit and report on the College, went up to perform this duty. The Visitor examined the muster rolls, registers of attendance of masters and students, &c.; went through the whole college, and examined several of the classes, especially those of the Senior English Department; he afterwards went through the Oriental classes. The Visitor expressed himself highly satisfied with the "excellent order and method" of the English Department, and with the result of his examinations of the classes.

With respect to the Oriental Department, the Visitor reports, that from the answers he received from the Mouluvees, he judges that they prefer a great variety of works and superficial showy knowledge to solid instruction, and is of opinion, that although their attendance is generally good, the institution will turn out few good scholars, while the present lax system of study and of attendance of the students prevails.

With reference to these remarks on the Oriental Department, a new course of study, some change of discipline, and some more stringent rules of attendance, especially as respects the Scholarship students, were proposed by the Principal, in concert with the head Mouluvees, and sanctioned by the Council, and these have led to improvement as to the points noticed, though it is to be feared that the regular discipline of the English Department is quite incompatible with the habits of Mahommadan students, and the circumstances of those in this Mudrussa.

It should be observed, that, in spite of the defects referred to, the Mudrussa has made no inconsiderable progress, if the results of the Scholarship examinations may be considered a test; and that in its discipline, such as it is, it is probably equal to any institution of the kind, though one exception of a very flagrant nature, the first, and it is to be hoped the last of the kind, has now to be recorded.

Riot in the Mudrussa.

115. The breach of discipline here referred to was so outrageous, that it has been found necessary to visit it with the severest measures.

The new rules of attendance required all the students of the Mudrussa to come at 11 and remain till 4, when the college breaks up for the day. Some of them having violated this rule, the Principal ordered the gates to be closed, and desired the Durwans to bring to him any one attempting to go out without a pass. In March last several students, in defiance of these orders, attempted to force their way out, and in consequence of the Durwan's complaining of them, they, with a number more, committed a cowardly and riotous assault on the Hindoo Durwan, for refusing, in the regular discharge of his duty, to allow them to go out before the proper time. The ringleaders identified by the Durwan were handed over to the magistrate, and all who appeared to his summonses sentenced to imprisonment. One, Ghoolam Mahbood, who attacked the Durwan in presence of the head Mouluvees, Akbar Shah and Meer Mohammad, and several other Mouluvees, to three months, the others to two months each. Two of the rioters identified were not arrested, having absconded. The Principal having also investigated the matter, and made his report to the Council, it was decided that our Secretary should visit the college, and announce the decision to which we had come, after considering all the information placed before us on the subject.

Dr. Mouat accordingly went up, and the students of the Mudrussa being all assembled, he addressed to them a speech, in which he emphatically announced to them the sense the Council entertained of such flagrant breaches of discipline, their determination to repress them by the severest penalties, and their decision that the following students be ignominiously expelled the college:

Ghoolam Mahbood.	Athur Ali.
Aman Oollah.	Ahmuddi.
Syud Abdoollah.	Fyzeelut Hossein.
Shekh Abdollah.	Mohammed Hossein Kermani.
Hyder Ali.	

Appendix N.

Mohammad Hossein Kermani's expulsion had been previously ordered, for sending direct to our Secretary (which is in itself a violation of the Rules) a false and insolent petition against the Principal and the Head Mouluvee Akber Shah, in reference to the riot. Ghoolam Mahbood had also forwarded a petition, to which he had affixed the names of many students who were altogether ignorant of the petition and its contents, thus adding the offence of forgery, including that of carrying away books belonging to the college, which he pledged to some one in the town, to his other misconduct.

The Visitor's address also conveyed the high approbation of the Council of the spirited conduct of Mouluvee Akber Shah, in rebuking the rioters, and endeavouring to protect the Durwan, when both were surrounded by a body of excited students, all apparently eager to attack the latter. The Visiting Member also intimated the dissatisfaction of the Council with the conduct of Mouluvee Meer Mohammad, the chief Shea Professor, and other Mouluvees who had witnessed the transaction, and made no efforts to protect the Durwan, and support the discipline of the institution.

These measures of just severity will, it is hoped, effectually prevent the recurrence of any such disgraceful conduct as that above recorded.

Libraries.

116. The reports of the books of the English and Oriental libraries, and of their condition, will be found on the whole satisfactory, and reflect credit on the librarians and on the students of both departments. Some books have been taken away by students, but of these several may be recovered. Great use is made of the library both by masters and students, and of course many of the books are now considerably worn, but not more than might be reasonably expected.

Mr. Vernieux, the Librarian of the English Department, obtained six months' leave of absence from the 20th of November last, on sick certificate. His place has been filled during his absence by the Assistant Librarian, Koonjobehary Chukrobutty, whose conduct has always been highly satisfactory, and who is quite capable of performing the duties of Librarian. He is assisted by Ramchundur Goopto, a steady young man, recommended by one of the Pundits.

Allowance for Books.

The allowance of books for this institution has been found insufficient in the Oriental Department (requiring as large an expenditure for books as the English, or larger), a feature of this institution which seems to have been overlooked when the same amount only of book money was fixed for the Hooghly as for the Hindoo College. This subject having been brought to our notice, an addition of 35 rupees to the allowance of 180 per month, making the aggregate allowance for the college and subordinate institutions up to 215 rupees, has been awarded, and the whole is to be considered available for all or any of the institutions as required, the accounts of each being kept distinct.

Students who have obtained employments.

117. The following is a return of students who have left the college during the year to accept the employments indicated:

Girishchundur Chatterjee	-	Second Master of the Bhaugulpore School.
Mothooranath Banorjee	-	Abkaree Darogah at Sulkeah, 24 Pergunnahs.
Jadoonath Set - -	-	Darogah of Salt Chokee at Goburdangah, under Hooghly Collectorate.
Khettermohun Banorjee	-	Second Master, Umorpore School.
Modhoosooden Ghosal	-	Second Master, Bansbarea School.
Junmajoy Dass - -	-	Third Master of the Azimghur School.
Kalinath Mookerjee -	-	Hospital Writer in Her Majesty's 29th Regiment.
John Cardozo - -	-	Clerk in the office of Rustomjee Cowasjee, Esq., at Calcutta.
Delawur Ali - -	-	Mahommadan Law Officer in the Civil Court of Sylhet.
Mohammad Idrees -	-	Mohafiz in the Hooghly Collectorate.
Vokeel Ooddeen -	-	Professor of Law in the Government School at Commillah.
Momtaz Ali - -	-	Mohurrer in the Hooghly Collectorate.
Ramtarak Roy - -	-	Mouluvee of the Regulation Class in the Mudrussa of this College.

The following have passed examination for Moonsiffs, and obtained diplomas:

Degamber Bisswas.
Ramtarak Roy.
Lalla Chuneelall.

Encouragement afforded by Public Functionaries to the Students.

118. Mr. Donnelly, the officiating Commissioner of Abkary, has taken great interest in the students of this institution. He has employed one of them, and promised, when vacancies occur, to take others into the service in his department, and to provide for them all as opportunities offer, if they will qualify themselves. In a letter addressed to our Secretary, Mr. Donnelly remarks, that the "great obstacle to the appointment of most native lads educated at the several public institutions is, that they cannot read written Bengalee with fluency, that they are much better acquainted with English than their own language," and that "unfortunately most of them are unwilling to undergo the drudgery of learning official duties in the subordinate grades of service." As respects the inability to read and write Bengalee fluently, Mr. Donnelly's remark does not apply to the Hooghly College. The objection to enter the service in the subordinate grades may partly arise from an aversion to the drudgery required in them, but is, perhaps, chiefly caused by the difficulty of giving the pecuniary security exacted. For a Darogahship in Mr. Donnelly's department, for instance, the incumbent must give a security in Company's rupees

rupees for 1,000 rupees; a great majority of students in the Hooghly College, would find it impossible to comply with that condition.

The extreme poverty of the greater number in this institution induces many to accept situations of junior masters, or any other, even on smaller pay, and thus to leave the college long before their education is completed, whence an erroneous and unfavourable judgment is sometimes formed of the nature and value of the education received in the college. All who can, endeavour to remain to qualify themselves for employment in the public service.

119. Mr. D. J. Money, the officiating Collector of Hooghly, has also manifested a great desire to encourage the meritorious students of this college, by appointing them to fill up vacancies in his department. Several whose names are given above have been so appointed conditionally on the approval of Government, and more are likely to be, if those already in office perform their duties creditably. The senior class of the English department have expressed their grateful sense of Mr. Money's preference, and it is very generally appreciated in the college, and likely to operate as a stimulant to the good conduct and diligent application of all the students in order to merit such favour, to which, they have been apprised, that character and ability alone can give them a claim. In his letter to the Principal, announcing Mohammad Idrees' appointment as Mohafiz, Mr. Money observes:—

"The public good, as well as the Government interests, are best consulted by the disposal of appointments in the local courts as rewards for high distinction obtained in the public seminaries of Government. The most responsible appointments have been too long held by men of low attainments, and, what is of more serious consequence, by men whose education has not been such as to impose upon them sufficient restraints against moral delinquency.

* * * * * *

"I would request you to explain to Mohammad Idrees, upon his leaving the Hooghly College, the great responsibility attached to this his first appointment, and to impress upon him the necessity of exerting himself to the utmost in the duties in which he will be employed, and of remembering always that it is not talents alone, but the fear of God, which will enable him to perform those duties, as well as all others throughout his official career in which he may be engaged, with satisfaction to himself as well as the Government he serves."

Drawing Classes.

120. The time devoted to this study is short, and the number of those disposed to cultivate it, or exhibiting any natural talent for it, is few. The English class consists only of eight. These seem to have made a reasonable improvement, considering their means and opportunities of study.

The Oriental Class, which is taught by the Koosh Navish, Mirza Mobarak Ali, only commenced in July 1842. It consists of nine students, only three of which are Moosulmans and six Hindoos, who prefer the Mirza's instruction. The progress of the students has been reasonable; but among the Mahommadans we cannot expect the cultivation of this study to be much extended, except as to the delineation of objects of inanimate nature. It is a matter of surprise to find even the few in this class drawing human bodies and features.

State of the Buildings.

121. The College and Branch and Infant Schools are all in good condition; the two latter only required the usual slight annual repairs, which were made during the Dusserah vacation. The Umarpore School has been kept in repair by the late proprietor. The Seetapore School has been repaired in January last.

The College Ghaut was damaged in January last by the periodical boars, but was repaired under the superintendence of the executive engineer. It has been again undermined in another part, by the tides, and is now about to be repaired by the same department.

General results.

122. In conclusion, on a revision of the proceedings and returns of the past year the results may be considered satisfactory. All the Scholarships assigned to the English Department, both in the College and Branch School, have been gained. In the Oriental Department 10 out of 14 Senior Scholarships, and the whole of the Junior Scholarships (16) have been also awarded, while the examinations, with few exceptions, show improvement, and especially in the vernacular department, to which so much importance is attached.

The grand totals of students of all sects in the college and subordinate institutions, as borne on the books at the termination of the years 1842–43 and 1843–44 respectively, were as follows:

1st May 1843 - - - - - - -	1,447*
1st May 1844 - - - - - - -	1,481

These numbers exhibit during the past year an increase, and in the English Department, though there has been a falling off in the subordinate institutions, that has been more than counterbalanced by the large augmentation of the numbers in the college, the classes of which are, in fact, all full, as are all those of the Hooghly Branch School. A further proof that there is no decline in the demand for education in this district, is afforded in the circumstance of two more private schools having been established, one at Bansbaria, about 10 months ago, referred to the last Report as about to be set up, which was visited by the Principal

* This number in the Report, as printed, was 1,609, owing to the mistake in the Oriental Department already pointed out.

Appendix N.

Principal (at the request of the proprietor) in December last, when it had 135 students, and was flourishing; and another at Chinsurah, which commenced only about three months ago, and already numbers about 140 students. This last is conducted by an ex-student of the college, and is supported entirely by the charges paid by the students.

123. At the annual distribution of prizes, the Honourable W. W. Bird delivered the following speech:—

"When I was last here I did not expect to be present at another Annual Meeting, but I am glad that it has happened otherwise, as an opportunity has been thus afforded me of marking the progress for a still further period of an institution in which I feel, and always have felt, the deepest interest. Although it has not been so long in existence as the Hindoo College, and cannot be expected to be so far advanced as an educational establishment, yet it is not perhaps doing less good in proportion to its means, and in one respect it possesses an advantage over that institution, inasmuch as it does not confine itself to diffusing instruction to one class only of the native community, but imparts it to all, whether Hindoo or Mahomedan, and in various languages, namely, English, Arabic, Persian, and the Vernacular —like a fountain in a desert land sending forth its streams, through different channels, to impart new life and new vigour to everything capable of cultivation in the surrounding country.

"In one respect, indeed, the Hooghly Institution appears to be in advance of the Hindoo College, I mean as regards vernacular education. The report says, that in this department the examination papers of the various classes show most satisfactory progress, which reflects great credit on the Superintending Pundit, and his subordinates, and on the students. This is as it should be. But observe the consequences when vernacular education is neglected. Mr. Donnelly, a gentleman high in the Civil Service, who takes great interest in the improvement of the natives, has remarked in a letter addressed to the Council of Education (a remark which I am happy to find does not apply to the Hooghly College), that 'the great 'obstacle to the appointment of most native lads educated at the several public institutions is, 'that they cannot read written Bengallee with fluency, and that they are much better 'acquainted with English than with their own language.' The same gentleman also remarks, 'that unfortunately most of the young persons so educated are unwilling to undergo the 'drudgery of learning official duties in the subordinate grades of the service.' The former of these defects is easily remedied by paying the same attention in other institutions to the study of the vernacular languages as is done in this. The latter is a matter of grave consideration for the Council of Education, to whom I commit the care of devising some effectual means for overcoming so serious an evil.

"Let me not, however, be misunderstood. Do not imagine for a moment that I think lightly of English education: far from it. I look to English education, not merely as the channel for conveying to the natives at large a knowledge of European literature and science, but also as the means of bringing them to the bar of public opinion, and of leading such as are in official employ to consider not only what Government think of their proceedings, but what is thought of them by the public; for I am convinced, that until they feel and think as English ideas alone can enable them to feel and think, and are capable of appreciating duly the advantage of public praise, and the shame of public disgrace, it is vain, in the absence of higher motives, to look for much moral improvement. But at the same time, it is superlatively absurd to see a native inflated with his English knowledge, unable to read or speak with correctness and fluency his mother tongue. Such a man, whatever may be his acquirements in English, must be a laughing-stock to his fellow-countrymen, while unable to impart to them in the only language they can comprehend the knowledge on which he so highly prides himself; and I can tell him that he will never be deemed qualified for the service of Government unless he is fully acquainted with both.

"It has gratified me extremely to read in the report, that the students of the first class regularly go down to Calcutta every week, to attend the Advocate-general's Lectures on Law. It evinces zeal for the acquisition of useful knowledge highly creditable to the college, and I feel it my duty again to thank Mr. Edwardes Lyall for his disinterested and laudable exertions in the cause of native education.

"In conclusion, it only remains for me to express my sincere conviction, that under the continued superintendence of the eminent persons to whom the care of the institution has been entrusted, there is every reason to believe that, with the blessing of Divine Providence, it will be the means of effecting, in a far greater degree than ever was contemplated by the founder, the real and substantial good of his fellow-creatures, and of perpetuating his own fame, as well as that of the British Government, from generation to generation."

124. In conclusion, we beg to express a hope that our proceedings for the past year will be approved of, and that we shall be deemed by your Honor to have spared no effort in our power to advance the important interests entrusted to us.

We have, &c.

Council of Education, July 1st, 1844.

The

The following are the Reports on the Provincial Colleges and Schools subordinate to the Government of Bengal: Appendix N.

DACCA COLLEGE.—8TH YEAR.

Local Committee on the 30th April 1844.

J. Dunbar, Esq., Commissioner.
J. F. G. Cooke, Esq., Civil and Session Judge.
J. G. Campbell, Esq., Officiating Collector.
H. B. Cooper, Esq., Officiating Magistrate.
J. Taylor, Civil Surgeon.
Rev. H. R. Shepherd, Chaplain.
J. Reily, Esq., Principal Sudder Ameen.
J. P. Wise, Esq., Indigo Planter.

Establishment.

J. Ireland, Esq., Principal and Secretary Local Committee.
Mr. W. Sinclair, Head Master, Senior Department.
Mr. E. Fell, 2d ditto ditto.
Mr. M. M. Chill, 3d ditto ditto.
Mr. J. W. Watson, 4th ditto ditto.
Hurro Chunder Pundit.
Mr. T. Harris, Head Master, Junior Department.
Baboo Soorjo Coomar Mookerjee, 2d ditto ditto.
„ Ramnarain Seal, 3d ditto ditto.
„ Khoderam Chund, 4th ditto ditto.
„ Kassub Lall Chund, 5th ditto ditto.
Mr. B. Demetrius, 6th ditto ditto.
Goluck Chunder Surma, 1st Pundit.
Nilmony Borat, 2d ditto.
Rammanick Sing, Librarian.
Petumber Doss, Writer.

The examination of the college took place in the month of September. The number of admissions since the previous examination had been 110, at an average age of eight years and a half, while, on the other hand, 37 had left, 4 had died, and 35 had been expelled for irregular attendance. The actual number of boys belonging to the college had increased from 344 to 378, of whom 96 formed the Senior, and 282 the Junior Department.

The Senior Department was divided into four classes. The first, consisting of 17 pupils, whose ages vary from 25 to 15 years, had read portions of the works of Shakspeare, Addison and Pope, from Richardson's Selections, and some of Bacon's Essays. They had studied the History of Rome, from Marshman's Brief Survey, and of Italy from Taylor's Modern History. They had read a considerable portion of Woollaston's Physical Geography, and were able to sketch maps of parts of the continents of Europe and Asia. In Mathematics they had read the four first books of Euclid, and Algebra as far as Quadratic Equations. The remainder of their studies consisted of vernacular reading and translation, book-keeping, and original composition on different subjects.

The second class, of 19 pupils, also varying in age from 25 to 15, had read the Poetical Reader, No. 4; Prose Reader, No. 6; Goldsmith's History of England, to the reign of Henry VIII.; Clift's, and a portion of Goldsmith's Geography; Geometry to the end of the First Book of Euclid, and Algebra to Simple Equations. They had received instructions in popular Mechanics, Astronomy and Book-keeping. They had also read and composed in the Vernacular, and translated therefrom into English, and *vice versâ*.

The third class, containing 25 pupils, from 23 to 12 years of age, had studied the Poetical Reader; No. 3, Prose Reader; No. 5, the History of Rome to the Commonwealth, and Geography, with reference to the globes. They had read to the 30th proposition of the First Book of Euclid, with vulgar and algebraic fractions, vernacular reading and grammar, with translation and composition, complete the extent of their studies.

The pupils of the fourth class, 35 in number, from 20 to 13 years of age, were reading the Prose Reader, No. 2, and the Poetical Reader, No. 2, with Lennie's Grammar. They had read the History of Greece and part of that of Rome from the Universal History, and were acquainted with the Geography of Europe, Asia and Africa. Their studies in mathematics were confined to vulgar fractions and algebraic division. In the vernacular they read with reference to grammar, translated and composed on various subjects.

The Junior Department was divided into four classes; the first consisted of 38 boys, whose ages varied from 8 to 24 years; their studies did not come up to the standard prescribed by the rules; the second class contained 42 boys, from 10 to 17 years of age; the third class was subdivided into into sections, one of 53 and the other of 51 boys; their ages varied from 7 to 17 years; the fourth class consisted of 98 boys, from 7 to 13 years of age.

The average attendance of pupils in both departments during the year, was 217; more, by 51, than at any former period, but still much below the due proportion.

The Committee were of opinion, that though there was room for improvement, yet much

Appendix N.

good had been done; and that the pupils had, on the whole, made satisfactory progress during the period embraced in the Report. The number* of admissions during the year was considered by the Government a satisfactory proof that the college was gaining ground in public estimation, and the general improvement in the qualifications and conduct of the pupils was thought to answer the highest expectation that could have been formed from the previous condition of the college. The Principal was directed to apply himself to correct the evils in the system of instruction heretofore pursued, and especially to take care that the pupils of the Junior Department were well grounded in the first principles of grammar and arithmetic, which had evidently been heretofore neglected. The practice of teachers, in giving an undue share of attention to the pupils at the head of a class, and neglecting those who were more backward, was reprobated as unjust towards the boys themselves, and injurious to the character and usefulness of the institution. The Committee were likewise desired to take measures for relieving the junior classes of the numerous adults who now attend with little benefit to themselves, and manifest detriment both to the morals and the intellectual progress of the younger boys.

Four Senior Scholarships of 30 rupees a month each were awarded to the following students: 1. Juggobundhoo Mukerjea; 2. Kishn Chunder Sein; 3. Rajkisto Paul; and, 4. Kistosunder Ghose.

Bissumber Doss, Anund Chunder Doss, Kalee Churn Ghose, and Bhugwan Chunder Bose were considered entitled to retain their Junior Scholarships: and those held by Rajkisto Paul and Kisto Sunder Ghose were awarded to Bungo Chunder Chuckerbutty and Bhugobuttee Churn Gangoolee. The papers of the successful competitors for Senior Scholarships were submitted to Government, and thought to evince considerable knowledge of the subjects on the part of the students.

To meet the complaint of the Principal and Masters, that the number of scholars had exceeded the ability of the existing establishment to teach them, the Government sanctioned the entertainment of two additional English Masters, Mr. E. Fell, formerly second Master of the Patna School, and Mr. J. W. Watson, a Graduate of the Aberdeen University, on salaries of 150 rupees, and 100 rupees a month respectively, and the transfer to the Junior Department of Soorujkoomar Mukerjea, who had previously been employed in instructing the senior classes, a duty for which he was not properly qualified. The Committee were likewise authorized to entertain an additional teacher whenever the increase of pupils might render it necessary to form a new section.

The Committee have passed certain rules for the purpose of ensuring a greater degree of regularity in the attendance of the pupils, which it is hoped will have the desired effect. They were enjoined to persevere in the use of vigorous measures for this purpose, and to make known to the pupils that absence without leave would be a bar to the acquisition of a Scholarship.

The Government expressed a desire that steps should be taken to introduce gradually and cautiously the system of making the pupils contribute towards the expense of their education, and with that view the Committee were requested to report on the propriety of fixing a limit to the number of free students in each department, and demanding a payment of not more than one rupee per month from others in the Senior, or eight annas in the Junior Department. An attempt made by the Committee during the past year to exact payment for books, &c., supplied out of the college store to the pupils, though obstinately resisted for some time, was in the end completely successful.

The students are represented to avail themselves largely of the means of information afforded to them by the college library, to which an addition of nearly 500 volumes has been made during the past year, and from which 669 volumes were issued during the same period to the senior students for private study at home. The Committee were informed that the library medals were still open to competition on the terms set forth in paragraph 39 of the late General Committee's letter, dated the 30th October 1840, and that it would afford much satisfaction to the Government to learn that any of the students had been thought deserving of reward.

The Principal reported that the new building in course of erection, which, it was mentioned at page 131 of the last Annual Report, had been sanctioned on a plan and estimate submitted by the Military Board, was unsuited to the purpose for which it was designed, and that some alterations and additions would be necessary before it could be occuped as a college. The form of the building being a square with an open space in the centre, and the staircase being at one of the angles, it would be necessary for a boy to pass through all the rooms on two sides of the building before he could reach the class-room at the opposite angle. In the opinion of the Principal, the rooms were all of too small dimensions, and neither lighted nor ventilated in a proper manner. The Committee thought that it would be more advantageous to allow the building to be finished before proposing any alterations; but it was considered by the Government obviously preferable to call upon the Military Board to take at once into their consideration the Principal's objections to the building, in order that if necessary a remedy for the faults complained of might be applied before it was too late. The Committee were likewise directed to place themselves in communication with the Executive Officer on the subject.

The proposal of Baboo Ramlochun Ghose to establish, in subordinate connexion with the college, a Patsalah for promoting the study of correct Bengalee in the city and district of Dacca, in furtherance of which he offered to contribute 3,000 rupees, was not approved, as the charge upon the education fund would be large, and the Baboo's donation was conditional

on

on restricting the benefits of the Patsalah to Hindoos of certain castes. It was also thought that ample means for vernacular instruction in the college had been already provided. Appendix N.

JESSORE SCHOOL.—6th Year.

Local Committee on the 30th April 1844.

E. Bentall, Esq., Judge.
J. Anderson, Esq., Civil Surgeon.
R. Hampton, Esq., Officiating Magistrate.
E. H. Lushington, Esq., Joint Magistrate.
Boroda Kant Ray, Rajah.
G. Scott, Esq., Merchant.
Moulavie Kalim, 1st Principal Sudder Ameen.
Muftee Lutf Hoosin, 2d - - ditto.

Establishment.

Mr. J. Smith, Head Master.
Baboo Takor Doss Chuckerbutty, 2d Master.
Two Monitors.
Anund Chunder, 1st Pundit.
Nilmony, 2d ditto.

At the annual examination 74 boys were present out of 120, the number of which the school was represented to consist. These were divided into eight classes, as in the margin, and the following is a statement of their respective studies and proficiency.

First of -	15
Second of	-
Third of -	12
Fourth of	8
Fifth of -	8
Sixth of -	9
Seventh of	5
Eighth of	18
Total - -	74

1st Class.—History of Greece to page 136. History of England to page 15. Physical Geography to page 15. Poetry, No. III. to page 66. Geometry, Euclid, Book I. Arithmetic, all the simple and compound rules. Use of the Terrestrial Globe, 12 problems. Algebra to Involution. Translations, Byacurn.

3d Class.—Marshman's History of India to page 116. Marshman's Brief Survey of History, to the end. Poetry, No. 1 to page 67. Lennie's Grammar to page 101. Clift's Geography to page 55. Arithmetic to Vulgar Fractions. Geometry, Euclid, Book I., 20 Propositions. Translations. Dictation. Byacurn. Gyannarnuba. Reader.

4th Class.—Marshman's History of India to page 95. Azimghur Reader to the end. Lennie's Grammer to page 19. Clift's Geography to page 55. Arithmetic to the Rule of Proportion. Poetry, No. 1 to page 27. Dictation. Byacurn. Gyannarnuba. Reader.

5th Class.—Marshman's History of Bengal, the whole. Azimghur Reader to page 57. Lennie's Grammar to page 16. Arithmetic to the Rule of Proportion. Clift's Geography to Africa. Byacurn. Munorunjun. Reader.

6th Class.—Reader No. II. to page 73. Murray's Abridged Grammar to page 21. Clift's Geograpy to page 16. Arithmetic to Compound Addition. Munorunjun. Reader.

7th Class.—Reader No. 1. to page 40. Geography to page 5. Murray's Spelling to page 34. Arithmetic to simple Division. Neetee Cotha, No. 1.

8th Class.—Murray's Spelling to page 29. Neetee Cotha, No. II.

The Local Committee had taken upon themselves to admit boys of all ages without reference to their qualifications, or to the rules which prescribe them. But, notwithstanding this, and the practice of retaining the names of boys on the list until they had been absent from the school for six months, the gross number had decreased from 144 to 120, and the number present from 84 to 74. The examination, however, of these was represented to be satisfactory, and creditable to the zeal and assiduity of the Head Master. A strict observance of the admission rules, as modified by Circular No. 38 of 1843, was enjoined upon the Committee, and they were also directed to take measures for checking the irregular attendance which prevails in this school to a greater degree even than usual. The Committee subsequently suggested the formation of a Bengalee class in connexion with the school, and requested authority to entertain a Sirkar on a salary of eight rupees a month for the purpose of instructing it; but there being two Pundits already on the establishment, the expense could not be sanctioned.

Kishno Chunder Mojundar was considered entitled to retain his Junior Scholarship until the next annual examination, and another Junior Scholarship, available by the abolition of the Tribany School, was awarded to Sham Churn Mukerjea, under the usual conditions.

The school was inspected in the month of February 1844 by Mr. J. Kerr, Principal of the Hindoo College, whose report was, on the whole, favourable.

The first class, except those boys who had been recently promoted, read and explained a passage selected from the Poetical Reader, No. 3. Their pronunciation was rather defective. They had read Goldsmith's History of England to the reign of Charles I. and of Greece to the first Persian war, and answered nearly all the questions put to them in those subjects correctly. Only two of the boys gave satisfactory solutions of easy questions in proportion, interest and vulgar fractions. Three were pretty well acquainted with Geometry as far as the 10th Prop. of the second Book of Euclid.

Appendix N.

The proficiency of the second class was considered by the Examiner to be creditable in all branches of instruction except arithmetic. In History and Geography, however, their answers were frequently given in the very words of the book. Many of the pupils had entered the school in 1841 and 1842.

The studies of the third and fourth classes were quite elementary. Of the former, the Examiner observes,—"It is gratifying to find that some of the boys in this class, though so young, have begun to take books from the library, and to make a good use of them. They gave me some information in geography which is not contained in their Class Book (Clift), but which they have obtained, they said, from a copy of Goldsmith's Geography belonging to the library. They are nice intelligent boys, and afford ground to hope that they will benefit largely should they remain long enough at school to get into the highest class. They told me that on obtaining Scholarships they would willingly come to the Hindoo College, or to Hooghly, to complete their education."

The fifth and sixth classes (the last of which is divided into three sections), consist of boys who could do little more than read and spell.

The Examiner noticed an irregularity on the part of the Head Master, who allowed certain lads too old to be regularly admitted to attend the school, though their names were not in the register. "He has not," observes Mr. Kerr, "the heart to exclude them, which he thinks would be tantamount to depriving them of every chance of obtaining an English education, there being no other English school in the district. It is hardly necessary to observe that every instance of such deviation has a tendency to neutralize the general good effects which the prescribed rules are intended to promote." Means have been taken to prevent the continuance of this practice.

The want of an additional Pundit for the junior classes being much felt, the Examiner remarks, "In the event of local subscriptions not being forthcoming, a sufficient sum to meet this inconsiderable outlay might, one would suppose, be raised by introducing on a small scale the pay system, a mode of contributing to the support of the school, which has not yet been tried at Jessore, none of the pupils, though some of them can well afford it, having ever paid a single pice for the valuable education they are receiving."

The prevailing irregularity of attendance is ascribed to the distance at which many of the boys live from the school, to their poverty, and to the unhealthiness of the district, which sometimes renders it necessary to close the school. The Examiner, however, considers that even under these unfavourable circumstances "the introduction of the pay system, and strictness in dismissing those who are frequently absent without leave, might produce some improvement."

The second English Master had been compelled by sickness to leave the station, and was absent on that account for several weeks. No competent person had been found to supply his place, but one has since been appointed. The two Pundits were represented by the Examiner to evince much reluctance to teach the mere rudiments of the vernacular language.

In regard to the removal of Scholarship-holders to the Central College, Mr. Kerr observes, "Anund Mohun Mozumdar, who obtained a Scholarship in the Jessore School in 1841, having preferred forfeiting his Scholarship to going to Hooghly, as the rules required, I was most anxious to ascertain, by inquiries on the spot, whether this was likely to be a permanent obstacle. I found that Annund at the same time that he held a Junior Scholarship of eight rupees, derived eight rupees more as remuneration for his services in the school as a monitor, which latter sum he would have lost by removing from Jessore. It cannot therefore be concluded from this peculiar case that other Scholarship-holders will evince the same unwillingness to comply with the condition in question.

"On putting the question directly to the present Scholarship-holders, one of them (Krishto Chunder Mozumdar) said emphatically that he would not go to Hooghly, because eight rupees a month would not support him there respectably; but that he would willingly go to Dacca, where he has friends with whom he could live cheap. The other did not speak with the same freedom, and I could only learn from what he said, that he is very comfortable at home, and has no wish to remove to a distance. It is probable that early marriages, and the fears and prejudices of parents, act with greater force as an obstacle to leaving home than the boys themselves are willing to admit, or than Europeans can well understand."

Mr. Ireland, who inspected the school in 1843, but whose report was received too late to be noticed in last year's General Report, writes, "It is said that the boys object to go to Hooghly, because eight rupees a month is not sufficient to support them away from their families; but if they are so poor as is represented, this objection is groundless, and ought not to be attended to."

He also observes: "There are too many classes in this school; as the daily attendance never exceeds 100, reduce the number of classes to four; dispense with the three monitors and one of the pundits, and appoint in their stead two junior teachers on a salary of 25 rupees a month each. There would then be four classes with four teachers and one pundit to superintend them. The two junior teachers would be able to teach both English and Bengalee, and the pundit should instruct the two senior classes in Bengalee, and correct the translation. Do away also with the Sanscrit class altogether; in an elementary school of this kind, attended mostly by poor boys who will have to earn their living by manual labour, of what possible use can Sanscrit be?"

CHITTAGONG SCHOOL.—7th Year.

Muddenmohun, Head Pundit.
Juddoonauth, 2d ditto.
Moolvee Woozur Ally, Persian Moonshee.

The annual examination of the school was held in the month of July. The first class had read the Histories of England and Rome, and Pope's Homer's Iliad to the end of the 4th Book. They had been in the habit of composing in English, and of translating from English into Bengallee, and *vice versâ*. They had studied Arithmetic as far as Decimal Fractions, Algebra to Simple Equations, and Geometry to the Third Book of Euclid. The second class had read the History of Rome to the end of the third Punic War, geography of the four quarters of the globe, English Grammar to Syntax, Arithmetic to Vulgar Fractions. They could also translate from English into Bengalli. The third class were in the English Readers, Nos. 2 and 3. They had studied the Geography of Europe and Asia, Grammar, and Arithmetic as far as Reduction. They also translated from English into Bengalli, and wrote from dictation. The fourth class were in their rudiments.

The Committee expressed themselves generally quite satisfied with the progress of the scholars and the conduct of the Masters during the year; but neither their report, nor that of the Head Master, was sufficiently in detail to enable the Government to judge correctly of the actual state of the institution.

Seven pupils competed for the Junior Scholarship, which was awarded to Ramkoomar Bose; but the papers of the second candidate, Kishenpersaud, were thought to be so creditable, that the Government, at the recommendation of the Committee, granted him a special Junior Scholarship, tenable for four years on the usual terms.

In consequence of the appointment of Mr. Vaughan to be second Master of the Calcutta Mudrussa, Mr. W. Gunn was appointed to succeed him as Head Master of the Chittagong School.

Mr. Ireland, Principal of the Dacca College, inspected this school in the month of March 1844. Extracts from his report are subjoined :—

" Since my last visit several boys have been promoted to this class, which is now divided into two distinct sections, the studies of which are, with the exception of arithmetic, entirely different. I have strictly examined the boys of the first section, all of whom were present, in the subjects which they have been studying during the past year, and I find that six boys have made great progress in their studies, and understand well what they have learnt. This is very creditable both to themselves and their late head master. The other three boys did well in some subjects, but in reading, explanation and parsing they were very deficient. Two of the six boys who acquitted themselves so well obtained Junior Scholarships at the last examination. All the six were candidates for the Scholarships, and their answers to the Scholarship questions have, at my request, been submitted to me. On comparing them with their written answers last year, I find a marked improvement in all the six, but the two boys who obtained the Scholarships are far superior to any of the others. The great improvement which these boys have made during the year is to be attributed entirely to the indefatigable exertions of the late head master, who, I am told, used to teach them after school-hours, and has been known to have them in school by candle-light.

" The boys of the second section, with the exception of the first two or three, have not improved much during the year. The only subject in which they acquit themselves well is geometry.

" The second class is also now divided into two distinct sections. All the boys of the first section were present; four of them read well, and evidently understood what they read; but the pronunciation of all the rest was decidedly bad. Five or six of the head boys pleased me with their readiness and correctness in answering questions in English grammar, but nearly all appeared to parse entirely by guess. In geography and arithmetic they are tolerably proficient; but, notwithstanding the minute subdivision of the classes in this school, four of the

Appendix N.

the boys in this section have only just commenced arithmetic, while the rest of the class can work sums in the Rule of Three.

"The studies of the second section of this class are very elementary; many of the boys are much too old for this class, and read very badly. English grammar appears to be taught by rote, little pains being taken to make the boys understand the subject. Very few of them know the multiplication table correctly.

"I did not examine the boys of the third class.

"On the whole, notwithstanding the striking improvement in some of the head boys, I am of opinion that the school generally has retrograded during the past year. This, however, does not appear to be owing to any want of industry or attention on the part of the teachers, but is to be attributed, in a great measure, to that injudicious subdivision of the classes which has long existed in this school. Each class is divided into two distinct sections, having separate and distinct studies, so that there are, in fact, six classes to be superintended by three English teachers. The consequence of this has been, that the teachers, finding themselves unable to give sufficient time to the English studies of the classes placed under them during the usual school hours, have been in the habit of detaining one of the sections under them for one, or two, and sometimes for three hours after the usual time for closing the school, in order to train up a few good boys to enable them to save their credit with the Committee at the examination. This has led to that pernicious practice, which prevails to a great extent in the schools of this country, of training up a few of the most intelligent boys in a class for a mere show, leaving all the backward boys to get on as well as they can, with very little assistance from the teacher. It is the duty of a teacher to encourage the backward boys, and endeavour to bring them on as nearly as possible to an equality with their class-mates, so that he may be able to teach the whole class as one boy. If he will devote extra time to teaching, let him by all means devote it to those who stand most in need of it.

"Mr. Gunn, on taking charge of the school, did not disturb the existing arrangements, but he soon saw that it would be impossible to conduct the business of the school in a satisfactory manner unless some change were made in the disposition of the classes. He represented the case to the Committee, but was not permitted to make any alteration. As soon, however, as I had finished the examination of the boys, I re-arranged the classes for him. I divided the whole school into four classes, and drew up a routine of studies for each class, to which I requested the Head Master's particular attention.

"The pupils at present attending the school are the sons or relatives of the Omlah, Vakeels, and others belonging to the public offices. It is chiefly among this class of persons that we find any interest taken in education at the Government School. They all seem to look forward to their children being able, after completing their education at the school, to obtain eventually good appointments under Government. The Portuguese population of the station is estimated at 5,000; but little desire is evinced by this class of the people to avail themselves of the benefits of the education afforded at the Government School. Perhaps if there were no charge for schooling, more of the Portuguese boys would attend than at present.

"The vernacular class-books in use here, are Bengalee Grammar, Gyanchundrica, Nithicotha, Burnomulla, Gulistan and Persian Reader.

"Great pains should be taken to instruct the boys well in the Bengalee language, as the vernacular of this district is a mixed language, almost unintelligible to a native of Calcutta.

"The two boys who obtained Junior Scholarships last year were willing to go to the Dacca College, but were induced by Mr. Ricketts to stay here, and read for Moonsiffships. I expect, however, they will decide upon going to Dacca in a few days. As far as I can learn, very few of the boys at present attending this school would be willing to forfeit Junior Scholarships of eight rupees a month rather than proceed to Dacca.

"To place this school on a more efficient footing, you must remove Mr. Mason to some other school, and appoint two native English teachers in his stead, one on a salary of 50, and the other on a salary of 30 rupees a month. These two native teachers should be able to teach Bengalee as well as English, and you might then dispense with the junior teacher, thereby effecting a saving of 25 rupees a month in the establishment.

"The desire for English instruction is chiefly confined to the Hindoos, and to a small portion of the Roman Catholic population. The Mahomedans generally have no wish for either English or Bengalee, and would have their children to learn Persian only. Very few of them, I am told, can either read or write Bengalee. The language which they speak is a corrupt kind of Hindustani.

"There is another English school at the station, established by the Roman Catholic Priest, to which boys are admitted free, and to which, in consequence, many boys resort, rather than enter the Government school, and pay for their schooling. It is supported principally by local subscriptions. It is conducted by a native teacher, on a salary of 30 rupees a month, assisted by a monitor. The average monthly expenditure is about 40 rupees. In December last there were 76 boys attending this school, consisting of 62 Christians, 12 Hindoos and 2 Mahomedans. The studies are merely elementary.

Mr. Ireland's suggestions in regard to the removal of Mr. Mason have been acted upon. He has been appointed second Master of the Patna School, *vice* Mr. Fell, who has been transferred to the Dacca College.

COMMILLAH SCHOOL.—7th Year.

Local Committee on the 30th April 1844.

F. Skipwith, Esq., Session Judge.
J. Alexander, Esq., Collector.
H. D. H. Fergusson, Esq., Magistrate.
F. Courjon, Esq., Zemindar.
R. Watt, Esq., Agent to the Rajah of Tipperah.
H. Roe, Esq., Zemindar.
Mohamed Allykhan Bahadoor, Principal Sudder Ameen.
Moulvee Mohamed Nazem, Sudder Ameen.
Golaum Ayeah, Kazee.
Moulvee Salamutoollah, Uncovenanted Deputy Collector.
Reazooddeen Ahmud, Serishtadar Judge's Court.
Gourmohun Roy, ditto of Collector's Court.

Establishment.

Mr. H. G. Leicester, Head Master.
Baboo Kally Doss Mujoomdar, Assistant ditto.
Nobin Chunder Surma, Pundit.
Moulvee Vakeel Oooddeen, Professor of Law.

At the annual examination held by the local Committee 119 boys were borne on the rolls of the school, being 30 more than last year. They were divided into four classes, the junior class being subdivided into two sections.

The first class, consisting of 19 boys, were reading the Histories of Greece and Rome, with passages from the Spectator, and the Poetry Reader No. 2. In addition to these subjects, and the usual course of study in Geography, Grammar, Composition and Mathematics, the class had attended lectures on the Revenue Regulations, of which they had acquired some knowledge.

The second class, consisting of 24 boys, had read 12 chapters of Marshman's History of Bengal, Reader No. 3, Geography of the Eastern Hemisphere, and Arithmetic. They had also practiced writing from dictation, and translated into and from the vernacular. In Bengali they read Bhagavati's Grammar, the Hitopades, Guanor Nuba, and 11 chapters of the History of Bengal.

The third class, of 27 boys, had read Woollaston's Grammar and the Prose Reader No. 1 throughout. In Arithmetic they had gone as far as Long Division, and were reading the Nithikota in Bengali.

The fourth class, consisting of 49 boys, were in the rudiments of Bengali and English.

The local Committee considered the results creditable to the Head Master and his assistants, and the progress of the pupils very satisfactory. They reported that they had authorized a deviation from Rules 37 and 38, with a view to the admission of boys who had no means of obtaining elementary instruction in English. The measure, however, was found to increase the labour of the masters to such a degree, as to compel the Committee to return to a strict observance of the rules.

The Government expressed gratification at the increase which had taken place in the number of scholars during the year, particularly those of the Mahomedan religion. This result, however, had been obtained in a great measure, not only by an unlimited relaxation of Rules 37 and 38, but by the admission of youths upwards of 16 years of age, in breach of the still more important principle laid down in Rule 39. It was hoped that the dangerous expedient of increasing the present number of scholars at the risk of the future prosperity of the institution would not again be resorted to, and on this subject the Committee were referred to Circular, No. 38, of the 4th January 1843.

Generally speaking, a much greater degree of regularity of attendance had prevailed during the past year than before; and this was doubtless owing to the judicious course pursued by the Committee in rewarding the regular attendants, and punishing an habitual absentee by expulsion.

Success appears to have attended the appointment of a Law Lecturer by the local Committee; but as the attainments of the Incumbent were not highly estimated by the Head Master, the Committee were desired to be careful to guard against an erroneous exposition of the law, and the dissemination of principles which might serve to mislead the pupils, and render the instruction imparted an evil, rather than a benefit. A vacancy having subsequently occurred, one of the Hooghly Oriental Scholarship holders has been appointed to succeed as Law Professor at Commillah, and is already represented as giving much satisfaction.

Kishen Chunder Sein, having obtained a Senior Scholarship in the Dacca College, his Junior Scholarship was awarded to Ramshunker Sein, one of the "Raja of Tipperah Scholars" of last year. The vacant Tipperah Scholarship was given to Gobind Chunder Bose. The two "Raja of Tipperah Scholars," having expressed a wish to be allowed to prosecute their studies at the Dacca College, permission was given conditionally on the consent of the Raja.

Appendix N.

Mr. Ireland inspected this school in the month of March 1844. He reports as follows :—

"The standard of proficiency in the first class is not so high as it was last year. There were then 22 boys in the class; but all the best having since left, the number is now only 13. Three students have been transferred to Dacca, having obtained Junior Scholarships; one has been admitted into the Medical College, one has obtained an appointment in the Collectorate, and two have been expelled for irregular attendance. The boys who now remain in the class, are, with a few exceptions, very dull; many of them are too old to make much improvement, and will never bring any credit to the institution. On inquiring the respective ages of the 12 boys present, I found (as per margin) that some of them were 20 years old, and that the average age for each boy was 18¾ years.

2	aged	21
3	„	20
1	„	19
4	„	18
1	„	17
1	„	14

"The majority read and pronounce badly. They write from dictation very incorrectly, much worse indeed than some of the boys of the second class, and many of them have much difficulty in expressing themselves in English. After a careful examination, I find that the subjects in which these boys are most deficient are arithmetic, English grammar and composition, and geography. Several of them are familiar with the rules of grammar, but do not apply them correctly, while most of them parse almost entirely by guess. In arithmetic, only two boys acquitted themselves well, and five of them did not solve a single question correctly. I cannot speak more favourably of their attainments in geography. They have all studied a great part of the First Book of Euclid, but several of them do not know even the definitions.

"On referring to my notes of the examination which I held last year, and looking over the performances of the boys who were then in this class, I find that the same defects then existed, and I do not consider that the boys now remaining in the class have made satisfactory progress during the year. Many of the old boys have been very irregular in their attendance; but I believe it is the intention of the Committee to dismiss all such boys, unless they attend more regularly, and make greater progress in their studies, than they have hitherto done.

"In the second class the boys passed a very creditable examination, and gave me much satisfaction. They read and write from dictation much better than many of the boys in the first class, and are quite equal to them in other things. They ought certainly to have been promoted to the first class at the last annual examination; but no promotions were then made, for what reasons I have not been able to ascertain. Three of the other boys at the bottom of the class acquitted themselves well in some subjects, very creditably indeed considering the short time they have been at the school, but the rest did not do well in any subject, though some of them have been five years at the school. They read very badly, and parse entirely by guess. The teacher complains of their irregularity, and of their being too old to make much progress in their studies.

"Many of the boys in the third class read well, and with good pronunciation; they have gone through Woollaston's Grammar, and know the rules well, but have not yet been taught to apply them. In arithmetic they do not appear to have made much progress; many of them have not yet learnt the multiplication table properly.

"The fourth class is divided into three sections. The studies of the first section are exactly the same as the third class, though the boys are not yet quite so far advanced; there was no necessity for separating these boys from the third class. Considering the short time which the boys in this and the other two sections have been at the school, they have made satisfactory progress in their studies.

"Owing to the increase in the number of students, and the want of additional teachers, one of the students of the first class, Kassee Chunder Ghuttack, who has for a long time received a subsistence-allowance of two rupees a month from the school funds, has been appointed monitor to teach the junior boys. Having examined him, and found him sufficiently qualified, I would recommend his being permanently appointed as a junior teacher on a salary of 10 rupees a month, to be afterwards increased to 20, if he shall be found to give satisfaction.

"No promotions having been made, as before stated, for nearly two years, I deemed it advisable, after finishing the examination, to re-classify the boys.

First Class	-	20
Second „	-	21
Third „	-	39
Fourth „	-	34
Total	- -	114

"I divided the whole school into four classes, as per margin, and drew up for the teachers a daily routine of studies for each class, distributing the classes among the teachers, according to the following scheme :—

1*st Class.*—English Studies	-	4 hours	with Mr. Leicester.
Vernacular	- -	1 „	Pundit.
		5 hours per day.	
2*d Class.*—English Studies	-	1 hour	with Mr. Leicester.
Ditto	- - -	2 „	2d Teacher.
Vernacular	- -	2 „	Pundit.
		5 hours per day.	
3*d Class.*—English Studies	-	3 hours	with 2d Teacher.
Vernacular	- -	2 „	Pundit.
		5 hours per day.	

4th Class.—English Studies -	3	With the Junior Teacher, or Monitor, as he is now called.
Vernacular - -	2	

" By this arrangement no class will be left without a teacher during any part of the day, and the boys will consequently be better taught. But, owing to the want of an additional teacher, it will be seen that the Pundit is obliged to take charge of a class without any assistance, which is contrary to the usual practice, and which should be avoided, when possible, if the vernacular is to be well taught.

" The general appearance of the boys is much in their favour; with the exception of the old boys and the Mahomedans, they appear to be smart and intelligent, but rather noisy; some of the villagers were not over clean in their dress.

" The interest taken by the native public in the Government School was formerly confined to the higher classes, but is now spreading rapidly among all classes; it has increased very much since my first visit in July 1841, and will continue to increase in exact ratio with the number of Scholarships, and the prospects of official advancement which are held out to the pupils; such appears to be the general opinion of all parties at this station, natives as well as Europeans. The increase in the number of scholars may be attributed entirely to these causes.

" The daily attendance has been gradually improving during the last two years. If boys absent themselves, sickness or some domestic occurrence is the plea usually assigned. The recent appointment of some of the boys to situations in the Government offices, the joining of Scholarships by others, and the expulsion of some of the most irregular boys, have no doubt tended greatly to promote regularity of attendance on the part of the pupils.

" The system of instruction in the classes is chiefly the interrogative; but the language used by the pupils in asking questions and giving answers does not receive sufficient attention on the part of the masters; broken English and bad pronunciation frequently pass unnoticed. Many of the suggestions to teachers appear to have been attended to.

" The progress which this school has made in public estimation since my first visit in July 1841, must be attributed in a great measure to the active interest which the present Secretary has long taken, and continues to take, in the cause of native education. He has been in the habit for a long time of having seven or eight of the most promising students at his house almost daily, either in the morning or evening, to read to him from useful works on different branches of knowledge. He has taken great pains to make them understand what they read, and spent much time in correcting their written compositions, a subject not sufficiently attended to in the school; these instructions have been of great service to the boys, who have thus acquired a greater command of the language than they would otherwise have possessed. The best boys having left, he now takes several from the first class, and two or three from the second.

" The establishment of the Rajah of Tipperah's Scholarships has also done much good for the school. This measure has given great satisfaction at the station, and I have been repeatedly thanked for suggesting it to Government.

" All persons, Natives as well as Europeans, express great satisfaction that the school is to be inspected periodically, and many seem to think that its recent success is entirely owing to this cause. To the natives it affords clear evidence of the lively interest which is taken by Government in the welfare and prosperity of the school, and they say that the masters now will be properly looked after, and not allowed to do as they please; and that all abuses will be speedily corrected whenever they occur.

" It is not likely that any of the boys of this school who may hereafter obtain Junior Scholarships, would refuse to go to Dacca. This school has already sent four junior scholars to the Dacca College, one of whom has lately succeeded to a Senior Scholarship."

BAULEAH SCHOOL.—8th Year.

Local Committee on the 30th April 1844.

Welby Jackson, Esq., Commissioner.
G. C. Cheap, Esq., Civil and Session Judge.
T. C. Loch, Esq., Magistrate.
W. M. Dirom, Esq., Officiating Collector.
T. W. Wilson, Esq., Assistant Civil Surgeon.
Moulavi Abdulali Khan Bahadur, Principal Sudder Ameen.
Syad Ibrahim Hosen, Sheristadar of the Criminal Court.

Establishment.

Baboo Saradaprasad Bose, Head Master.
„ Shiva Chundra Ghose, Officiating 2d ditto.
„ Rudrakant Lahiri, 3d ditto.
Kailas Chundra Bidyanedhi, Head Pundit.
Shivaprasad Sandyal, 2d ditto.

The annual examination of this school took place on the 12th September 1843, in the presence of the local Committee. The number of pupils attached to the school at that time was

Appendix N.

was 110, of whom 106 were Hindoos, 3 Christians, and 1 Mahomedan. These were distributed into five classes, of which the two last were subdivided each into two sections.

The following is a statement of the studies in which the classes had been engaged during the year :—

First Class.—Richardson's Poetical Selections (Goldsmith, Gray, Addison, Pope and Shakspeare). Prose Reader, No. VI. Recapitulation. History of Greece, Rome, England and India. Grammar, Exercise in Syntax and Prosody. Elements of Natural Philosphy (S. D. U. K.) Mechanics, Astronomy, Hydrostatics, Pneumatics and Optics. Recapitulation. Geometry, first Six Books of Euclid. Second Course, Plane Trigonometry, Algebra, Quadratic Equations, Progressions and Ratios. Book-keeping. General Geography, Use of the Globes. Translations and Composition.

Second Class.—Prose Reader, No. V., 199 pp. Pope's Homer's Iliad, 5 Books. Pinnock's History of Greece, 215 pp. Goldsmith's History of Rome, 161 pp. Lennie's Grammar, whole. Physical Geography and Use of the Globes (Text Book, Goldsmith.) Lessons on Objects. Arithmetic, to Decimal Fractions ; and, Translations.

Third Class.—Marshman's History of Bengal to the Reign of Serajuddaula, or 180 pp. Prose Reader, No. IV., 70 pp. Poetical Reader, No. II., 60 pp. Lennie's Grammar, Syntax. Clift's Geography, whole. Lessons on Objects. Arithmetic, to Compound Proportions ; and, Translations.

Fourth Class, 1st Section.—Prose Reader, No. II., 42 pp. Murray's Abridged Grammar, as far as Syntax. Clift's Geography, 25 pp. ; and, Arithmetic, to Reduction.

Fourth Class, 2d Section.—Prose Reader, No. I., 22 pp. Clift's Geography, 7 pp. (lately commenced) ; and, Arithmetic to Simple Multiplication.

Fifth Class, 1st Section.—Murray's Spelling, words of three syllables, and Reading Lessons.

Fifth Class, 2d Section.—Murray's Spelling, words of one syllable.

The proficiency attained by the students in the upper classes was considered to be on the whole greater than in the generality of provincial schools, and the Committee testified that the senior boys in each class acquitted themselves in a satisfactory manner. It was thought necessary, however, to draw their attention as well as that of the Head Master to the annexed extract* from a letter addressed to the Dacca Committee on a similar occasion.

The Head Master drew attention to the insufficiency of the means provided for vernacular instruction, aggravated by the omission on the part of the Committee to fill up the situation of Pundit, until it had been vacant for nearly a year. The Head Master recommended the establishment of a Patsalah in subordinate connexion with the school ; but the Government concurred with the local Committee in thinking that there was no necessity for such a measure, the object of which could be equally well attained by the admission of boys into the institution for instruction in the vernacular alone, which was accordingly authorised.

The enlargement of the school-house, principally for the purpose of obtaining a suitable library, towards which the sum of 300 rupees was granted by Government in 1842 has not yet taken place, and the Committee were directed not to commence the work until a plan and estimate should be submitted and approved.

Kunja Lall Banerjea was considered to have made sufficient progress in his studies to entitle him to retain his Junior Scholarship. The Committee recommended Charles Burrowes for a similar distinction ; but under existing arrangements this could not be granted.

This school was inspected by Mr. F. V. Seddon, Principal of the Nizamut College, and the result as reported by him was considered to reflect much credit on the head master and his assistants.

Of the first English class, consisting of seven pupils, the examiner observes, "The first class have finished Goldsmith's Histories of Greece, Rome, and England, and Marshman's History of India ; and have commenced Hume's History of England and Lardner's History of Rome. They have read the Prose Reader No. VI., sixteen Books of Homer's Iliad, and in Richardson's Poetical Selections, Goldsmith, Addison, Gray, Pope's Essays, Otway's Venice Preserved, and of Shakespeare, Hamlet and Othello. They are now reading Macbeth. On the 16th they were examined in history, explanation, mechanics, pneumatics, astronomy, use of the globes, geography, delineation of Europe and Asia on the board, book-keeping, geometry and algebra ; during which time the second class was occupied in preparing written answers to questions in history. I was ably assisted by Messrs. Loch and Dirom ; both took great interest in the proceedings ; the former relieved me much in geography, natural philosophy, and algebra. This enumeration would *à priori* argue the advance of this class, their general proficiency and application, and the pains, care, zeal and ability of the Head Master.

"On the 15th I examined the class in Hamlet, Macbeth, and Othello. Charles Burrowes, as Hamlet, did not throw himself into the character, but he read accurately, and gave the meanings correctly. Brajasunder, as Horatio, acquitted himself indifferently well without animation. Visweswer's delivery was most impressive, his voice clear, and emphasis good.

"At

* "The practice of teachers in neglecting the more backward pupils of a class, and giving an undue share of their attention to those at the head of it, has been repeatedly reprobated as unjust towards the boys themselves, and highly injurious to the character and usefulness of the college, and the Committee are enjoined to use their utmost endeavours to prevent it."

"At the Master's suggestion, they read the part in Othello beginning,

"Excellent wretch! Perdition catch my soul,
"But I do love thee!"

but this which should have been read with passionate irony, was delivered with unmoved monotony. With the exception of one or two of the more difficult passages, the explanations were so good and correct, as to evidence very close application.

"The whole read with fluency. Their explanations are capital (and of their many good points perhaps the best) not of words only, but of the meanings of phrases, images and allusions, and retentively and intelligently given; with the exception of some passages which puzzle older heads, and divide the opinions of criticism.

"The height to which water and mercury rise by the pressure of atmospheric air, the principles of the common pump, the reason why substances of various weights in a vacuum fall to the ground at the same time, the cohesion of the metallic hemisphere, the six mechanical powers, and other incidental questions in which Mr. Loch assisted, were satisfactorily and very intelligently answered.

The Examiner adds, "The papers sent will afford a good criterion of the state of the senior classes, and their various studies, and, with every abatement for mistakes and mis-spellings, of diligence, a love of learning, enlarged ideas, progressive improvement, and, may I add, a growing sense of the bounty of Government, and the benefits of civilization.

"The Head Master is solicitous to have as detailed a report sent down as convenient. I have accordingly been studious to include all subjects, which I trust will meet with the approbation of his Honor, who, with his usual discrimination, will make every just allowance for circumstances, and, looking to the bright side of the picture, will be gratified with the assurance that a school under the able management and proficient acquirements of a native brought up at the Hindoo College, has made such capital progress in the higher mathematics, history and poetry, in conjunction with other pursuits."

CUTTACK SCHOOL.—4th Year.

Local Committee on the 30th April 1844.

A. J. M. Mills, Esq., Commissioner of Revenue, President.
C. Cardew, Esq., Special Commissioner.
H. B. Brownlow, Esq., Judge.
E. T. Trevor, Esq., Officiating Joint Magistrate and Deputy Collector, Secretary.
Tarakant Bidyasagur, Principal Sudder Ameen.
Moolvie Mohamed Fazeel, Law Officer.
Kassinath Rae Chowdree, Zemindar.

Establishment.

Mr. J. K. Rogers, Head Master.
Mr. J. Da Souza, 2d - ditto.
Bissumber, Head Pundit.
Ragbanund, 2d ditto.

At the annual examination there were 75 boys present, out of 79 belonging to the school. These were divided into four classes; the two junior classes, consisting of 55 boys, being subdivided into sections. The first class had read Marshman's Survey of History to page 80; Prose Reader, No. 5, to page 30; Lennie's Grammar as far as syntax; Popular Introduction to Natural Philosophy, and Nicholl's Geography of Asia and Europe, with reference to Maps and Globes. They had learned Arithmetic as far as Practice and Simple Interest, and had been accustomed to translate from the vernacular into English, and *vice versâ*. The second class had learned Lennie's Grammar as far as Syntax; Guy's Geography of Europe, Asia and Africa, with reference to maps; and Arithmetic to Practice. They had also been accustomed to translate from English to Oorya, and *vice versâ*. The studies of the two junior classes were of an elementary nature.

The majority of the boys are the sons of Bengalees who have settled in the province, and but few of the indigenous Oorya population attend. They are represented to be respectful and obedient, and very assiduous in the prosecution of their studies. The average daily attendance throughout the year was 62. None of the pupils were sufficiently advanced to compete for a Junior Scholarship.

The Committee were desirous of a further relaxation of the principle of admission laid down in sections 37 and 38 of the printed Rules, but the necessity for this the Government was not disposed to admit.

A new school-house has been constructed under the superintendence of the executive officer of the division, at an expense of 2,000 rupees, one moiety granted from the education funds, and the other raised by local subscription.

It is "a good substantial building, well ventilated, in a centrical situation, consisting of four rooms, 36 × 22 feet each, and two others, 22 × 22 feet each, about 18 feet high, flat roofed, with a thatched verandah all round 11 feet wide. It is about 1½ miles from most of the

Appendix N.

the European houses, and is in the large compound in which the Collector's and Magistrate's Cutcherries are situated." It has been placed in charge of the executive officer.

In continuation of paragraphs 55–69 of the last Annual Report of the Council of Education (page 33 of the printed volume) it may be stated, that the Council concurred in the local Committee's suggestions for the provision of Oorya class-books, and the latter body having reported that the Pundit had completed and printed an Oorya Grammar, consisting of 24 12mo pages, which was for sale at 6 annas a copy, and Mr. Sutton, a vocabulary of 200 pages, 8vo, at 3 rupees a copy, they were authorized to subscribe for 300 copies of the former, and 250 of the latter for the use of the school. The spelling treatise proposed to be prefixed to the grammar was dispensed with, as unsuited to the peculiar construction of the Oorya language. For the translation of the other works recommended by the section of the Council of Education for vernacular class-books as well adapted for Cuttack, Mr. Sutton's terms were sanctioned.

MIDNAPORE SCHOOL.—8th Year.

Local Committee on the 30th April 1844.

W. Tayler, Esq., Officiating Judge.
O. W. Malet, Esq., Officiating Collector.
R. P. Harrison, Esq., Magistrate.
H. V. Bayley, Esq., Officiating Superintendent of Settlements.

Establishment.

Mr. F. Tydd, Head Master.
Baboo Bhycauntnath Chatterjee, second ditto.
Babob Sittaram Das, third ditto.
Baboo Jadub Chunder Mookerjee, fourth ditto.
Gooroodas Vidyalunkar, Pundit.
Mohes Chunder Acharjee, Sircar.
Kuor Seel Librarian.

At the annual examination, there were 131 boys on the rolls of the school, divided into five classes. The progress made by the several classes during the year was represented by the Committee to be satisfactory. The first class had read Malkin's History of Greece to p. 350; Homer's Iliad; M'Culloch's Grammar, and Nicholl's Geography, with reference to maps and globes. In Arithmetic they had gone as far as Decimal Fractions, and in Algebra to Simple Equations. They had also been accustomed to translate from English into Bengali, and *vice versâ*. A greater degree of regularity in attendance had prevailed, but in some instances, protracted absence, without adequate cause, had been allowed to go unpunished. The Committee were requested to use great vigilance in checking this practice, and to exercise the powers vested in them by the rules for the expulsion of incorrigible offenders.

Ketter Mohun Jana was considered to have made progress sufficient to entitle him to retain his Junior Scholarship. Two other candidates were proposed by the Committee for similar honours, but none were available.

The school was inspected in the month of February by Mr. Jas. Sutherland, Principal of the Hooghly College, whose report was not altogether favourable.

The majority of the boys in the first class failed to work a sum in the Double Rule of Three; with the help of dictionaries, they succeeded, after much delay, in producing indifferent English translations of an easy passage in Bengalee; and in geography, a few questions of an elementary character, put to them by Mr. Sutherland, were not very well answered. Their examination, however, in other subjects, was considered on the whole satisfactory. The second class, who were reading Goldsmith's History of England, were unable to answer simple questions put to them on the subject. This deficiency was ascribed by the Head Master "to the circumstance of their minds being occupied in mastering the mere language of the book." In explanation they did not succeed, and they expressed themselves in English very badly. Some of the boys in this class had been put back from the first class for want of the books required for the present course of study, a circumstance indicative of great neglect on the part of the local authorities in applying the means provided by Government for purchasing books and other instruments of instruction.

The third class were examined in Marshman's History of Bengal, but they could not explain the meaning of many simple words, nor did they appear to comprehend the language of the work, which was rather above them. In geography they had made little progress, and they spoke English very indifferently.

The fourth class read Goldsmith's History of Rome, a book beyond their capacity, to which, at present, No. 1 English Reader, and Chambers' Geographical Primer, the examiner thought would be better suited. They answered well in multiplication. The progress of this class is retarded by the presence of some "overgrown lads" of 17 and 15 years of age, who prevent the younger boys from getting on so well as they otherwise would.

The Examiner remarks: "The general state of the school does not appear to me such as might be reasonably expected, considering that it has been established nearly eight years.

The

The studies even of the first class are still very elementary, and their advancement in them not very considerable, while the manner in which they express themselves in English is very indifferent; but I am disposed to ascribe this result, in a great degree, to the circumstance of the rules limiting the age of admission not having been observed until lately. On first going through the school I was struck with the adult appearance of many of the students, even in the junior classes, and this induced me to note down the ages, and the time in class and school, of those composing the second and third classes, and of six of those of the fourth class, who also appeared to me far too old to be in that position. In the Hooghly College, we found that continuing grown-up young men in a junior class was seriously detrimental to its progress, and many of them were dismissed in consequence. There is, moreover, a moral objection to mingling young men with little boys so obvious, that it need not be specified.

"Another circumstance which may account in some degree for the state of the higher classes, and which placed them at a disadvantage rather, for the examination, is, that there has lately been a change in the course of study, most judicious in itself as respects the books introduced, viz., Chambers' Educational Works, and Mr. Taylor's admirable Manual of Modern History, but still so recent as not to have given time to produce its natural results, and consequently making the students appear more backward than they really are.

"Great attention appears to be paid to the study of the vernacular, and all the masters are competent to teach the language. The piece of Bengalee given to the first class to translate was read out to them by the Head Master, from whose dictation they wrote it down. The translations into Bengalee of the first class are actually only middling, but then they may be deemed very fair, allowance being made for circumstances, considering that the passage rendered is part of a draft Act taken at random from the Gazette, and that they were done in a very short time.

"The vernacular is made the means of conveying sound knowledge. The class-books used are,—first class, Yates' Elements of Natural Philosophy; second ditto, Rammohun Roy's Bengalee Grammar; third ditto, History of Bengal, Marshman's, translated by Baboo Gobin Chunder Sein; fourth ditto, second part of Burnomala and Nittikotha; fifth ditto, Burnomala, Dictation and Arithmetic. Dr. John Grant's Class Book is used also for reading and translation.

"The deep interest taken in native education by the present Secretary, as manifested by his zealous supervision of the Cuttack School, and by more than one other member of the present local Committee, together with the judicious change recently made in the course of instruction, at Mr. Bayley's suggestion, warrant the conclusion that a great improvement will soon take place in the Midnapore School.

"The school-house is new, having been finished only last year; it is spacious and well ventilated, centrically situated with reference to the station and neighbourhood, and every way well adapted to the purpose to which it is applied.

"The boys appeared cleanly and well behaved.

"The pay system here is applied to all, but it is limited to four annas, in addition to which they pay the same sum for books. No objection appears to be made to the small fee, and I imagine that some in the school might very well be required to pay more, and relieve Government of part of the expense."

The attention of the Committee was drawn to Mr. Sutherland's Report, and they were directed to apply themselves to remedy the defects which he has pointed out.

GOWAHATTY SCHOOL.—8th Year.

Local Committee on the 30th April 1844.

Major Francis Jenkins, Governor-general's Agent N. E. Frontier, and Commissioner of Assam.
Major James Mathie, Deputy Commissioner.
Captain T. Fisher, Commanding First Assam Sebundy Corps.
Lieutenant Charles Scott, Principal Assistant Governor-general's Agent.
Assistant Surgeon K. M. Scott, Civil Assistant Surgeon.
Lieutenant Robert Campbell, Adjutant First Assam Sebundy Corps, Secretary.
C. K. Hudson, Esq., Sub-Assistant to Governor-general's Agent.
J. Nicholas Martin, Executive Officer, Lower Assam.
Deobur Bordoloi, Sudder Ameen.
Preonath Purbottiah Phookun, Sudder Moonsiff.
Lucki Dutt Burkotki, ditto.
Madhumbram Rajkhoah, ditto.
Degumber Borooa, Moonsiff.
Gurgoram Mojondar, ditto.
Som Dutt Borkotki, ditto.

Establishment.

Mr. W. Robinson, Head Master.
Baboo Jagot Chunder Mookerjee, Assistant Teacher.
Gopinath Shorma Nyalunkar, Senior Pundit.
Boshudhor Shorma, Junior Pundit.

Appendix N.

At the annual examination of this school there were 185 boys belonging to the central establishment, of whom 60 were in the Anglo Vernacular Department, prosecuting their studies in English and Bengali, and 125 engaged exclusively in the study of the vernacular, with the exception of a few who likewise read Persian and Sanscrit.

The Anglo Vernacular Department was divided into four classes. The first class consisted of five boys, who had, during the past year, read the fourth, and a part of the fifth number of the English Reader; the whole of the Poetical Reader, No. 3.; half through the introduction of the sciences in Chambers' Educational Course; and eight chapters of Goldsmith's History of Greece. In writing from dictation, Chambers' Biography had been used. This class had also gone through the whole of M'Culloch's Grammar, and the boys had lately been more particularly engaged in syntactical exercises. Two of the pupils in this class had gone as far as vulgar fractions in Arithmetic, whilst the others were yet in the Rule of Three. In Geography they had, during the period under report, been almost exclusively confined to the several countries in Europe and Asia only. They had also been instructed in all the problems relating to the use of the terrestrial globe. The class had also been regularly engaged in translations from English to Bengali, and *vice versâ*. For this purpose use had been made of the Digdarshon or Indian Youth's Magazine, and the Sumachar Darpon, an Anglo Bengali newspaper. The Bengali studies of this class had of late consisted entirely in these exercises. In English composition the class had done but little.

The 2d class was composed of nine boys, who had during the year read through the English Reader, No. 2. In Grammar they had gone through Woollaston's Elements, and had lately been instructed in it orally. In Arithmetic they had gone through the four simple and compound rules. They had commenced the study of Geography, and had read six pages of Clift's Geography. They had also had daily practice in writing from dictation, and this course had had a perceptible effect in improving their orthography. They had been accustomed also to translate Æsop's Fables from English to Bengali, and *vice versâ*; but a great deficiency was remarked in this branch of their studies, which was attributed to the second Master's ignorance of the vernacular.

The third class was composed of 11 boys who had read through the whole of the English Reader, No. 1. They had learnt as far as adverbs in Woollaston's Grammar, and had read only four pages of Clift's Geography—their progress in both these branches of study having been very small indeed. In Arithmetic four had gone through the simple rules, which they seemed to understand very well, the rest had not proceeded beyond simple subtraction. They had also been accustomed daily to write from dictation, and in these exercises they seemed to be making good progress.

The fourth class consisted of 33 boys, and was divided into two sections. The 1st section included 16 boys who had read the 1st No. of the English Reader as far as page 60. They had been in the habit of translating their daily lessons into Bengali, in which, considering the short period they had been under instruction, they had made very creditable progress. Short sentences had likewise been usually given them in Bengali to translate into English, and they had been in the practice of writing from dictation every day. Grammar had been taught from *vivâ voce*, and they were able to distinguish the several parts of speech, and give definitions of them with tolerable correctness. In Arithmetic they had proceeded as far as multiplication.

The 2d section of this class consisted of 19 boys, who had read through the English Instructor, No. 1, which they could also translate into the vernacular. They had but just entered on the study of Arithmetic, and were able to work small sums in simple addition. Their exercises from dictation, which are written every day, were on the whole very creditable, and their pronunciation very fair.

The Bengali School, containing 125 pupils, was divided into four classes. The 1st class was divided into two sections. The 1st section contained six boys, who had read through the whole of Gopal Lall Mittra's translation of the 1st Part of Marshman's History of India, the leading facts of which they seemed to be perfectly well acquainted with. They had also read the whole of the Gyannornuba. In Grammar they had gone through 26 pages of Bhogoban Chondra's Bengali Grammar, or as far as the powers of the consonants. The whole of the Chanakya Sloks they had committed to memory, and were able to explain them all very satisfactorily. Their handwriting was very fair, and their compositions showed that they had profited by the grammatical instructions they had received. In Arithmetic, they had gone through the whole of a little work on Arithmetic published by the Head Master, Mr. Robinson, and carried on as far as compound proportion. This book was intended for the use of the Bengali Schools in Assam, and contains the tables of weights and measures, &c. as used in that province.

The 2d section of this class consisted of eight boys, who had read through the whole of Mritunjoy's translation of the Hitopodesh, carefully explaining it in the common colloquial dialect. Bhogoban Chandra's Grammar had been used in this section also, and in this branch of study the boys had kept up with those of the 1st section. They had committed to memory 60 of the Chanakya Sloks, and were able to give very correct explanations of them. To enable them the more readily to explain the more difficult words and phrases made use of in Bengali compositions, they had committed to memory the greater portion of Ram Chandra's Bengali Abidhan. In Arithmetic they had advanced as far as the boys of the 1st section.

The 2d class consists of 15 boys. They had read 122 pages of the Gyan Chandrika, and were able to explain it all with considerable facility. They had gone through Keith's Bengali Grammar, and 13 pages of Rammohun Roy's Grammar. They had committed to memory

memory as far as the 81st page of Ram Chandra's Abidhan, and in Arithmetic had proceeded as far as compound division.

The 3d class consisted of 26 boys, and was divided into two sections. The 1st section contained 13 boys. They had read the Gyanadoy Itihas, a collection of easy and instructive reading lessons in prose and verse, collected and published by the Head Master, and had committed to memory 42 pages of Ram Chandra's Abidhan. In Arithmetic they had proceeded as far as compound addition.

The 2d section contained 13 boys, who had gone through the Barnamalla, No. I. and II., and as far as simple division in Arithmetic.

The 4th class, which consisted of 46 boys, was divided into two sections. The 1st section contained 21 boys, who had read through the Bengali Primer, and were as far as page 8 of the Barnamalla, Part II. In Arithmetic they had learned as far as simple subtraction.

The 2d section contained 49 boys, who were reading the Bengali Primer, and committing to memory the arithmetic tables.

The number of boys in attendance at the Branch Schools was as follows: Nilachol, 88; Pandu, 75; Beltullah, 42; North Gowahatty, 41; and Amingong, 35; making an agregate of 281 boys, all receiving instruction in Bengali, and some of them in Sanscrit. All these schools had been visited from time to time by Mr. Robinson, and, with the exception of the one at Beltullah, were represented to be in a flourishing condition. The prevalence of disease, especially cholera, and the great mortality among the boys, amounting in the first six months of 1843 to no less than 77 deaths, had seriously diminished the numbers attending the school, and interfered with the studies of those who had escaped the worst effects of those calamities. Setting aside, however, the deaths which had occurred, the number of boys admitted during the year considerably exceeded that of those who had left or had been dismissed, so that the actual decrease could not be held as indicative of any disinclination on the part of the people to send their children to the schools.

The progress of all the classes in the Central School, except the 2d English, was considered by the Head Master to be satisfactory, and though it was stated to have been, in the opinion of the Committee, generally "very slow," yet the Government did not gather from the remarks of the individual members on the classes which they severally examined, that the result had fallen short of their expectations. The report on the Vernacular Department by the Sudder Ameen was remarkably favourable.

In regard to the second Master, who was represented to be ignorant of Bengali, and to show but little interest in his duties, the Government approved of the Committee's proposal to remove him if he were still unable to pass a satisfactory examination in Bengali, as he had promised to do, within six months after his appointment in January 1843. As it afterwards appeared that he had not qualified himself in this respect, his services were dispensed with, and the third Master, Juddut Chunder Mookerjee, appointed in his room.

The Committee were not satisfied with the state of the Branch Schools (Nilachol excepted), and observed, "that unless they were well looked after, they would soon cease to be of any benefit to the pupils." The Government hoped that the remedy for the anticipated evil, which was entirely in the hands of the Committee, would not be neglected, and that frequent visits by the numerous members, combined with a system of monthly reports to be carefully checked by the Head Master, would, in a great measure, correct the lax and irregular state of discipline into which the Branch Schools were stated by the Committee to have fallen, and which the imperfect control hitherto kept over them had not, of course, been sufficient to prevent.

The unfavourable condition of the Beltullah Branch School, noticed by the Head Master, seemed to be owing chiefly to the inefficiency of the Pundit, and the Government trusted that this cause would not be long permitted to check improvement, and restrict the benefits which the school is calculated to confer on the people.

Three students of the 1st class in the English Department competed for the Junior Scholarship, and one of them, Joygopal Bose, was recommended by the local Committee for the distinction, but it was not considered that his performances came up to the requisite standard.

The Committee submitted an estimate of the expense of repairing the school-house, including the construction of a pucka terrace and drain round the building, amounting to *Rs.* 665. 13. 5.; but before sanctioning this, the Government desired to know what proportion of the expense the Committee were prepared to defray by local subscription.

On the 15th March the Committee submitted several minutes of individual members, commenting on the diminution of the number of pupils attending the English classes of the school, and recommending that the services of the Head Master, Mr. Robinson, might be made available for the inspection of all the schools in the district of Kamroop. With the Committee's letter the general subject of education in Assam came under the consideration of Government, and the result was, the abolition of the local Committee, and the appointment of Mr. Robinson in subordination to the Commissioner as Inspector of all the Schools in the Province. *See* Appendix, No. 5.

Appendix N.

SIBSAUGOR SCHOOL.—3d Year.

Local Committee on the 30th April 1844.

Captain S. F. Hannay, Commanding Assam Light Infantry Battalion.
Captain Thomas Brodie, Principal Assistant to the Commissioner.
Lieutenant E. T. Dalton, Junior Assistant to Commissioner.
Lieutenant C. S. Reynolds, Adjutant, Assam Light Infantry Battalion.

Establishment.

Mr. De Souza, Head Master.
Sri Ramsagur, Assistant Teacher.
Sri Urbhidhur, Pundit.

The examination of this school was held on the 5th, 6th and 10th of July 1843, by several members of the local Committee, in the presence of other residents of the place, European and Native. The number of scholars had decreased from 104 to 87, and the attendance of those remaining had been very irregular. The Committee, however, were of opinion, that this diminution was but temporary, and that the returns for the future would exhibit a steady increase.

There was no 1st class, and the 2d class consisted of two boys, one of whom had been for some time absent, and the other had made creditable progress. The 3d class consisted of two divisions: the 1st division of 16 boys, some of whom had obtained a slight knowledge of English previous to the opening of the school, were examined in the English Reader, No. 1; Clift's Geography, as far as Asia; Woollaston's Grammar, to the 39th page; Arithmetic to compound multiplication; and Writing. Their progress was considered by the Committee to be satisfactory; but none of them were sufficiently advanced to compete for a Scholarship. The 2d division of 12 boys was examined in the English Reader, No. 1, Spelling to dissyllables, and Arithmetic as far as subtraction. The 4th class, also consisting of two divisions, and containing 38 boys, and the 5th class of 19 boys, were in their rudiments.

The Government were disposed to agree with the Committee in considering the result to be, on the whole, and with reference to the recent establishment of the school, satisfactory; and as the causes to which the decrease in the number of pupils was attributed did not appear of a permanent nature, it was hoped that the anticipations of the Committee might be realized. But the numbers continued to diminish, and at the close of the year it was deemed advisable to alter the constitution of the school, by dispensing with the services of the Head English Master, and placing it under the direct control of the Commissioner of Assam, aided by Mr. W. Robinson, the Inspector of Schools in the Province.

ASSAM SCHOOLS.

These schools have been established at different times for the instruction of the natives of the Assam Province in Bengalee, and the following sums are assigned for their support:

	Rs.	*a.*	
Nowgon - - - - - -	1,080	–	per annum.
Durrung - - - - - -	768	–	„
Kamroop - - - - - -	1,441	8	„
Luckimpore - - - - - -	1,236	–	„
Jorehat - - - - - -	900	–	„
Total - - -	5,425	8	per annum.

They were transferred to the Education Department under orders of the 4th December 1843.

In Nowgong there are 12 schools in active operation, containing 458 pupils; in Durrung 5 schools, with 121 pupils; in Kamroop 20 schools, with 1,102 pupils, exclusive of the institution at Gowahatti and its subordinate branches; and in Luckimpoor 3 schools, with 163 pupils. The grant for the support of schools in Jorehat being of a very recent date, no returns have yet been received of the manner in which it has been applied, but it is intended to provide for 10 Pergunnah schools, at which the inhabitants of the district may be taught to read and write, and likewise receive elementary instruction in arithmetic and accounts.

The Commissioner has been directed to prepare a general sketch of the mode of instruction followed at these schools, showing the subjects taught, the books in use, the qualifications of the several masters, and such other particulars as may enable the Government to form a correct estimate of the tendency of the establishments towards improving the condition of the inhabitants of the Province. Some of the masters having heretofore been paid partly in money and partly by remission of rents on the lands occupied by them, strict injunctions have been given to put an immediate stop to the practice, and to remunerate the masters in future by money payments only.

On the 29th April the Government determined to place the whole of these schools, as well as those of Gowahattee and Sibsagur, under an Inspector, whose duty it will be to visit

every

every school as often as may be, and to introduce an uniform system of instruction throughout the Province.

The local Committees of Gowahattee and Sibsagur have been dissolved.—*See* Appendix, No. 5.

RAMREE SCHOOL.—6th Year.

Local Committee on the 30th April 1844.

Captain A. Bogle, Commissioner of Arracan.
Captain D. Williams, Senior Assistant Commissioner.
Captain A. P. Phayre, ditto ditto.
Lieutenant H. Hopkinson, Junior, ditto ditto.
Lieutenant H. Siddons, Executive Engineer.

Establishment.

Mr. R. A. Fink, Head Master.
Gullam Hussen, Acting Ordoo Teacher.
Mounglah, Head Mugh Teacher.
Thatwang, second ditto ditto.

The first English class was composed of the same boys as at the last annual examination, and their attendance and conduct during the year had been satisfactory. Their progress, however, had been comparatively slower than during the previous year. They labour under a disadvantage from which the natives of Bengal are free, arising out of the want of a cheap dictionary of the Burman language. In translation they had made respectable progress. They had finished the general summary of each of the grand divisions of the earth. The first series of Lessons on Objects has been completed, and the second commenced. In History the class had acquired a knowledge of events from the deluge to the age of Semiramis. In Arithmetic some of the boys had gone as far as decimal fractions, and the rest of the class had made creditable progress.

The second class had nearly finished the first number of the English Reader, and had commenced the second number with the translation. Of Geography they knew the definitions, and were learning the general summary of Asia. In Arithmetic they had gone as far as simple addition.

The third class consisted of two divisions, the boys in both of which were in their rudiments.

All the English classes study the Vernacular, and were considered to have improved in their knowledge of it since the previous examination.

The separate Vernacular Department was divided into four classes, who had made good progress, except as regards Arithmetic, in which the native assistant was not competent to teach them beyond simple and compound proportion. The Oordoo Department had not undergone any change since last year.

The Government agreed with the local Committee in thinking the report, on the whole, satisfactory. The number of students amounted to 102, and it was stated that many more would attend, but for the limitation which the Committee had found it necessary to impose, in consequence of the inadequate means of teaching, and the insufficiency of the present school building to accommodate a larger number. The Head Master proposed that an Assistant Master should be appointed, the present school-house improved, and a new building erected for the English Department, to include a library and a room for the Master. The Committee advocated the first of these recommendations, but preferred the removal of the school from its present site, and the construction of a new school-house for the accommodation of all the departments. The Government observed, that it was obviously desirable that the school should be contained in one building, in order that the instruction of all the classes might go on under the eye of the Head Master, and that if the present building was incapable of being improved and enlarged, so as to meet the growing wants of the people for the education of their children, it would probably be necessary to erect a new house in a more favourable site sufficiently large for the purpose. The Committee were requested to take the subject at once into their consideration, and, in conjunction with the executive officer, to prepare and submit for the approval of Government such plan or plans, accompanied by a detailed estimate, as might appear to them, with strict reference to economy, most advisable to adopt. The Committee were likewise requested to state what proportion of the cost would be defrayed by local subscription.

Before coming to any definite conclusion on the subject of appointing an additional teacher, the Government desired to be favoured with the sentiments of the Committee as to the nature of the education which the people of Arracan in their present condition require; whether the resources of the State ought to be devoted to the extension of English or Vernacular instruction; whether any modification of the existing establishment is desirable; and, in short, to receive from them such a comprehensive report on the general question of education in the Province as would enable the Government to judge what measures it might be expedient to adopt for the proper and efficient disposal of the grant.

The irregularity of attendance on the part of the students was observed to be very great, the average daily attendance being only five-eighths of the number of boys borne on the rolls,

Appendix N.

many of whom had been absent more than half of the school-days in the year. The intention of the Committee to award a half-yearly prize of 10 rupees for regular attendance out of the fixed amount of 96 rupees per annum allowed for prizes, was approved; but it was suggested that two half-yearly prizes of 6 rupees and 4 rupees might answer the purpose better. The Committee were desired not to be reluctant to exercise their power of expulsion in cases of constant and wilful absence without leave, as the loss of numbers thereby occasioned would be more than compensated by the consequent improvement in the discipline of the school.

MOORSHEDABAD NIZAMUT COLLEGE.—2d Year.

College Committee on the 30th April 1844.

Major-general F. V. Raper, Visitor and President, Agent to the Governor-general.
H. P. Russell, Esq., Judge.
W. J. H. Money, Esq., Collector.
Captain St. G. D. Showers, Superintendent of his Highness the Nawab Nazim's Education.
Nawab Sufdar Ali Khan Bahadur.
Nawab Wahid Hosein Khan Bahadur.
Rae Sitanath Bose, Dewan of the Nizamut.

Establishment.

Mr. F. V. Seddon, Principal.
Mr. J. G. E. Arrow, Head Master.
Mr. J. F. Delanougerede, second ditto.
Bashir ud din, Head Moulvie.
Bakar Ali Khan, second ditto.
Tafazul Hosein, Head Urdu Teacher.
Syad Afzal Alli, second ditto.
Nabogopaul Turkalunkar, Head Pundit.
Nabokunta Turkapunchanun, second ditto.
Syad Ibni Hydar, Atalik.
Ahmad ud din, Darogah.
Syad Ali Naki, Writing-master and Oriental Librarian.
Jagutchunder Rae, Writer and English ditto.

This institution is supported entirely out of the Nizamut Deposit Fund, and forms no charge upon the resources of Government. It is divided into two departments, one for the education of the Sahibzadahs, or relations of the Nizamut family, and the other for that of persons of respectability, who are admitted at the discretion of the College Committee. The question of making the latter department less exclusive and more generally available for the respectable inhabitants of the city of Moorshedabad and its neighbourhood, Hindoo as well as Mussulman, is now under consideration.

His Highness the Nawab Nazim, who takes a deep interest in the college, was present at the annual examination, and distributed the prizes to the students to whom they had been awarded by the Committee.

PATNA SCHOOL.—9th Year.

Local Committee on the 30th April 1844.

A. Smelt, Esq., Session Judge.
H. S. Oldfield, Esq., Opium Agent.
G. F. Houlton, Esq., Collector.
J. A. O. Farquharson, Esq., Magistrate.
S. Davies, Esq., Civil Surgeon.
C. J. Muller, Deputy Collector.

Establishment.

Mr. S. Mackintosh, Head Master.
Mr. E. Fell, Assistant ditto.
Khyrooden Hussein, Urdu Teacher.
Balkissen Matey, Hindu ditto.

The annual examination of this school was held in July and August 1843, in the presence of the Committee and a large assemblage of native visitors. The first class had read Goldsmith's History of England to the reign of George II., Malkin's History of Greece to the 72d page, Wilson's Universal History, Milton's Paradise Lost to the end of the 4th Book, Paley's

Paley's Moral Philosophy to the end of the First Book, Brinkley's Astronomy to the 4th chapter, the six first Books of Euclid, and Algebra to Progressions and Logarithms. They had also practised original composition and translations to and from the Vernacular. The studies of the second class during the year had consisted of the Brief Survey of History, the Poetical Reader No. 1, Lennie's Grammar, the First Book of Euclid, Arithmetic to Simple Interest, and Clift's Geography. In the Vernacular, they had read Historical, Literary and Scientific Selections, the History of India, and Gilchrist's Rusalah. They had also been accustomed to translation. The third class were in Grammar, the History of Bengal, English Reader No. 2, Compound Division, the Geography of Europe and Asia, and Lessons on Objects. In the Vernacular, they read the History of India, Selections, Moral Precepts and Fables, with Grammar and Writing. The fourth and fifth classes were in their rudiments.

The Government observed with pleasure the progress made by the pupils of the Patna School during the year in every branch of study. In Mathematics alone did they fail to give the Committee complete satisfaction; and this result was considered creditable alike to the industry of the pupils themselves, and to the zeal and care of the Head Master and his Assistants.

The number of pupils did not appear to be on the increase. Several were admitted to the school during the year; but at least as many had left within the same period. The Committee's report, however, contained no definite information on this head; and on the tabular returns were borne, improperly, the names of a great many boys who had ceased to belong to the school some time before the examination. The attendance of the boys had not been so regular as could have been wished, and to this point the attention of the Committee was particularly requested.

The Government agreed with the Committee in thinking Mr. Mackintosh's proposals for restricting candidates for admission to boys who had passed a "period of probation in a Vernacular school," and for giving the children of the wealthy and higher classes of native society privileges and advantages within the walls of the school which should be denied to poor and less respectably connected boys, to be inconsistent with the principles on which the system of national education in India is based, and therefore inadmissible. If, however, there were in the city of Patna, or its vicinity, native gentlemen willing to establish a permanent foundation for the liberal education of their children in European and Asiatic literature, and in the sciences by means either of English or the Vernacular, the Government would regard such a movement with the most lively satisfaction. The rapid increase in the number of boys receiving instruction in the Hindu Branch Schools connected with the Patna Institution, but not supported out of the Education Fund, was considered extremely gratifying. In November 1841 there were 199 boys attending at these schools; there are now 601 boys, and an average daily attendance of 456.

The Committee were requested to place the Government in possession of detailed information regarding these interesting and apparently prosperous establishments.

The Head Master's subsequent interesting report on the Branch Vernacular Schools is subjoined at length:—

"On my joining the Patna School in the year 1841, I was consulted by Mr. W. Dent with regard to the best mode in which a sum of money, of which he was trustee, amounting to about 3,000 rupees, collected by him for the late Arrah School, and I believe principally contributed by himself, might be applied to the purpose of public education in Patna. As Mr. Dent was well known to be a zealous friend of Vernacular education, I pleaded in its behalf in the interviews I had with him, and in two letters I addressed him on the subject.

"Although Mr. Dent was about leaving this country, he yet generously confided the work into our hands, and placing the funds in the Union Bank, authorized my drawing the monthly sum of 50 rupees for the support of the Hindi Schools. He has since expressed his approval of the measures we have adopted in carrying on the plan, and has also promised further aid, though I have not yet availed myself of his kind offer by making known to him our wants. These schools, then, owe their existence in their present form to Mr. Dent. In their management I have also been much indebted to the kind advice and encouragement I have from time to time received from Mr. H. C. Tucker, of the Civil Service.

"In November 1841 we commenced with three schools, containing about 150 boys. From that time to the present the number of schools and of pupils has been gradually increasing, as also the expenditure incurred, which now amounts to about 100 rupees per month. The aid I at present receive is, as I have said, 50 rupees per month. The number of schools we now have is 11, extending almost in a line from New Digha in the west, to Hagigunge, near the eastern extremity of the city of Patna, an extent of 13 miles, within which space I believe there are few localities from which children may not with ease be sent to one or other of these schools, where a plain, though I trust useful and practical education, may be obtained in Hindi. The number of boys on the rolls is about 600, the average attendance about 400, a small number it may be for the space occupied; but, considering the time the plan has been in operation, and the expenditure incurred, perhaps better results can scarcely be reasonably expected.

"The majority of these are indigenous schools, and have been merely improved by us, and brought under one uniform system of instruction and management. Before forming any plan of operation, I instituted inquiries on the state of Vernacular education in this city, as to the age, character, natural abilities and qualifications of each teacher, and the number

Appendix N.

of pupils, and the course of instruction given in each school. The same we have since done at Dinapore, Hajepore, Futwa, and other places in the neighbourhood.

" Besides information on these points, we also learned that these indigenous teachers, as might be expected, were generally regarded with some degree of consideration as instructors of youth, each in the place he was located, and more especially such as had been thus employed for some length of time, and had numerous pupils grown up to manhood; that, with regard to instruction in Hindi, the only thing cared about was to give the children a knowledge of arithmetic and writing, and that nothing in the shape of moral instruction was communicated, nor was even the bare faculty of reading books imparted to the pupils at all, by which that instruction may hereafter be acquired from books.

" We therefore naturally inferred that, while, on the one hand, the parents of the children would undervalue any system of teaching, however costly and in itself of a superior order, that did not give instruction in arithmetic and writing as taught *in their own way*, our main object should be to superadd to the old system what we could, with regard to that point in which it was so lamentably deficient, viz., moral instruction as conveyed in books. This appeared much easier to do than to engraft on the already existing system any course of instruction in European knowledge, as of geography, history, &c., which could only be done gradually, and which we do hope to introduce by degrees; since the value of moral truths and instruction is at once acknowledged by all, as it is itself infinitely greater than that of any other species of knowledge.

" Mr. Adam's third report on the state of Education in Bengal and Behar, I had not the advantage of perusing till lately. Perhaps it is well it was so, for we have been compelled by *slow trial* and *personal experience* to do everything for ourselves. In page 142 of this work I, however, find the interesting fact that in the year 1815 the very plan we have since November 1841 adopted, was in some way in the contemplation of Government.

" We found it upon the whole advantageous to gain the co-operation of as many indigenous teachers as our funds and means could enable us to entertain. Some of these we hoped would become excellent teachers after a little training; of others we reckoned only on their assistance in teaching Hindi, arithmetic and writing, in collecting boys for the schools, and in giving instruction to the lower classes in reading. We have endeavoured to make the best of their services, and have reposed confidence in each, in proportion to the zeal and talent he has exhibited. Where there was a deficiency in these points, more attention was required to be paid by another class of teachers hereafter to be mentioned.

" The remuneration the indigenous teachers receive for their service is one rupee for every ten boys actually learning to read in one book, as tested by a monthly examination taken by myself before pay is issued. In addition to this allowance they receive from us, these teachers are at liberty to receive from the children the schooling they have been always accustomed to obtain. This matter is left entirely with them.

" Over these schools are placed for the purpose of superintendence, and for the instruction of the senior classes in each school, other teachers already referred to, who get a fixed pay, and who have received either a Sanscrit or an English education. From this class of teachers I obtain a daily report of the state of the schools, and with them I have frequent opportunities of consulting regarding matters connected with the institutions. There are 11 indigenous teachers, and five of the latter class, of whom one was lately in the first class of the Patna Government School, and one is still a member of the senior class, but devotes his mornings to the work of superintendence as above described, receiving for his labour a small stipend.

" The books studied are the same as those read in the Hindi Department of the Government School.

" We have no rules of restriction as to age, caste or position in society, but the great majority of the children enter young, and are the sons of people engaged in money matters, and hence the importance attached to the study of arithmetic. The houses in which the schools are held are small native tiled buildings open on one side. Some we pay a small rent for, in no case exceeding 12 annas per month; others we are allowed the free use of by the proprietors; more suitable buildings are very desirable. The number of Hindi schools in Patna, not connected with us, is 22, containing 688 boys. Exclusive of these, within 20 miles on the west of the Government school, there are 17, containing 452 pupils, and on the east, witihin 14 miles, 15, having 352 pupils. The total number within the space of about 340 square miles, not connected with us, is 54, containing in all 1,492 boys. The number, then, in connection with us, seems to be nearly one-fifth that of the whole number of the remaining schools, and that of the pupils in our patshalahs nearly one-half that in the latter, or say one-third, in case there may be schools regarding which I may have not been informed."

The school was inspected in April 1844 by Mr. F. V. Seddon, Principal of the Nizamut College, whose report was extremely favourable.

Munni Lall's proficiency, as ascertained at the special examination, was considered sufficient to entitle him to retain his Junior Scholarship for another year.

BHAGULPORE SCHOOL.—7th Year.

Local Committee on the 30th April 1844.

G. F. Brown, Esq., Commissioner.
T. Leckie, Esq., Civil Surgeon.
H. T. Metcalfe, Esq., Judge.
E. Lautour, Esq., Magistrate.
Major T. E. A. Napleton, Secretary.
Captain W. G. Don.
E. Sandys, Esq., Assistant Magistrate and Collector.
Mahomed Majid Khan Bahadoor, P. S. Ameen.
Mahomed Haneef, Moonsiff.
Shah Inyut Hosain, Zemindar.
Mahomed Muhamid, Molvee of the Dewanny Adawlut.

Establishment.

Mr. C. Ridge, Head Master.
Baboo Grish Chunder Chatterjee, second ditto.
Uchumbit Lal, Head Vernacular Teacher.
Wahiduddeen, second ditto.

The annual examination of this school was held in July 1843. The number of pupils at that time was 67, showing an increase of seven over the number belonging to the establishment in 1842. This increase, observe the Committee, although smaller than was expected, is, on the whole, satisfactory, inasmuch as it exhibits a large number of Hindustani boys, natives of the place, as students, than has been reported since the establishment of the institution.

The first class, consisting of nine boys, of the average age of 16 years, had read the History of England, and the outlines of General History, the Elements of Natural Philosophy, Lennie's Grammar to the end of Syntax, Geography, Arithmetic to Decimal Fractions, and had been accustomed to translation and original composition. The second class was in abeyance. The third class of 23 boys, averaging 13 years of age, had read the English Readers, Nos. 2 and 3, Grammar, including the parsing and analysis of sentences, Geography of Asia and Europe, Arithmetic to Compound Division, and had been in the habit of writing from dictation, and translating simple sentences. The fourth class of 18 boys, averaging 10 years of age, had read the English Reader, No. 1, the rudiments of Grammar and Geography, and Arithmetic to Simple Division. The junior class of 17, very young children, had been recently admitted, and were learning to spell.

The Vernacular Department was divided into four classes; the first, of four boys, were reading the Bagh-o-bahar, Hatim Tai, Goolbasonour and Kawaidi Oordoo; the second, of 26 boys, Bagh-o-bahar, Hatim Tai, and Fables; the third, of 13 boys, Huroof Tahajee; and, the fourth, of 24, were in their rudiments.

The results of the examination were not considered satisfactory by the Committee, who attributed the slow progress made by the boys to the Head Master's defective mode of instruction, and his "want of a clear and methodized system." The Committee, however, considered that Mr. Ridge had had unusual difficulties to contend with, arising principally from the sudden resignation of the second Master, and the delay which took place in providing a competent successor.

Irregularity still continuing to prevail in the attendance of the boys, the Committee were enjoined to use their utmost endeavours to check this practice, of all others most injurious to discipline, and not to be deterred from exercising the powers vested in them under Rule 46, by the fear of diminishing the number of scholars, the loss of every wilfully irregular boy being a gain to the institution.

The insufficiency of the Oordoo teachers being subsequently brought to the notice of Government, two others better qualified for the duty were appointed in their room.

The examination of candidates for the Junior Scholarship was held in accordance with the instructions conveyed in Circular, No. 5, of the 4th of September, and the prize was awarded at the recommendation of the Committee to Rajnath Misser. In reporting the result of the Scholarship Examination the Committee observe, "The result of the present examination is much more satisfactory than we expected, and Mr. Ridge's great and constant exertions, unassisted by a second Master, augur well for a continuation of daily improvement in the discipline and mode of tuition in the school. The members of the Committee, who at times attend the school, and personally examine the different classes, are convinced that its best interests are now duly attended to, and we, therefore, respectfully submit for the approval of the Deputy Governor, that Mr. Ridge be allowed a further trial of six months, under the belief that a complete reform will in that time be accomplished in the school, and that we shall, at the conclusion of that period, have the pleasing duty to report most favourably of the institution."

The Government were gratified to learn the improvement that had taken place, and were willing to allow Mr. Ridge the benefit of the Committee's recommendation. A second Master was appointed, and in January the Committee reported that the number of pupils had increased to 111. and that the improvement which had taken place both in the discipline of the school, and the attainments of the pupils, was such as fully to justify their expectations.

Appendix N.

The school was inspected in the month of February 1844, by Mr. F. V. Seddon, extracts from whose report are subjoined:—

"The school, which has now 121 scholars, is divided into four classes, comprising 40. The rest, in number 81, constitute the preparatory class, of which 75 were present; they are in the Spelling Book, No. 1.

"The fourth class, of 12 boys, were all present, and were examined in simple lessons in reading their class-book. Their period under tuition fluctuates considerably from 12 months to three years, the mean being about two years. The average age is 11, the extremes 5 and 15. Seven are Brahmins, three Keiths, and one a Seiyid. Of the whole, one-half are natives of the district, and one-half from Bengal. They construe through the Hindui, fairly for the time, such parts as they learn, and spell words from their lessons. They have commenced Woollaston's Abridgment, and made some progress in the simple rules of Arithmetic.

"The third class of 13 boys were all present. They were in the same book as the fourth, viz., simple lessons in reading. The maximum term of study is three years, and the minimum, one. The average age is 12 years and nine months, or nearly two years senior to the fourth.

"The second class of 11 boys were all present. They are reading sketches from English History in the Azimghur Reader, as a preparation for Junior Scholarships. Their average period under tuition is three years. The average of their ages is between 11 and 12. Five are from Bengal, and the rest of Behar. They have been reading the Moral Class Book, Grammar as far as Syntax, the Geography of Europe and Asia, and some have gone as far as the Rule of Three in Arithmetic, but others are not out of the compound rules. They write from dictation, and construe easy sentences, and are commencing lessons on things.

"The first class is composed of four boys, of whom one is said to have been away for a year and a half at one time, and another to have just returned after an absence of six months. The whole are Brahmins, two of Behar, and two from Bengal. Parbutty Churn Mookerjee reads with a better emphasis than Rajnath Misr, and Jadoonath Misr and Kedarnath Gangooli seem much on a par in accent. The chief defect seemed to me a drawling intonation of the vowels, by dropping the voice too suddenly, of which Jadoonath Misr, who reads with a low clear tone, seemed most free; but which in the second class was most perceptible in the two Christian boys. Otherwise they all read with ease and without mistakes, and translated as if they understood the sense. Rajnath Misr, the head of the school, competed with the Hill schoolboys for the Junior Scholarship, and won it. The translation annexed of a sentence not previously read, composed on the spot from my English dictation, but subsequently amended, will afford an idea of his comparative progress in English and Hindui.

"In the elements of Natural Philosophy perhaps the class shone most, and indeed their answers were very interesting, and at times beautiful, all things considered. They far exceeded my expectations, and it is but due to Mr. Ridge to say he has done justice in this particular. The laws of matter, motion, gravitation and attraction, the revolutions of the planets round the Sun, with their relative position, the Earth's form and motion at the Equator and the Poles, the causes and effects of the Tides, height and weight of the atmosphere, the pressure of fluids, the attraction of cohesion, and other questions selected at random, afforded, as one rose out of another, gratifying evidence, not only of pains taken by the Master, but of interest by the scholar, of close application and retentive powers.

"The desire for English instruction dates from the foundation of the Government Schools, The number of Mussulman scholars now on the books is 34, which, with the eight candidates for admission, will make 42. The next examination will probably average 150 students."

The Government, in forwarding extracts of Mr. Seddon's report to the Committee, requested them to give immediate directions for the remodelling the classes of the English Department on the principles laid down in sections 65 and 73 of the printed Regulations. It was observed that the studies of the first class, consisting only of four boys, were forced on to the prejudice of the others, to whom it was impossible that the Head Master could give a sufficient portion of his time if so much of it were devoted to the instruction of this small section in Natural Philosophy, a subject which is more properly taught in the senior department of the public Colleges than in a Zillah school.

BHAGULPORE HILL SCHOOL.—21st Year.

Local Committee on the 30th April 1844.

G. F. Brown, Esq., Commissioner.
H. C. Metcalfe, Esq., Session Judge.
F. E. Reade, Esq., Collector.
E. Lautour, Esq., Magistrate.
Major T. E. A. Napleton, Commanding Hill Rangers.
E. Sandys, Esq., Assistant Magistrate.
T. Leckie, Esq., Civil Surgeon.
Captain W. G. Don, Secretary and Superintendent.

Establishment.

Establishment.

Baboo Gooroo Churn Mittre, Head Master.
Lalah Shewsahoy, English Assistant and Hindee Teacher.
Mysha Rhai, Hindee Teacher.
Lalah Jyepurshaud, ditto ditto.
Hunooman Dutt Pattuck, Pundit.

The examination of this school was held in the month of December 1843. The number of boys then belonging to the school was 112. The first English class, consisting of five boys, had finished Marshman's History of Bengal, and read 150 pages of Goldsmith's History of England. They had also read short Histories of Assyria, Babylon, Egypt, Persia, the Medes and the Hebrews, from the Introduction to Universal History by H. H. Wilson, from the commencement to page 24; English Reader, No. 4; Revision of Lennie's Grammar and Clift's Geography, and a few exercises on the metals from "Lessons on Subjects." In Arithmetic they had advanced as far as Decimal Fractions and Interest, and had commenced Evolution. The second English class had read as far as page 133 of English Reader, No. 2, and a portion of No. 3, Woollaston's Elements of Grammar, the Geography of Asia and Europe, and Arithmetic as far as Simple Division. The third English class had read from page 16 to 80, English Reader, No. 1, and Woollaston's Elements of Grammar as far as personal pronouns, page 12. They could explain in Hindee what they had read with facility, and point out the different parts of speech in their lessons. They had commenced Clift's Geography; some of them could work sums in Simple Addition, and practise writing on paper. The others were learning the Multiplication Table. The fourth English class were in their rudiments.

The first Hindee class had read the Hindui Reader, No. 1, and a portion of the "Benefits of Knowledge." The second class were reading in Rowe's Spelling-book, and the Hindui Reader, No. 1. The third class were in the same books as the second, and the fourth in their rudiments.

The Head Master's report to the Superintendent of the school is a highly interesting document, from which extracts are annexed:—

"The progress made by the pupils of the different classes during the last 12 months is, in my humble judgment, highly gratifying; and as they gave entire satisfaction to the members of the local Committee by the manner in which they acquitted themselves on the day of the examination, it is unnecessary for me to offer any further remarks in this place on their past and present attainments, especially as I have given a detail of them in a separate sheet. I shall, therefore, at once proceed to describe the internal arrangements of the school in the order laid down in the 35th Circular of 1842.

"The attendance of the boys in general was very good; gratifying as it was during the last, it is much more so during the present year. The average daily attendance throughout 1843 was 79½ nearly, and that of December 88¼. Seven of the boys did not miss a single day, four only one day each, and seven not more than a week in the course of the year. The distribution of half-yearly prizes to those who distinguished themselves for great regularity of attendance has produced the most beneficial results. The irregularity of attendance in the junior classes is to be attributed partly to sickness, and partly to the boys accompanying their parents to the Hills on leave of absence.

"The cleanliness and the general conduct of the pupils reflect much credit on them, and the arrangements I made last year, with a view to keep them as clean as possible, seem to be admirably well adapted, and have been found very successful.

"The system of instruction pursued is chiefly interrogative. The pupils of the two junior classes, however, not being sufficiently advanced to understand English, receive explanation in Hindee. The rules have been generally adhered to, and where any deviation has occurred, it had your previous sanction and authority.

"Most of the pupils admitted during the year being little boys, their ages varying from four to ten, none of them (excepting two or three Hindoos who were acquainted with the elements of the Vernacular only) possessed any knowledge of the Hindee, and much less of the English language. The same remarks which I made in paragraph 9 of my last year's letter to you, with reference to the effect on the pronunciation and future conduct of boys admitted at a tender age, are equally applicable to the admissions of this year.

"The native community regard this as an institution of an entirely charitable nature, but I endeavour to the best of my power, and whenever an opportunity presents itself, to explain to them that the intention of the Government is to improve the moral character of these rude tribes, and to raise them in the scale of civilized beings, by education; and already some appear to appreciate more correctly the noble views of our rulers.

"I have every reason to be satisfied with the conduct of the under teachers. As to their qualifications, I beg to refer you to the paragraph 11th of my letter, dated 9th January 1843. The want of a Hindee teacher, having grammatical knowledge, is a matter of much inconvenience, and it is desirable to have a Pundit to enable the senior students to translate from English into Vernacular with correctness.

"Before concluding this letter, I deem it necessary to make a few general remarks on the flourishing state of the school, and the effects of education on these rude people, for whose particular benefit it is avowedly kept up and supported. From June 1840, when I joined this institution, there has been a decided and progressive improvement, both in the attainments of the boys, and the number of pupils receiving the blessings of education, particularly in the English Department. As a proof of this, allow me to refer you to the commendatory minutes written by the local Committee individually and collectively year after year, stating the

Appendix N.

the satisfaction they felt at the result of every examination held by them. In 1840, there were only 27 boys learning English, last year there were 58, and now there are no less than 70 boys in the English Department, which is an increase of 12 boys. On the whole, there have been 36 admissions and 25 departures within the year, giving an increase, as the annual abstract will show, of 11 boys in the aggregate. Of the 36 admissions, 14 are Hill boys, 16 Hindoos and six Mahomedans. There is a falling off of three Hill boys, compared with the last year's return. This is owing to one of the Sepoy scholars having died in the Hills, and two having been discharged from the regiment for bad conduct, and also to several other boys, who went to the Hills on leave of absence, having never returned.

"The translations from the Hindee into English, which accompany the Report, were done without any assistance whatever, and the enclosed essays written in the presence of the local Committee, will show more than anything else, how much the writers have improved since last examination. Soobunspurshaud, a boy not yet 14, and only three and a half years under instruction, is a rare instance of genius among native youths, and I only wish his father would send him down to the Presidency for collegiate instruction, which, however, he is not very willing to do, owing to the lad's weak constitution. Chundoo Mysah, a Hill boy, will, in two or three years more, be certainly an ornament to his tribe, and should he be ever favoured by Government with a situation giving him some authority among the Hill tribes, he will, by the discharge of his duties, give real cause of satisfaction to his benefactors, and thereby prove an honour to this institution. Twenty such youths, or even half that number, sent out to the different parts of the Hills, will effect a vast amount of good by their moral influence alone, and if through them, measures be taken to carry the blessings of education to their doors, it is not prophecy to say that an entire change for the better will take place in the condition of these rude aborigines of the country, especially as there are so few prejudices to be encountered and overcome. There are also four or five promising Hill boys in the 2d class; but as they are yet very young, it would be premature to say much about them at present.

"Already some Sepoys appear to appreciate the value of learning, and eagerly seek for education for their children; but with a view to attract more notice, I would humbly propose that at the next half yearly, and at every annual examination, the Subadars and Jemadars of the corps and such Manjhees as happen to be then at Bhagulpore, be invited, and that an order be given to the Amlahs of the different courts, and a notice to the respectable residents of the town, to be present on those occasions. For unless they witness these things with their own eyes, it is not easy to make them believe what the Hill boys are doing and what they can do. Native gentlemen, in general, entertain an opinion that the Hill people are not better than the brute creation, and it is to remove this misconception that I earnestly request the favourable consideration of the local Committee to this proposal."

The Committee corroborated the statements of the Head Master in every respect, and the Superintendent, in submitting the annual returns, observed as follows:—

"When the Hill Rangers first took the duties at Monghyr and on the Botaun frontier, I had considerable difficulty in persuading the men to leave their children behind, for the purpose of attending the school, but by promising to feed, and assist them in a small pecuniary way, when they required it, they all consented, with the exception of one man; but as his son was very young, I did not press the matter. However, I am happy to be able to report, that when the two relieving detachments marched from this to Monghyr, and the frontier, in the beginning of this month, the men who had boys at the school, came of their own accord, and requested that so much money should be deducted monthly from their pay for the support of their wives and children, being desirous that their boys should attend school as usual. This circumstance, together with the great regularity of attendance, during the past year, is the best proof the Committee can give his Honor in Council, that a taste for instruction has been established, and that, amongst the junior boys particularly, great subsequent improvement may reasonably be expected.

"At the desire of the Committee, the three best scholars of the first class, Soobunspurshaud, Teerbhoobun Sing, and Chundoo Mysah (a Hill boy), competed for a Scholarship in June last, with the boys of the other institution, but it was not the wish of the Head Master of the Hill School that they should come forward to try for a Scholarship until 1845 or 46, as it could not be expected that they could compete with boys who have been so much longer in the English Department than themselves. The Committee, however, considered that they acquitted themselves in a very creditable manner."

The Committee desired to record their entire satisfaction at the result of the examination and their sense of the credit due to the Superintendent, as well as to the Head Master, to whose united, constant, and judicious efforts the prosperity of the institution is chiefly attributable.

The school was inspected in February by Mr. F. V. Seddon, Principal of the Nizamut College, who reported most favourably of the progress of the boys, and of the system of management adopted by the Head Master, Gooroo Churn Mitter.

MOULMEIN SCHOOL.—9th Year.

Local Committee on the 30th April 1844.

Major G. Broadfoot, C.B., Commissioner.
Captain W. C. Macleod, Assistant to Commissioner.
J. De la Condamine, Esq., ditto.
D. Richardson, Esq., ditto.
Lieutenant E. H. Impey, Commandant Talian Corps.

Establishment.

Mr. G. H. Hough, Head Master.
Mr. J Crawley, Assistant ditto.
Ko Thyne, Burmese Teacher.

The examination was held in December 1843, and the Committee derived much satisfaction at the general state of the school at that time.

The attainments of the boys, though not of that high order that might have been expected, had their attendance been more regular, and had not some of the most advanced scholars of last year have left the institution, yet do considerable credit to the attention bestowed on them by the Head Master, Mr. Hough.

The first class, having but two boys of the class as it existed in 1842, and these the most backward of that class, still afforded the Committee much satisfaction. They replied with readiness to the questions put to them in Geography, Grammar, and Arithmetic as far as Decimals, from those sent down from Calcutta for the examination of candidates for Junior Scholarships which were opened at the school at time of examination. The questions in History were too difficult for them, in this department their reading not having been sufficiently extensive to enable them to reply to them. The system of translating from the Vernacular into English, and *vice versâ*, is still continued. The progress made in Geometry by one of the boys was most creditable. The second class acquitted itself tolerably well, as indeed did the other classes. Prizes were distributed to the boys, and a case of mathematical instruments bestowed on Nga Tha Ai, the boy alluded to as proficient in Geometry. The general arrangements of the school in every respect met with the approval of the Committee.

The Committee's Report was considered deficient, inasmuch as it failed to show the progress made by the several classes since the last examination, or the studies in which they were engaged. The Head Master appeared to have entirely overlooked the directions conveyed in Circular No. 35, dated the 28th September 1842.

As far, however, as could be judged from the general and vague statements submitted, the Government were disposed to think that the school had not retrograded; and as the number of pupils has increased, though in a trifling degree, it was still hoped that the benefits anticipated by the Government of India from the foundation of the institution, might, by dint of exertion on the part of the officers entrusted with its management, be eventually realised.

The Committee were requested to direct their best endeavours towards improving the discipline of the school, which in its present lax state is an effectual bar to all improvement. It did not appear that the suggestions made last year in this respect had been attended to, or that the Committee had exercised the power vested in them by sec. 46 of the printed Rules, to expel pupils whose irregularity of attendance might render them deserving of such punishment. It was thought that the stipendiary or dieting system which still prevails in the school ought to cease, and prizes for proficiency and good conduct substituted for these merely pecuniary inducements to enter the school. It was not likely that the people would appreciate the value of an education which it was necessary to bribe them to receive.

None of the boys were sufficiently advanced to compete for an English Scholarship.

The Committee promised to submit a proposal for the new organization of the school, and for the establishment of a branch at Tavoy. They were likewise requested to furnish a report of the condition and progress of the existing school at Mergui, in regard to which the Government are in possession of no information.

CHYEBASSA AND CHOTA NAGPOOR SCHOOLS.

Local Committee on the 30th April 1844.

Lieut.-col. J. R. Ouseley, Agent Governor-general and Commissioner.
Captain Guyon, commanding the R. L. I. Battalion.
Captain Armstrong, 2d in command R. L. I. Battalion, and 2d class Assistant to Governor-general's Agent.
Captain Hannyngton, Deputy Commissioner.
Captain Ouseley, Principal Assistant Agent Governor-general.
Lieutenant Haughton, 2d in command Nursinghpore Service Regiment.
Lieutenant Bird, Junior Assistant Agent Governor-general.
Dr. Macraie, Assistant Surgeon R. L. I. B.

 Establishment.

Appendix N.

Establishment.

Mohes Chunder Chatterjee, Head Master.
Karamut Allee, Assistant Teacher.
Ramprosad, Hindee Assistant Teacher.

The examination of the Chyebassa School was held on the 13th November 1843. The number of boys borne on the rolls was 41, divided into eight classes. A detailed account of the studies of each class was not given, but the Committee expressed themselves satisfied with the progress made during the year. The books in use are the English Readers, Nos. 1 and 2, Lennie's Grammar, Clift's Geography, and Hindee Readers, Nos. 1 and 2.

The examination of the Chota Nagpoor School was held on the 25th March 1844. The number of boys on the rolls of the school was 64, divided into six classes. The studies of each class were not reported by the Committee, but the examination was considered highly creditable to the students. "Those of the first class readily answered questions proposed from a chapter in history, selected by the Committee at the time of examination. They also solved miscellaneous questions in vulgar fractions, and on the use of the globes. The *vivâ voce* translations from English into Hindustanee, by scholars of all classes, were fluent and correct." Inconvenience had been felt from the want of a proper supply of books, but the Committee have now taken steps to obtain them.

SYLHET SCHOOL.—4th Year.

Local Committee on the 30th April 1844.

H. Stainforth, Esq., Judge.
A. S. Annand, Esq., Collector.
C. T. Sealy, Esq., Magistrate.
Baboo Gobindpershaud Pundit, Uncovenanted Deputy Collector.
Syud Bukt Mozomdar, Zemindar.

Establishment.

Mr. J. Kelso, Head Master.
Mr. G. Swiney, 2d ditto.
Baboo Kalleenauth Day, 1st Monitor.
Baboo Anund Chunder Banerjeeah, 2d ditto.
Bissonath Bhuttacharjeea, Head Pundit.
Goureesunkur Turkobhoosun, Assistant.

The annual examination of this school was held on the 17th of July 1843, when the number of scholars present was 80. The scholars were divided into three classes, and the course of reading for each class was as follows:—The first class had read the History of England to the reign of Henry the Fifth; the whole of Nos. 2 and 3 Reader; No. 4 Reader to page 124, the whole of the Vernacular Reader, and History of Bengal; Lennie's Grammar to Syntax; Etymological Parsing; Clift's Geography, Europe, Asia, Africa and America, and commenced with Goldsmith's Geography; Arithmetic as far as the rules of Proportion, and commenced Elements of Geometry. Persian, Bahardanis, Allamee and Lookman Hackeem. Bengallee, Gyanarnava and Gowry Beacrow. Writing on paper. The second class had read the History of Bengal to the reign of Mohamood of Guzni; the whole of No. 2 Reader, and to page 95 of No. 3 Reader; the whole of No. 2 Spelling; Lennie's Grammar as far as verbs; Clift's Geography, Europe, Asia and Africa; Arithmetic, Compound Division; Persian, none learning; Bengallee, Gowry Beacrow and Gyanarnava. Writing on paper. Third class had read No. 2 Reader, to page 106; No. 2 Spelling, to page 66; Woollaston's Grammar, to page 39; Clift's Geography, Asia; Arithmetic, Compound Addition. Persian, Golistan and Bostaun. Bengallee, 3d part Neeteecotah. Writing on paper. The progress of the boys was such as in the Examiner's opinion to justify their allowing six of them to try for the Junior Scholarships allotted to this school by Government, but as they failed in one or two papers, the Committee could not recommend them for Scholarships; but they were of opinion that the mere fact of their having stood the examination with tolerable credit, showed considerable improvement upon the last year's examination, when no report at all could be forwarded.

The regular attendance of the masters, and the pains taken by them for the improvement of the boys, had had the effect of increased regularity in the attendance of the scholars, and it was expected that the improvement in attainments would be much greater at the next annual examination.

The first class read with fluency, and in the case of boys who had received their first instructions in the school with accuracy. In History they seemed well at home in such parts as they had perused, both as to the meaning and parsing of the book they read. Their acquaintance with Arithmetic, as far as they went, was sound, and some of the translations from the report of the Deputy Collector (Pundit Roy Bahadoor) and Principal Sudder Ameen (Mohamad Idris Khan) were very correct and good. The junior classes gave promise of surpassing the senior in pronunciation, as it has been found very difficult to overcome the bad pronunciation inculcated by learning the first rudiments of English from a native.

The

The Government observed with much satisfaction the degree of improvement evinced by the boys since the last Report, and trusted that the anticipations of the Committee in regard to their further advancement might be fully realized.

Mr. Ireland inspected this school in November 1842, but did not submit his report until February 1844, when it was almost useless. He observes,—"The 94 boys, whose names were on the books at the time of my visitation in December 1842, were composed of four Christians, 18 Mahomedans, and 72 Hindoos. They were arranged in six classes; and during the days of examination there were present 50 on the first day, and 57 on each of the other days, as shown in the following statement:—

	Number on the Rolls.	PRESENT.		
		28th January.	29th January,	30th January.
1st Class - - -	13	6	6	6
2d „ - - -	12	9	9	10
3d „ - - -	27	17	20	19
4th „ - - -	14	5	8	8
5th „ - - -	11	5	5	5
6th „ - - -	17	8	9	9
TOTAL - -	94	50	57	57

"The boys of the 1st class had studied the History of England to the reign of Stephen, 30 pages of Lennie's Grammar, the Geography of Europe and Asia in Clift's elementary work, and were working sums in Compound Division. Of the six boys who were present, four could scarcely read at all: they evidently did not understand what they read, and were unable to answer any of the questions which I put to them. One of the remaining two boys I found to be a very intelligent youth; he read pretty well, and answered correctly all the questions which I put to him on those parts of History, Geography, English Grammar and Arithmetic, which he had been studying; I was much pleased with him; but on expressing my satisfaction with the progress he had made in his English studies during the short time he had been at the school, he informed me that long before the school was established he used to receive instructions in English from a friend, who is a writer in one of the Courts. The other boy answered some of the questions with tolerable correctness, but his reading was by no means good, and his pronunciation was very bad. This class had been under the special charge of the late Head Master, and the very unsatisfactory state in which I found it must be attributed solely to the careless and negligent manner in which he discharged his duties for some months prior to his sudden departure from the station, under very disreputable circumstances.

"The boys of the 2d class had read 62 pages of Reader No. 2, and 15 pages of Woollaston's English Grammar. They had lately commenced Geography, and could work sums in Long Division. The little fellows in this class gave me much satisfaction, and the progress they had made reflects much credit on Kessub Laul, who seems to have taken great pains to make them understand what they were studying. The third class was also under the same teacher, and I found that the same attention had been paid to make the boys understand clearly what they read. The studies of this and the other junior classes were merely elementary.

"The school was established at the beginning of 1841, and during the first year the Committee visited it almost daily, and exercised a vigilant control over the Head Master. At the end of the year, the result of the examination, which was conducted in the presence of the principal European and Native residents, was considered so satisfactory, that the Committee placed much confidence in the Head Master, and ceased to visit the school so frequently as before; after this the Head Master, who proved to be unworthy of any confidence, began to neglect his duties, and the result was, that the examination, which was held in July, was considered so unsatisfactory, that no returns were forwarded to Government: a few months afterwards, he thought proper to abscond, and well for the school that he did so, for he left it, as the Committee and others inform me, in a much worse state than it was in 12 months before. As there was no Head Master when I visited the school, and the youth who was acting was new to the duties, I remodelled the classes for him, and reduced them to three. The absurd practice of having a great number of small classes, which answers no useful purpose, but is attended with a great deal of unnecessary expense, I altogether disapprove of. I also drew up for him a routine of studies for each class, for every hour in the day and every day in the week, and requested him to adhere to it strictly so long as he remained in charge.

"I found about 40 Hindoo boys studying Persian. The only object which they have in view in studying this language is, the expectation of obtaining employment under Government. Though the use of Persian in the Courts has been prohibited by Government, many persons assert that a knowledge of it is still necessary, and I have frequently been requested to recommend that it should be studied in the Government schools; but all the arguments which have been advanced in its favour have failed to convince me that it is incumbent on Government, or on benevolent individuals, to subscribe funds for instructing the natives

Appendix N.

natives of Bengal in a language which is not spoken in any part of the country, and which is not even the language of its rulers. I recommended the Committee either to discontinue the study of Persian in the school, or at least to exact from all those boys who are anxious to study it, such a monthly payment as would in the aggregate defray the expenses of the Moulavee.

" The school-house, which is in a central situation, relative to the Sudder station, is in a good state of repair. It is well ventilated, and in every respect well adapted for a school. It will afford accommodation for at least eight classes, containing on the average 30 boys each. There is a very good house adjoining the school, which I am told might be purchased, with the ground attached to it, and put into thorough habitable order for about 500 rupees. This would be a very desirable residence for the Head Master, and its value to him might be estimated at 30 rupees per mensem. There was not much furniture in the school when I visited it. Several additional desks, a set of large maps, and a pair of globes, were urgently required. There were few works of reference, or books of any kind, belonging to the institution. The class registers of daily attendance were kept in a very slovenly and imperfect manner. As no register of the admission of the boys into the school had ever been kept, I caused a book to be procured and ruled according to the form F. in the Appendix to the printed Rules, and directed the young man who had charge of the school to prepare a general register of all the boys who were then attending the school.

" It would certainly be considered by the natives a great favour if Government would take the school under its charge,* and establish it on a permanent footing. It is very probable that the number of students would then rapidly increase; but at present the people have no confidence in the stability of the school, and nothing but Government aid will ever inspire it. The laudable efforts made by the local community, both Native and European, in originating the institution, and by their liberal donation and monthly subscriptions contributing funds, by means of which a very valuable and durable school-house has been erected, and the institution maintained during two years with a considerable degree of success; the isolated situation of the district which prevents the inhabitants from availing themselves of the schools established elsewhere, the general poverty of the people throughout the district, and the eager interest evinced, and substantially proved, by the wealthier part of the inhabitants to establish the means of instruction for their children, are reasons sufficient, in my opinion, to entitle this school to the liberal support of Government.

" There are, I believe, about 12 Hindoo and Mussulman schools in the town, averaging about 10 scholars in each; and in the village of Akaleah, at the outskirts of the town, and inhabited principally by Brahmins, there are 40 or 50 youths distributed through the different Pundits' houses, who are instructed in Bengalli and Sanscrit."

BURRISAUL PROBATIONAL SCHOOL.—4th Year.

Local Committee on the 30th April 1844.

R. J. Loughman, Esq., Civil and Session Judge.
R. R. Sturt, Esq., Collector.
T. Young, Esq., Magistrate.
R. Ince, Esq., Superintendent of Salt Chokies.
W. J. Ricketts, Esq., ditto - of Abkarry.
J. Knott, Esq., Deputy Collector.

Establishment.

Mr. S. Bareiro, Head Master.
Kallycoomar Chuckerbutty, Monitor.
Serajooddeen, Persian Teacher.

No annual examination of this school was held by the local Committee, but they reported that none of the students were sufficiently advanced to compete for a Junior Scholarship.

The school-house having been destroyed by fire in the month of May 1843, the Government made over to the local Committee a brick building, formerly occupied as a cutchery by the Principal Sudder Ameen of Backergunge, the expense of all repairs effected during the Committee's occupation being defrayed from the local funds.

In the month of February 1844, the school was inspected by Mr. Ireland, whose report was extremely unfavourable. He attributed the decline of the school, since the year 1840, principally to the want of a sufficient number of teachers, and to the inefficiency of the Head Master. " The natives," he observed, " have long seen that little or no benefit was to be derived from the school, and have ceased to take much interest in it. The only boys at present attending the school are five resident Christians and 35 Hindoos, connected with the Omlah of the Courts. It is, however, asserted by all, Natives as well as Europeans, that if the school were permanently established by Government, and conducted in a proper manner,

* This has now been done. The school is supported by a monthly grant of 200 rupees from the Education Fund.

manner, with an efficient body of teachers, boys would flock to it from all parts of the district.

"The income of the school, when the houses, which are now undergoing repair, and for which there are sufficient funds in hand, are finished, may be calculated at about 300 rupees per month, as per statement:—

	Co.'s Rs.
Interest of 11,100 rupees in registered bonds, at 12 per cent.	111
Rent of a house, on which 3,194 rupees have lately been expended, let to Mr. Muston, when finished	60
Another house, lately decreed in favour of the school, when repaired, let for about	20
Head Master's bungalow	20
	211
Monthly subscription	126
	Co.'s Rs. 327

"For the sum of 300 rupees a month, an establishment might be kept up sufficient for the education of 150 boys.

"The members of the Committee are very anxious to have a Government school established at this station, for the instruction of the natives in the English and Vernacular languages, and are willing to make over all the funds of the school to Government for this express purpose. The funds have accumulated from the liberal donations and monthly subscriptions of Civil Servants, who have at various times resided here, and of a few wealthy zemindars. Government might either take immediate possession of all the funds, or leave them to the management of the Committee, with directions for the proceeds to be paid into the local treasury, to the credit of the Education Department, under the heads, Rent, Interest, Monthly Subscriptions."

On the 9th April 1844 the Committee were addressed in the following terms:—

"The Honourable the Deputy Governor has determined to dissolve the connexion that at present exists between the Government and the Burrisaul School, and to withdraw the allowance assigned from the public funds for its support, unless the Committee are prepared to agree to the following arrangements, by which it appears to his Honor, that the means of education which the inhabitants of the district of Backergunge are desirous of possessing, can best be provided.

"It is believed that the Committee are willing to make over to the Government all the funds now in their hands. It is likewise understood that these funds consist of private bonds to the amount of 11,100 rupees, bearing 12 per cent. interest, the rent of three houses estimated to yield 100 rupees a month, and a monthly subscription list amounting to 126 rupees. Now it is obviously out of the question that the Government can either take upon itself the risk and trouble of realizing an income of this nature, or guarantee the permanent existence of a school dependent on such uncertain and fluctuating sources of supply; but if the Committee are able and willing, by the sale of their bonds and household property (except the schoolmaster's bungalow), and by the substitution of donations, once for all, in lieu of the sums now contributed monthly by the subscribers, to pay over to the credit of the Education Department, either in cash or Government 4 per cent. securities, a sum in amount not less than 25,000 rupees, the Deputy Governor will, in addition to the present allowance of 30 rupees a month for books, guarantee an establishment on not less than 250 rupees a month, as per margin, and the appointment of an additional teacher on 20 rupees a month, as soon as the average daily attendance exceeds 120.

Head Master and Bungalow	130
2d ditto	60
3d ditto	30
Pundit	20
Servants	10
	250

"The Government Junior Scholarship now available for the school in the Dacca College, would, of course, under these circumstances, be continued on its present footing.

"The monthly subscription of Rajah Kalishunker Ghosal, should he be disposed to continue it, might be appropriated to the payment of two or three Junior Scholarships in the Dacca College, to be denominated, 'Ghosal Scholarships,' tenable under the rules in force, and entitling the holders to compete for Senior Scholarships in that college; and any other person willing to pay the sum of 2,400 rupees, either in cash or four per cent. promissory notes, to the credit of the Education Fund, might be entitled to found a permanent Junior Scholarship of eight rupees a month, in his own name, on similar terms.

"The property of the Committee in the schoolmaster's bungalow must also be transferred to the Government, and the repairs of all the school buildings will then be made at the expense of the State."

BANKORAH SCHOOL.—5th Year.

This school was inspected by Mr. J. Ireland, in March 1843. He stated, that the European residents at the station took little interest in the school, and that the monthly subscriptions were now insufficient to meet the expenditure. The number of students nominally belonging to the school, was 60, of whom 34 were present when Mr. Ireland was there. The condition and prospects of the school were not considered by the Government to justify a continuance

Appendix N.

of the grant of 20 rupees per month for the purchase of books, and it was accordingly withdrawn, the connexion of the school with the Government being at the same time dissolved. The Committee, however, were informed, that whenever the residents and natives of the district might succeed in raising a sum of money which invested in Government promissory notes, or other equally valid security, would yield a clear annual income of not less than 1,200 rupees per annum, and be willing to make over that sum to the Government for the foundation of a school at the Sudder Station, on a permanent and efficient footing, the Government would grant from the Education Fund an annual allowance equal to twice the amount of the income so obtained, and guarantee the maintenance of an establishment at the rate 300 rupees a month.

RUSSAPAGLA SCHOOL.

Managing Committee on the 30th April 1844.

Captain W. L. Mackintosh, Superintendent.
Prince Yaseen Muhammad.
Prince Gholam Muhammad.

Establishment.

One Teacher of English.
One - ditto of Arabic and Persian.
One - ditto of Persian and Hindee.
One - ditto of Bengallee.

In 1838 the Superintendent of the Mysore Princes, Major J. W. J. Ouseley, was directed to prepare, in communication with the principal members of the family, a scheme for the appropriation of about 600 rupees a month for the education of the children of their relatives and dependents. The Superintendent accordingly proposed to entertain an establishment, at the rate of 490 rupees a month, for the purpose, and this being approved by the Government, the school was opened on the 1st October of that year. The Honourable Court of Directors approved of the grant of 600 rupees a month for the support of this school, but the full amount has never been drawn.

On the 8th September 1840, the Superintendent reported the result of the first examination. Though the school was in its infancy, and the studies of the pupils of an elementary character, the progress made was satisfactory. On the 31st December 1840, the Superintendent submitted a formal report for the first time. There were then 20 students in the school, all of whom learned Persian, 18 English, 17 Bengalli, and 3 Arabic. On the 25th March 1842, another annual report was submitted. The number of boys had increased to 21, all of whom read English and Persian, 17 Bengalli, and 2 Arabic. On the 15th February 1843, the Superintendent furnished the third annual report. There were 24 students, of whom two read English alone; of the remainder, all read Persian, 17 English, and 16 Bengalli. The attendance of the boys was represented to be tolerably regular, and the proficiency they had attained considerable. The members of the Mysore family were said to take a deep interest in the welfare of the school, and to visit it frequently.

There are now 22 boys in the institution, of whom two read Persian alone, and one Bengalli alone. The remainder all read English and Persian, and 13 of them Bengalli. The Superintendent considered the progress made by the pupils in English, Persian, Oordoo and Bengalli to be on the whole satisfactory; but, in order to ensure further proficiency, he recommended that boys under 10 years of age should be restricted to the study of one language, and under 12, to two, the choice of the languages resting with the boys or their parents.

The Government approved of the Superintendent's proposal to limit the studies of the pupils to one or more languages, according to their age, and desired him to draw up a set of rules for regulating the course of study in each department, and for the general management of the institution.

APPENDICES to the REPORT of the COUNCIL of EDUCATION.

Appendix (A.)

LAW EXAMINATION, 1844.

First Series.

GENERAL QUESTIONS.

1. What is meant by the Law of Nature? and by the Law of Nations? and how may they be distinguished from each other?

2. What is meant by the Local Law (Lex Loci)? and the Law of Domicile? give any instance in which a conflict may arise between them?

3. State briefly what are the different codes or systems prevailing in the Supreme and Sudder Courts, and under what modifications they prevail.

4. What do you understand by a Court of Equity, as distinguished from a Court of Law.

5. State the order in which parents, children, brothers and sisters and widows succeed according to the English law of inheritance.

6. The same according to the Hindu law.

7. The same according to the Mahomedan law.

8. If a Hindu adopt a son, and afterwards a son is born to him, how will his property be distributed in case he should die intestate?

9. How does the Hindu law of succession decide between the rights of the sister's son and the son of the paternal uncle of the deceased?

10. To what extent can the will of a Moosulman, who leaves the whole of his property to one of several sons, be maintained by the Mahomedan Law?

11. If the parents of a Moosulman are dead, will he succeed to the property of his grandfather jointly with any uncles he may have?

12. What are the sources from which the English Common Law is derived?

Second Series.

MERCANTILE LAW.

1. What is real property? and what personal property? what legal distinctions can you draw between them?

2. What are simple contracts? and what are specialties or contracts under seal? and wherein do they differ?

3. In what cases will the act of one partner bind all his co-partners in the absence of any express agreement or articles?

4. What kind of interest in the business of a partnership will render a person responsible as a partner to third persons?

5. To what extent are the members of a joint stock company liable to third persons, and how may their liability be restricted?

6. How can a factor or agent deal with goods consigned to him so as to bind his principal to third persons?

7. Give the common form of a bill of exchange, and state when it is negotiable, and what is meant by the "acceptance," "acceptance for honour," "presentment," and "protest" of a bill of exchange.

8. When is the master or captain of a ship entitled to "abandon"?

9. How many part-owners of a ship may there be? and how are they to be distinguished from partners in general?

10. What warranties are implied with reference to the ship and the prosecution of a voyage in every policy of insurance?

11. What is the right of lien? and the right of stoppage in transitu? and how may the latter be affected by the indorsement of bills of lading?

12. What is the meaning of general average and particular average?

13. What is bankruptcy? and what is insolvency? can you distinguish between them?

14. Mention any one doubtful question of Commercial Law that has been mentioned in this course of Lectures, and state the arguments on both sides, with your opinion in conclusion.

Note.—It may be as well to mention that several of these questions had no reference to the course of Lectures, and were intended to test the general knowledge and ability of the students.

Appendix N.

ANSWERS BY ISSERCHUNDER MITTER.

HINDOO COLLEGE.

FIRST SERIES.

1. THE will of the Supreme Deity, as evinced in his creation, is the *Law of Nature.* It is a law in contradistinction to the positive laws of a community, and to the revealed law; the former is a rule prescribed by the Supreme Power in a State, commanding what is right and prohibiting what is wrong, and enacted to supply the exigencies and wants of the community; the latter is a law whereby the will of God is expressed and made manifest; but the Law of Nature is to be gathered from the creation itself, from the observance of things and the ends for which they were created. The Law of Nature is to be found even in the most barbarous countries which have not attained to that degree of civilization which is necessary to the formation of positive laws whereby conveniences may be increased and injustice avoided. The most rude barbarian knows that an offence of murder, or the killing of a fellow brother, is a *malum in se,* a violation of the Law of Nature. The *Laws of Nations* are those laws which, besides the positive laws of community, regulate their conduct in their intercourse with each other. They are different from the Law of Nature in this respect: that the Law of Nature is equally binding on and directory of the conduct of every man as considered as a part of the universe, whereas the Law of Nations is made by the policy of nations to secure each others advantage. Thus the law of two nations forbidding the exportation of cotton, or any other commodity, from one of them to the other, is an international law between them; but it is not a law of nature, because it is only a matter of policy, and does not constitute a *malum in se* for its violation, for there is no reason why a *man* should, against his will, be forbidden to take something of his own to another country, except as a *subordinate* policy for some convenience or otherwise.

2. The *Lex Loci,* or the Local Law, is the law prevailing in certain communities in a general sense, or, more particularly, that which prevails in certain districts of the community or nation. In England, the Lex Loci may be defined to be those laws which, besides the general law, prevail in certain counties and districts, as the custom of gavelkind in Kent, by which, in opposition to the general doctrine of primogeniture, all the sons are equally entitled to inherit the property; such is also the custom of Borough English, which ordains that the youngest son only shall succeed to the property. The Local Law, in a general sense, may be said to be the law of a country which a foreigner residing in that country adopts to himself to, and the Law of Domicile is the law of his native country. If there be any *contract* for the purpose between the two nations, then the laws of the native country may bind on the person when residing even in another country; but if there be any contract or not between the two countries, he must be bound by the *Lex Loci. Conflicts* generally arise in these matters where no such contract between the nations exists; for instance, where a native of England resides in a foreign country, and hires slaves to do his work, then, as the slavery is abolished in England, she may resent this offence in one of her subjects, but the person being under the *Lex Loci* of the foreign kingdom, claims its protection, whereby she may not allow the native State to inflict penalties on the person, which leads to conflicts and contentions between the States.

3. In the *Supreme Court* of Judicature here, the English law generally prevails as regarding the residents and Englishmen, and is to decide in all those cases which are subject, in England, to the peculiar jurisdiction of several courts—as the Courts of King's Bench and Common Pleas, the Court of Admiralty, and the Courts of Equity. The English law also prevails, as regarding the Hindus, in matters of public and private wrongs; but as regarding matters of inheritances, it has been ordained by the 21 Geo. 3, and Regulation 4, 1793, that the natives of this country—the Hindus and Mahomedans—shall have their laws in force. But in the *Sudder* Court, the Regulations and Acts of the Government, under certain restrictions, are in peculiar force. An Act when passed by Government shall be valid, if it does not infringe on the King's prerogative, on the constitution of the Company, or certain Acts of Parliament which may be in force in this country. There being few English gentlemen in the Mofussil, and those (even before the enactment of the Black Act here) being tried in the Supreme Court, the Courts of the Mofussil and the Sudder Dewanny Adawlut are not so much engaged in the administration of English law as of the Regulations of Government and the laws of the natives which still are in force. By this it is not meant that the Regulation law does not prevail in some degree in the Supreme Court, or that the English law does not influence the rights of Englishmen in the Mofussil, but that the English and Hindu laws or codes prevail chiefly in the Supreme Court, and the Regulations and Acts of Government, as well as the Hindu or native codes, are principally in force in the Sudder Dewanny Court and the Courts of the Mofussil.

4. A Court of Equity is different from a Court of Law in this respect, that in the latter, actions are decided according to the law, the "rule of *prescribed* conduct;" whereas in the former, cases are decided in which "the *law,* by reason of its universality, cannot reach;" for equity is defined by Grotius to be the connexion of that wherein the law, by reason of its universality, is deficient. Equity, in its common signification, means right or lawfulness; but, in its technical sense, it means an interpretation of a deficient law, by taking the reason and spirit of it: that is the cause which moved the legislator to enact it. Thus a law ordains that any one who is left in the wreck of a ship, is a lawful claimant of the goods therein saved: it happened that at certain wreck a sick man was left in the ship which, fortunately, was not lost, and he claimed the property so saved by his right at law—the question is, will such a person get the property? Now it is evident that the sick man was *compelled* to lie in the vessel, and the main object of that law was to encourage any person who should be able to save any property therein; and the sick man, consequently, cannot lay any claim to the property. It is true, that strict justice is of a very commendable nature; but to practise it to extreme lengths shall be subversive of all law; and, on the other hand, it would be as bad if each decision were left entirely to the breast of the Judge, and there were no fixed criterion

criterion of judging wrong and right. To remedy this evil, equity has to decide in those cases where the law, "by reason of its universality, deficient."

5. In the English law of inheritance, as regarding property *real*, the right of primogeniture is allowed on the principle of the feudal law, by which the feuds were not allowed to be divided, both on account of the military services which were required of freeholders, and on account that, if the estate were allowed to be divided, it would soon become poor, and ultimately, in course of time, fail. Wherefore, in England, a rule or canon of inheritance is, that the eldest son should succeed to the estate: hence, if there be any number of children, brothers or sisters, the eldest son alone would succeed. There is also another canon, that the estate of a man be inherited lineally, by his descendants, but not his ascendants or ancestors, on this supposition, that the estate, in coming to the person, must have come to the possession of the father, therefore parents were not allowed to inherit. When the inheritance lineally ceases, it goes to the collateral kinsmen, who are descended from the same stock of ancestors. The canon on this head is this, that the kinsman who inherits should be of the blood of the first purchaser; and to enlarge this principle a little more (in the feudal law) a *feudum novum* is held *ut antiquum*; that is, although a land be newly purchased, yet it may be held as ancestral; and, therefore, if a man purchases land, although it can descend to his descendants, being of his blood; and although it cannot descend to his brother, he being not of his blood, yet by the principle added, it can descend to his brother; but in case of ancestral property, his brother, being of the blood of his father or grandfather, who have been the purchasers, has every right to succeed; therefore, the maxim is, that when the inheritance, in the lineal descending line ceases, a brother shall succeed to the estate; or if there be no brother, the sisters shall succeed equally, the right of primogeniture prevailing in the cases of males only.

6. According to the Hindu law, the son or sons succeed first and equally; in their default, the son's sons; in their default, the son's grandson. In default of him, the succession ceases in the male descending line, and the widow succeeds to the property, although she has not a proprietary right in the property, for she cannot alienate it either by sale, gift or contract, using as much as is *necessary* both to her and to the performing of obsequies to her husband. In her default, the property goes to the daughter; the unmarried daughter has the first claim, then the daughter who has or is likely to have male issue; but not the widowed or barren daughter, or the daughter who is the mother of a daughter, according to the Bengal school; but according to the Benares school, the unmarried daughter is the first, the married indigent daughter, and then the married wealthy daughter. And according to the Mithila school, the unmarried daughter is the first, the married daughter the next, making no distinction between indigent or wealthy, barren widow or having a male issue. In default of the daughter, the daughter's sons inherit; and if there be several daughter's sons, they take *per capita*. In default of these, it goes to the ascending line; the father inherits, and in his default the mother, then the brother, then his sons and grandsons, and then the sister's son. The sister does not inherit at all. According to the Mithila school, the daughter's son and father do not inherit, but it goes to the mother; and according to the Benares school, the daughter's sons inherit; but the father inherits after the mother.

7. According to the Mahomedan law, the widow is a legal sharer, taking an eighth when there is a child or son's child, and a fourth when there is none; when there is a son, the father is a legal sharer, and he takes a sixth, and the mother also a sixth; but if there be no child or son's child, or two or more brothers and sisters, when these are not in existence, the mother takes a third, and the sons and daughters are residuaries, a male child taking twice the share of a female; but if there be no son, the daughter takes a half; or if there be two or more, all of them share equally between them a two-third of the property. Sisters stand excluded by a son or son's son, a father and a true grandfather; but if there be a daughter, or son's daughter, they are not excluded, although they do not get any legal share; they then become residuaries with a male in the same degree, the proportion of shares being as two to one; but if there be no daughter, or son's daughter, a half is a legal share of one, and two-thirds of two or more. If there be a daughter or son's daughter, as I have mentioned, or supposing there is no daughter or son's daughter, but there is a brother, together with a sister, the brothers and sisters become residuaries, the portion of the brother being double that of the sisters; half-sisters by the father stand in the place of sisters when there are none; or if there be a sister of the whole blood, they take a sixth; but if there be two or more, they get nothing. They stand *totally* excluded by the child or son's child, or father or true grandfather; the half-sisters and brothers by the same mother take equally, in opposition to the double share of a male.

8. If a Hindu adopts a son, and a legitimate son is afterwards born to him, the adopted son takes a third, according to some authorities, and a fourth according to others; and if there be two or more legitimate sons, he takes in the same proportions; thus, if there be an adopted son and two legitimate sons, the property is divided into five parts, according to the first maxim, and the adopted son gets one, and the legitimate ones two each. According to the other maxim, the property is divided into seven parts, of which the adopted son takes one, and the legitimate ones three each.

9. In order to distinguish the rights of a sister's son and the son of a paternal uncle, it would best be exhibited by giving their rights of succession in order. The right of the sister's son would be found to be prior to that of the son of the paternal uncle. In default of the sister's son, the brother's daughter's son succeeds, then the paternal grandfather, then the paternal grandmother, then the paternal uncle, then his son and grandsons. Bengal School.

10. A will, by the Mahomedan law, can be executed by a person of sound health and disposition; but the legacy cannot exceed one-third of the property, and is not valid when made to an heir, except at the consent of the other heirs; therefore a legacy made to the son of the whole property is not valid, unless with the consent of the other heirs; and if they do not agree to it, he can only claim lawfully his part of the share.

11. The right of representation is not allowed in the Mahomedan law as in the English and Hindu

Appendix N.

Hindu Laws, where a father may be represented by his son. As in the right of collateral succession in England, when there is no brother of the deceased, the brother of his father, therefore, does not succeed if there be a son of the brother, which son represents his father to all intents and purposes. But in the Mahomedan law it is not so—a son cannot represent his father; therefore, according to it, when his father is dead, he cannot claim the property of his grandfather (which he can only do by right of representative), when there is a paternal uncle, the son of his grandfather to inherit the property.

12. The English law is derived from many sources. The *common law* of England is comprised of long-established usages, which have been practised and acted under "time out of mind, or time whereof the memory of man runneth not to the contrary." In the most ancient times, there were many systems of law prevailing in different districts. Alfred had the ability to collect many of them, and to have them observed by the whole community. His book was styled the Dome-book, or *liber judicialis*, which, unfortunately for posterity, has perished. The invasion of the Danes and Saxons had introduced laws different from the law of the land; and, in the eleventh century there prevailed in England three different system of laws; viz., the Mercen lege, the West Saxon lege and the Dane lege. Out of these, it is said, Edgar and Edward the Confessor compiled their systems of laws which they ordained to be observed by the community; but it is more probable that those systems were collected from the *liber judicialis* of Alfred. However that be, the common law is of good authenticity, and it derives its chief force and support from being of immemorial usage, and being obeyed by generation after generation. As a law is enacted for the good of the community, it is better that that law should have the voice of all its members. The common law being placed on the love and obedience of the community, and having stood so long in their estimation, it cannot but be said that the law has great and intrinsic value. It remains only to observe the sources of the canon and civil laws which prevail in some courts. The *canon law* is derived from the writings of Holy Fathers and Saints, from the edicts of the Councils of Bishops, and the decretal orders of the Popes. The *civil law* is the municipal law of the Romans comprised in the Institutes, the Pandects and Novels of Justinian. These are not followed in England for any obedience or allegiance which England has for Rome or the Emperors, but are only followed as a matter of choice, and because the custom of ages has rendered these laws a part of the common law. I shall conclude by observing that the *statute law* of England consists of the Acts made by the King, with the aid of Parliament, and are founded upon the Supreme Legislative authority of the Sovereign, and the two Houses of Parliament.

Second Series.

1. *Real* property is that kind of property which is immoveable and lasting; it is defined to be "that which has an *immobility* as to place, and *duration* as to length of time," as land, which is a real property or thing; for it cannot be taken out from the earth, or transferred to another place, and shall last almost as long as the earth shall exist. It is not absolutely lasting, but has a sufficient degree of stability to induce one to say that it is almost unperishable. Real property is divided into three kinds; viz., lands, tenements, and hereditaments, which some suppose to be of the same nature; but they have at least some shades of difference, as an heir-loom, which is inherited, together with the house, is a hereditament. Personal property is that which is of a moveable and perishable nature; that is, it follows the person of the possessor wherever he goes, and can last no longer than a short and limited length of time; thus the apparel, the furniture, the money of a man can go along with his person, and are also of a perishable nature. Personal property is divided into two kinds; viz., absolute and qualified. Absolute property is that to which a man can have a total right to the possession of, and qualified property is that of which a man can have a temporary possession. Goods, furniture, trees, jewels, monies, &c. are personal *absolute* property, as a man has a total and paramount property in them above all others; and as no one can lay any claim to them when he got them by means and enterprizes of his own. But animals, *feræ naturæ*, or of a ferocious nature, when reclaimed and tamed by a man, to remain in his hold, are personal qualified properties, for they are so long his, as long as he can keep them within his subjection; but when they have once got possession of their former liberty, and wandered away to their native forests, they are as much his property as of any other, then they are no longer the subjects of property or "dominion." There is another distinction in personal property; viz., a property in possession and a property in action. A property in possession is that in which a man has not only the title, but also the possession; and a property in action is that of which a man has not the possession, but a mere right or title to, and which is recoverable by a suit at law; and the thing so recovered is called a chose in action. There is another kind of property which is neither absolutely real nor personal. Of the quality of the one it has an *immobility* as to place; and of the other, it has a quality of lasting not long, such are leases on lands which remain for a short or any definite period of time; but the land is immoveable. One legal distinction which I can draw between real and personal property is this, that the one is inheritable, in the English law, by right of primogeniture; and the other equally, or as regulated by will.

2. Simple contracts are those which are done either by word of mouth, or by mere writing, unsealed; and contracts under seal are sealed, and duly signed by the parties, with the evidence of witnesses. A simple contract may only be valid if the subject of the contract be demanded within six years after the formation of the contract; whereas a deed under seal may be valid to any reasonable length of time. In contracts, simple, anything may be altered or superadded; but in special contracts, no alteration or addition can be made without endangering its validity. A contract simple may be revoked, or its obligations rescinded, by the consent of the parties, verbally; but a contract under seal can never be revoked without the assistance of another deed to the purpose. In contract, simple, the *consideration* for which the contract is made, is the evidence or proof of its being made; whereas in contracts special, the deed itself is a sufficient proof of its existence. In contracts special, the deed itself is a sufficient warranty of its validity, and its being executed; whereas, in simple contracts, if a reasonable *earnest* or otherwise be not made to bind the bargain, one may not be bound by it unless immediately performed, or unless the contract be in writing, though

though not under seal. In these distinctions does a simple contract differ from a special contract, or contract under seal.

3. The acts of a partner in transacting business related to the business of the partnership or firm, are binding (even when made without the consent of his co-partners) on the other members of the firm. When a partner pawns some articles to a man, or takes a loan pertaining to some business of the firm, his co-partners are liable to recover that pledge and repay this loan. When a partner guarantees some one in a contract or otherwise, his co-partners are liable for that security. If a partner indorses, accepts or draws a bill, his partners are responsible for that. In fact, in the execution of any business which is similar to that carried on by the firm, a partner will bind his co-partners thereunto. But if, in the execution of any such business, the trader knows that he does not act on behalf of the partnership, and still makes any contract with him, then, if it be proved that he did not act *bonâ fide*, he cannot bind the co-partners on account of the partner. For instance, a firm entered into an agreement with the partner of another firm, and, in order to guarantee themselves against any danger, insisted on the partner to act as if in behalf of his partnership; on the failure of the partner, it was decided that the contractors cannot recover their sum from the co-partners, as they knew that he acted for himself, therefore a partner cannot bind his co-partners in any transaction of his own, if the trader *knows* it to be such. Also, he cannot bind his co-partner by a bond or deed; therefore, if a partner executes a deed, the other partners are not bound by it; but if it is done in their *presence*, and with their seeming *assent*, it can bind them; but there are some differences of opinion on this head.

4. A participation in profits and losses for an undertaking constitutes a partnership, therefore any *specific interest* in the *profits* will make a person responsible to a third party as a partner. Whoever has a *share* in the profits must have a share in the losses, and therefore, although a man who gets some remuneration for his labour in *proportion* to the profits may not be deemed a partner (by a third party) as regarding responsibility for losses, yet a person in the same station, who takes a specific interest in a *part* of the profits, will be deemed as such, and liable for any losses which may be suffered by the partnership.

5. The liability of the members of a joint stock company extends (as regarding the claims of third persons) to their private properties; but this liability of the members, to answer the claims of creditors and others by the last farthing they have in the world, may be restricted by charters from the Queen or Government, who can grant them several privileges, one of which is this, that they will be amenable or responsible only to a certain extent, proportionate to the amount of their shares in the joint stock, whereas in partnerships, any partner is bound to make good a debt to the utmost of his power and wealth, though any other member or partner who had not means sufficient, paid the debt to an amount even below the proportion of his shares, and the profits he had accrued or gained.

6. A factor or agent who is entrusted with goods to sell them for his principal, can lawfully deal with them according to the injunctions and commands of his principal, so as to bind him by the contract. In the fulfilment of *acts ordered* to be done by the principal, and in doing *acts under general commands*, the agent binds his principal by such acts. To exemplify the former, take for instance a driver of a coach, or agent of his master to drive the coach, if he drove over the body of a man, the master is liable for this injury; so in the case of factors, when the principal commands him to do any act, which he does either carefully or negligently, he is bound by such act. To exemplify the latter; if a master was in the habit to command his servant to bring goods on credit, and he makes away with the property, the master is liable for this to the merchant who supplied him with those articles, and knew that they were usually taken by the servant, in order to serve the purposes of the master; and the same rule holds among factors. But by this it is not to be thought that, in the performance of acts ordered by the principal, the agent may or may not use diligence in so doing, that is not the case; the agent is required, on his part, to obey his principal in every intent and purpose, and he is required, as much as he can, to fulfil those duties which are imposed by his principal, and to go along with his intentions and designs to the best of his power. But when the agent acts contrary to the injunctions of his principal, or contrary to usage, the principal is not bound by those acts: he cannot indorse a bill in the name of his master, if he is not ordered to do so—he cannot deliver goods on credit contrary to usage; for if he does so, the master is *not* liable, or bound by the contract, and he may redeem the goods by an action in trover. With these restrictions, an agent can do acts whereby he may bind his principal, and make him amenable to third persons—and can execute those transactions with such freedom, that it appears he were the principal himself.

7. A bill of exchange contains an order from one person to another to pay on his account a sum of money to a third person. The common form of it is this: Pay to A. B. or order the sum of —— rupees (for value received), and place the same in my name or account—with the name of the person who is to pay, called the *drawee*, on the top, and the signature of the person who draws the bill, called the *drawer*, placed below. If the person who is directed to receive payment does not receive it himself, but directs another to receive it, then he should write his name on the back of it; which is called an indorsement, and which is *blank* or *full*, according as the name of the indorser is only written on the back of it without any other circumstance being mentioned, or if the name of the person who receives the money for the indorser is particularised. It is negociable by indorsement, for one of the indorsers may indorse it again to another, and he again to another, so that it can be transmitted through several hands before it can come to the drawee; and thus, instead of large quantities of money being transferred from one to another, this paper, which represents money, may be transmitted more conveniently. The "acceptor" is the drawer, so called, when he accepts the bill, presented by the payee or indorsee. "Acceptance for honour," is the accepting of the bill by a person different from the drawee—when the drawee does *not* come forward, such an "acceptor for honour" may have his remedy against the drawee. The "presentment," is the presenting of the bill, by the indorsee or payee, for "acceptance," at a certain time and certain place, or if the bill is accepted but not paid (allowing the days of "grace"), the "presentment" for payment at the proper time and place—"*protest*" is made by the indorsee or payee, when the drawee does not accept the bill, or if accepted, does not pay the bill after allowance being made

Appendix N.

made for the days of grace, which are different in number in different countries. This "protest" should be made before a public notary, or if there be none, before a respectable inhabitant of the place. The payee is always entitled to payment; for if the drawee does not pay this money, he can have it from the drawer, or if the indorsee, he can go to the payer, if the payer had made the indorsement, or to the indorsers who have been the indorsee to some other indorsers.

8. The master of a ship is allowed to abandon the vessel in case only when all his endeavours to save the vessel hath failed. Great liability and trust is laid on the master, who is enjoined to try all possible means for the preservation of the ship and cargo from destruction.

9. A ship is divided into 64 shares, and every part-owner cannot take less than two; wherefore there can be 32 part-owners at the utmost. Part-owners are the joint tenants of articles of their merchandise, whereas partners are tenants in *common*. In the former certain shares are joined together, to which each has his own *part* of the right; whereas, in the latter, a property stands, in which every one has an equal interest. In the former, any one may dispose of his share without the consent of the rest; but in the latter, he cannot do so without the assent of the others. In the one case, the liability of a single person does not reach any other; in the other, all are equally liable for any damage or loss.

10. The implied warranties in a policy of insurance, though not expressed in it, are (regarding ships), that the vessels be exactly in the state mentioned in the policy under a certain date; for if it be not such, the insurers cannot be bound to pay the money stipulated to be paid if the ship be lost. Or if the ship's state be not known, not being in port, they may take it as "lost or not lost." As regarding the course of the voyage, the implied warrantees are, that the ship should proceed directly to its destination, that the master should not provoke hostilities with any nation, and that he should keep aloof as much as possible from the attacks of enemies.

11. The right of "lien," is the right to keep goods (either pawned for debt or sold, but the price not paid) in possession, till the debt is paid or the price given. The right of "stoppage in transitu," is the right whereby a merchant, who had consigned property to another, and who conceives that the consignee may be insolvent, can stop the goods while they are proceeding on the sea, and can transfer it to another; but when once the goods are delivered, he cannot transfer them to another. This transfer is made by an indorsement of the bill of lading in which the goods are enumerated and the contract made (as is the method in *general* ships chiefly), and which being directed to the consignee, is indorsed and directed to another person, to whom the proprietor or merchant wishes the goods to be given.

12. When ships are in great hazard in a tempest are liable to be drowned, the shipmaster throws over some goods to lighten the vessel, which is called "jettison"; as this loss (it may be of one person) is made for the saving of others, it is made good by the contributions of the other merchants, whose goods were thus saved at the expense of another. This contribution is called "general average," and particular average is the loss accrued by one or two persons, whose goods are washed away, for instance, by a wave. This is meant by "particular average," wrongly so called.

13. Bankruptcy is the state of a bankrupt. He must be a trader, and a *regular* trader, otherwise he cannot become a bankrupt. In England, the acts of a bankruptcy are, the "being out of the kingdom;" concealing oneself within his own house; lying in prison 21 days, without demanding bail, on an arrest for debt; not paying a debt of 100 *l.* after the judgment of a court for his paying; confessing oneself as not able to pay his debts. These are acts of bankruptcy, all of which tend more or less to the defrauding of debtors. On any of these acts being made, a creditor, whose due is 100 *l.* if one, 150 *l.* if two creditors, and 200 *l.* if more, should petition the Chancellor and deliver their affidavit; and the Chancellor should issue a commission of some gentlemen, who will seize the person and papers of the debtors, examine him (the debtor being obliged to make the fullest discovery), and then appoint assignees, who are to be elected by the creditor (not under 10 *l.*), and to whom the whole property should be delivered, or who shall seize it for the creditors; and when all the property has been reduced to money, a dividend should be made after this; if the debtor has conducted himself fairly and *bonâ fide*, a certificate signed by the creditors (not under 20 *l.*), the Commissioners and the Chancellor to be given to him, and an allowance at a certain rate, and he shall become a man free from all debts, with liberty to trade again. Bankruptcy is available by merchants and traders only, whereas insolvency can be claimed by all sorts of men, and where the privileges granted are not so ample and liberal. In India, the part of the Chancellor is performed by the Judges of the Supreme Court, under the Indian Insolvent Act.

14. One doubtful question as regarding commercial law has arisen in regard to sales. Suppose A. buys a cow from B. at a certain sum, and B. requires that the cow may be kept in his field, and gives also an earnest of 5 rupees to bind the bargain; A. keeps it; but in a certain time the cow dies, and he requires B. to remove his carcase; B. does not agree to this; wherewith A. sells the carcase at a certain price, and sues B. in some court of justice for the remainder. A. affirms that as B. has given an earnest, he thereby takes the cow almost into his possession; but B. affirms that he had not received it, and that if so he had a right to the carcase; for if the cow was his own, the carcase was his too. If there be any doubt as to the earnest, it must be proved. My opinion and conclusion is this, that an earnest was given, he thereby had a right to the cow, and that therefore he should pay A. the money, deducting the *reasonable* price of the carcase, which may be fixed as such by the Court. The Court may give this decision (inflicting any fines, if they choose, on the vendor for selling the carcase, which was not his own) in favour of the plaintiff A. I conclude it upon this principle, that when a bargain is made the right of the things is immediately vested in the buyer and the right to the money in the vendor—and the bargain is highly binding if an earnest on the one part or the other was made. The Court must, however, examine if the vendor had not used any fraud in the matter, as contributing to the death of the cow.

Appendix (B.)

SCHOLARSHIP EXAMINATION QUESTIONS.

SENIOR SCHOLARSHIPS 1843.

LITERATURE.

He thought also, there was found in the mind of man an affection naturally bred and fortified, and furthered by discourse and doctrine, which did pervert the true proceeding towards active and operative knowledge.

This was a false estimation, that it should be as a diminution to the mind of man to be much conversant in experiences and particulars, subject to sense, and bound in matter, and which are laborious to search, ignoble to meditate, harsh to deliver, illiberal to practise, infinite as is supposed in number, and no ways accommodated to the glory of arts.

This opinion or state of mind received much credit and strength by the school of Plato, who, thinking that particulars rather revived the notions, or excited the faculties of the mind, than merely informed; and having mingled his philosophy with superstition, which never favoureth the sense, extolleth too much the understanding of man in the inward light thereof; and again Aristotle's school, which giveth the due to the sense in assertion, denieth it in practice much more than that of Plato.

For we see the schoolmen, Aristotle's successors, which were utterly ignorant of history, rested only upon agitation of wit; whereas Plato giveth good example of inquiry by induction and view of particulars; though in such a wandering manner as if of no force or fruit. So that he saw well that the supposition of the sufficiency of man's mind hath lost the means thereof.

1. What is meant by, "That it should be as a diminution to the mind of man," &c.?
2. State, in your own words, the doctrine of Plato, which is here alluded to.
3. What does the author mean by saying, "That superstition never favoureth the sense"?
4. State, in your own words, what (according to the author) is "the difference between the school of Plato and Aristotle in assertion, and what is the difference in practice."
5. In what sense are the schoolmen here said to have been "utterly ignorant of history"?
6. What is meant by their resting only upon agitation of wit?
7. What is the meaning of the last sentence?
8. What is the scope of the whole passage?

Macbeth.—Two truths are told
As happy prologues to the swelling act
Of the imperial theme—
This supernatural soliciting
Cannot be ill; cannot be good.—If ill,
Why hath it given me earnest of success,
Commencing in a truth? I am Thane of Cawdor;
If good, why do I yield to that suggestion
Whose horrid image doth unfix my hair,
And make my seated heart knock at my ribs,
Against the use of nature? Present fears
Are less than horrible imaginings:
My thought, whose murder yet is but fantastical,
Shakes so my single state of man, that function
Is smother'd in surmise; and nothing is
But what is not.

1. "Two truths are told as happy prologues to the swelling act of the imperial theme."
   What were the two truths, and what was the imperial theme?
2. "I am Thane of Cawdor."
   What does Macbeth intend to prove by this assertion?
3. Explain "whose murder yet is but fantastical."
4. Explain "that function is smother'd in surmise."
5. Explain "and nothing is but what is not."

But sometimes virtue starves while vice is fed,
What then? Is the reward of virtue bread?
That vice may merit, 'tis the price of toil;
The knave deserves it when he tills the soil;
The knave deserves it when he tempts the main,
Where folly fights for kings, or dives for gain.
The good man may be weak, be indolent:
Nor is his claim to plenty, but content;
But grant him riches, your demand is o'er?
No—shall the good want health, the good want power?
Add health and power, and every earthly thing,
Why bounded power? why private? why no king?
Nay, why external for internal given?
Why is not man a god, and earth a heaven?

Appendix N.

Who ask and reason thus will scarce conceive
God gives enough while he has more to give;
Immense the power, immense were the demand:
Says, at what part of nature will they stand?
What nothing earthly gives, or can destroy,
The soul's calm sunshine, and the heartfelt joy,
Is virtue's prize:

Write a paraphrase of this passage from Pope, in prose, substituting for every interrogation a corresponding affirmation, and for every pronoun the noun which it represents.

HISTORICAL QUESTIONS.

1. Give some account of the Gracchi—their descent and character, and the state of parties i Rome at the time they flourished.
2. What was the Mithridatic war, and who were the principal Roman generals engaged?
3. State (1) the origin of the Achæan league, (2) the principles on which it was established, (3) its termination, and (4) the chief characters who figured in it.
4. Give some account, with date, of the battles of the Metaurus, Mycale, Arginusæ, Delium, Chæronea, and Mutina.
5. At what time, and under what Emperors, did the final division of the Roman Empire into East and West take place? and what countries were comprehended in each division?
6. Give the line of policy pursued by Henry VII. in his internal government, and the means by which he carried it into effect.
7. What events led to the English wars with France in the 13th and 14th centuries? How did the English finally lose possession of their conquests?
8. State the rise and progress of the representation of the Commons in England.
9. Mention some events in the lives of Sebaktagin, Nadir Shah, Seraji, Mahomed Toglak, and Holkar.
10. Describe the religious opinions, political design, and revenue system of Akbar.
11. When did the Romans first become acquainted with the Oriental mode of warfare, and in what respects did it principally differ from their own?
12. What are the earliest Historical Records among uncivilized nations? and what are the changes which they usually undergo before we arrive at the period of true history? Illustrate this by instances from the Histories of Greece and Rome, of India, and of Europe.

GEOMETRY.

1. To a given straight line apply a parallelogram, which shall be equal to a given triangle, and have one of its angles equal to a given rectilineal angle.
2. If a straight line be divided into any two parts, the square on the whole is equal to the sum of the squares on the parts with twice the rectangle contained by the parts.
3. The opposite angles of a quadrilateral figure inscribed in a circle are equal to two right angles. Give also the demonstration of the converse.
4. The area of a triangle is equal to half the product of its base multiplied by its altitude.
5. Describe an isosceles triangle having each of the angles at the base double of the vertical angle. Give the construction for inscribing the regular decagon in a circle.

ALGEBRA.

6. Find the square root of $4x^8 - 16x^6 - 16x^5 + 12x^4 + 32x^3 + 24x^2 + 8x + 1$.
7. Divide a number a into two such parts, that the sum of the quotients which it contains, when one part is divided by m and the other by n, may equal b.
8. Required two numbers whose sum is $\frac{1}{6}$ of their product, and the greater is to the less as 3 to 2.
9. Given $\left\{\begin{matrix} x + y = a \\ x^4 + y^4 = b \end{matrix}\right\}$ to find x and y.
10. Find such a number, that if we take it seven times from its square, the remainder will be 44.

PLANE TRIGONOMETRY.

11. If A B be 8, A C 7.2, and B C 12 miles, and the angle A D B 107° 56′ 13″: required the distances D A, D C, and D B.
12. The two sides of a right angled plane triangle, which contain the right angle, are 242.7 and 321.2; required the hypothenuse.
13. At the top of a castle which stood on a hill near the sea-shore, the angle of depression of a ship's hull at anchor was 4° 52′; at the bottom of the castle the angle of depression was 4° 2′. Required the horizontal distance of the vessel, and the height of the hill on which the castle stands above the level of the sea, the castle itself being 64 feet high.

NATURAL PHILOSOPHY.

1. Illustrate the different kind of levers, and calculate the advantages gained by each.
2. State the law for the transmission of force through a rigid body, and deduce it from the principle of two equal and opposite forces balancing upon such a body.
3. Describe the formation and use of the screw.
4. Describe the hydrostatic press, and explain the principle of its action.
5. Describe the air-pump, and some of the principal experiments for which it is employed.
6. The cylinder of an air-pump = one-fifth the contents of the receiver: required to find the exhaustion at the fourth stroke.
7. Explain and illustrate the principle of the compound microscope.
8. Explain the principles on which all telescopes are constructed.
9. State briefly the principles on which the Calendar is constructed, and the nature of the Julian and Gregorian corrections.
10. State Kepler's three planetary laws, and deduce its own proper consequence from each.

JUNIOR SCHOLARSHIPS, 1843.

HISTORY.

1. Give a short sketch of the Danish dynasty in England.
2. Give a brief outline of the events that occurred during the reign of Alfred the Great; the chief enemies with whom he had to contend, and the particular acts by which he improved the administration of justice.
3. Under what circumstances did Spain become a power of the first magnitude in Europe, and what were the character and policy of Ferdinand?
4. Who was the first sovereign of the Tudor dynasty in England, and what was the nature of his pretensions to the throne.
5. Who were the European cotemporaries of Henry the Eighth of England, and for what were they and their reigns remarkable?
6. At what period did the Roman Empire begin to decline, and to what great causes can this be attributed?
7. Give a brief outline of the characters of the twelve Cæsars.
8. What was the nature of the laws enacted by Solon for the administration of justice in Athens; and under what circumstances was he called upon to amend the criminal codes of that state?
9. When was the battle of Marathon fought, and to what results did it lead?
10. What proofs can you give of the early civilization of India?
11. Describe briefly the leading events in the life of Mahmood of Ghuzni.
12. What were the results of the battle of Plassey?
13. What advantages does India derive in regard to commerce, security of property, and the diffusion of knowledge, from its connexion with England?

GEOGRAPHY.

1. What are the chief cities of Russia—its extent, population, religion, and form of government?
2. Give a brief outline of what is known concerning the Japanese Empire.
3. Enumerate the principal rivers of Asia, and the countries through which they flow, specifying their various sources and terminations.
4. Enumerate the capital cities of the kingdoms of Europe, and state the latitude, longitude, population, and most striking characteristics of each.
5. What is understood by the Germanic Confederation, and of what States is it composed?
6. For what peculiarities is the Chinese Empire chiefly remarkable?
7. What islands compose the Oriental Archipelago, and what are their principal products?
8. What are the relative proportions of land and water upon the surface of the globe, and what are the chief geographical divisions of each?
9. What are the causes of the change of seasons and variations of climate?
10. What do you understand by the vernal and autumnal equinoxes, and when do they occur?
11. What are the chief products of Asia?
12. How do you find the angle of position between any two places on the globe?

ARITHMETIC.

1st.—Reduce $\frac{5}{9}$ of a pound to the fraction of a penny; state the process and result in vulgar fractions and decimals.

2d—What is the value of $\frac{5}{9}$ of an English ell? State the process and result in vulgar fractions and decimals.

3d.—If a penny loaf weigh $6\frac{6}{10}$ oz. when wheat is 5 *s.* a bushel, what ought it to weigh when it is 8 *s.* 6 *d.* per bushel? State the process and result in vulgar and decimal fractions.

4th.—Find the value of 37 cwt. 2 qrs. 14 lbs. at 7 *l.* 10 *s.* 9 *d.* per cwt. by process of practice.

5th.—Divide 721.17562 decimals by 2.257432 decimals.

6th.—Multiply 9 ft. 6 in. by 4 ft. 7 in. by process of duodecimals, and also by that of decimals.

7th.—What is the square root of 3 to 6 places of decimals?

8th.—What is the cube root of 3214?

9th.—What is the 5th root of 2?

10th.—What is alligation medial? and what is alligation alternate? State examples of both and work them out.

11th.—A hare runs at the rate of 10 miles, and a dog at the rate of 18 miles per hour. The hare, being

Appendix N.

being distant from the dog 40 yards, begins to run; when the hare has ran 40 seconds, the dog begins to pursue. In what time will the dog catch the hare, and how many yards will the dog run?

12th.—What is the radius of a circle which contains a begah, or 160 square yards? State the process.

ENGLISH GRAMMAR.

I. What is a triphthong? How many triphthongs are there? and give examples.

II. Divide the following words into syllables:

Arrogant, coalition, coeval, delicious, dependence, efficacious, freedom, filtration, gardener, guidance, impregnable, judicial, momentary, musician, onion, perversity, reverential, solidity, teachest, transient, unanimity, verisimilitude.

III. Correct the false spelling in the following words:

Succede, sence, degenaracy, usefull, limitted, loveingly, receed, compleat, disapointment, laudible, imbalm, dispence, cellebrated, licenciousness, ancesters, exagarate, merryment, priviledge, condusive, etheriel, reumatism, peazant, soverein, inesteemable, perswaded, paroxism, flowry, direliction, cronology, prophane, septre, center.

IV. What are the comparatives and superlatives of bad, fore, in, out, up, ill, and little?

V. Give the past tense and perfect participle of the following verbs:

Bid, drink, forbear, shrink, smite, stride, tread, weave, wring, bereave, cleave, beseech, burst, ring, saw, work.

VI. Rectify the errors in the use of capital letters, and supply the stops in the following passage:

Between Fame and true Honour a Distinction is to be made the former is a loud and noisy Applause the latter a more silent and internal Homage Fame floats on the Breath of the Multitude Honour rests on the Judgment of the Thinking Fame may give Praise while it withholds Esteem true Honour implies Esteem mingled with respect The one regards Particular distinguished Talents the other looks up to the whole character.

VII. Parse the following passages:

If we view ourselves, with all our imperfections and failings, in a just light, we shall rather be surprised at our enjoying so many good things, than discontented, because there are any which we want.

Vice is a monster of so frightful mien;
As, to be hated, needs but to be seen:
Yet seen too oft, familiar with her face,
We first endure, then pity, then embrace.

VIII. Correct the following sentences:—

By these attainments are the master honoured, and the scholars encouraged.

I cannot yield to such dishonourable conduct, neither at the present moment of difficulty, nor, I trust, under no circumstances whatever.

May thou as well as me, be meek, patient, and forgiving.

I have not, nor shall not consent to a proposal so unjust.

No person could speak stronger on this subject, nor behave nobler, than our young advocate for the cause of toleration.

Not a creature is there that moves, nor a vegetable that grows, but what, when minutely examined, furnished materials of pious adoration.

There was much spoke and wrote on each side of the question; but I have chose to suspend my decision.

IX. Scan the following lines:

See the leaves around us falling,
Dry and wither'd, to the ground;
Thus to thoughtless mortals calling,
In a sad and solemn sound.
Beneath the hedge, or near the stream
A worm is known to stray,
That shows by night a lucid beam,
That disappears by day.

Dear Harp of my country! in darkness I found thee,
The cold chain of silence had hung o'er thee long,
When proudly, my own island Harp! I unbound thee,
And gave all thy cords to light, freedom, and song!

TRANSLATION.

English into Vernacular.

Alexander being asked how he had been able, at so early an age, to conquer such vast regions and establish so great a name, replied, "I used my Enemies so well, that I compelled them to be my Friends, and I treated my friends with such constant regard, that they became unalterably attached to my person." When this great Prince was asked why he paid more honor to his Tutor than to his Father; "My Father," he replied, "brought me from Heaven to Earth; by the aid of my Tutor, I ascend from Earth to Heaven." He was, the same author states, subject to violent anger, and used to warn his favorites of the danger of speaking to Princes when under the influence of passion. "They are as a Sea," he was won't to say, "which is dangerous even in a calm, but dreadful when the tempest rages."

He soon afterwards gave some terrible proofs of the outrageous violence of his own ungovernable passions.

HINDOO COLLEGE.

ANSWERS.

AUNUND KISSEN BOSE.

Bacon.

1. THE ancient philosophers, who delighted themselves in the luxuriance of imagination, rejected with disdain the aid of experience which they thought was too humble and mean a guide to follow. They were as yet untutored by the truths of inductive philosophy, and hence they were led to make too poor an estimate of the tedious and irksome process of analysis and generalization.

This is the false estimation that Bacon here alludes to. To be much conversant in experience and particulars was, in the opinion of the ancients, a degradation from the dignity of the human mind, and an occupation which seemed to contract its powers. They feared nothing so much as to be too matter-of-fact minded. They did not deign to examine the limits of their power, they therefore plunged themselves into inquiries which are beyond the reach of the human intellect; their speculations in theology, however sublime and transcendent, were carried too far to betray at once the energy and weakness of man. These reflections they thought were congenial to their nature, and hence derided such exertions as were directed to the discovery of truths which are subject to the sense, little knowing how to rise up "from Nature up to Nature's God." They found it more easy to invent a hypothesis for the explanation of a phenomenon than to search for its real cause; hence they call the search tedious; "ignoble to meditate" in comparison with the Divine speculations above alluded to," "harsh to deliver," because on such subjects they could not make a display of their eloquence which they were ardently fond of, their delivery being reduced to a bare rationale of facts; "illiberal to practise," because they thought it to be a degrading occupation; "infinite in number," because they knew not how to generalize.

2. The doctrine of Plato here alluded to is that there is nothing new on the earth, and that all knowledge is but remembrance—he supposed that the mind is filled with the image of existing things from the very beginning, and that the senses cannot be accounted as the origin of knowledge, but as instruments, by which our notion of things, which lies dormant becomes revived.

3. Superstition requires the immediate interference of the Deity in all the operations of Nature, and claims the peculiar privilege of explaining every physical, mental and moral phenomenon, by some development of supernatural agency. Her votaries fall into an error just opposite to that of the Atheists; the latter rest on "second causes scattered;" the former deny at once the efficiency of second causes; hence superstition cannot stoop to acknowledge the genuine functions of the senses; it is her interest to condemn them as fallacious. She valueth more the false operations, and the innate energy of the man within, than the indispensable aid of the man without.

4. The followers of Aristotle maintained, in their dialogues and discourses, that the senses are the origin of our knowledge, which the Platonists denied; but the latter, in their reasoning and inquiry, take a view of particular examples, and make and approach to induction, though in a manner

Appendix N.

manner showing that they set not the least value upon it; while the former in their mode of argumentation betrayed a supine neglect of the aid of experience, a minute attention to rules of synthesis, without regard to the nature of the results they brought out. Hence the followers of Aristotle "give the due to the sense in assertions" (which the Platonists do not acknowledge), and deny it much more in practice than those of Plato.

6. They rested only upon agitation of wit; that is, they rested only upon the deductions of theory, without stooping to compare them with those of experience, or bringing the aid of the latter to bear upon the former. The schoolmen were particularly famous for their singular array of arguments, compact and beautiful in their superstructure, but based upon an unsteady foundation.

8. Bacon points out the errors into which the ancients had fallen with respect to their low estimation of experience; he shows clearly that the feeble progress of philosophy is owing to her votaries having disdained to court the aid of this humble but sure guide; that this contempt is unjust and unfounded; that induction is the only means by which man can unravel the arcana of nature, and feel that he treads on firm and unyielding ground.

Macbeth.

1. The witches had accosted Macbeth, calling him Thane of Glamis, Thane of Cawdor, and King that would be. On the arrival of the messenger from King Duncan he learnt that he *has* been made Thane of Cawdor, and as he was already Thane of Glamis, the truth of these two assertions of the witches was consequently verified. These two truths, therefore, Macbeth considers as the prologue to the "imperial theme." The imperial theme is the promise of royalty which the witches had honoured him with.

2. The hasty fulfilment of a part of the prophecy of the witches kindled up the ambition of Macbeth, who began to see before him the prize of royalty. He is at first perplexed what to think of this circumstance, whether it would end in good or evil; then he makes up his mind, and says, it cannot be ill, for it hath given me earnest of success commencing in a truth, which is that I am already made the Thane of Cawdor; thus far, his hopes being fed, there rises a secret question in his heart—why then may I not be a King.

3. Macbeth yielding to the electric current of his imagination, thinks of the murder of Duncan, but he staggers at the thought, and says to himself that the project of murder which his thought has hatched, though yet but a dream, works such a tremendous effect upon him.

4. The sense here seems to me ambiguous. It may either mean that from the perturbed state of Macbeth's mind, the functions of his body and mind were smothered and received a momentary check; or that the perpetration of the contemplated deed seems to be prevented from its being smothered in surmise, buried as it were in doubts. The mind of Macbeth is in a state of dilemma; he wavers and fears, he hopes and determines, according as he looks forward to the consequence, or reflects upon the present happy conjunction of circumstances.

5. That is, that which has no existence produces an effect like a real existence. The phantasm of the imagination, a mere nonentity, torments Macbeth, and forces him to make this observation.

Rajnarain Bose.

Bacon.

1. The supporters of this false estimation maintained, that it is a matter of degradation to the mind of man to be much conversant with the knowledge of material nature, which is "subject to sense, and bound in matter, laborious to search, ignoble to meditate, harsh to deliver, and illiberal to practise;" but that it should rather soar on the wings of speculation and meditate on the existence of God, his infinite attributes, the gradations of being that are links in the universal chain between God and man, and the pre-existence or immortality of the soul; that it should attempt to reconcile the foreknowledge of God with the free will of man, and the existence of evil with his infinite benevolence and infinite power, and that it should expatiate on the causes, progress and effects of the phænomena and qualities of the human mind.

2. The doctrine of Plato here alluded to was this, that when Nature was not created and the germs of the universe lay in chaotic confusion, the Supreme Being had in his mind the pattern of the present system of things in the form of ideas of a general nature, and that he did create this universe by impressing these ideas upon matter, which was at first without form and void. He maintained that the human soul, which is an emanation from the Divine essence, or in the beautiful language of the Persian poet, Jellal-ood-deen Roomee, "a rose from its native garden untimely torn," was, in its pre-existent state, conversant with those ideas, and did revel in the appreciation of their beauty; that it has lost them by being confined in this "fleshy nook;" that it should attempt to regain them by contemplation; and that the cold particulars of physical nature should not merely endow the mind with a knowledge of themselves, but that they should contribute to the revival, and excite its faculties to the attainment of those ideas which it possessed when it was in its pre-existent state, a portion of the Supreme Spirit.

3. Superstition never favoureth the investigation of the qualities of sensible objects. The fancy of the superstitious man is always engaged with the imaginary beings, which his own brain has created, in propitiating them in his own favour, and in yielding homage to them with heartfelt veneration. The superstitious man has hardly the time and the inclination, to make physical nature the object of his study and speculation. Plato did really mingle superstition with his philosophy. He admitted the existence of demons or genii between God and man, and allowed worship and sacrifices to be paid to their Divine Nature. He also maintained that the souls of wicked men, and those who luxuriated in the enjoyment of concupiscent pleasures, after the dissolution of their bodies, did hover around their tombs, and were unable to free themselves from the earth, in whose pleasures and passions they had so much indulged.

4. In

4. In theory, Aristotle favoured the study of external nature, and Plato of spiritual nature. But, in practice, the case has been different; for Plato has given, in his invaluable works, many examples of inductive reasoning; but (as he paid superficial attention to that method of ratiocination, and whenever he uses it, uses it in a kind of rambling excursive manner), they are of no force or effect; while on the other side, the schoolmen of the middle ages, the disciples of Aristotle, who regarded the works of their master as possessing equal authority with the Bible itself, were not engaged in the study of physical nature, but busied themselves with theological inquiries and metaphysical subtleties.

5 and 6. The schoolmen were utterly ignorant of history; *i. e.* the history of material nature. Men who were enamoured of theological and metaphysical inquiries, and pursued those inquiries with the greatest alacrity and application, cannot be expected to have much knowledge of natural science, and to pay much attention to its investigation. Their minds rested only upon "agitation of wit," *i. e.* upon wrangling and controversy on the subjects above-mentioned. Theological controversy was the chief employment of the learned in the middle ages. Any University who could puzzle and confound a rival one with their subtleties was declared victorious, and its renown was spread far and abroad. There were prizes given to the parties victorious in metaphysical disputations. These incitements had due effect upon the minds of students, and they devoted their whole attention and time to the study of theology and metaphysics, to the perusal of the huge volumes of St. Augustine, Thomas Aquinas and Duns Scotus. The sense in which the term "history" is used in this passage by Bacon, is countenanced by his division of the intellectual faculties of man and of human knowledge, in the second book of his advancement of learning. He there divides history into civil and natural history.

7. Plato saw well that if we suppose man's mind to be all-sufficient, and that it can pronounce with decision upon subjects beyond its reach, we must acknowledge on the other hand that it has not the means of doing so; for, as far as induction and view of particulars go, so far can man proceed with firm steps in his inquiries and speculations. This is well shown in the case of Plato himself, for he was obliged to have frequent recourse to inductions and view of particulars in the demonstration of his opinions on spiritual subjects, as for example in his able demonstration of the dissimilarity of the corporeal and intellectual natures of man, and the distinct existence of the human soul.

8. In the above passage, extracted from the Filum Labarynthi of Lord Bacon, that illustrious philosopher persuades men to the study of physical nature, and refutes the false opinion that prevailed before his time, that it is a matter of degradation to the human mind to exercise its powers upon material objects, which occupation was considered by the proud Peripatetics of the middle ages to be ignoble and illiberal. It should be observed, to the honour of Lord Bacon, that though he depreciates Aristotle in the above passage, and various others of his Great Instauration, and calls him the tyrannical Ottoman who kills his brothers that he himself may be the sole sovereign; yet, in the dedication of his work, named "Colours of Good and Evil" to Lord Mountjoy, he bestows such praise upon Aristotle as almost compensates all his depreciations of that gigantic intellect. Lord Bacon is the founder of modern science. He it was who freed philosophy from the cloister of monks and the jargon of the middle ages. Though he himself did make few actual discoveries in physical science, yet to him we owe a Newton, a Boyle and a Laplace. He has been well compared by Thomson, the poet of the Seasons, to Moses, as the person who, out of the gloom of the dark ages, conducted men to the land of true science and true philosophy.

II.—*Shakespeare.*

1. Macbeth, Thane of Glamis and General of Duncan, King of Scotland, in his way to the capital, after his successful repression of a rebellion of some Scottish Thanes, aided by the Norwegians, is greeted in his way through a blasted heath, with the titles of Glamis, Cawdor and King, by three witches, who wished to gratify their malicious disposition by enticing him to his own destruction by ambiguous prophecies. Immediately after he is hailed with the title of Thane of Cawdor by some messengers from the King. Dumb with astonishment, at the devils speaking true, he breaks forth into the above exclamation, fraught with the most vehement pathos:

> "Two truths are told
> As happy prologues to the swelling act
> Of the imperial theme."

These two truths are, his being Thane of Glamis and Thane of Cawdor; and these truths are happy prologues to the act of the imperial theme, *i. e.* to the act of his accession to the throne of Scotland, which act is more important than the two happy prologues, and which will be performed with imperial magnificence.

2. Macbeth intends to prove by this assertion that this supernatural soliciting cannot be ill; for, if ill, why then has it commenced in a truth (*i. e.* his elevation to the Thaneship of Cawdor), and given him pledge of the future consummation of the ardently desired event, *i. e.* the performance of the "swelling act of the imperial theme."

3. That is, "my intention, the actual execution of which is but yet existing in my phantasy or imagination." Macbeth's fancy is big with the conception of some dark act of blood, *i. e.* of the assassination of his sovereign, in defiance of the laws of loyalty and gratitude. His whole frame is agitated, and is shivering with this mental convulsion.

4. That intention, the actual execution of which is but yet existent only in his phantasy or imagination, shakes his single state of man, *i. e.* convulses his little microcosm so much, that "function is smothered in surmise," *i. e.* his natural functions are impeded, and, as it were, suffocated in their operations by surmise; *i. e.* by anticipation of the bloody and dark act of assassination which is preparatory to his ascension on the throne of Scotland.

Appendix N.

5. Not only his functions are smothered, but he is, as it were, living in the midst of things that are not at present in actual existence, and that are only now existing in his own brain. His mind's eye is seeing only things that are in the womb of futurity. He is not at present standing on the heath; but is, perhaps, grasping a dagger, and burying it in the royal blood of Scotland. The first conception of a bloody act, with the physical convulsion attendant on it, in such a man as Macbeth, who had much of the milk of human kindness in him, is described with a happy and inimitable exactness by the pen of the heart fathomer, William Shakespeare.

JOGESCHUNDER GHOSE. 1ST CLASS.

1st. The Gracchi were descended from a noble family of Romans. They were the sons of Cornelia, who was the daughter of Scipio. Though they were nobles by birth, yet they favoured the people, and proposed in the senate for the revival of the Licinian law, that is for the equal division of land. This was of course rejected by the senators; however, the Gracchi became very popular amongst the Romans, and consequently the senate disliked them. Tiberius Gracchus, the elder brother, was killed at the instigation of the senators, who pretended that he aimed at the sovereignty of Rome; a few years after, the younger brother, Caius Gracchus, met the same fate. Whether they actually aimed at sovereignty, it is very difficult to decide now; but they were guided by motives of patriotism and benevolence to propose for the Licinian law, and their character was every way exemplary; and it was rather the sedition of the senate against the Gracchi than that of the Gracchi against the senate. There were two parties at that time in Rome; the one was the aristocratic, the other was the popular party; and one contended against the other.

2d. The Mithridatic war took place between the Romans and Mithridates in the seventh century, after the foundation of Rome. This Mithridates was descended from that Mithridates who begged the friendship of Alexander the Great, and who was King of Pontus. Sylla, the Roman dictator, defeated Mithridates at Chæronea, the same place where Philip defeated the Thebans two centuries before; and Pompey and Lucullus were the other Roman generals who were engaged in this war.

3d. 1. The states of Achæa, and other Greek provinces, combined themselves in a league to get rid of the encroachments of the Macedonian Kings, in the third century before Christ. 2. They pledged themselves to defend each other against any foreign encroachment, and also they took the lead in the affairs of Greece. 3. The Achæan league was dissolved when the Romans, under the Consul Mummius, defeated the Greeks. 4. Philopœmen and Aratus were the chief characters who figured in this league.

4th. After the death of Theodosius, in the fourth century after Christ, his two sons, Honorius and Arcadius, divided the Roman empire amongst themselves. Honorius took the Western empire, and Arcadius the Eastern. The Western empire comprised Britain, Gaul, Spain, Helvetia and Italy, &c.; and the Eastern empire contained Greece, Syria and other Asiatic possessions, and Egypt and other African possessions.

5th. The line of policy pursued by Henry the Seventh was economy; he likewise depressed the power of the nobility, and increased the influence of the commons by allowing them to purchase the estates of noblemen; he consulted his Parliament on all momentous occasions, and raised the dignity of that august assembly; it was in his reign that something like a Parliament was established in Ireland, by Poynings; though the power of the Irish Parliament was very limited, for that assembly could not pass any important laws without the consent of the English Council.

6th. Edward the Third of England claimed the crown of France by right of Isabella, the Queen of England, who was the daughter of the King of France, and soon after invaded that country and defeated the French, in the battle of Cressy, where his son, commonly called the Black Prince, displayed high feats of valour. Soon after Edward returned to England, and his son, being ill supported by his father, lost all the conquests gradually. All these events took place in the thirteenth century. In the fourteenth century, Henry the Fifth of England revived his claim upon the throne of France, and, having invaded that country, he gained a decisive victory over the French, in the battle of Agincourt; and soon after a treaty was concluded, by which it was agreed that Phillip, the King of France, should be allowed to reign during his lifetime, but after his death Henry should succeed to the throne; and Margaret, the daughter of Phillip, was married to Henry. After the death of Henry the Fifth, his son Henry the 6th, who was a minor, succeeded to the thrones of England and France. It was at this time that an enthusiastic woman named La Pucelle, commonly known as Joan of Arc, spread a rumour that she was destined by God to rescue France from a foreign yoke; however, by this she caught the credulity of the people, and soon after she headed an army and defeated the English; and Charles, the son of Phillip, was re-instated on his ancestral throne; and thus did the English finally lose possession of their conquest.

7th. In the year 1215, the barons, sword in hand, extorted from King John his consent to the Magna Charta, the ground-work of English liberty, by which it was enacted, that in criminal matters all Englishmen should be tried by a jury of their peers, and a free enjoyment of person and property was also secured. However, it was not till the end of the thirteenth century, that the Commons obtained a share in the legislation. Henry the Third was obliged to allow the Commons a share in the legislation; and in his reign it was enacted that knights, citizens and burgesses should be summoned to attend the Parliament. This was the origin of the House of Commons. In the reign of Edward the First it was enacted, that Parliament should be summoned annually, and oftener if need be. In the reign of Edward the Third the House of Commons was re-modelled, and it was enacted that no taxes can be levied without the consent of the Commons; and the House of Commons was constituted in the same form in which it continued for several centuries. In the reign of Queen Anne, the Scotch Parliament was incorporated with the English; and in the year 1800, the Irish Parliament was also united with the English. In the year 1831, a Bill was introduced in the House of Commons, by Lord John Russell, for reforming the constitution of the Parliament; after a long debate for two or three sessions, it was at last passed. By this Bill, the number of electors was increased to 900,000 nearly, and all British-born subjects who possess a freehold of 10 *l.* per annum are entitled to vote in the election; and some rotten boroughs were disfranchised,

disfranchised, and Manchester, Birmingham, and other large towns received franchises. Those who enjoy a clear freehold revenue of 600 *l.* per annum, are entitled to become members for counties; and a freehold of 300 *l.* per annum will entitle a man to become a member for towns and boroughs. The total number of the Members of the House of Commons is at present 658, of which 100 represent Ireland, and 45 represent Scotland.

8th. Sebactagin was the son of Aleptagin, and may be said to be the founder of the Afghan dynasty; and Mahomed, the celebrated Sultan of Ghizni, was the son of Sebactagin. He flourished in the eleventh century.

Nadir Shah was originally known by the name of Cooly Khan, and was the leader of a band of Tartar shepherds. His valour recommended him to the service of the King of Persia, and soon after he became the King of Caubul. At this time India was governed by a weak and imbecile Prince, Mahomed Shah, whose profligacy disgusted his ministers, who invited Nadir Shah to come and take possession of India. Nadir Shah invaded India in 1738, and the imperialists were defeated by him, and he soon attacked Delhi, and ordered a general massacre of the inhabitants; and, after taking an immense quantity of gold and jewels, he returned to his country, where he was soon after murdered in his camp by Ahmed Shah Abdalli.

Holkar was a Mahratta Chief, who ruled Malwa, About the beginning of the present century Jeswunt Rao Holkar became a formidable potentate. Holkar intended to burn Poonah in 1803; but it was saved by the timely arrival of General Wellesley (afterwards the great Duke of Wellington). About the year 1805, Holkar ravaged Hindoostan, and defeated Colonel Monson at Shamlee; afterwards he was pursued closely by the English, and he fled to Lahore; soon after, Lord Cornwallis concluded a peace with him. During the government of Lord Hastings, the power of Holkar was totally annihilated.

9th. In the war with Pyrrhus, King of Epirus, the Romans first became acquainted with the Oriental mode of warfare, for we know that Pyrrhus brought with him some elephants, which the Orientals only use in their warfare. The chief strength of the Romans consisted in their infantry, which was known under the name of Roman Legions; but the chief strength of the Eastern nations consisted in their cavalry and elephants. The Romans fought very close, while the Oriental scattered their forces; in these respects the Oriental mode of warfare differed principally from the Roman mode. In the Mithridatic war, the Romans became properly acquainted with the Oriental mode of warfare.

10th. The earliest records among uncivilized nations consisted in traditions, ballads, and monuments; and, gradually, these ballads are collected and sung by minstrels; afterwards poems are composed to commemorate principal events, and then history, in the proper sense of the word, takes its rise. Thus we see Hesiod and Homer collected their great poems from ballads and traditions; afterwards true history took place of traditions and poems. The Romans originally used to commemorate their events by songs, and it was not till the time of the Punic wars that historians commenced to write true histories. The Ramayuna and Mahabharut, the two greatest epic poems of India, contain the earliest histories of India, which were collected from oral traditions and ballads; after the conquest of India by the Mahomedans, we arrive at the period of true history.

In modern Europe, the Druids and minstrels used to commemorate principal events by means of ballads and songs; and the poems of Ossian and others are collected from these ballads.

PRIZE ESSAY.

PEARYCHURN SIRCAR.—1st CLASS.

The Effect upon India of the new Communication with Europe by means of Steam.

The application of steam, in carrying on the communication with Europe, has been the source of innumerable advantages to India. By means of this powerful agent, Europe, ere long regarded as a *remote* quarter of the globe, has lost that character. The appalling distance between these two portions of the world has been diminished, though not in a scientific sense. The connection between them has been strengthened by the communication being rendered more easy, and voyages to Europe have lost that forbidding aspect which had so long dissuaded the unenterprising sons of India from leaving her shores.

The introduction of this great improvement in guiding ships has facilitated Indian commerce to a great degree. Voyages at present are performed within less than a fourth part of the time occupied a few years ago. Vessels are no longer subject to wind and sail, and the lengths of voyages are made subjects of mathematical calculation. Merchants, enabled to transport goods much oftener in the course of a year, and receiving their returns much sooner, have found means to carry on trade on very extensive scales. Capitals are speedily set free, so as to be invested in fresh merchandise, and the prices of articles are lowered by the rapid import of large quantities of them. The application of machinery to manual labour, as existing in Europe, is daily coming into use here also. Thus the commerce of India, one of the principal sources of her civilization and aggrandizement, is indebted to the agency of steam for much of its present flourishing state.

As the enlightenment of India is owing in a great measure to her intercourse with Europe, the object that has been instrumental in bringing her close to the focus of illumination, must be regarded as having been highly beneficial to her. The arts and sciences of Europe, the many valuable inventions and discoveries that have been made in that continent, the useful instruments and utensils that are there used, and the innumerable improvements that the people in that quarter have made, both in practical and intellectual knowledge, have all been rendered easily accessible to her ignorant children.

Another source of the advantages derived from steam communication, is the quickness with which intelligence is conveyed from one place to another. The overland mail has been of great utility to every class of men any way connected with Europe, but particularly to Government; for

Appendix N.

owing to this rapid vehicle of intelligence, its measures are no longer clogged with unnecessary delays, and business is conducted with a degree of expedition, the want of which is sometimes productive of very evil consequences. By means of the overland mail, a speedy communication is kept up with the Court of Directors; and thus the Government here is soon relieved from suspense, and the consequent inaction, in executing measures of importance. In the case of a war breaking out, the intelligence may be rapidly communicated to any place, and the preparations commenced with the greatest expedition.

Besides these, the Government is in several other ways benefited by steam communication. By means of the overland mail the state of the whole of Europe is brought under the cognizance of the inhabitants of India within a very short time; and thus these two parts of the world, distant as they are, are made to communicate with each other in civil, political and literary matters, with the greatest ease. So we see that by means of a certain quantity of steam the distance of several thousands of miles is made to be regarded as comparatively nothing. Such is the triumph of science.

The advantages derived from the use of steam in navigation are too numerous to admit of being described within the short compass of an essay of this nature, in the limited time that is allowed to write it. Suffice it to say, that by means of steam communication India is daily rising higher and higher in the scale of civilization, and that the treasures of Europe, in the most extensive sense of the word, are poured upon her lap in profusion, taking into consideration not the riches of the soil only, which are very poor indeed, when compared with the inestimable boon of intellectual improvement which it has been the lot of her sons to receive at the hands of enlightened strangers.

Appendix (D.)

HINDOO COLLEGE.

The prizes for proficiency in Adam Smith's Moral Sentiments, given by the President of the Council of Education, have been contended for at the Hindoo College.

The questions were not communicated to the students till they were all assembled in the hall of the college, and the answers were all written in the presence of the President, without reference to books or other assistance. The answers have been examined by the President, and he has awarded the gold medal to Annand Kissen Bose, and the silver medal to Raj Narain Bose.

The questions were the following :—

I. Whether is the moral estimate which, according to Smith, we form of conduct, founded ultimately in reason or sentiment?

II. Show that we have no *immediate* experience of what other men feel; and point out, carefully, the connexion of this fact with Smith's theory.

III. Whence arises our sense of the propriety or impropriety of conduct, and of its merit or demerit in others and in ourselves?

IV. Whence are the *general maxims* of morality derived; and what importance would you attach to them as *regulators* of our conduct and moral decisions?

V. State your opinion on the following objections to Smith's theory :—

1. Sympathy being a capricious principle, cannot be regarded as the standard of our moral judgments, which are on the whole pretty regular.

2. Smith says, " when we judge in this manner of any affection as proportioned or disproportioned to the cause which excites it, it is scarce possible that we should make use of any other rule or canon but the corresponding affection in ourselves."

" I judge of your sight by my sight, of your ear by my ear, of your reason by my reason, of your resentment by my resentment, of your love by my love." But I may surely think my own sight bad and yours good, or both bad. Then why may I not think your resentment proper and my own improper, or both improper? and if so, my own can be no rule or canon for judging of yours.

3. The principle of sympathy becomes insufficient when applied to cases, wherein a good act, instead of securing the affections of men, subjects us to their hatred.

Annand Kissen Bose.

1. There are two sets of philosophers who have taken different views of the manner in which we perceive moral approbation or disapprobation. The one founds the moral estimate of our conduct on reason, which, according to this theory, is supposed to exercise its jurisdiction not merely over the dominion of truth and falsehood, nor to confine its power in adapting means to an end agreeably to the scientific acceptation of the phrase, but to observe what tenor of conduct or tone of temper is fit and proper, deserving of reward or punishment, necessary and advantageous to be indulged and encouraged, or checked and eradicated. The other builds the theory of moral approbation and disapprobation upon sentiment, upon a certain conformation of our feelings, or what some metaphysicians call, passive affections of the mind. Clarke, Cudworth, Price, Butler, Malebranche and Stewart stand as the distinguished champions of the first or the rational theory. Hume, Hutcheson, Shaftsbury, Cumberland, Adam Smith and Brown, form the conspicuous supporters of the second or the sentimental theory.

Though the writings and opinions of these philosophers go in favour of the one or the other of these two theories, yet there is no unanimity among the upholders of the same system; among the rationalists, there are almost as many distinct theorists as there are among the sentimentalists. Adam Smith, who belongs to the latter class, has distinguished himself by the originality of his system, by the nicety and subtilty of his reasoning, by his deep and profound knowledge of human nature, and by the many apt and lucid illustrations which he has brought forward to establish his theory.

theory. He seems to be the most candid of all the founders of new theories, and betrays no desire of veiling any objections that appeared such to him; he examines every system of moral philosophy that was known in his time, declares them to be founded upon some acknowledged principle of mental operations, points out the false phases in which lurk undetected errors, and marks the points of coincidence with his own theory; he takes notice of those varieties of agents which exert any material influence upon moral approbation or disapprobation, gives their due weight to those faculties which are the basis of antagonist theories, and disclaiming the sophisms and visions which haunt thick the recluse in his closet, comes out into the broad daylight of the world, appeals to fact and experience, and traces the source of the moral estimate of our conduct to sympathy, an universal, though till his time not duly noticed, operation in the economy of nature. He defines sympathy to be our fellow feeling with any passion whatever, with grief as well as with joy, with gratitude as well as resentment, with the social and the selfish, with the amiable and the boisterous passions.

2. Though it is a matter of question, whether by any process of *à priori* reasoning, built upon the knowledge of the natural constitution of man, we can discover the truth, that we have no immediate perception of another man's feelings, yet that we can have no such perception is a fact of every day's experience, and too obvious to cause any doubt, even in the mind of the most superficial observer. Since, therefore, it is more from experience than by any process of ratiocination that we come at this conclusion, the best means by which we can prove its reality to any (who takes a fancy to question it), is by citing instances and giving illustrations.

If, while I am conversing with a person, he happens to show some symptoms of an inward complaint, I observe them, and grope about for some cause which excited them. I question him, and until he gives an answer my feeling is not a whit disturbed, my state is that of impatient curiosity. When I learn the cause, I ponder upon it, my imagination is set actively at work, and by a process (which I shall have occasion to explain hereafter), a faint idea of his suffering is conveyed to me.

The external senses are the only instruments by which any emotion of pleasure or pain can be excited, and as there are no links to connect the senses of one man with those of another, there is no possibility of a feeling excited in one being immediately perceived by an observer. A culprit that is undergoing a flagellation feels an emotion of pain which is excited by the irritation of his nerves; the nerves of a spectator not being in a similar state of excitement, he cannot immediately have the same perception of pain.

There is a strong connexion between this fact and the theory of Smith, inasmuch as it may be regarded as the corner stone of his theory. The connexion may be thus traced. If I can have no immediate perception of another man's feelings, by what process is it, that when I am acquainted with everything regarding those feelings, I exhibit faint expressions of similar feelings? The solution of this query leads to the theory in question.

Smith argues, that as we can have an immediate perception of our own feelings only, when we observe a person under any sort of excitement, we in imagination transport ourselves into his situation, and conceive what must be the state of our feelings under similar circumstances, and by this illusive identification we acquire a perception of his feelings. That such is really the case our author proves by many striking illustrations. We see, says he, a person drawing back his leg when he observes a stroke aimed at the leg of his neighbour; we see the spectators of a rope-dancer writhing and twisting themselves in the same manner as the player does to balance himself; now all this can never arise from any immediate transfer of nervous influence—sympathy alone explains these phenomena.

After having established this ground-work of his theory, Smith goes on to show how, from this principle, we regulate our approbation or disapprobation of another man's conduct.

When I see a person commanding himself in the agony of disease, I approve of his conduct. My approbation cannot arise before I perceive his feelings; the perception is caused by my imagining myself to be transported into his situation, and by observing the state of my feelings under similar circumstances. Thus by *my* feelings I judge of *his*; and if, subsequently, I find that I would have acted similarly as he acts, I approve of his conduct.

Smith, moreover, observes, that our sympathy does not arise so much from the view of the passion as from that of the situation of the person. Thus, on many occasions, as in the case of idiots, of men of callous feelings, and of departed spirits, our illusive sympathy arises from conceiving ourselves in their situations, and feeling an emotion which they feel not; on other occasions, when we see a person labouring under a passion, we naturally inquire the cause of it, that we may enter thoroughly into his situation, and have a perception of his feelings.

From simple, double, divided, illusive and conditional sympathy, Smith explains all the phenomena arising from the sense of merit and demerit, of propriety and impropriety.

3. Our actions and affections may be judged under two different views; in relation to the cause which excited them, or the motives from which they sprung; and in connexion with the consequences arising from, or the ends proposed by, them.

When actions and affections appear to us as suited to, or out of keeping with, their cause or motive which excited them, we approve or disapprove of them.

When the ends they aim at or tend to produce, and the consequences arising from them, appear to us beneficial or hurtful, there arises in our minds a sense of their merit or demerit. When we judge of another man's conduct as consistent with propriety or not, we conceive ourselves placed in his situation, and observing his feelings, if we find every emotion of our heart corresponding with his, we approve of his conduct; if, on the contrary, we find no feelings of our heart responding to his, we disapprove of his conduct.

Our sense of the propriety or impropriety of another man's conduct, therefore, is founded upon the concord or dissonance of our sentiments with his.

Our sense of the merit or demerit of an action is a compound sentiment; it is made up of a direct sympathy with the motives of the person who confers the benefit, and an indirect sympathy with the gratitude of the person upon whom the benefit is conferred, on the one hand, and a direct antipathy with the motives of the injurer, and an indirect sympathy with the resentment of the injured, on the other.

We judge of the propriety or impropriety, merit or demerit, of our own conduct, by the same principles with which we judge in the case of others.

Appendix N.

We approve or disapprove of our own conduct, when, by transporting ourselves into the situation of an impartial spectator, my sentiments correspond or disagree with those of the imaginary being.

Those actions of our own which are the proper objects of gratitude or resentment, appear to us as deserving of reward or punishment; proper objects of gratitude or resentment, are the objects of that gratitude or resentment which every impartial spectator can go along with. This imaginary being, the man within the breast, is conscience.

4. These general maxims are drawn by a process of induction, acting upon the materials supplied by sympathy. They are of high importance in correcting our momentary and false sympathy, and in the moment of acting under the influence of a passion.

5. Answer to Objection.—The first objection to Smith's theory loses its force, when we recollect that Smith does not regard the first impulse of sympathy as the standard of moral judgment; this is not the "be all and the end all" in our consideration of what is right or wrong, proper or improper.

It is true that the sympathetic emotion of no two individuals are alike, nor of the same individual at all times; but upon this vacillating and capricious nature of sympathy, we could never rely for the decision of moral truths, had it not, when called into exercise, required the assistance of the general rules of morality, and of the result of the experience of our former sympathies. As, in judging of a composition of genius, a delicacy of taste, sound judgment, habits of comparison and experience, must combine to make our decisions right; as we pronounce those productions to be models or standards of taste, which, throughout the revolutions of time, the mutations of custom and religion, have continued to please the generality of civilized nations; as we do not call that sort of writing the best, which, in the heat of party spirit and popular phrenzy, has been applauded to the skies; so in judging aright the conduct of a man, a delicacy of feeling, a vigorous understanding, habits of experinece, and a knowledge of human nature are the essential requisites; we call that tenor of conduct just and proper, which not only is the object of our own approbation, but which has become such throughout all ages and in almost all civilized countries. Our approbation of that course of action is not proper, which, under the influence of some passion or prejudice, we for a moment sympathise with.

To explain this view more clearly, I shall take the following instance. Here is a general moral maxim; that the good of the greatest number should be preferable to that of a few; which I observe is quite opposite to the view of my neighbour. I charge him with bad judgment, he retorts the charge upon me; how can the dispute be put an end to? I bring forward arguments from the general economy of nature; but they do not convince him; he gives another turn to the question, and says, that he sees no necessity why he should sacrifice his own interest to that of the world. Reason can go no furthur to convince him; he continues firm in his opinion, till enlarged experience and general commerce with mankind prove how disagreeable such a passion appears to the rest of his fellow-creatures; how little they sympathise with this selfish view. When he learns that the moral maxim above alluded to has continued to guide the generality of mankind from time immemorial; the dislike, with which his selfish view was received, often and often returns to his mind; upon these facts he builds his reasoning, and the accumulation of these concurring circumstances presses upon him with irresistible force, and compels him to believe what at one time he denied. Thus is the capriciousness of sympathy corrected; thus the varying judgments of moral truths are reconciled; and thus the eternal and immutable maxims of morality produce those beneficial effects which it was intended by the Great Ruler of the Universe to work.

Answer to Objection II.—With respect to the second objection, it may be observed, that as we can have no immediate perception of another man's feelings, I must, in judging of a person's affection, refer to my affection on a similar occasion. It is true I judge of another man's sentiment by my own; but I do not rely upon this until other concurring circumstances (mentioned in the answer to the 1st objection) confirm it: here it must be confessed, that the expressions of Smith upon this part of the subject are a little lax.

Amongst the several sorts of sympathy, Smith mentions a conditional sympathy. When I observe that conduct, which to me appears praiseworthy, is notwithstanding censured by the generality of mankind; yet I abide by my conviction by the belief, that if men were thoroughly acquainted with my feelings and motives, if they had viewed the particular conduct from the same point of view as I have done, they would undoubtedly sympathise with my sentiments.

Rajnarain Bose.—1st Class.

1. The opinion into which I have been led on this often disputed and most intricate point of moral philosophy, after as much of candid and impartial investigation as I have made up to this time, is this, that the moral estimate which we form of conduct is founded neither on reason or pure sentiment, but on the compounded principle, of what is called by Smith sympathy. I call sympathy a compounded principle, because, at every time it is exercised, it is compounded of either imaginative and emotive, or imiginative, ratiocinative, and emotive processes. When I sympathise with another person, I place myself in his situation, I identify myself with him, *I become he*; this is an act of the imagination; then, when I have placed myself in his situation, I participate in his feelings; this participation is an emotive process: sometimes he is reasoning on the ultimate cause of my sympathy, and I participate in his reasonings; this is a ratiocinative process; and then again after he has reasoned, immediately an emotion springs up in his breast, I participate in this emotion also; here again is the emotive process. However it is certain, that in every operation of sympathy, there are the imaginative and emotive processes. If we examine our hearts thoroughly, we shall find that every isolated thought which rises in our breast is conjoint with feeling; and that it is certain, that no man can be "an intellectual all in all," a being of pure intellect and thought.

It is certain, and is agreed to by all moral theorists, that in every moral estimate, the final faculties, which decide the point, are the emotions of approbation and disapprobation; it is not certain, however, whether reason, or sympathy, or moral sense *precedes* approbation and disapprobation. Now, as general rules have been formed, and at present regulate our moral decisions, we cannot decide this question, unless we take as our data the probable nature of this antecedent process, occurring

occurring in the earlier stages of society when general rules were not yet formed; and the instances of it which yet occur at this stage of society when general rules have been formed, and when remembrances of such general rules precede and guide approbation or disapprobation. The supposition of a moral sense, which precedes approbation and disapprobation, is inconsistent with that economy of nature which prevails in innumerable works of her hand; and with which it is *probable* she has acted in this instance also; which probability being such, that it almost amounts to certainty. Reason cannot precede approbation or disapprobation. Suppose the case of a savage that first of all saw a murder committed. Instantly, it is certain, the emotion of disapprobation should have arisen in his breast: but it is very probable that he would have been unconscious of a ratiocinative process, if we suppose any such, that would have preceded this disapprobation. He thought, says the rationalist, of the results of this murder towards the individual murdered, and his family; and also of the prejudicial consequences which this crime, if frequently committed, would have on society. If such reasonings did really precede his disapprobation, then why was he unconscious of them? In the present state of society, I am certain that, in no case whatever, are we conscious, except very rarely, of a ratiocinative process, preceding our approbation or disapprobation. Locke says, that "I cannot conceive how any idea springs up in the mind, and I be unconscious of it;" with much more truth, I can say, that I cannot conceive how a process of ratiocination is being performed in my mind while I remain unconscious of it.

After the refutation (a feeble one) of the Hutchesonian and the rational system, I will attempt to prove that sympathy does really precede approbation and disapprobation. If we examine our hearts carefully, we will find that, as we are social beings, we often regard the opinions of others. When we are going to perform any bad action, we frequently ask what will *men* think? After we have done any bad action, we usually ask ourselves, after it has been brought to light, what are men thinking of it; perhaps they are thinking so and so, perhaps their feelings towards us are so and so. With respect to other men, we imagine what they have reasoned and felt, before and after the commission of such and such an action. We will find that after every such operation of sympathy, the emotion of approbation or disapprobation arises in our breast, and we will find that if we do not exercise sympathy before approbation or disapprobation, the remembrance of general rules has supplied its place.

Smith's theory is very simple and deeply founded in the feelings of human nature. I cannot therefore think well of the intellect of a very modern moral theorist, who has said that it requires but common acuteness to refute his theory.

2. That we have no immediate experience of what other men feel is very evident; we have no sense by which we can become conscious of other men's feelings; we have eyes to see, ears to hear, tongues to taste, noses to smell, muscular sensation to perceive the feeling of touch, but we have no sixth sense whereby we can become conscious of the *feelings* of others. It is, then, by the imagination only that we can become conscious of them. Unless we place ourselves in their situation, identify ourselves with them, *and become they*, I cannot conceive of any other way of which we can become conscious of their feelings and emotions. This is sympathy; this is the fact upon which Smith has ingeniously and ably erected his sympathetic theory. I have before proved that sympathy is a compounded principle, and that it does not consist solely of an imaginative process.

3. Every affection can be considered in two relations; first, its relation to the cause which excites it; and, secondly, its relation to the effects which it produces, or tends to produce. Upon the suitableness or unsuitableness, gracefulness or ungracefulness of an affection with respect to its cause, depends the decency or indecency, propriety or impropriety of the affection, and the conduct which it occasions; upon the suitableness or unsuitableness of the effects, which an emotion produces, or tends to produce, considered with respect to the emotion itself, depends the merit or demerit, the utility or the hurtfulness of an action or a line of conduct; and it is deserving either of rewards or punishments, as it becomes the object of gratitude or resentment.

4. The general rules of morality have been formed by the process of induction. After men had felt what actions please, and what actions displease, they have, by an easy induction, formed these rules.

These solid rules of morality are very useful; for they supply the place of sympathy which Smith allows, varies with the different humours, and different states of the health of men; they are the great regulators of our conduct, and, by an easy reference to them, we can decide cases of morality. It is by a regard to them that we waver many times before the commission of an atrocious act; and, after we have done the deed, it is a regard to these general rules that fills our minds with the stings of remorse, that leads us to consider that we are the object of the detestation of mankind, and subjects us to continual anguish. If we had not the general rules of morality, then the collisions of various and fluctuating sympathies would have introduced confusion into morals; though it must be confessed that these various and fluctuating sympathies themselves were the sources of the formation of these general rules. It is plain, then, that these rules are of great importance to us as *regulators* of our conduct and moral decisions.

5.—1. Though sympathy is a capricious principle, yet it is not so capricious as its opponents think: for instance, every man on the face of the globe, however depraved his moral principles may be, admires a beneficent action, and disapproves of theft, robbery and murder. Even the perpetrators of these crimes acknowledge that they are in the wrong, but have been led into the commission of them by want, necessity or passion. I grant that sympathy is capricious; but then, where it is capricious, it is guided and corrected by reason.

Smith, in his review of the national system, at the latter part of his work, grants that sympathy is capricious, and that all solid and just judgments concerning right and wrong, are made by reason. Some nations follow customs which, judged according to the pure and elevated standard of European morality, are morally culpable, but which the nations themselves consider as innocent. The custom of infanticide prevailed in ancient Greece and Rome. The rites of infant sacrifice and Suttee prevailed until very lately in Hindoosthan. In the island of Formosa, promiscuous sexual intercourse is considered no crime; and in some parts of Africa, the people throw their old parents from trees. All these have originated in mistaken, misguided, and rude sympathy; yet we can venture to assert, that when those nations will gain the same stock of information and civilization as the Europeans possess, their elevated reason will correct these products of misguided sympathy, and will abolish them altogether. I doubt not that if the Suttee rite had prevailed up to this time, the youths who are educated in the institutions, where Western learning and literature are cultivated

Appendix N.

and taught, would not have sympathized with the perpetrators of the rite, and would have disapproved of it.

5.—2. The objection, as far as it goes, with respect to sight, is true, but the inference, that " my own resentment cannot be a rule or canon for judging of yours " from the premises " why may I not feel your resentment proper and my own improper, or both improper," such inference is not correct. In innumerable cases I judge of your resentment by my resentment, and in those cases such judgment is generally correct. By my resentment of improper, hurtful and vicious actions, I judge of your resentment of such actions, and this judgment, we find, is usually correct.

The senses in which the words " why may I not feel your resentment proper and my own improper," can be taken, are two. First, when the cause of resentment is the same; and, secondly, when it is not the same. The latter is out of the question altogether; but as to the former, if the cause of resentment be the same, it is impossible that when I call *my own* improper, I will call your's proper; I cannot conceive of such a case. So that the words " why may I not feel your resentment proper and my own improper" are a contradiction in terms. Then, as to the very last part of the objection, when we feel the resentments of both of us to be improper, in this case, I judge of your resentment by my resentment. I judge my resentment to be improper, and I pass the same judgment with respect to your resentment; it is plain that I judge of your resentment by my own resentment.

5.—3. According to my humble opinion, the principle of sympathy does not become insufficient, when applied to cases, wherein a good act, instead of securing the affections of men, subjects us to their hatred. I cannot conceive of such case as that when a good action subjects us to the hatred of all men. Though the multitude did not relish the poem of Antimacus, yet still there was a Plato to approve of it. So a good action may be disliked by the generality of the actor's countrymen; yet still he can repose in the sympathies of his wise friends, and contemporaries, and countrymen, who approve of the deed. Yet, granting such a case to happen as that of a good action incurring the hatred of *all* men, yet still the actor may think that the people are prejudiced against, and have formed some misconception of the scope and tendency of, the action; therefore they hate it; but when they will be in their right senses, they will shower applauses upon him. If his own generation do not approve of the action, yet still he thinks that posterity will do justice to him. The applauses of future centuries ring upon his ears, and he disregards the cotemporary hatred that is pouring invectives and vituperations upon him. It is this conditional and future sympathy, that the actor reposes in and contemplates with calm and serene satisfaction.

HOOGHLY COLLEGE.

ESSAY.

The Effects upon India of the new Communication with Europe by means of Steam.

Nothing tends so much to advance society, to humanize the manners, and to elevate men in the scale of civilization, as intercourse with different nations. It encourages commerce, by supplying the wants of one country with the superfluities of another; the knowledge of one people may be made the common property of all by its means, what the people of the remotest regions discover or invent, can be communicated everywhere. In short, intercourse renders the earth, separated as it is into continents, islands, &c., by vast oceans, sometimes by insurmountable mountains, into one entire whole; and all mankind, as the members of one and the same family.

It was by carrying on an intercourse with the Greeks, that the Romans were enabled to improve in the liberal and mechanic arts. It was Greek philosophy that softened and polished the rough military manners of the Romans, and soothed them when misfortune compelled them to look for consolation. In the middle ages, when religious fanaticism coupled with superstitious zeal, led to the opening of a communication between Asia and Europe, the people of the latter continent who, sunk in barbarism and ignorance, were then groaning under the pressure of tyranny and oppression, received from the hands of the Asiatics, who were their superiors in civilization, the blessings of social life and happiness. But those short days of Asiatic glory and superiority are gone, the stream of civilization has taken an opposite course; before, it flowed from Asia to Europe, now, but with more than its pristine vigour and rapidity, it flows from Europe into Asia.

The blessings that Europe now showers upon us are numerous and useful. Both in ancient and modern times Europe has been the seat of philosophy and civilization, but in consequence of there being no safe intercourse in ancient times, that civilization was confined to where it grew. But now that that obstacle is removed, an entire change has taken place in the circumstances of countries; whatever is now or has been gathered in Europe or in any part of the earth, receives an universal circulation.

England which is of all the countries of Europe is nearest related to India by her present position in Asia, is particularly engaged in the cause of Indian improvement. She not only carries on commerce with India, but she is ardently employed in instructing the natives in the arts and sciences, in history and political economy, and, in fact, in every thing that is calculated to elevate their understanding, meliorate their condition, and increase their resources.

But since, from a communication with Europe, these benefits upon India have resulted, if this communication be rendered more easy and rapid, would not the benefits received increase in proportion? The sooner a thing desired is had the better. But this facility of communication is beneficial in many other ways; whether to carry on war, or manage the civil affairs of a distant empire, or communicate with a friend situated in a remote country, in every one of these concerns, expedition is the chief instrument of success. To secure expedition and facility in carrying intelligence from one place to another, public roads are constructed, post-offices established, &c. But none of these means has proved of greater use in answering the desired end than steam. By means of steam a distance, a distance that took 18, afterwards six months to pass over, now takes six weeks only. Hence, whatever advantages existed before is, by the new mode of communication,

cation, increased four times. Now, Europe is brought nearer to Asia, and each can partake of the fruits of labour of the other with more ease than before. But since, in the event of an association of an inferior with a superior, the inferior is the gainer, let not our rulers think themselves the losers; for a knife is whetted upon a stone which is in itself not sharp. The English are to us what the Romans were to the English; and as the English are the children of modern times, and command more resources and power than the Romans, we derive the greater advantage. The facility afforded to communication by the use of steam has enabled the English to govern our country with great prudence and vigilance, they do not appear to be at any time at the risk of forbearing in the glorious work which they have commenced, of improving the native mind and condition, but prosecute it with honour to themselves and favour to their subjects, till they are styled the regenerators of India.

NOBINCHUNDER DASS.

PAPER ON GENERAL LITERATURE.

ANSWERS.

Bacon.

Answer 1st.—By the passage, "That it should be a diminution of the mind of man, &c." is meant that it is a degradation of the mind of man to be very familiar in experiences and particulars; intimating that it is beneath the dignity of the human mind to be conversant in them, for they are derived through our senses and from matter; also, because it requires great labour to find out these experiences and particulars which are too mean to be deeply thought of, disagreeable to be made known, unworthy of being practised or imitated, too many to be enumerated in the flourishing of arts.

Answer 2d.—Plato maintained, that human happiness depends on the true knowledge of the Almighty, which is to be acquired from speculations, as God and matter were different things, having no connexion with each other.

Answer 3d.—"Superstition never favoureth the sense," the author means to say, that one who pays great veneration for superstition is incapable of favouring the dictates of his sense, or of allowing them to be correct, when they do not coincide with his superstitions.

Answer 4th.—Aristotle's school asserted that opinions should be founded and explained by our sense, but Plato's school asserted, that the same should be accomplished by speculation. In practice, however, the first acted contrary to his own assertion in a greater degree than Plato did.

Answer 5th.—The author means to say, that the schoolmen were utterly ignorant of the different phenomena of nature and the dependencies existing in it.

Answer 6th.—"Resting upon the agitations of wit," means depending upon what they made out by consulting their wit.

Answer 7th.—Plato observed, that he could not, upon proper grounds, suppose that the mind of man is of itself sufficient to make all investigations, without having recourse to anything else.

Answer 8th.—From the whole passage it appears, that we must invariably make reference to the works of nature for arriving at any correct conclusion, and that true knowledge depends upon experiences and particulars.

Shakspeare.

Answer 1st.—The two truths told to Macbeth (while he was passing on) by some witches and spirits. They were, that Macbeth would become the Thane of Cawdor and the Thane of Glamis, and the imperial theme was, that he would be the sovereign.

Answer 2d.—Macbeth, by asserting that I am the Thane of Cawdor, intends to prove that what was made known to him by the supernatural agency, could not be ill, for what they prophesied, was partly fulfilled, as he became the Thane of Cawdor, and similarly the rest might also be fulfilled.

Answer 3d.—The word fantastical means fanciful, and, therefore, the whole passage means—whose murder is not yet accomplished, but only thought of in his mind, or intended.

Answer 4th.—This passage means, that considerations relative to the murder have smothered his purpose, or have rendered him incapable of executing his object.

Answer 5th.—I take this to be its meaning: Macbeth says, that "nothing is but what is not"—smothered, alluding to his person, that is to say, nothing remains of him except his body, his senses being smothered by the thought.

Upper School, First Class, Sec. A.

ANSWERS TO HISTORICAL QUESTIONS.

Answer 1.—The two brothers, Tiberius and Caius, were the sons of the high-minded Cornelia, by Gracchus. In one of his journeys through Italy, Tiberius, the elder, observing the wretched condition of the people, resolved to redress their grievances, and place them on terms of equality at least before the laws with their haughty lords. On his return to Rome, he stood a candidate, and became the tribune of the people. The first acts of Tiberius, after being installed tribune of the people, were well calculated to gain their favour. He proposed, and carried into effect the agrarian law; measures were taken for the rebuilding of Carthage, and he proposed, what the senate, after a useless waste of blood and treasure, was obliged to concede, the extension of the privileges of the citizens of Rome, to all the inhabitants of Italy. But Tiberius was not thus allowed to carry on his measures: the senate took alarm at these dangerous encroachments on their power, and resolved, if possible, to put him out of their way. In a tumult, excited by one of his measures, Tiberius was slain, to the regret of the people of Italy.

Appendix N.

But his brother Caius was near at hand to avenge his fate. Being elected tribune, he proposed that none but the knights should be elected senators, and that the *commita centuriata* should be transferred from the senate to the people. Not content with this, he resolved to carry the measures of his brother into effect. Accordingly, he invited a great number of Italians to Rome to carry out that law, which vested the rights of the citizenship of Rome to the allies; but the brutal Optimus, at the instigation of the senate, fell upon him while still in the forum, and slew him, with a great number of his followers.

Thus fell the two brothers, Tiberius and Caius, whose patriotism has been stigmatised with the name of sedition by historians. Tiberius possessed all the talents of an accomplished statesman, and understood well the means by which he could carry on his measures with success. Caius, though inferior to his brother, was still a good statesman.

The state of parties in Rome at this time was of a most heterogeneous nature. While the former distinctions of patricians, plebians and clients remained, the new ones of poor and rich began gradually to usurp their place.

Answer 2.—The Mithridatic war was a war with Mithridates, king of Pontus. This bold and powerful Asiatic, having consolidated his own kingdom, resolved to seize on the possessions of Rome, and ordered, in a cruel manner, the general massacre of all the Romans found in Asia. The generals who were successively engaged in this war, were Sylla, Lucullus and Pompey.

Answer 3.—The Achæan league had subsisted in Greece from the earliest ages; but the part which it had hitherto taken in the affairs of Greece was either very unimportant or was obscured by superior parts of Sparta, Athens and Thebes. But when these states successively lost their supremacy, Achæa rose into notice.

The principle of union between the different cities of Achæa was the same, as it now exists, among the Swiss Cantons, and among the United Provinces of America, that is, each city was governed by its own particular laws and usages; but all public affairs were decided in national assemblies.

With the destruction of Corinth, we may date the termination of Achæan league, which was finally absorbed in the vast empire of Rome.

The principal characters who figured in it, were Aratus and Philophemen, the last of Grecian heroes according to Cicero's judgment.

Answer 4.—The contending parties who opposed each other at the battle of the Metarans, were Asrubal (the brother of Hannibal) and the Roman Generals, Nero and Livius, in which fortune gave the victory to the Romans, 206 B. C.

The battle of Mycale, off the coast of Ionia, between the Persians and the Greeks, under the Athenian, Zairtephus, and the Spartan, Leotichides, gave such a fatal blow to the power of Persia, that the Ionians were encouraged to throw off the galling yoke of king of kings. B. C. 425.

There were two battles off this promontory: the one in which the Greeks gained a partial victory over the fleets of Xerxes, in 427 B. C.; the other in which the Spartan Admiral Calicrates was defeated and slain by ten Athenian Admirals.

The battle of Delian was fought between the Spartans and the people of Argos, in which the latter were completely defeated.

The field of Charonia was fatal to the liberties of Greece, because Phillip here obtained a bloody victory over the Athenians and Thebans.

The battle of Mantinea decided nothing; for both the Spartans and Thebans claimed the victory. In this engagement Epaminondas, the first of the Greeks according to Cicero's judgment, lost his life, B. C. 362.

Answer 5.—The final division of the Roman empire took place under the sons of Theodosius, the Great Honorius and Arcadius, of whom the former became emperor of West, and the latter of the East. The western division of the empire with Roman for its capital, comprehended Italy, Gaul, Spain, England, Africa, Egypt and Pannonia, and the eastern division with Constantinople for its capital. All those countries lately under the Turkish empire.

Answer 6.—The policy which Henry the Seventh pursued in his internal government, was the depression of the ancient barons, and the elevation of the middling classes and the clergy. This he carried into effect by granting permission to the nobles to dispose of their estates, which the merchants and all those who had acquired wealth, were easily enabled to purchase. Another method by which he attempted to break in the power of nobles, was by the enactment of such laws which prohibited the nobles from keeping retainers in their service.

Answer 7.—The English princes in the thirteenth and fourteenth centuries, embraced a notion of conquering France, or at least those portions of it, which formerly belonged to the Norman line. In the prosecution of this idle plan, they often came into contact with the French kings, and on one occasion had nearly completed the conquest of France, when their prey was wrested from them by a simple country girl.

The English lost their last hold in France in the reign of Mary. Without any provocation she declared war against Henry II. of France, in hopes of making a diversion in favour of her husband, Philip II. of Spain. But all her hopes were frustrated, the French, under the celebrated Duke of Guise, besieged and took Calais in 12 days, which it had cost Edward III. eight months to capture; and thus the English finally lost their last possession in France, in 1556 A. D.

Answer 8.—Although the House of Commons owes its origin to the usurpations of Leicester, yet it has been found one of the most effectual checks upon the power of kings. Leicester, in order to conceal his own usurpations, first issued writs to the counties and boroughs, to return to Parliament two Members from each county, and one or two from every borough. On his death, Edward, though a warlike prince, found the necessity of the support of the House of Commons to all his ambitious projects, and he thus established its legal title. Under Edward III. the House of Commons enacted those three laws which rendered their power permanent, viz. that no tax should be levied without the consent of the House of Commons. That any alteration in any law should have their concurrence, and that they should exercise the privilege of impeaching king's minister for bad government. The House of Commons had nearly lost its importance in the wars of the Roses, when in the reign of Henry the Eighth, it was made the instrument of all his cruelties. Some spirit began to show itself in the reign of Elizabeth, and which farther developed itself in that her successor, James I. "The Great Rebellion" decided the dispute whether the King should govern

govern with or without Parliaments; but it was decided in favour of Parliaments. The reign of James II. affords a curious spectacle to every reader of the constitutional history of England. The House of Commons boldly declared that James, by violating the fundamental laws of the realm, had abdicated the throne. Under the Hanoverian family were decided two questions, namely, the dispute between the constituents and their representatives, occasioned by the Middlesex election of Wilkes, and the Reform Bill. By the latter Act, the right of returning Members to Parliaments was extended to those cities which had hitherto remained unrepresented.

Answer 9.—There is nothing extraordinary or inalogous in the history of oriental despotism, when we say, that both Sebaktigin and Nadir Shah raised themselves from the lowest states to the highest pinnacle of human grandeur. Both were slaves, and both became kings. The one was more ferocious and cruel than the other, and was at the same time well fitted to shine in troubled time. Both invaded India, of whom Subaktigin confined his incursions to the Punjab, while Nadir Shah carried his ravages as far as Delhi, marking his progress with devastation and bloodshed.

Sevagi, the founder of the Marhatta greatness, is a character, the like of which is scarcely to be found in the history of the world, surrounded by powerful neighbours. Sevagi found means to enlarge his territories at the expense of the kings of Ahmednuggur, and Bijapore and Golcon, and in the course of a few years gave importance to a race of men hitherto little known. The most important event in his life was his escape from the fort of Rhijor, where he was confined by the bigoted Arungzebe.

It is hard to decide whether Mohammad Toglak was perfectly in his senses. The evident signs of derangement is everywhere visible; in one of his capricious fits he orders the inhabitants of Delhi to remove their family, cattle, furniture, &c. to Dowlatabad, because he intended to make it the capital of his empire.

Answer 10.—The religious opinions of Akber are thus stated by a Persian writer: Akber, himself, believed in the existence of one deity, the author of all space and matter; but he could not go all the lengths he wished for the fear of offending his Mahomedan subjects. Akber, say the same writer, was extremely fond of hearing religious disputes, and would sometimes take an active part in them. He would engage Brahmins, Molnas, Jews and Christian missionaries to decide on the merits of their respective religions.

The revenue system of Akber was the same as is still to be found in some of native states. The Great Reformer of the revenue system of the Moguls, was Raja Fodarmul. He divided lands into three sorts, viz., those which require no fallows, those which after the expiration of four years, and those which are overflowed by inundations, and waste ground. The lands which required no fallows were required to pay one-third of the whole produce, which, if it were inconvenient to be paid in kind, was transmuted into money, according to the price of the commodity. The lands which required fallow were in the same manner required to pay one-fourth of their whole product. The waste grounds were only to pay one-eighth of the whole, with the same conditions as before stated.

Answer 11.—The Romans first became acquainted with the oriental mode of fighting in their wars with the Syrian kings. The principal points in which it differed from their own, lay in the organization of the two armies. The orientals place all their dependence on the cavalry, while the Romans generally made their infantry the instrument of their victories.

Answer 12.—The earliest records among uncivilized nations are the traditions, monuments and documents take in their place after tradition, and at last history appears. This may be finely illustrated from the Grecian history. Before the time of Herodotus, it may with propriety be said, that there was no history, and its place was usurped by traditions.

Appendix N.

APPENDICES to the REPORT of the MOFUSSIL INSTITUTIONS.

Appendix No. 1.

CIRCULARS issued from the Education Department, from the 30th April 1843 to the 30th April 1844.

CIRCULAR No. 1.

To the SECRETARY to the Local Committee.

(Education.)

Sir,

I AM directed to transmit for your information and guidance the annexed extract from a Resolution recorded by the Government of India, under date the 29th ultimo, and to acquaint you, that the Institutions in the Agra Division of the Bengal Presidency, as noted in the margin,* are placed under the Government of the North-West Provinces, and you are requested to submit all your communications connected with the school to that Government for orders.

2. You will be pleased also to forward in future the monthly pay abstracts of the school to the Secretary to Government in the North-West Provinces, who will transmit them, after examination, to the Civil Auditor there, for the purpose of being audited and returned to you for payment at the local treasuries, as heretofore.

* Benares College.

Agra College.
Delhi ditto.
Barrelly.
Meerut.
Furruckabad.

Fort William, 3d May 1843.

EXTRACT from a Resolution of the Government of India, dated 29th April 1843.

RESPECTING education, the establishments within the two divisions of the Presidency, which are now carried on under the direction of the Supreme Government, will henceforth be superintended by the Governments of Bengal and Agra respectively; the Council of Education being placed in direct communication with the Government of Bengal, and in other respects remaining on its present footing until further orders.

CIRCULAR No. 2.

To the SECRETARY to the Local Committee.

(Education.)

Sir,

I AM directed to acquaint you, that, by a Resolution of the Government of India, dated the 29th ultimo, the school has been placed under the Government of Bengal; and you are requested, in future, to address your communications to the Secretary to that Government, instead of to the Secretary to the Government of India, as heretofore.

Fort William, 3d May 1843.

CIRCULAR No. 3.

To the SECRETARY to the Local Committee.

Sir,

GREAT inconvenience having at various times been experienced by pupils desiring admission to the Calcutta Medical College being sent for examination who were not found qualified, I am directed by the Honourable the Deputy Governor of Bengal to state, that in every case in which any pupil of your school (or college) may wish to join that institution, the following are the qualifications required:

1st. The age must not be under 15, or above 18 years of age.

2d. The candidate must bring a certificate of good conduct and character from the Head Master of the institution in which he has been educated.

3d. He must be able to read correctly, and analyse any passage from Milton's Paradise Lost, Robertson's Histories, or other works of the same classical standard; be able to write correctly from dictation, and possess a knowledge of arithmetic as far as the rules of proportion.

4th. He must produce a certificate from his master of having been examined and found qualified in the above-mentioned branches of education.

5th. The number of pupils admitted to the stipendiary class is limited to 50, and the amount of the stipend is eight rupees per mensem, tenable for four years, subject to the special regulations of the college on the subject.

6th. The number of free students is unlimited, and for them the tests of age and qualification are the same as prescribed above.

Fort William, 26th June 1843.

CIRCULAR

CIRCULAR No. 4.

To the Secretary to the Local Committee.

(Education.)

Sir,

It has been determined that the examination for Scholarships in the Mofussil Schools and Colleges shall be uniform with those in the Presidency institutions; and hence it is absolutely necessary that the examinations throughout the country should be held simultaneously, or as nearly so as to prevent the possibility of unfair practices by the communication of the contents of the question papers from one station to another, previous to the day of examination.

2. The examination for Scholarships will commence during the month of September, some few days before the Dusserah vacation; and of this you are requested to inform the candidates, in order that they may be prepared to undergo their examination at the shortest notice.

3. With the papers will be communicated specific instructions as to the orders in which the several subjects are to be given, and the precise day and hour at which the examination in each is to be commenced. The Committee are requested to be particular in observing that those instructions are punctually conformed to, as any deviation will preclude the award of a Scholarship even to a properly qualified candidate.

4. You are requested to state by *return of dawk* the number of sets of Senior and Junior Scholarship examination papers that will be required in the institution under your charge.

Fort William, the 28th August 1843.

CIRCULAR No. 5.

To the Secretary to the Local Committee.

(Education.)

Sir,

In continuation of my Circular No. 4, dated the 28th ultimo, I have now the honour to forward, in separate sealed packets, sets of examination questions for Senior, and sets for Junior Scholarships.

2. The examination for Junior Scholarships at the Presidency Institutions will commence on Thursday the 14th instant, and be held in the following order:

1. Grammar	Thursday	14	September.
2. History	Friday	15	„
3. Geography	Saturday	16	„
4. Arithmetic	Monday	18	„
5. Vernacular	Tuesday	19	„

That for Senior Scholarships as below:

1. General Literature	Thursday	14	September.
2. History	Friday	15	„
3. Mathematics	Saturday	16	„
4. Natural Philosophy	Monday	18	„
5. Essay	Tuesday	19	„

3. The Committee are therefore particularly enjoined to observe the above order in giving the subjects, and not to give more than one subject on each day. Should the papers reach the Committee before the 14th instant, they are requested to hold the examination on the very same day as those determined upon by the Council of Education for the Presidency schools; but should they arrive on the day itself, or subsequently to it, the Committee are requested to commence the examination on the day after the receipt of the papers (not being Sunday), allowing no day except Sunday to intervene between those on which the examinations may be held.

4. In modification of a portion of section 80 of the printed Rules, the Committee are requested to open each sealed packet on the day set apart for the examination on the particular subject to which its contents refer, and not before. They are also requested to observe that portion of the Rules transcribed in the margin,* with the greatest care.

5. As there are no means available at the Presidency for composing a suitable paper in the vernacular of your district, a paper in Bengali is sent, which the Committee will, in the first instance, render into the vernacular, and give it, in that form, to be translated by the students. To Ramree, Cuttack and Moulmein.

6. The Deputy Governor has determined that the award of Scholarships shall be made exclusively at the recommendation of the Committee, and his Honor trusts that the increased responsibility involved in the change will ensure their best attention and care in examining the candidates, and weighing the merits of their respective performances.

7. The Committee will lose no time in reporting the result of the examination, together with the names of those whom they recommend for Scholarships, for the information of Government. The answers need not be sent.

8. After

---

* The students will not be allowed to communicate with each other during the examination, and on that account will be placed at a proper distance from each other.

They will be required to answer the questions and to write the Essay without any assistance whatever, and to ensure this, *one of the members of the local Committee will remain in the room and superintend during the whole examination.*

At the hour fixed for the close of each day's examination, each student will deliver to the superintending member of the local Committee his answers or his essay signed by himself. The member of the local Committee will immediately put them all into an envelope, and seal it up.

Appendix N.

8. After the close of the examination, and of the proceedings of the Committee consequent thereupon, the question papers may be made over to the Head Master, for the use of the pupils of the institution.

Fort William, 4th September 1843.

CIRCULAR No. 6.

To the Secretary to the Local Committee.

(Education.)

Sir,

I am directed by the Honourable the Deputy Governor of Bengal to transmit to you the accompanying copy of a Notification received from the Secretary to the Council of Education, respecting vacancies in the stipendiary class of the Medical College, and to request that you will cause the contents of the same to be made known to the pupils of the institution under the Committee's charge.

Fort William, the 23d October 1843.

Notification.

An examination will be held by the Council of Education in the Medical College on or about the 1st December, of all candidates for the stipendiary vacancies in the Medical College, 12 in number.

The amount of the stipend is eight rupees per month, tenable for five years. No persons will be allowed to compete who are under the full age of 15 years, or above that of 18, on any account whatever.

The candidates must present themselves before the Secretary to the College three days prior to the day of examination, in order that they may be identified as the persons really desiring admission.

All candidates will be expected to possess a thorough knowledge of English, so as to be able to read, write and enunciate it with fluency and facility. They must be able to analyse a passage in Milton's Paradise Lost, Robertson's Histories, or works of a similar classical standard; be acquainted with arithmetic, as far as the rules of proportion; and bring certificates from the Head Master of the schools in which they have studied, expressly stating that they possess the information required, and are capable of undergoing the ordeal proposed. The preference in selection will be always given to those who possess the greatest amount of information in the above-mentioned branches of elementary education.

Pupils of the schools and colleges in the Upper Provinces are informed that four Scholarships of 10 rupees per month each, in addition to the college stipend of eight rupees, are open to all who are willing to compete for them. The following are the conditions on which they will be allowed to contend:—

No boy from the Upper Provinces shall, on any account, be admitted as a student of the college under the age of 15, or above that of 18 years of age.

The stipends of all students who may obtain Robertson Scholarships, with a view to study the medical profession in Calcutta, should be fixed at 10 rupees per month, tenable for four years. In addition to which they shall receive the usual college allowance, when admitted as stipendiary students; viz., eight rupees per mensem.

With a view to ascertain the respective attainments in general literature and English of the various candidates in the different colleges of the North-west Provinces, a series of examination papers, prepared in Calcutta, shall be forwarded to the various institutions, to be opened on a fixed day, the answers to be written in the presence of the Masters or Teachers, by the pupils, without having any access to books or paper on the subjects; the respective replies to be forwarded for the decision of the Council of Education, with a descriptive roll of the age, caste, parentage, general character and attainments of the several candidates.

CIRCULAR No. 7.

To the Secretary to the Local Committee of Public Instruction, Patna, Bhaugulpore.

(Education.)

Sir,

In forwarding the accompanying copy of an Urdu translation of Marshman's History of India, which has been approved of by the Government, I am directed to state, for the Committee's information, that it is thought desirable to introduce the work in question into the Vernacular Department, with a view of imparting a knowledge of the historical facts which it contains, as well as of the language into which it has been translated.

2. You are requested to state how many copies the Committee are prepared to purchase for the use of the school under their management. The price is 1 rupee 8 annas a copy.

3. The Committee will, of course, understand that the introduction of an Urdu version of this work supersedes the necessity for the use of the original in the English classes; and that the pupils are expected hereafter to obtain their knowledge of Indian history to the end of the fifteenth century through the medium of the vernacular language of the district.

4. This, however, must not be understood as intended to discourage those pupils who may feel disposed to read, out of school-hours, the history, in its original English: it is merely designed, in conformity with the frequently expressed desire of the Government, to make the vernacular the means of inculcating sound information in every branch of instruction in which it can be made available.

Fort William, the 20th November 1843.

CIRCULAR

CIRCULAR No. 8.

To the Secretary to the Local Committee.

Sir,

With reference to the printed Rules 45 and 46, I am directed to request that, on the first of every month, you will submit, together with the monthly bills, an abstract of the register of daily attendance for the preceding month, according to the annexed Form, showing the number of boys present on each school-day, as well as the average number present throughout the month.

Fort William, the 11th December 1843.

Abstract Register of Daily Attendance of Scholars at the School (or College), for the Month of —— 184 .

Date.	Number of Scholars borne on the Books.	Number of Scholars in Attendance.	REMARKS.

CIRCULAR No. 9.

To the Secretary to the Local Committee.

(Education.)

Sir,

I am directed to request that you will report how far the directions contained in the fifth head of the fifth section of the printed Regulations are attended to, and why the monthly visiting book is not submitted annually, for the information of Government.

Fort William, the 15th January 1844.

CIRCULAR, No. 10.

To the Secretary to the Local Committee.

(Education.)

Sir

I am directed to forward, for the information of the Committee, and of the Principal, Masters and Scholars of the institution under their charge, and for distribution to the same, copies of rules for leave of absence, and travelling and acting allowances in the Education Department, which the Deputy Governor of Bengal has directed to be in force from this date.

Fort William, the 28th February 1844.

Rules for Leave of Absence, and Travelling and Acting Allowances, to Principals and Masters of the Government Colleges and Schools, passed by the Deputy Governor of Bengal, on the 28th February 1844.

The Local Committee may grant leave of absence, without deduction from salary, during the authorized vacations, and it shall not be necessary to report the same to Government.

2. In addition to the above, the Government will, at the recommendation of the local Committee, and on good cause being shown for the indulgence, grant leave of absence on private affairs for not more than three months; but no salary will be drawn for the period of such absence.

3. The Government will grant leave of absence on medical certificate for one year to any place within the limits of the East India Company's Charter, one-half of the absentee's salary being deducted for the first six months, and the whole for the remainder.

4. In cases of extreme urgency, the local Committee are authorized to grant leave of absence for one month on medical certificate, reporting the same to Government for sanction.

5. No leave will be granted under Rule 3 until after the lapse of three years from the expiry of previous leave under that Rule.

6. If the period of leave granted under Rule 3 be less than one year, the Government will extend the same to the full period allowed by the Rule, on the production of a medical certificate showing the necessity for such extension.

7. Absence without leave will subject the absentee to loss of appointment.

8. No person appointed to a situation in the Education Department shall draw the salary of his appointment for any period prior to the date of his joining it.

9. A person holding a situation at one station in the Education Department appointed to one of equal or higher value at another, will draw the salary of his former situation from the date on which he may relinquish it, until the date of his joining his new appointment, provided he does not exceed the time allowed for joining, prescribed by the following Rule, in which case no salary will be passed to him for such period in excess.

Appendix N.

10. The time allowed for joining an appointment is to be calculated at the rate of 10 miles a day (Sundays excepted), together with a week to prepare for the journey.

11. A person officiating temporarily in any situation on the occurrence of a vacancy, or during the absence of the real incumbent, will, if he hold no other appointment, draw one-half the salary of such situation; and if he hold any other situation of less value, he will receive half the fixed salary of his own appointment, together with half the fixed salary of that in which he officiates.

12 The 1st, 2d, 3d, 4th, 5th, 6th and 7th of these Rules shall be considered applicable to the holders of Senior and Junior Scholarships, and to the Stipendiary Students of the Medical College.

CIRCULAR No. 11.

To the Secretary to the Local Committee.

(Education.)

Sir,

I am directed by the Deputy Governor to forward, for the information of the Committee, extract of a letter (para. 10) addressed to the local Committee at Dacca on the 5th ultimo, and to request that in future the annual examination of the institution under the Committee's charge may be conducted simultaneously with that for Scholarships, of the time for which due information will be given.

2. This rescinds section 76 of the late General Committee's printed Regulations, *and the special Instructions in Mr. Deputy Secretary Bayley's Letter, No.* 1299,* *dated* 30*th July* 1842, *No.* 1790,† *dated* 12*th October* 1842.

* To Bhaugulpore Hill School.
† To Moulmein.

Fort William, the 4th March 1844.

Extract of a Letter addressed to the Secretary Local Committee at Dacca, dated 5th February 1843, No. 104.

10. The arrangements made as to the time for holding the general examination are approved. In future it may be always held simultaneously with the Scholarship Examination, immediately before the Dusserah holidays, during which period there will be ample time to determine the award of prizes, scholarships, promotion, &c., and to make the requisite preparations for re-opening the college after the vacation. It does not appear necessary that those students who compete for a Scholarship, senior or junior, should undergo any other test of their proficiency during the year.

CIRCULAR No. 12.

To the Secretary to the Local Committee.

(Education.)

Sir,

I am directed by the Honourable the Deputy Governor to request that you will submit to this office returns of the institution under the Committee's charge, brought up to the 30th of April, according to the Forms of Statements annexed, and despatch the same so filled up without fail on the 1st of May 1844.

His Honor begs that the instruction may be carefully attended to.

Fort William, the 11th March 1844.

Local Committee on the 30th April 1844.

CIRCULAR No. 13.

To the SECRETARY to the Local Committee.

(Education.)

Sir,

I AM directed by the Honourable the Deputy Governor to inform you, that if there be no local objection to the arrangement, the Committee are authorized to admit boys into the institution under their management, for the purpose of receiving instruction in the vernacular language alone, without making it incumbent upon them to study English likewise.

Fort William, the 11th March 1844.

CIRCULAR No. 14.

To the SECRETARY to the Local Committee.

(Education.)

Sir,

I AM directed to forward an extract from Mr. Principal Ireland's Report on the Dacca College for 1843, and, with reference thereto, to request that the Committee will use their best endeavours to establish in the institution under their control the system of prepayment for school-books which has been so successfully introduced at Dacca.

Fort William, the 25th March 1844.

EXTRACT from Report of Mr. IRELAND, Principal of the Dacca College, dated 20th December 1843.

Para. 7. On the receipt of printed Circular, No. 23, in May last year, directing the Committee to discontinue sending indents for books to Government, and authorizing them to charge, in a contingent bill, 70 rupees per mensem, to provide all books, &c. which might be required in the college, it was resolved that Rule 41 should be immediately enforced, and that all the boys, without exception, should be made to pay something for their class-books. The old books already in the hands of the boys, were accordingly all called in, valued and re-issued; and the boys were further supplied from the store with such books as they required in their respective classes. They were then informed that these books must all be paid for, and that in future no class-books would be given out to them unless paid for beforehand. Three months elapsed, and only two boys had the honesty to come forward with their payments. All the rest positively declared that they were in very poor circumstances, and had not the means of paying. This was referred to the Committee, and

Appendix N.

and the senior boys were summoned before them, and questioned on the subject, but they still persisted in declaring their inability to pay. There was in fact a conspiracy among the boys of the senior department to resist payment as long as possible, in the expectation of being able to induce the Committee not to enforce the rule; while the boys of the junior department refused to pay unless the senior boys paid also. It was well known that many of the boys were in good circumstances, and could easily pay if they chose; and it had been ascertained by the teachers, that several of them had actually received money from their parents for that purpose. Public notice was therefore given by the Committee, that they would enforce payment for class-books from all the students, but that the payments might be made either at once or by monthly instalments, and that some deduction would be made from the bills of such as were really in very poor circumstances. Several boys responded to the call, but the majority still held out, and the payments came in so slowly, that on the 5th September the Committee deemed it necessary to issue notice, that they would hold a special meeting on the 19th of the same month, to investigate the cases of those boys who had not then paid up their monthly instalments, and that it was their intention to expel every boy who refused to pay. Perceiving that the Committee were in earnest, and that the consequences of further opposition were likely to be more serious than they had anticipated, the boys now came forward with their payments. Many of them, however, returned several of their books, as they had copies of their own at home, but had taken these, as usual, from the college, little expecting they would be made to pay for them. On the day of meeting only 23 were reported as not having paid anything; but these did not refuse to pay, they only petitioned for further delay, as their friends lived at a great distance from Dacca, which was granted, on their promising to pay immediately after the holidays. After this, the lies that were told, and the mean practices that were resorted to by several of the boys, in order to make it appear they were in very indigent circumstances, and unable to pay the full value for their books, were truly disgusting. In some instances they succeeded in their efforts; and I have since seen several of those very boys who were the most urgent in their appeals, purchasing books that were not required in their respective classes. The affair altogether gave me great annoyance, but the experiment was well worth trying, and it has completely succeeded, without injuring the college in the least, as our increased numbers during the year clearly show. It may, however, have driven away a few incorrigible idlers, but such boys may well be dispensed with, as they only bring discredit on the college, and are a source of much annoyance to the teachers. The charge for class-books will not, on the average, exceed from two to four annas a month in the junior department, and eight annas in the senior department of the college. This is the only expense incurred by the students, and I am sure there are not 20 boys attending the college who find any difficulty in raising the money. I am confirmed in this opinion by the fact, that since the promotions were made at the re-opening of the college on the 27th October, we have already received no less than 638 rupees for class-books, chiefly from those boys who were promoted. This would not have been deemed possible 12 months ago. There are in fact only two boys at present attending the college who have not yet paid for the books which were given out last year. Five of those who have left the college carried away their books with them; but in three instances we have succeeded in recovering them. The other boys are not in Dacca, and cannot be found or heard of. The college has, at various times, suffered heavy losses from this cause alone; but this will not occur in future. The class-books are now all made over to the writer, who is instructed not to give credit to any boy, as he will be held responsible for the payment. This has caused a great addition to his labours, and as he is trustworthy, and his responsibility is much greater, I think his salary should be increased to 15 rupees per month. It is intended always to keep on hand a large supply of the best class-books, and we have lately procured from England, through our book-agents in Calcutta, upwards of 100 *l.* worth of valuable class-books and maps. It is gratifying to observe how eagerly these books are bought up by the senior boys, who never before had an opportunity of procuring good and useful books in Dacca. On the arrival of every fresh supply of books from Calcutta, the same eagerness is shown to purchase such as they think will be useful for them in preparing for the Scholarship Examinations.

Appendix N.

Appendix No. 5.

No. 319.

To the Commissioner of Assam.

Sir,

With reference to a letter from the Secretary to the local Committee of Public Instruction at Gowahattee, No. 13, dated the 15th ultimo, I am directed to inform you that the Deputy Governor has been pleased to abolish the situation of Head Master of the Gowahatty School, at present held by Mr. Robinson, and to appoint that gentleman to be Inspector of Schools in Assam, on his resent salary.

2. Mr. Robinson's duty will be to visit every school in the Province, as often as he may be able; to introduce an uniform system of instruction in all; to exercise a vigilant control over the Masters and Teachers, requiring from the head of each school a monthly report of attendance and progress; to see that the pupils in each school are supplied either gratis or at a moderate price with the books necessary for their instruction; to recommend the establishment of additional schools in localities where they may be required; to persuade the inhabitants, and especially the more respectable among them, to send their children to be instructed; and generally to carry out the views of Government in diffusing throughout the Province the means of a sound and gradually improving system of education through the medium of the native language.

3. The school at Gowahattee, together with all the branch schools attached to it, will be placed under Mr. Robinson's superintendence. The former will be considered as, in its primary object, a vernacular school, but the Deputy Governor will not refuse to grant the means of acquiring a knowledge of English to those who may desire to profit by them, and for this purpose the services of the second Master will be retained.

4. In like manner the school at Sibsagur, at which the last monthly returns show an average attendance of 30 boys, is hereby abolished as an English school, and the services of Mr. D'Souza, the Head Master, dispensed with. The Assistant Teacher and Pundit will be able to carry on the duty of instructing the boys in the vernacular, and the former can also instruct in English those who may wish to continue their studies in that language. The salary of 150 rupees a month thus saved will be held available for the extension of vernacular instruction in Assam, as soon as the most beneficial plan for the disposal of the whole sum, or a part of it, shall be determined on.

5. The local Committees at Gowahattee and Sibsagur are hereby dissolved, and the secretaries will be directed to make over their records to you. It will still, however, be expected of the officers of Government resident at those stations, as well as in every district of the Province, to visit all the schools within their jurisdiction as often as may be, to bring irregularities and abuses to the notice of the Inspector at his periodical visits, and to afford every encouragement to the natives to avail themselves of the means provided by Government for the education of their children. The spirit of the orders of the 6th January 1841 will henceforth be considered applicable to all public officers in regard to the schools of the districts in which they are severally employed.

6. The Inspector will furnish you with an annual detailed report of the state and progress of all the schools in the Province; in submitting which to Government, with your remarks and suggestions, you will not fail to mention the names of those officers who have taken a lively interest in the education of the natives, and endeavoured to promote it by the influence which their official position naturally gives them, as well as those who may have shown indifference to the subject, and neglected this highly important branch of their public duty.

7. In regard to granting leave to Masters under the Rules of the 28th February last, you will exercise the functions of the local Committees as therein defined. The appointment and removal of all Masters and Teachers of every description will rest with you, and you are at liberty to delegate as much power in this respect to the Inspector as you may deem advisable. A statement, however, of Masters appointed, promoted and removed, will accompany your annual report.

8. The Deputy Governor desires to be favoured, at the earliest practical period, with a scheme of vernacular instruction applicable to the Province, from the first rudiments of the language to the highest point to which, under present circumstances, it may be expedient or practicable to extend it. His Honor would be glad to learn your views in regard to the provision of books and other instruments of education, and whether it would be proper to demand payment of their value either partially or generally, from the boys who may require them for use, or whether they ought to be provided gratis by the Government. His Honor would also be glad of your advice as to the demand of a monthly contribution, however trifling, from each pupil, more as an incitement to application than as compensation to the state for providing him with the means of improvement, though the latter consideration is not to be overlooked. The remuneration of the Masters, who, it would appear from the minutes appended to the local Committee's letter above referred to, are still most improperly paid in part by grants of land, is likewise a branch of the subject which requires attention and amendment.

9. With a view to render Mr. Robinson's services as efficient as possible, and to encourage him to visit each school as frequently as the great extent of country over which they are scattered will permit of, the Deputy Governor will be prepared to sanction such a reasonable rate of travelling allowance as you may think adequate to cover the expenses he is likely to incur, whether by a rate

of

of mileage for actual distance travelled, or by a fixed daily allowance during the time occupied in travelling, or by reimbursement of sums actually and necessarily expended.

10. His Honor thinks that the Mofussil School bills may be conveniently submitted, as heretofore, through the Collectors of the several districts, and those of the schools at Gowahattee and Sibsagur by the same channel, the Inspector alone forwarding his bills direct to this office. The Collectors, however, must be kept aware of all leave of absence granted to Masters, as well as of all removals and appointments, with a view to prevent irregular payments.

11. In replying to this letter, you are requested to favour the Government with such further suggestions as your matured experience and conversance with the affairs of the Province may lead you to consider calculated, if carried out, to impart the highest degree of efficiency to the educational establishments which it is at present in the power of the Government to entertain.

I have, &c.

The 29th April 1844. CECIL BEADON,
Under Secy to Govt of Bengal.

Appendix O.

PROPOSED PLAN OF THE UNIVERSITY OF CALCUTTA.

The present advanced state of education in the Bengal Presidency, with the large and annually increasing number of highly educated pupils, both in public and private institutions, renders it not only expedient and advisable, but a matter of strict justice and necessity, to confer upon them some mark of distinction, by which they may be recognized as persons of liberal education and enlightened minds, capable, from the literary and scientific training they have undergone, of entering at once upon the active duties of life; of commencing the practical pursuit of the learned professions, including in this description the business of instructing the rising generation; of holding the higher offices under Government open to natives, after due official qualification; or of taking the rank in society accorded in Europe to all members and graduates of the universities.

The only means of accomplishing this great object is by the establishment of a central university, armed with the power of granting degrees in arts, science, law, medicine and civil engineering, incorporated by a Special Act of the Legislative Council of India, and endowed with the privileges enjoyed by all chartered universities in Great Britain and Ireland.

After carefully studying the laws and constitution of the Universities of Oxford and Cambridge, with those of the recently established University of London, the latter alone appears adapted to the wants of the native community.

This university was incorporated by Royal Charter, dated the 5th of December, in the first year of the reign of Queen Victoria, under writ of Privy Seal, constituting the persons named, a Chancellor, Vice-Chancellor and Fellows, one body politic and corporate, by the name of the "*University of London.*" In this charter are defined the mode of appointing and electing the officers above-mentioned, their constituting the Senate of the university, with the power of granting degrees in arts, science, medicine, &c.

Upon a similar plan, and for the same objects, it is proposed that the University of Calcutta shall consist of a Chancellor, Vice-Chancellor and Fellows, as follows:—

Chancellor and Visitor:*

The Governor-general of India.

Vice-Chancellor:

The President of the Council of Education.

Fellows:

Law Faculty.

The Judges of the Supreme Court.
The Judges of the Sudder Dewanny Adawlut.
The Advocate-general.
The Registrar of the Sudder Dewanny Adawlut.
The Remembrancer of Legal Affairs.

Faculty of Science and Civil Engineering.

The Chief Engineer.
The Superintendent of Government Machinery.
The Secretary to the Military Board.
The Civil Architect.

Faculty of Medicine and Surgery.

The Physician-general.
The Inspector-general of Her Majesty's Hospitals.
The Surgeon to the General Hospital.
The Secretary to the Medical Board.
The Apothecary-general.

Faculty of Arts, and for general Control and Superintendence.

The Secretary to the Government of India, Home Department.
The Secretary to the Government of Bengal.
The Council of Education.
The Secretary to the College of Fort William.

The

* During the absence of the Governor-general, the functions of Chancellor and Visitor to devolve on the Deputy Governor of Bengal.

The above to form the body politic and corporate, to be styled the "University of Calcutta," to constitute the Senate for its government, to be armed with the legal powers accorded to all such bodies by Royal Charter in Great Britain, and to frame bye-laws and regulations for the granting of degrees * and diplomas.

The powers and authority of the Chancellor and Visitor to be such as pertain to those offices in Europe.

The Vice-Chancellor and Fellows to have the entire management of and superintendence over the affairs, concerns and property of the university, for framing bye-laws and regulations for degrees, granting the same, convening meetings, and "in general touching all other matters whatsoever regarding the said university."

Six members to form a meeting for the decision of all questions relating to the university. All such questions to be decided by the majority of members present, the Chairman having a vote; and in case of an equality, a second or casting vote. In the absence of the Vice-Chancellor, a Chairman to be chosen by the members present.

An examination of candidates for degrees in all departments to be held at least once a year, and conducted either by Examiners appointed from among the Senate, or by any others specially nominated by that body.

The benefits of these examinations to be extended to ALL institutions, whether Government or private, approved of by the Senate, provided the candidates from such institutions conform to such regulations as may be enacted respecting the course, extent and duration of study, with the certificates that will be required, authority being granted for the issue of the same.

A regulated scale of fees, to be determined hereafter, for degrees and diplomas, to form a Fee Fund for the payment of the expenses of the university, of which an account is to be furnished annually to the Financial Department of the Government of India.

The names of all candidates receiving degrees and diplomas to be published annually in the *Government Gazette*, as well as in the Reports of the Education Department.

OUTLINE OF PROPOSED REGULATIONS.

Matriculation Examination.

All pupils intending to be candidates for degrees or diplomas in arts and science, law, civil engineering, or medicine and surgery, shall pass a matriculation examination, of which the standard shall be the present *Junior Scholarship* standard of the Council of Education; except in the case of pupils from the Martinière, Parental Academy, and similar institutions, for whom translations from and into Latin and Greek, if the candidates prefer them, shall be substituted for vernacular translations.

No candidate shall be allowed to matriculate until he has completed his 15th year.

Every candidate shall pay a matriculation fee of five rupees prior to the examination, which shall be returned to him if he should be rejected.

Arts and Science

Shall consist of a Bachelor's and Master's degree, with a special examination for honours of those who may have passed.

Course of study, subjects of examination, fees, and other details, to be arranged hereafter by the Senate, should the university be established and incorporated.

Law

Likewise to consist of two grades, with an examination for honours; and graduates to be legally entitled to practise at the Bar of the Supreme or Sudder Courts; to act as Attorneys and Vakeels; to be considered qualified for the appointment of Moonsiff, Sudder Ameen, &c.; and to form a distinct legal profession for the Indian Empire.

Detailed regulations to be determined by the Judges and other legal members of the Senate.

Civil Engineering.

One Examination and Degree.

The course of study, qualifications, nature and extent of examination, &c. to be decided by the engineer members of the Senate, so as to raise up ultimately an indigenous class of engineers in the Government service, as well as native architects, builders and surveyors, &c.

Medicine and Surgery.

Two examinations, one for the degree of graduate in medicine, the other for a diploma in surgery, together with a special examination for honours. Details to be arranged by the medical

* As degrees are unknown here, it will be expedient to describe them in the Act, together with the privileges attached to them.

Appendix O.

medical members of the Senate, in communication with the Council of the Medical College.

The above is a rough outline of a plan, the carrying out of which would form one of the most important eras in the history of education in India. It would open the paths of honour and distinction alike to every class and every institution; would encourage a high standard of qualification throughout the Presidency, by bestowing justly-earned rewards upon those who had spent years in the acquisition of knowledge, and rendering their literary honours a source of emolument as well as of social distinction. It would remove most of the objections urged against the existing system of examination of candidates for public employment, without lowering the standard of information required; and would in a very few years produce a body of native public servants, superior in character, attainments and efficiency to any of their predecessors.

It would encourage the cultivation of the arts and sciences, and call into existence a class of native architects, engineers, surveyors and educated landholders, whose influence would rapidly and certainly diffuse a taste for the more refined and intellectual pleasures and pursuits of the West, to the gradual extinction of the enervating and degrading superstitions of the East. Increased facilities of intercourse, by means of railroads, with the interior of the country, the North-West Provinces, and with Europe, would cause these influences to radiate from the centre of civilization, with a velocity and effect heretofore unknown in India, and, in fact, would be attended with all the advantages that have been recorded in history to have followed a judicious, enlightened, extended and sound system of education, encouraged by suitable rewards and distinctions.

The adoption of the plan would only be attended with a very trifling expense to Government in the commencement; for in the course of a few years the proceeds of the *Fee Fund* would be more than sufficient to defray every expense attendant upon the university.

It would raise the character and importance of the whole Education Department in public estimation, and ultimately place the educated natives of this great empire upon a level with those of the western world.

That the time for such a measure has arrived is fully proved by the standard of excellence attained in the senior scholarship examinations of the Council of Education,* and the creditable skill and proficiency exhibited by the graduates of the Medical College, whose examinations, in extent and difficulty, are much greater than those of any of the Colleges of *Surgeons* in Great Britain, and, in a purely professional point of view, nearly on a par with those required from the medical graduates of most British Universities.

FRED. J. MOUAT, M.D.
Secretary.

Council of Education,
25 October 1845.

APPENDIX P.

(Referred to in the Evidence of the Rev. J. TUCKER, Quest. 8232, p. 335.)

Appendix P.

THE MEMORIAL of the CHURCH MISSIONARY SOCIETY, for AFRICA and the EAST, presented to the Right Honourable the Earl of ABERDEEN, First Lord of the Treasury, &c. &c. &c., in reference to the Renewal of Powers to the Honourable EAST INDIA COMPANY.

THE MEMORIAL, &c. &c.

IN the course of the months of March, April and May 1852, several meetings were held of a Joint Conference of Members of the Society for Promoting Christian Knowledge, the Society for the Propagation of the Gospel in Foreign Parts, and the Church Missionary Society, to take such measures as might seem to them advisable, with a view to promote the efficiency and well-being of the Church, and the interests of religion, in India, on occasion of the renewal of powers to the Honourable East India Company.

At these meetings the following Resolutions were adopted:—

That it is advisable—

1. To press for an increase of the episcopate in India.
2. To represent the necessity of an increased number of Chaplains and Assistant Chaplains; and to ask for grants-in-aid towards the support of clergymen in the smaller English stations, where there is no chaplain or assistant chaplain.

3. To

* Fully equal in extent to the Bachelor's examination of Oxford, Cambridge, and Dublin; and much more so than that of the *Bachelier-ès-Lettres* of the Sorbonne in Paris.

3. To recommend the appointment of native sub-assistant chaplains, as already recommended by the Bishop of Calcutta, to minister to native Christians connected with the Honourable Company's service.
4. To point out the importance of increased means, and an improved system of education in India, and to call attention to the especial claims of the poorer classes of Europeans and East Indians connected with the public service.

In reference more especially to the subject of education, the following Resolutions were adopted :—

1. That the object for which a yearly sum for educational purposes is set apart by the East India Government, is to promote good general education, to be ascertained on the report of their Inspectors, among all classes of the inhabitants of India.
2. That every school in which such general instruction as shall reach the standard prescribed by the competent authorities be conveyed, is entitled to share in the benefit of the Government Grant.
3. That any regulation or usage which prevents the admission of the Holy Scriptures into schools and colleges supported by Government, should be discontinued.
4. That the Conference desires to submit for consideration the importance of using every effort to ameliorate the condition of society in India, and especially of discountenancing such inhuman and demoralizing customs as are unhappily still too prevalent in that country.

It having appeared advisable to the united committees that, while securing by the Conference substantial agreement as to the course to be pursued, the several Societies should urge their views upon the Government separately and independently, the Church Missionary Society, confining itself chiefly to points of a purely missionary character, adopted the following Memorial, which was presented to the Earl of Aberdeen on the 22d of June, and subsequently, at his Lordship's suggestion, to the President of the India Board by their President, the Earl of Chichester, and a deputation of the Society.

To the Right Honourable the Earl of Aberdeen, First Lord of the Treasury, &c. &c. &c.

The Memorial of the Church Missionary Society for Africa and the East.

That the Church Missionary Society was founded in the year 1799, under the title of "The Society for Missions to Africa and the East;" and that on the opening for Christian Missionaries, granted by the wisdom of the Legislature on the renewal of the Charter of the East India Company in the year 1813, this Society immediately extended its operations to that country.

That the Society, in the course of the period which has since elapsed, has founded the under-mentioned Missions in India, namely :—

In Bengal and North-Western Provinces :—Stations at—

Calcutta.	Benares.	Agra.
Burdwan.	Chunar.	Mirut.
Krishnaghur.	Jaunpur.	Himalaya, at Kotghur.
Bhagulpur.	Gorruckpur.	Punjab, at Amritsir.

In the Madras Presidency, at—

Madras.	Travancore, comprising 6 Stations.
Tinnevelly, comprising 11 Stations.	Masulipatam.

In the Bombay Presidency, at—

Bombay.	Junir and Astagaum.	Sinde, at Kurachi.
Nassuck.	Malligaum.	

According to the latest Returns received in this country—

There are now in connexion with the Society in India, 88 Ordained Missionaries, of whom 73 are Europeans, 2 Indo-Britons, and 13 Natives; these are assisted by 104 Catechists, 9 of whom are Europeans, 2 Indo-Britons and 93 Natives, and 197 Native Scripture Readers.

There are 36,502 Native Christian Converts in connexion with these Missions, of whom 5,815 are communicants; besides upwards of 10,000 unbaptized persons under Christian instruction.

There are 20,141 Scholars in 622 Schools—17 English, 60 boarding, and 545 day and vernacular; in which 700 schoolmasters and mistresses, 14 Europeans, 10 Indo-Britons and 676 Natives, are engaged in the instruction of 15,741 males and 4,320 females.

The expense of maintaining these different establishments has amounted for some years past, on an average, to 45,900 *l.*, the whole of which has been raised by voluntary contributions from the members of the Church of England in this country, and from Protestant Christians of various denominations in India; the proportion being four-fifths in Europe, and one-fifth in India.

It is with great thankfulness to the Divine Author and Finisher of their common faith, in obedience to whose command these missions for communicating the knowledge of His salvation to the natives of India were undertaken, and have been sustained, that your Memorialists are

Appendix P.

are able to challenge the fullest inquiry into the conduct of their missionary establishments, as regards the public peace, the cause of order, and the national interests. In the long contest maintained in this country and abroad, as to the danger of permitting the free exercise of the labours of Christian missionaries in India, it was contended by their opponents that such labours must be perilous to the public tranquillity; but forty years' experience to the contrary, if it has not entirely silenced the unfounded suspicion, may be reasonably appealed to in vindication of the past history of this Society, and other Protestant Christian missionary efforts in India; and affords ample justification of the applications which your Memorialists now prefer.

First, for the removal of certain obnoxious measures which are repugnant to the Christian character of the nation—which obstruct the progress of Christianity in India—and are at variance with the clearly-expressed intention of all the recent legislation in this country, and the orders of the Court of Directors founded thereupon.

Secondly, in behalf of the reasonable claims of the Christian natives to participate in the funds appropriated by Government towards the education of the people of the country; from the benefit of which the Christian natives are at present practically excluded.

And, *Thirdly*, for the complete and practical recognition, in the patronage of the Indian Governments, of the great principle enunciated in the present Charter (Act 3 & 4 Will. 4, c. 85, s. 87), namely, "That no Native of the said Territories, nor any natural-born subject therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the said Company."

Your Memorialists gratefully preface their statements upon the above-mentioned points, by an acknowledgment of the perfect liberty of action which has been afforded in all parts of India to the missionaries of the Church Missionary Society, and the protection and kindness shown to them personally by the local authorities in the different districts where the missions are situated. Your Memorialists further adopt the language of an able publication from the Calcutta press, in which high praise is conceded—and not higher than is due—to the Honourable Court of Directors of the East India Company, "for the steady perseverance with which they have carried out the avowed wishes of the English Parliament and people; for the thorough change which they have admitted into their own views; and for the energy with which they urged on their own officers, when the latter were inclined to adopt only incomplete measures."—("Calcutta Review," May 1852, Article, "Government Connexion with Idolatry in India.") Your Memorialists likewise readily subscribe to the liberal judgment pronounced by the same publication, in reviewing the Parliamnetary "Returns" of the progress of the measures referred to, that "in the Bengal and Madras Presidencies, the Government service contains a considerable number of very able men, acquainted with the condition of those over whom they rule, anxious to conciliate them in matters where they feel most deeply, and to carry out the measures of their superiors, with prudence, justice and decision."

I. Under the first of the points above mentioned, your memorialists refer primarily to the continued existence in the Statutes of two of the Presidencies of India, Bengal and Madras, of a Regulation enacting that—

"Whereas considerable endowments have been granted in land, by the preceding Governments of this country, and by individuals, for the support of Mosques, Hindu Temples and Colleges, and for other pious and beneficial purposes: and whereas there are grounds to suppose that the produce of such lands is in many instances appropriated contrary to the intentions of the donors, &c.; and whereas it is an important duty of every Government to provide that all such endowments be applied according to the real intent and will of the grantor, &c. &c., the general superintendence of all lands granted for the support of Mosques, Hindu Temples, Colleges, and for other pious and beneficial purposes, &c., is hereby vested in the Board of Revenue and Board of Commissioners, &c. It shall be the duty of the Board of Revenue and Board of Commissioners to take care that all endowments made for the maintenance of establishments of the above description be duly appropriated to the purposes for which they were destined by the Government or individual, by whom such endowments were granted."—Madras Regulation VII. of 1817, corresponding with the Bengal Regulation XIX. of 1810.

In Bombay no such Regulation exists. The natural course of proceeding there, in case of alleged malversation, was therefore plain. The parties appealed to the ordinary courts for redress. In Bengal and the North-West Provinces, the Regulation rarely came into operation, and had long fallen into disuse. But at Madras it was largely applied, until nearly all the idolatrous institutions of the country had come under the immediate charge and superintendence of the public servants of the East India Company, and so continued to be, until their severance from all such connexion was ordered, by the celebrated despatch of the Court of Directors, dated 20th February 1833, which directed "that in all matters relating to their temples, their worship, their festivals, their religious practices, their ceremonial observances, our native subjects be left entirely to themselves."

The Court of Directors, as we have already acknowledged, have in all material proceedings, for some years past, enforced the observance of that grand fundamental rule of policy; but the above quoted regulation, though in contradiction of that rule, remains unrepealed. Its repeal has been repeatedly urged by authorities of the highest name in India, by the Sudder Board of Revenue in Bengal, by the Governor-general in Council, and by the Government of Madras, which years ago submitted for the approval of the Supreme Government the draft of a Regulation for that purpose; but it still remains in the statute book, liable to be mischievously used, disturbing the course of justice in the

case

case of alleged abuses by the managers of native institutions, and containing a recorded connexion between a Christian Government and idolatrous and immoral institutions. Your memorialists therefore pray that orders may be given for the annulment of that Regulation, and for the early completion of any measures, which may yet be needed, for removing all pagoda lands and their property from the interference of the Company's Collectors of Revenue; and that reports of the execution of such orders be speedily laid before Parliament.

There is another document, as we are informed, still suffered to remain on the records of the Indian Government, strangely at variance with the otherwise commendable tenor of the instructions of the Court of Directors of late years on subjects of this nature. It is a despatch to the several Governments of India, forbidding their public servants to take any part in Christian missionary proceedings. It is scarcely necessary to remark, that no attempt is known to have been made to carry this prohibition into effect; and that persons in the highest stations of the public service, who have long been equally eminent for their support of Christian efforts to benefit the native population, and for their distinguished official services, must disregard directions which encroach on the liberty of personal action in matters of a purely private and conscientious nature. But there are scrupulous persons who, knowing the existence of such orders, feel themselves painfully constrained in the matter; while the Native Christians (as will be shown by a document to be subsequently referred to), conscious that the Hindu official servants of Government are never interfered with in promoting their superstitions, justly remark on the unequal measure meted out to the Christian servants of the Company, who may feel it their duty to assist efforts for extending the blessings of a pure faith. It is submitted, that it is not enough for such instructions to fall into desuetede; they ought to be cancelled.

Your memorialists invite your Lordship's attention to the statements which the members of other Christian Societies have presented to Parliament, relative to the payment of money allowances to Hindu pagodas. They know that great efforts have been made, under the orders of the Court of Directors, for commuting claims of this nature; and that, where they are inseparably bound up with the possession of Circar land, considerable difficulty may be experienced in completely relieving the public accounts from these charges. But they implore your Lordship that measures may be taken for enforcing the complete execution of the orders which have been transmitted from home, prohibiting all connexion with, and support of, pagodas.

It is under this head, indeed, that the most obnoxious of this class of payment is still permitted to continue. Your memorialists need hardly name the annual money allowances paid by Government to the temple of Juggernaut. At the close of years of controversy on the subject of this charge; after item by item of the original allowance had been reduced as indefensible; after advantages, far exceeding the last remnant of allowance, had been conceded to this temple,—the Court of Directors adopted, on the 5th of February 1850, a despatch of the India Board, suggesting that the time had arrived when the remaining comparatively trivial allowance might be discontinued. The Governor-general concurred in this opinion, and a Regulation was framed for the purpose of abolishing it. The terms of that Regulation, however, have been the subject of correspondence between the Home and Indian authorities ever since. Old pleas in behalf of the monster-idol have again been suffered to creep in, and the allowance still exists—the opprobrium of the Government—the occasion of the incessant taunts from the opponents of Christianity on the spot, as to the patronage still afforded by Government to that impure worship, and filling the hearts of Christian men in all countries with grief and shame. Your memorialists earnestly entreat that no further delay be allowed in the execution of orders which ought to have been long since carried into effect for expunging this hated charge from the public accounts of India.

Great progress has happily been made, since the days when the Marquess Wellesley prohibited the exposure of infants to be drowned, or devoured by alligators, in the (so called) sacred rivers of India, and in abolishing various practices in the religious ceremonies of the natives, which are alike revolting to humanity and decency. But similar practices still prevail, less glaring it may be, but most debasing to the native mind, and which call for the interference of a humane and enlightened Government. The abolition of such practices cannot fail, it is believed, to be acceptable to the growing intelligence of the educated natives; and if accompanied, as other measures of the same nature have been, by a frank exposition of the motives of Government, the reform may be effected, as in the preceding instances, without danger in any manner to the public interests.

II. The second point to which your memorialists solicit your Lordship's attention is, the reasonable claim of Christian Natives to participate in the funds appropriated by Government towards the education of the people of India.

It has been already stated that the Christian Natives are practically excluded from the benefits of any share in these funds. The whole amount of the monies granted for educational purposes has hitherto been exclusively applied to the Government schools and colleges. These institutions profess to be open to all classes. The colleges are designed for the cultivation of European, Hindu and Mahommedan literature, and European science; the vernacular schools are for an inferior scale of learning. But the Christian Scriptures and all Christian teaching are excluded from all these seminaries. According to the statements of a document, which will be referred to in the sequel, Natives becoming Christians have been excluded from one in high repute in Calcutta.

Appendix P.

The schools of the various Christian missions are equally open to and attended by all classes, although the instruction, besides common learning, professedly includes direct Christian teaching. From tables that have been compiled from authentic documents, the relative number of schools and scholars in the Government lists, and in those of the different Christian missions in India, stand as follows :—

GOVERNMENT SCHOOLS.

	SCHOOLS.	TEACHERS.	PUPILS.	YEAR'S COST.
				Rs.
Bengal	141	387	10,150	387,110
North-Western Provinces	15	160	1,582	133,521
Madras	1	13	180	43,558
Bombay	247	295	13,450	150,408
TOTAL	404	855	25,362	714,597

CHRISTIAN MISSION SCHOOLS.

BOYS' SCHOOL.

	VERNACULAR DAY SCHOOLS.		BOARDING SCHOOLS.		ENGLISH SCHOOLS.	
	Schools.	Boys.	Schools.	Boys.	Schools.	Boys.
Bengal	127	6,369	21	761	22	604
North-Western Provinces	55	3,078	10	209	16	1,207
Madras	852	61,366	32	754	44	4,156
Bombay	65	3,846	4	64	9	984
TOTAL	1,099	74,659	67	1,788	91	6,951

GIRLS' SCHOOLS.

	SCHOOLS.	SCHOLARS.
Bengal	54	1,526
North-Western Provinces	19	421
Madras	263	8,030
Bombay	75	2,802
TOTAL	411	12,779

GRAND TOTAL.

Christian Missions	Schools, 1,668	Scholars, 96,177
Government	ditto 404	ditto 25,362
	2,072	121,539

It will hence be apparent, that notwithstanding the monopoly of the public funds, the prestige of Government patronage, and the professedly liberal principles of the Government seminaries of learning, the schools of the Christian missions, established for avowedly Christian objects, maintained by private support, and carried on by small-paid but devoted men, afford education to nearly four times the number of scholars which are found in the Government schools and colleges.

In making these remarks, there is no intention to disparage the Government colleges and schools as seminaries of secular learning. The colleges and higher schools it is well known afford the means of a very superior secular education, and many of the pupils have been distinguished for high intellectual culture and scientific attainments.

Appendix (A.)

The subject will be found discussed at greater length than would be fitting in this memorial in a document appended to it, which draws attention to the practical tendency of the system of Government education as now conducted.

The corrective teaching, which Christianity only can supply, being excluded from the Government seminaries, the document referred to proves, upon the testimony of persons who from their connexion with the system are most competent judges, that the moral results have been most unsatisfactory, although some favourable exceptions may be produced to the contrary.

To remedy this state of things, your memorialists submit that the obvious remedy would be either to introduce Christian teaching into the public seminaries, or, if this be deemed inexpedient, to assist by pecuniary support those schools which supply the deficiency in the Government system.

In

In accordance with the latter suggestion, the document in the Appendix proposes, that as the object for which a yearly sum for educational purposes is set apart by the East India Company is to promote good general education among all classes of the inhabitants of India —every school in which such general instruction, as shall reach the prescribed standard is afforded, shall share in the benefit of the Government grants. The paper referred to thus characterizes this proposal:— Appendix P.

"This scheme comprehends all classes, and recognises the claims of all to a share of the Government countenance and assistance. It respects, at the same time, the religious sentiments and feelings of all classes, and offends none. It is the system, apparently, best adapted to meet the actual state of things in India, and will serve, if adopted, to discharge the obligations which rest upon the Government to contribute to the education of all classes of their subjects; and at the same time leaves all to choose the schools most conformable to their respective creeds and feelings."

Your memorialists have observed with gratification, that a proposal has recently been made by the Council of Education at Madras, to introduce a scheme of this nature into the administration of the Government educational grants at that Presidency; and your memorialists earnestly hope that the measure will have the sanction of the Home authorities, and be extended to the other Presidencies.

Your memorialists have no doubt, that under the encouragement of such grants-in-aid, an improved system of training, of school books and teaching, will speedily be found in operation in the schools of this and other Christian institutions, and that thus a principle of vigour and extension will be imparted to them which can scarcely be expected from unaided private means, and from the laborious Christian missionary, amidst an overwhelming population, the disadvantages of climate, and the pressure of his many other duties.

Your memorialists cannot conclude this part of their address without earnestly pressing upon the consideration of your Lordship's Government, that any regulation or usage which prevents the admission of the Holy Scriptures into schools and colleges supported by the Indian Government, should be discontinued.

Your memorialists also desire respectfully to draw your Lordship's attention to the importance of encouraging, by all reasonable countenance and assistance, every well-directed effort to improve the education and habits of the country-born population of India. It is needless to speak of the vast numbers of this class, of whom many have exhibited qualities which prove, that under favourable influences of early training, very valuable characters might be formed. They have hitherto, as a class, enjoyed no countenance from Government; and the best effort that has yet been made for affording them, at one of the Presidencies, a superior education, has unhappily failed to obtain the support which its founders have repeatedly sought from the Government, both abroad and at home. Your memorialists allude to a proposed Protestant College at Madras, intended especially for the benefit of the country-born population, but to be open to all classes. A fund of upwards of 100,000 rupees, raised among themselves and by individuals who felt a generous interest in their condition, has remained for years unemployed, whilst the managers have been endeavouring to obtain some moderate assistance from Government to enable them to complete their project. They earnestly besought the help they needed, and offered to adopt any regulations which the Government should prescribe, consistently with the main object of preserving for their children a Protestant system of instruction; but hitherto they have sought in vain. A copy of the last memorial of these parties to the Home authorities will be found in the document already referred to, as appended to this address; and your memorialists beg your Lordship's favourable consideration of that very able paper, and its most reasonable prayer.

Your memorialists are aware that pecuniary objections have been continually urged in answer to applications of this nature, but they are persuaded that an enlightened Government will admit that nothing costs the State so much as a neglected and untaught population; and that no disbursement of public money ensures so certain and ample a return to the State as a well-bestowed aid to rescue any hitherto depressed class from a state of ignorance, and its inevitable accompaniments of comparative uselessness, idleness and crime.

III. The third and last point proposed in this address is, the complete and practical recognition in the patronage of Government in India, of the great principle enunciated by the Charter Act of 1833, namely, that no native of India shall be ineligible to office on account of his religion.

Upon this point, your memorialists request attention to two documents recently received from India, and possessing, as they venture to think, particular claims on the attention to Government. The first, already referred to, is a letter written by the Rev. Krishna Mohun Banerjea, originally a Brahmin of the highest caste in Bengal, a long-established convert to Christianity, and now, for some years, an ordained minister of the Church of England, and a professor in Bishop's College, Calcutta. It is addressed to a Member of Parliament, and was written in the freedom of private correspondence. Its importance has induced the writer's correspondent to permit the use now made of it, in order to explain, from an unquestionable source, how the conversion of a Native to Christianity still subjects him to disadvantages, which an enlightened and liberal Government, anxious to maintain "a really even balance" among its subjects of every creed or denomination, should be solicitous to prevent or to remedy; and your Lordship's attention is asked to the letter with that view. Appendix (B.)

The other document is a translation of a petition written in the Tamul language, and addressed to the British Parliament by nearly five hundred Christian Natives, connected with the mission of the Church Missionary Society, in the province of Tinnevelly, on the coast of Coromandel. All the signatures to this petition are those of householders. Its form, and Appendix (C.)

Appendix P.

the language in which it is written, preclude its presentation to Parliament. But your Lordship's perusal of it is requested, under a confident persuasion of the truth of the statements it contains, and that many of the evils it describes are capable of remedy. And your memorialists doubt not that it must be the desire of Government to have the existence of such evils brought to its notice, in order that they may be remedied.

Before dismissing this last head of their address, your memorialists take the liberty of submitting to your Lordship's consideration, that the time has arrived when the Christian Natives of India—a body now rapidly increasing in numbers and importance—have a just claim to consideration in all legislative measures affecting the social and political interests of the inhabitants of that land.

In conclusion, your memorialists, as members of a great religious society, which comprises a very large and earnest portion of the ministers and members of the United Church of England and Ireland, implore for your Lordship and the members of Her Majesty's Government the aid of Divine wisdom to guide your deliberations on the subjects which are embraced in this address, and in legislating for the future administration of the affairs of an empire, comprising one of the largest divisions of the earth, and involving the present and everlasting well-being of more than a hundred millions of people.

Your memorialists may be pardoned for reminding your Lordship and your colleagues, that the charge of that empire has not been entrusted to this nation by the Power that ruleth in the kingdoms of men, and giveth them to whomsoever he will, for any mere temporal purposes, but for the benefit of the people of India, by the advancement of his own kingdom, which is identified in every nation with the blessings of righteousness and peace.

That your Lordship and Her Majesty's Government may be disposed and enabled to remove all remedial obstacles to the advancement of Christianity in India, and to promote, by your sanction of a just and liberal expenditure, all objects which may legitimately subserve the highest interests of the natives of that country, and thereby secure, under the Divine favour, the welfare and stability of the largest and most important dependency of Great Britain, is the devout prayer of your memorialists.

By order of the Committee,
CHICHESTER, President.
HENRY VENN,
WILLIAM KNIGHT,
HECTOR STRAITH,
Secretaries, Church Missionary Society.

Church Missionary House,
May 27, 1853.

APPENDICES, &c. &c.

Appendix (A.)

THE question of general education, which occupies so much of public attention in England, has become of scarcely inferior interest in India.

Two different systems are there in operation, based on essentially different principles.

First. That of Government, comprising colleges for the cultivation, respectively, of European, Hindu and Mahommedan literature, and European science, and English and vernacular schools, professedly for all classes of the people, without respect to the religion of any, but specifically proscribing in all the Christian Scriptures, and practically excluding the Christian population from the benefits of the Government schools and colleges.

Second. The schools of the various Christian missions, which are, equally with those of Government, open to all classes of the people, but in all of which the Holy Scriptures are taught. These schools are frequented alike by Hindus and Christians, and contain a much greater number of scholars than the Government schools.

The whole number of Government colleges and schools in all the Presidencies, by the latest official reports, are stated at - - - - - - - 237
And the scholars of all classes, at - - - - - - - 22,207

The Mission schools, according to returns published in the Calcutta Review in the month of October last, amount to - - - - - - - - - 1,991
And the scholars to - - - - - - - - - 113,850

In this number are included 445 girls' schools, containing 13,955 scholars.

Note I., page 629.

Further particulars are given in a note appended to this Paper.

From the numbers thus reported of the Government and Mission schools, it is apparent that, while the Government scheme is professedly liberal in its basis, it is practically exclusive; and that the Mission schools, which are avowedly Christian in principle, are practically liberal and popular.

The large funds applied by Government to promote education, being given only to their own establishments, and all the advantages of those establishments being confined to Hindus and Mussulmans, the Christian Natives of India, now a large and increasing, but still the poorest class of the inhabitants, are deprived of all share in those funds; and their education, which ought to be a subject of solicitude to a Christian Government, is either neglected or thrown upon institutions maintained entirely by private benevolence.

This

This state of things cannot be excused by the observation that the Government schools, being open to all classes, Christians may avail themselves of those schools in common with other classes; for conscientious Christian parents of any country cannot send their children to schools from which the Christian Scriptures are authoritatively proscribed, whose teachers are heathens, and where the admixture with heathens or Mussulmans is unrestricted, and without a corrective of any kind. Appendix P

The Government schools in India are really heathen schools or Mussulman schools. The teaching is such as heathens or Mussulmans may learn without prejudice. European science and philosophy are taught in the colleges; but the institutions are professedly for the heathen and Mahommedan population. They did not contemplate a Christian population, and are not adapted for them.

As it cannot be doubted that the claim of the Christian population to a share in the Government grants for education will be admitted, the question for consideration is, will the Government deem it expedient to adapt their institutions so as to make them suitable for Christians, by freely admitting the use of the Christian Scriptures as a part of the established instruction, or, retaining the principle of their schools and colleges, afford aid to other institutions, and leave to those schools the education of the Christian Natives.

As regards the first suggestion, it may be remarked, that the fact of the numbers of Hindu youths, who voluntarily enter the mission schools, proves, beyond dispute, that a system of instruction in which the Christian Scriptures constitute a principal feature, is not of itself obnoxious to the Hindu youths; and it may be reasonably inferred, that the free admission of the Christian Scriptures into the Government schools and colleges, without the use of them being enforced, would not render those institutions less acceptable to the Natives in general. It is certain that in some schools established or supported of late years by Native Princes in India, the Christian Scriptures have formed a part of the system of instruction for Christians in those schools.

Instances can also be produced of Hindus who, having been educated in the mission schools, have become schoolmasters, opened schools in various parts, and now use Christian books for the instruction of their scholars; and of others who are employed as tutors, in Hindu families of the higher classes, making use of the same books for their pupils, and purchasing them for the avowed purpose from Christian depositories.

These facts are so well known in parts where conversions to Christianity have been most extensive, that a portion of the public press in India, which has hitherto vehemently opposed the introduction of the sacred Scriptures into the Government schools and colleges, has candidly acknowledged its mistake, and now advocates their introduction. Note II., page 630.

It has indeed become apparent, what was long since known to many, that the prejudice against the use of the Christian Scriptures in the education of the Natives, is an European prejudice, and not of native origin.

It is very desirable that the effects of the Government system of education on the moral and social condition of the people should be ascertained.

That the public schools and colleges have given a considerable impulse to the acquisition of knowledge, and a desire for reading, is unquestionable. That they have tended to the improvement of the native character to any appreciable extent may be reasonably doubted. For if the moral and social state of a people is to be estimated by the popular literature, what may not be apprehended of a people, the reading portion of which, if not misrepresented, draws its aliment from a literature of the character described in a local publication, from which an article is annexed to this Paper. It is notorious, also, that the worst English books have found a too ready circulation among this class of readers. Note III., page 631.

Unhappily this point is no longer a speculative question. Testimony has been produced which places the fact in the most lamentable light, and, at the same time, upon the most unquestionable evidence. In the Appendix will be found an extract of a letter from a gentleman of high literary character, who was long employed in the Government Native Education Establishment at Bombay, and who, though not without doubts of its principle, laboured zealously to promote its success, until forced, by mortifying conviction of its ascertained tendencies, to abandon and denounce it. His experience corresponds with that of others, who apprehend that the educated native youth of India are becoming sceptics in religion, radical in politics, and in morals what their popular reading indicates. That there are many exceptions of a better class may be readily admitted, while the preponderance of the worse stamp cannot be questioned in the face of the proofs that have been referred to. Note IV., page 632.

The same injurious effects have attended education in European countries, where education has most widely prevailed, but from which is excluded the pure instruction of that sacred volume, which the greatest and best of Oriental scholars thus characterized: "The testimony of Sir William Jones to the verity and authority of the Holy Scriptures," says his biographer, "I transcribe from his own manuscript in his Bible. 'I have carefully and regularly perused these Holy Scriptures, and am of opinion, that the volume, independently of its divine origin, contains more sublimity, purer morality, more important history, and finer strains of eloquence, than can be collected from all other books, in whatever language they may have been written.'"

The nations of the Continent of Europe have had free access—as India is now acquiring access—to the tree of knowledge, but only in a limited degree to the tree of life. The consequence has been that the people have acquired intellectual power without moral principle to control it. Society has grown strong, but not wise, and the state of the world tells the consequences. The progress of disorganization may be quickened or retarded by circumstances, but that it is certain, unless a remedy adequate to correct the mischief be found,

Appendix P.

history too clearly attests. What is literature in one generation, as an acute modern writer has remarked, is opinion in the next, and law and fact is that which succeeds.

But if it be still thought unadvisable to attempt a fusion or mixed system of education, comprising the Christian element, under professed Government patronage in India, an alternative is open. Let Government, instead of maintaining only an exclusive system of their own, afford assistance to all schools and colleges in which sound knowledge is communicated, on the principles upon which the English Government affords aid to all the great educational societies of this country.

Every attempt to establish here the mixed system of education by authority having failed, Government has adopted the measure of aiding the several classes separately in the proportion of their respective efforts; in other words, the Government aid is afforded to the societies of the Established Church and of the different denominations of nonconformists, according to the number of schools and scholars, and the proportion of funds raised by each respectively.

This scheme comprehends all classes, and recognises the claims of all to a share of the Government countenance and assistance. It respects at the same time the religious sentiments and feelings of all classes, and offends none. It is the system apparently best adapted to meet the actual state of things in India, and will serve, if adopted, to discharge the obligation which rests upon the Government to contribute to the education of all classes of their subjects, and at the same time leaves all to choose the schools most conformable to their respective creeds and feelings.

The Christian Natives, whose claim to a fair participation in the benefits of public education, or to a share of the funds applicable to that object, is here preferred, consist only of Protestant Christians, and are nearly all the fruits of Christian missions during the present century. They are distributed as follows:—

From the Calcutta Review, for October 1851.

	CHURCHES.	COMMUNICANTS.	CHRISTIANS.
Bengal, Orissa and Assam - - -	71	3,416	14,401
North-Western Provinces - - - -	21	608	1,828
Madras Presidency - - - - -	162	10,464	74,512
Bombay - - - - - - -	12	223	554
Ceylon - - - - - - -	43	2,645	11,859
	309	17,356	103,154

In the above statement, reference is made to the Christian Natives properly so called. There is another very large and increasing class, namely, the East Indian or Indo-Britons, for whom a similar claim to a share of Government assistance must be urged. This class of persons at Madras have collected a large but insufficient fund for the establishment of a Protestant college for the education of their children on a superior footing. The sum raised by them for the purpose is upwards of a lac of rupees, and they have several times memorialised the Government, the Court of Directors, and the President of the India Board, for assistance to enable them to complete their scheme. A copy of their latest Memorial accompanies this Paper. The ability with which they plead for their object should not be overlooked, nor the important considerations which they urge in its favour. A very moderate measure of assistance afforded to this class, in the way they have solicited, could not fail to operate most beneficially in promoting the cause of really valuable education, in a place, and for a people, where it is exceedingly needed, and in confirming the principle of attachment to the English Government of a class, whose numbers and position no Indian statesman can rationally disregard.

Since the above Paper was written, an article on the same subject has been received from Dr. Duff, the founder of the Scotch education system in Calcutta, which is added as a supplement to the preceding, and will be found to agree substantially in the views which it advocates.

Brief Memorandum on Government Education in India.

1. At present the Government devotes the whole of its educational funds to the maintenance of a comparatively small number of schools and colleges of its own, and at a comparatively large expense.

2. From all of these the Christian Scriptures are excluded, the course of instruction being avowedly of an intellectual, and not of a moral or religious character.

3. The results of this system might be shown to be very far from satisfactory to the British Christian, the British Patriot, or the real well-wisher of India's prosperity, and, as connected therewith, the stability and permanence of the British power.

4. While, at an earlier stage of our history in India, it was one great object to create a taste among the natives for our improved literature and science, the British Government might feel warranted in maintaining a few costly monopolist institutions of its own. But that taste having now been, to so large an extent, created at the seats of Presidency and other large towns, and throughout many country districts, there is no longer the same real or apparent necessity for upholding such exclusive and expensive seminaries.

5. The

5. The creation of this taste is clearly indicated by the growing demand for our improved European education, and by the growing readiness of the natives, in many places, to pay for it. The fees of the Hindu pupils in the Government College of Calcutta exceed thirty thousand rupees (*Rs.*30,000).

6. The great object of the British Government should be to diffuse as widely as possible the blessings of improved education amongst the error and superstition-ridden people of India; and if it is not prepared to introduce the Christian Scriptures into our institutions, it were better for it to abandon its monopoly of such institutions altogether, and adopt another course more suited to the change of circumstances, and to the exigencies of the people.

7. The subject is admitted to be beset with difficulties on all sides; but if practicable measures of improvement are to be delayed until all difficulties be cleared up to all minds, no new or improved measure will ever be adopted at all.

8. Looking, then, at the subject in all its bearings, I have for several years past entertained the persuasion, that the principle on which the British Government at home has been distributing its educational funds, is that which furnishes the most satisfactory solution of the difficulties connected with the Government educational question in India.

9. At home, the Government does not expend its educational resources on the maintenance of a few monopolist institutions; it strives to stimulate all parties far and wide, who desire to further the cause of improved education, by offering proportional aid to all who show themselves willing to help themselves. On the subject of religion, except in the case of the established churches (whose standards of faith are engrossed in the law of the land), it maintains a strict neutrality, leaving that entirely to the felt responsibilities of the different parties themselves. Through its own appointed inspectors, it has a sufficient guarantee for the soundness and efficiency of the ordinary secular branches of study.

10. Why not bring such a principle, with any needful adapting modifications, to bear on the state of things in India? Instead of exhausting its educational funds on a few exclusive institutions that are very obnoxious to the Christian people of Great Britain, why might it not henceforward address all its Indian subjects, without respect of class or race—"We are desirous of promoting your mental, moral and social improvement; for this end we wish to encourage the acquisition of the improved literature and science of Europe, through the medium alike of the English and vernacular tongues. All, therefore, who desire to participate in the advantages of such acquisition, we are willing to assist in some way proportional to their own efforts; the books and system of tuition, so far as concerns the secular studies, being subject to the approval of our accredited inspectors."

11. The present educational funds of the Government ought certainly to be increased; but even if they were not, such a mode of distributing and applying them as that now suggested, would vastly enhance their productiveness. Natives, and all who feel interested in native welfare, would, in all directions, be stimulated to do a vast deal more than heretofore. Without directly trenching on the peculiar religious convictions or prejudices of any parties, Hindu, Mussulman, European, or any others, the Government educational funds, instead of being exclusively lavished on a few institutions, would have the effect of extending and multiplying them tenfold, and of thus more rapidly and widely diffusing the benefits of an enlightened education among the masses of the people.

12. This Memorandum can only be regarded as a mere fragment, conveying the general idea, without entering into any details.

Edinburgh, 1st March 1852. ALEXANDER DUFF.

NOTE I.

BY the Official Reports on Education addressed to the respective Governments for the year 1850, the numbers of pupils at the several Presidencies are stated as follows:

BENGAL:		
Lower Provinces	7,795	
North-West	1,706	
		9,501
MADRAS:*		
Madras University		180
BOMBAY:		
Elphinstone Institution	916	
Mofussil English School	668	
Vernacular ditto	10,670	
Poona Sanscrit College	172	
		12,426
TOTAL		21,107†

In

* The latest Parliamentary Return under this Presidency states there are no Educational Establishments in existence at this Presidency, with the above exception.

† The numbers stated here as in the Government Schools and Colleges are increased in the Memorial from later Reports to 25,362, and in the Mission Schools are reduced to 96,177, owing to the exclusion in the Memorial of the Ceylon Schools, as not properly belonging to India within the East India Company's territories.

Appendix P.

In some of the colleges, particularly in Bengal, there are some Christian pupils, but the entire number is very small. From the circumstance that there are no Protestant missions in the places where this chiefly occurs, it may be inferred that those Christian pupils are mostly Romanists, whose distinction from the heathen is frequently little more than nominal.

In the schools maintained by the different Christian missions, the number of scholars are as follows :—

Boys' Schools.

	VERNACULAR DAY SCHOOLS.		BOARDING SCHOOLS.		ENGLISH SCHOOLS.	
	Schools.	Boys.	Schools.	Boys.	Schools.	Boys.
Bengal, Orissa and Assam -	127	6,369	21	761	22	6,054
North-Western Provinces -	55	3,078	10	209	16	1,207
Madras Presidency - -	852	61,366	32	754	44	4,156
Bombay Presidency - -	65	3,848	4	64	9	984
Ceylon - - - -	246	9,126	6	204	37	1,675
	1,345	83,787	73	1,992	128	14,076

Note II.

From the Madras "Crescent," a Newspaper which has for years opposed the Introduction of the Christian Scriptures into the Public Schools.

13 December 1851.

One of our members of Council is thought by the Natives to be ill-disposed to the diffusion of European education among them, and so perhaps may be Sir Henry Pottinger; but his avowal has gone as far as that of Sir Henry Young, the placing within the reach of the people the means of having their children taught the elements of knowledge and of morals.

He has not indeed encouraged the course of education pursued at the high school, neither have the Court of Directors; but those who have discouraged it the most are the Natives themselves, all along, by declining to send their children in any respectable number, and latterly, by the few who are sent attempting to monopolise the instruction to the castites, and the extrusion of those who are without caste.

How far our Governor may be blameworthy for not having yet introduced the provincial schools for that course of inferior instruction of which he has declared his approval, it is impossible for us to say; his hands may be tied up by orders from the Court of Directors, or he may not be cordially supported in the matter by his colleagues; one of whom, as we have remarked, is said to be adverse to the education of the masses; and another probably declines to interfere unless permission to read the Bible is made one of the regulations; to his permission we were opposed when the Minute of Lord Tweeddale made it apparent that, convertism was directly looked for as its contemplated and intended sequence, and while we thought it would have the effect of keeping away the scholars; but, as the high school has not increased, but declined in number ever since the advent of Sir Henry Pottinger, whom no person will suspect of having missionary predilections; and as Mr. Anderson's schools where the study of the Bible is compulsory, are unable to meet the eagerness of the natives for

for the attainment of western information, we no longer see any sufficient reason to oppose a measure which would conciliate the conscientious feelings of the honourable member last alluded to; and induce the many influential persons who have adopted the same opinion as himself to co-operate in the work, which is certainly calculated to ameliorate the condition of the natives; but who, having shown such utter disregard to the education of the high school whence the Bible has been sedulously excluded in compliance with their prejudices, have no longer any claim to consideration on the score of those prejudices, with regard to whatever system of instruction the Government may think it prudent to adopt, short of enforcing the study of the Scriptures with a view to their conversion.

From the Madras "Athenæum," 15 December 1851.

If a cause which has been abandoned, and a belief which has been renounced within the last few days, by our cotemporary of the "Crescent," had never been taken up and avowed by him, a great deal of mischief and misconception might have been avoided. At the end of many years of energetic labour, he has given up the hope of defeating the efforts of his countrymen to truly enlighten the Hindus.

He has long been in the condition of a general without an army, a leader without any credentials, from the party whom he claimed to represent, but how many, both in India and at home, were induced to believe, that it was the "Hindus" and not the "Crescent," that held the missionaries in such intense abhorrence! We proclaimed, more than three years since, the real character of the agitation against Bible teaching; that it had no basis in the national opinion, and now a frank admission of its hollowness is made to the world. The disgusted Hindu is a myth, but his place is occupied by a disgusted European, who, sick of all creeds, and disliking all races of mankind, must needs take refuge in the "Eremite's cell," and become the Timon of the 19th century.

The "Crescent" may complain with Kossuth, that he has been deserted by those whom he trusted, but we are unwilling that he should arrogate to himself the credit of conducting "the only paper" through which the alleviation of their (*i.e.* the Hindus) trodden down condition has found an advocacy in Madras.

If attempts to promote the material prosperity of the country, and to urge the Government to carry out plans of useful reform, have any thing to do with the labour in question, we think the honour may be divided at least with a couple of his cotemporaries.

From the Madras "Spectator," 17 December 1851.

We are glad to see that the "Crescent," resting on the preference shown for missionary schools, has abandoned his opposition to the use of the Bible as a class book for those who are disposed to use it.

From the Madras "Spectator," 24 December 1851.

The progress of the Scottish Free Church Schools, as evinced by the statistics brought forward at their examination last week, is exceedingly satisfactory. It proves how untenable are the fears of those who dread converting influences on the natives of the country, and how safely the Bible may be brought into contact with the rising generation of the heathen as a book of religious instruction.

While the Government High School, with all its official recommendations and prospects, numbers a handful of scholars scarcely increasing, the Free Church Seminaries boast of a roll which includes 2,300, and this prosperity is unaffected, at least permanently, by the missionary successes of the teachers. In former years we have had the pleasure of recording the encouraging experience of those agents, with reference to male converts, and can now speak as favourably of their endeavour on behalf of female pupils.

Before June last, when several baptisms took place, the number of these was 160.

After those events, the withdrawals were so many that the attendance declined to 34; but the rise of scholars was so rapid, that they now amount to 210. Indisputably, therefore, the Missionary Schools have grown in favour rather than diminished, under the circumstances of conversion.

There are also other indications of the acceptance which they find among the heathen.

We are told that natives come in to listen to the preaching in their own tongues, on the premises of the Free Church; that they show no repugnance to the instruction given, which is avowedly directed to their proselytism.

This is highly satisfactory. When scholars abound, notwithstanding that fact, it is clear that scriptural tuition creates no obstacle of moment, and that it may safely be introduced, as a voluntary element, into the Government School.

Note III.

Article from the "Indian Mail," under the head of "Bengal."

Impurity of the popular Literature of Bengal.

We are aware that the popular standard of coarseness (in popular literature) varies in different ages and different countries, and it would not be fair to refuse to Bengali books the benefit of a concession which is often made in favour of European works. But after making every

Appendix P.

every allowance, it must be owned that the former exceed the bounds of decency beyond all reasonable proportion. Gross obscenity, dark superstition, an extravagant and horrible marvellousness, and frequent references to idolatry, form the principal ingredients of that seasoning which alone can render a book palatable to the popular taste of Bengal. Nala and Damayanti is the only one that appears to form an exception.

Whilst the books which have already been reviewed form a comparatively bearable class, we must now invite attention to a second and much larger class, which is deserving of unqualified condemnation. It consists partly of mythological works and partly of amatory tales. The libidinous doings of Krishna and his adulterous consort Rádhá, are the subject of different productions; some are paraphrases of parts of the Bhagavat Purána and the Mahábhárata; whilst in others the same materials are worked up into different shapes, according to the taste of each writer. Two works, both entitled Pancháli, which contain other mythological stories, in addition to those of Rádhá and Krishna, are, if possible, worse than the former. We suspect that these mythological works are more extensively read than any other books, because Rádhá and Krishna are favourite deities with a great majority of the inhabitants of Bengal. The character of these objects of worship is so vile, that those who describe it feel it necessary to apologize for it, by urging the plea that Krishna, being lord of the world, was not subject to those laws of morality which mortals are bound to obey. But reason and experience unite in proving that his example has a frightfully contaminating power, and that the natives of Bengal will never cease to be addicted to profligacy until Krishna shall cease to be the object of their worship, their thoughts and their affections. Siva, who is the favourite god of the higher classes, and Durgá, or Kali, the national deity of Bengal, are about as licentious as Krishna and Rádhá.

It was the writer's intention to have examined some twenty amatory tales submitted to him; but this task was too revolting. A trial was made of two or three; we do not remember a more repulsive occupation. The tales are, for the most part, wretched imitations of Bidya and Sundar. It is almost impossible to conceive anything more truly horrible than some pages of these volumes; they must utterly pollute the imagination of those by whom they are read, or to whom they are recited by strolling singers.

Impossible as it may appear, it is nevertheless true that the Bengali (or Hindu) mind has discovered depths of proflicacy lower still than those already pointed out. There are pamphlets for sale in the Calcutta bazaars, written for the express purpose of reducing bestiality to a systematic theory. Had we not seen them we could not have believed in their existence. The mind of Milton's or Klopstock's Satan, and even that of Göthe's Mephistopheles, would have revolted with horror from all contact with such defiling abominations. The publication and sale of such books, and of engravings of an equally filthy character, ought unquestionably to be proscribed as a crime, and punished as such by the rulers of the land. We believe many Hindus would thank them for doing it.

It is an instructive fact, that the inculcation of vice in these obscene books is invariably perpetrated under the screen of the national religion. The title-page prominently exhibits the names of some of the popular divinities. The book itself always opens with a formal invocation of two or three of them, and almost every new section commences with a prayer.

When all these things are considered, the repugnance to the education of females, so universally prevalent amongst the natives, will cease to excite surprise. The idea prevails (and there is much truth in it) that female education must lead to the perusal of such horrible books by female readers.—*Calcutta Review.*

Note IV.

From the Discourse on the Death of Professor Henderson, of Bombay, by Dr. Wilson, President of the Bombay Literary Society.

He saw that the capacity of English reading conferred on multitudes was not in general turned to the account of perusing our best authors. He witnessed a relaxation of the fetters of ignorance, without the imposition of the restraints of truth. He found a general contempt of religion beginning to prevail, as the consequence of its neglect in the Government seminaries of India. He discovered a spirit of unbecoming rivalry existing between these institutions and those of a better character; and, without being able exactly to draw a line of distinction between the essential and merely incidental evils of the system with which he was connected, he came to the conclusion, that to be really and extensively useful, it must undergo a radical change.

At present I speak as a witness and not as an advocate of party views. I am able to confirm and illustrate my testimony by quoting his own words. The following is an extract from the first letter which I received from him after my arrival in Britain :—

" Since you left Bombay the Board of Education has greatly extended its operations, and is preparing for still greater things. An accomplished Englishman has been placed in charge of the English school at Surat; my young friend and former pupil at Edinburgh, Robert Mackay, has been placed in charge at Tanna; the most talented of the late Normal scholars have been retained on high salaries, as assistants in the central English school here. English schools, taught by Natives, have been commenced in many places in the Mofussil, and all the schools opened by English gentlemen in the Fort are numerously attended. Again,

all

all the Native schools here, and throughout the Presidency, have been greatly improved, and placed under efficient superintendence. Lectures are given in Márathí and Gujaràti by Bàl Shàstri and others, for the benefit of Native schoolmasters; a series of treatises, school-books and maps, is in the course of preparation and translation for the Native schools; and Mr. Harkness, Mr. Eisdale and Bàl Shàstri annually visit every district in the Presidency on their respective tours of inspection. The operations in the other Presidencies seem to be on as great, if not a greater scale, and in the same spirit. Now, what is to be the result of all this? A very great movement in one direction or another, at no remote period, is manifestly inevitable; but will it be for good or for evil? On that subject I must confess to you, that my opinions have of late undergone a complete change. You know I never cordially approved of the Government plan of education; but of late, and I may say exactly in proportion as I myself thought more solemnly on the truths of Christianity, and made them the subject of conversation with educated Natives, the more convinced have I become of the evil tendency of the system which has hitherto been pursued, and the necessity of strenuous exertion in opposition to it, by all who have at heart the enlargement of the Messiah's kingdom, or even the tranquillity of India and the safety of the British empire. The Government, in fact, does not know what it is doing. No doubt it is breaking down those superstitions, and dispersing those mists, which, by creating weakness and disunion, facilitated the conquest of the country; but, instead of substituting any useful truth or salutary principles, for the ignorance and false principles which they remove, they are only facilitating the dissemination of the most pernicious errors, and the most demoralizing and revolutionary principles. I have been appalled by discovering the extent to which atheistical and deistical writings, together with disaffection to the British Government and hatred to the British name, have spread and are spreading among those who have been educated in Government schools, or are now in the service of Government. The direction of the Government system of education is rapidly falling into the hands of astute Brahmins, whom you know, and who know how to take advantage of such a state of things, and at the same time to strengthen themselves by an alliance with Pársi and Mussulman prejudices; while the European gentlemen who still remain nominally at the head of the system, know nothing of the under-currents which pervade the whole, or consider themselves as bound, either by principle or policy, not to make any exertions in favour of Christian truth, while the professed object of the Government is to give secular instruction only. Now, what is required in order to counteract the tendency of such a system? To enlighten the public at home, particularly those who have most influence in East Indian affairs, by laying the real state of the case before them, appears to me to be the first thing required. The whole subject of Government education requires to be reconsidered, and in the spirit of the age. But still I do not think that Government instruction ought ever to be regarded as one of the principal means of Christianizing India. It may be so organized as not to counteract that object, and even to co-operate in a subordinate degree; but the main dependence must always be placed upon faithful, efficient and zealous missionaries, European and Native."

The letter from which I extract this passage is dated 31st October 1843. The testimony which it gives is worthy of attention, and, what is more, it will command attention both here and elsewhere. It is that of a close and impartial observer, and a competent judge. I invite all parties connected with the Government Schools in India to reflect on its import.

Mr. Henderson at one time intended to memorialise the Government of India about a change in its educational system. He came to the conclusion, however, that the most suitable testimony which he could give respecting it was, like that of Mr. Robert Money, formerly Secretary to the Native Education Society, the abandonment of it altogether.

This article was prepared before the following was communicated, which too strongly confirms the views expressed above to be withheld.

Mr. Robert C. Money, a distinguished member of the civil service of Bombay, for several years Secretary to the Native Education Society, in a very able Memoir on the Education of the Natives of India, which he drew up in the year 1832, for the Earl of Clare, the Governor of Bombay, and which will probably be found in the records of the Government for that year, expressed the result of his long and close observation of the system of education pursued by the authorities both at Bombay and in Bengal. Take some brief extracts:—

"I have without a doubt on my own mind come to the conclusion that this system can never make the Natives under our rule more moral or better affected towards the British Government.

* * * * *

"If the lovers of good order, and of the real happiness of society in Europe, think that the present measures, which give the people a literary and scientific education only, most ruinous to all correct and moral principle, how much more should we dread the introduction of a similar practice into this country?

* * * * *

"Far worse than a high acquirement of knowledge, unaccompanied by religious instruction, is superficial education with the same exception; and this is the more to be dreaded, as the inevitable consequence of the present method of education in India, from the habits and manners of the Natives."

* * * * *

Mr. Money quotes the opinion of a gentleman of Calcutta, who took a lead in the education of the young of that city:

"Among the Natives here may be enumerated three grand classes; first, those who have an English education, and in their manners emulate the English, and have also embraced the most repulsive forms of English infidelity." He then notices the other classes, and adds,

Appendix P.

"In regard to the evil above stated, English schools without religion have done immediate evil, and leave future good problematical. These young men make a great noise; but are giddy, wild and reckless."

The testimony of a native gentleman in Calcutta, noticing these evils, is remarkable, as quoted by Mr. Money:

"Natural religion has been carefully excluded from places of instruction, and the tree of error and moral depravity has been planted thereby."

He concludes by remarking,

"It has been a curious error to attribute the British power in India as hitherto depending on the popular breath. Public opinion is only at this present moment assuming a form. Its scattered fragments were formerly powerless, and had not the means of uniting with any efficiency. It has now a press, and, as education increases, it will gradually put on its great strength."

NOTE V.

To the Honourable COURT of DIRECTORS of the EAST INDIA COMPANY, London.

The humble Memorial of the undersigned Christian Inhabitants of the Presidency of Madras;

Respectfully showeth,

1. THAT your memorialists are the representatives of a portion of the European and East Indian inhabitants living within the territories of the Madras Presidency, and forming part of the subjects of the Crown of Great Britain, not in the covenanted service of the East India Company. Some of them are employed in the several departments of Government, and the remainder are engaged in mercantile and legal pursuits, trade and other occupations in this country.

2. That on the extension to this Presidency, by a resolution of the Madras Government, dated 28th June 1845, of the important order of the Governor-general of India, declaring that educated persons alone shall be eligible for employment in the public service, it appeared to several friends of education at Madras highly desirable that means should be devised to afford to all their fellow Christians, whether Natives, East Indians or Europeans, the means of obtaining in the country a superior, sound, Christian education, especially as the notification of the Governor-general placed every individual, whether educated in a Government or a private school, on the same footing in regard to his eligibility for public employment. This appeared to them a desideratum, as no institution at the Presidency offered to Christians the opportunity of obtaining that measure of liberal education to enable them to compete with their Hindu and Mahommedan fellow-subjects, and which the two latter possessed in the Government educational establishment at Madras.

3. That your memorialists were in consequence constituted into a committee of management for watching over their interests in connexion with the cause of education at Madras, and for providing for the deficiency which now unhappily exists in this respect at this Presidency.

4. That in furtherance of this object, it was proposed to found a collegiate institution on Protestant Christian principles, and towards the establishment of which contributions were invited from all classes of the community.

5. That the proposal for such an establishment met with a generous response from the Christian public of this Presidency, and the contributions received on this account, and which have been funded, now amount to upwards of 120,000 rupees. In addition, annual subscriptions, to the amount of 8,000 rupees, have been promised in further aid of this object, the greater part of which, it is believed, will be available, should the projected institution be established.

6. That your memorialists, satisfied that private exertion alone is insufficient to secure the desired end, and that individual contributions, however liberal and encouraging, cannot ensure perpetuity to any project of the above character, especially in this country, sought the aid and countenance of the State, as the only legitimate source which could afford that support and protection essentially necessary for its safe establishment.

Your memorialists were emboldened to take this step from its being recognized and acted upon by the Home Government of Great Britain and in all Her Majesty's colonies, that the aid afforded by the State in the cause of education shall be proportioned and made dependent on the amount of private contribution received for such a purpose; and accordingly your memorialists confined their application to Government to such an amount of assistance from the State as they themselves could raise from private and individual contributions from the residents of the country.

7. That your memorialists were further encouraged in making this application, from its being a stipulation of the present Indian Charter, that from the revenues of the country a specified amount shall be appropriated for the moral and intellectual improvement of the people of India, and that from this portion the sum of 50,000 rupees per annum has been set aside for the cause of education under this Presidency. Your memorialists further beg to state, that only a moiety of this sum has been annually devoted to education for the last 10 years, and that the accumulations arising from the grants of preceding years, and the balances of the last 10 years, amounting to a large sum, now remain in the general treasury of this Presidency.

8. That,

8. That, in pursuance of the object in view, your memorialists, in conjunction with their fellow-countrymen, memorialized the Government of Madras, and subsequently your Honourable Court, for the bestowal of such a grant from the above fund as may appear desirable and necessary; but, they regret to add, without success up to the present period.

9. Your memorialists considering that, by their preceding acts above enumerated, they have established a legitimate claim to assistance from the State, in furtherance of the object they have in view, and as the funds already raised are insufficient to accomplish that object, feel they have no alternative but again to appeal to your Honourable Court, and respectfully to solicit a reconsideration of the matter, especially as they are now able to adduce the proceedings of the Government of the North-West Provinces as recommendatory of their own case; the principle of State-aid they solicit in the cause of education, having been recognised and acted upon by the Lieutenant-governor of that Presidency, with the sanction of the Government of India and your Honourable Court.

10. From the notification put forward by the Lieutenant-governor of those Provinces, and bearing date the 9th February 1850, it is stated, that the scheme of education propounded by that Government contemplates the drawing forth of the energies of the people of India for their own improvement, rather than actively supplying to them the means of instruction at the cost of Government. Persuasion, assistance and encouragement, are the means to be chiefly employed: the poor to be persuaded to combine for the support of a teacher; the rich to be encouraged to support schools for their poorer brethren; and the whole to be matured and carried forward by Government assistance, encouragement and supervision, proportionate to what the people themselves are able to do in this matter.

11. The said notification further states, that operations in the spirit of this scheme have already been partially commenced; and the introduction of the system into eight districts, therein enumerated, has received the sanction and authority of your Honourable Court.

12. Your memorialists are quite satisfied that the Government alone cannot be expected to undertake the entire charge of popular education, because the expense would far exceed its resources; but as the education of the people must not be neglected, and as the sum available from the State for educational purposes is limited, the efforts of the Government, combined with those of the community, will go far to accomplish the benevolent and noble object your Honourable Court has in view, in sanctioning the measures of the Lieutenant-governor of the North-West Provinces. Wherever this plan has been tried, whether in England or in Her Majesty's colonial possessions, or in India, it has proved eminently successful, and the results have invariably been of a satisfactory and cheering nature.

13. Emboldened by the developement of the present views and intentions of Government, and which for the first time have been officially promulgated in this country, that the assistance and encouragement of Government are to be afforded to all private attempts, whether made by individual or combined efforts, for the promotion of popular education in this country, your memorialists respectfully and earnestly crave to be admitted to a participation of the benefits held out in the notification already adverted to, and which, it is authoritatively stated, has received the sanction of your Honourable Court.

14. In conclusion, your memorialists beg respectfully to state, that they are fully prepared to subject the proposed Collegiate Institution to the supervision of Government officers, to the extent provided for in the notification of the 9th February last, so far as secular education is concerned, and to include such branches of instruction as may be embraced in the Government plan of operations; and that official visitors shall be allowed to examine the school periodically, with reference to those departments of secular knowledge provided for in the Government scheme. Your memorialists only think it necessary to add, that the proposed Institution will be open to all classes of the community—Native, East Indian and European; and that none will be excluded from a participation of its benefits and advantages, who conform to the rules that will govern the establishment, the principles of which are clearly stated in the Prospectus of the proposed College hereto annexed, and to which your memorialists respectfully beg to refer your Honourable Court.

And your memorialists, as in duty bound, shall ever pray.

Madras, 21st September 1850.

Prospectus of the proposed College.

It is proposed to attempt the establishment of a Protestant Christian Institution for Education, upon the following basis:—

First. That it is the object of the Institution to provide a superior and sound Christian education, approaching, as nearly as circumstances will admit, to a collegiate education. By sound Christian education is to be understood, religious instruction on all points (without reference to ecclesiastical government) common to the Thirty-nine Articles of the Church of England, and to the Confessions of Faith of the Church of Scotland, and of the whole body of the reformed Protestant Churches of Europe.

Second. That the Institution is designed primarily for Protestant Christians, Native, East Indian and European, born in India, but open, with such limitations alone as shall be necessary to secure the primary object, to all other classes.

Third. That the Institution shall be under the charge of a Principal, who may be a member of any Protestant Church, and shall be a graduate of one of the Universities of the United Kingdom.

Appendix P.

Fourth. That, in order to secure for students of the less wealthy classes the means of continuing under instruction for a sufficient period, Scholarships shall be immediately founded.

Fifth. That the funds shall be vested in a body of nine Trustees, either in Government securities, or, if four-fifths of the Trustees concur, in land.

Sixth. The Trustees shall have the appointment of Principal and Masters, and the general direction and management of the Institution, with power to fill up vacancies in their number.

Appendix (B.)

Copy of a Letter from the Rev. C. M. Banerjea to a Member of Parliament.

Your speech, on Mr. Herries' motion for the Indian Committee, contains a sentiment which I have long held myself with regard to Government interference with the propagation of Christianity in India. I venture, therefore, to obtrude a few remarks on that subject. I think your maxim of non-interference with the dissemination of Christianity a very sound one, both as regards policy and religion. I say policy, because it would be very difficult for Government to manage missions, and the system would soon degenerate into one of simony and jobbery; I add religion, for I do not find any authority in the New Testament for preachers of the Gospel living on free quarters in heathen lands, where they labour for the propagation of the truth. Such the case would be, if Government spent public funds on the maintenance of missions. It would no longer be to offer wine and milk without money and without price.

But if you excuse the presumption and the intrusion, we have some reasons for complaining that your Governments do not keep the even balance between various opinions, the maintenance of which you so correctly defined to be the duty of a Government. Not that those who are in charge of your Governments are hostile to Christianity, or wanting in that high degree of honour which constitutes true dignity; by no means. I cannot conceive men more honourable in their appreciation of what is right—more anxious to do what is good—more desirous of discharging their trust in conformity with God's will, than those who have the management of the Government here. But certain systems have insensibly grown up, which, unless curbed by the high hand of power, will practically destroy the even balance of which you spoke in the House of Commons.

I. There is still interference with idolatry in the country. On this point, the missionaries have put forth a pamphlet, and I will therefore add nothing more.

II. In the education department, while you are so jealous of the least interference with Christianity, you scruple not, in your Sanscrit and Mahommedan Colleges, to teach and inculcate the principles of the Hindu and Mahommedan religions: the Hindu Shasters and Mahommedan theological books being used as class-books in those institutions. That the inculcation of Hindu and Mahommedan law requires the use of those books is an especial pleading that may palliate, but not justify, the disturbance of the even balance in favour of false religions. The palliation itself loses its virtue when it is remembered that the especial pleadings of Christian advocates are disregarded when they endeavour to disturb the even balance in favour of the Gospel.

III. In the most important educational establishment, the Hindu College of Calcutta, Christian Natives are not allowed to receive the advantages of education. This is practically putting Native Christianity at an immense discount: the invidious exclusion is felt as a great grievance. I have two nephews, who, if my brother had not embraced Christianity, would have entered the Hindu College, like their father and myself; but because they are Christians, they are debarred from the benefit of the College. I have a third nephew, son of my sister, who with her husband is a heathen; and he is studying in the Hindu College. You may say this is a trifling thing, not fit to be brought to the notice of a Director. It may be a trifling thing, but trifling things, when summed up, become important, and how can one say that this disability, connived at and tolerated by Government, is not retarding conversions in many instances? I know my brother considers it no small trial that he cannot place his sons in the Hindu College. As far as general education is concerned, we consider that to be the most suitable institution for native lads.

But the Hindu College not only refuses to admit converts, but also expels those who having been duly admitted are led to embrace Christianity afterwards. A most distressing case occurred a year or two ago of a boy being expelled from the Hindu College because of his conversion. He is now in a fair way of being very much degenerated intellectually. A Native teacher also was obliged to withdraw from the Hindu College because he embraced Christianity.

IV. While Brahmins and Mollahs, as ministers of their respective systems, are not disqualified for service in the educational department, Christian ministers are so practically. There is a strong feeling in the Governors of the country, that no Christian minister can be appointed to any public college. The Rev. A. W. Wallis was, indeed, appointed by Mr. Thomason as Principal of the Benares College. He was accidentally superseded. But I

have

have heard from members of the Council of Education, that Mr. Wallis's appointment would never have been suffered by the Court of Directors, who have forbidden the appointment of clergymen, even as members of local committees and of the Council of Education. These disabilities certainly destroy that even balance which should be maintained between the different opinions which divide the population; but here are certain advantages which the State withholds from Christianity, though it allows them to other religions. Excuse the liberty with which I have made these remarks.

"Bold is the task when subjects, grown too wise,
Instruct their monarch where his error lies."

But I will be bold still. No servant of Government fears, in his private capacity, to assist and encourage in the propagation of his faith, save its Christian servants. Members of Council, and civilians of any standing, are apprehensive in many instances that the Court of Directors will be displeased with them if they league themselves with missionary societies. This feeling has grown of late, in consequence of a despatch which was sent by the Court, though not insisted on. This is not even balance; it is interference with a vengeance. In order to keep up the even balance, it is necessary there should be complete Christian emancipation, and that the authorities in England should instruct the local governments that no disability of any kind should attach to a man, lay or clerical, because of his religion, in any department of the State; nor should Government allow any portion of its subjects to be excluded from any public institution by reason of his faith. When this complete emancipation is granted, we will say that the Government keeps up an even balance in matters of religion. Until then, we must declare that Christianity is at a discount in many public institutions.

I hope you will not be offended with the freedom I have taken, but rather use your vast influence in removing our disabilities. It is a long time since I wrote to you last, and I am therefore somewhat apprehensive that you will consider this as an intrusion. I am now resident in Bishop's College, as one of its professors. There is a large field for work here; the tuition of students, the superintendence of the missions, the preparation of vernacular books and tracts, the duties of the chapel, and, with me individually, the care of my Cornwallis-square flock, of which I still retain charge at the Bishop's request; all these press heavily on our time and attention.

Appendix (C.)

[Translation from the original in the Tamil Language.]

To the Right Honourable the English Houses of Parliament.

The humble Petition of the Christian Inhabitants of several Villages in the Talooks of Kulleyoor, Shermadavy and Nangungery, in the Zillah of Tinnevelly, South India,—

Humbly showeth,

That your petitioners are grateful for the benefits they have received for their souls and bodies in consequence of the removal of the darkness of heathenism from these parts, through the providence of our Lord and the generous assistance of the people of Europe; and your petitioners have ventured to write this humble petition, being desirous to acquaint your Honourable House with some of the deeds which are being done in support of heathenism and in injustice to the poor by the Honourable Company who are the Christian rulers of this district, under our gracious Queen; therefore we humbly pray you that you would of your clemency give ear to the following facts:—

I. In former times, heathen kings released their pagodas from the payment of land revenue, and with the income of those lands erected temples and steeples, and established therein certain annual festivals. In like manner, the Company sanction the withholding of those land taxes, and receive the accounts, and then pay over the receipts for the purpose of maintaining the daily sacrifices and the festivals, and also for the purpose of repairing therewith the temples and steeples which have decayed through age, and, on the petition of the people, for the re-establishment of devil-worship in places where it has long ceased to be performed. In consequence, the heathen are led to believe that the Christian Company are persuaded that these idols are truly gods. Moreover, although heathen kings in their days contributed large sums to their idol temples, the Christian Company, though they have governed these parts thus long, have released no Christian churches from payment of land tax, and have contributed not the smallest sum towards the erection of such churches as have been erected in this zillah, while they do assist in establishing idolatry.

II. There are in this zillah, under the authority of the Company, 43 talook cutcheries. In these the officers, peons and accountants amount to about 1,500 persons. Further, there are four collectors' and assistant collectors' cutcheries, and in these the office-bearers amount to 150 persons; four peshgar and police ameens' cutcheries, with 40 officers; three small debt moonsiffs' cutcheries, with 30 officers; one criminal cutchery, with 40 officers; one session court cutchery, with 30 officers; 20 gaol peons, about 70 saltpans' officers: total, about

Appendix P.

about 1,880 native office-bearers. With the exception of two Christian writers only, who have been brought down hither from the north, all these officers are heathen, a few of them being Mahommedans. In consequence of the Company appointing all these heathen, the inhabitants suffer much loss and injustice; viz.

1. Because these persons have not the fear of God, the people do not receive justice; not having the fear of God, and being ignorant also of a future life, and the account they have to give to God, they look only for the good things of this life, not caring for justice or injustice; they seek to perform their duties only according to their own pleasure, and care not whether the people receive justice or injustice.

2. These officers, giving way to covetousness, wilfully act contrary to justice. When some of the people have been beaten or wounded, or when thieves have assembled by night, burnt down houses and committed robberies, and when the injured persons make their complaint in the cutcheries, these officers not only ask how much money they are willing to give them for making the depositions of the witnesses appear to establish or overthrow the case, but also sometimes, when the defendants have given them more money than the others, the defendants, having wounded some one of their own party, are induced to make a false complaint to that effect, and to prove it, and in consequence those who have been really injured are themselves punished unjustly. Again, the complaints of both parties are sometimes reported to the Collector as unfounded. Further, the officers about the Collectors, being also covetous, when an appeal is made, although the Collector is willing to do justice, justice is nevertheless not obtained. Whoever gives the officers the most money, whether their cause is righteous or unrighteous, they alone reap the benefit. Without money, it is a rare thing to obtain justice.

3. In consequence of heathen alone holding office, all castes of the people are not allowed even to enter the cutchery to make their complaints. Inasmuch as Brahmins and other high caste men alone hold office, persons of their caste alone are permitted to enter the courts and formally to make their complaints, and to obtain assistance. Low caste people, such as shanars, pallars, pariars, sakkilliyars, semmars, washermen and barbers, &c., are prevented from entering. When these men receive injustice, they are obliged to take their complaints in their hands, and, standing at a distance, to call out, as men invoke God, saying, "Swamiy, Swamiy." If there happen to be a benevolently disposed person at hand, he will enter the cutchery and announce the man's cry. Sometimes their complaint will by this means be received shortly, otherwise the man has to wait a day or two before it is received. In the meantime, if the person complained of is a high caste man, he enters, gives the officers a bribe, and evades justice; he also then makes a false complaint, and puts himself into the position of the other. Moreover, when low caste witnesses are examined, whether in the case of wounding, beating, murder, theft, and such like, or in a case affecting lands, the witness is obliged to stand at a great distance, and if, in the course of examination, a high caste man comes near, the witness is obliged to run off to a greater distance; and thus while he says one thing, the others write another, and consequently justice fails. This state of things takes place every day in each of the thirteen talook cutcheries.

Moreover, in consequence of low caste people being refused admission into the cutcheries, the moneys they have to pay they are obliged to give into the hands of high caste people, and stand themselves outside; and thus, in consequence of the moneys not being paid, they frequently suffer the loss of it. This is a thing of not rare occurrence.

4. Documents are clandestinely substituted by these office-bearers. In this zillah many persons are without education. When such persons give evidence in the courts upon complaints, and at the close of their examination are required to subscribe their deposition, because they cannot write, they put their mark thereto; then when the office-bearers have received bribes, they tear this up, and substitute an unmeaning one for it, and after attaching to this a similar mark, they make their report accordingly. In consequence of this, also, there is a failure of justice.

5. These office-bearers perform their duties on Sundays: while the Lord in the fourth commandment commands that not even a beast shall work on the Sabbath, the Christian Company's servants hold cutchery. With the exception of the six cutcheries, namely, the Collector's, the three Assistants, the Criminal Court and the Session Court, all the other cutcheries carry on business, and it often happens that Christians are thus troubled on that day. In this way these men bring down the wrath of God upon this portion of Her gracious Majesty's dominions.

6. By the instrumentality of these office-bearers, obstacles are placed in the way of the diffusion of Christianity. The Merasdars of this zillah, and the inhabitants of their villages who have the possession of their lands and palmyra trees, pay yearly a certain revenue. The Revenue Board has issued an order, that the possessions of these people shall not be taken from them. When these villagers, either upon hearing the preaching of the reverend the missionaries or their catechists, or upon the teaching of some of their friends who are already Christians, are ready to embrace Christianity, the Merasdars threaten to take away their lands and palmyra trees from them, and thus compel them to fall away from Christianity. If they refuse to listen to them, they unjustly complain in the cutchery, that "these people, who had previously worked for hire, by having gone over to Christianity, seek to deprive us of our lands and trees." The Tasildars and their officers, being heathen, become full of false zeal, and report to the Collector that these people have recently taken possession of the lands and palmyras of the Merasdars, and thus they ruin the living of these people. If then the Christians appeal to the Collectors, since all but himself in his court are heathens, and he not thoroughly understanding the language of the country, sometimes justice and sometimes injustice follows. Thus several, who have recently joined

Christianity,

Christianity, losing their living, fall away from the faith. Some, immediately on joining Christianity the Merasdars beat and rob their houses; and when justice is not done them in the Talook Courts, if they appeal to the Session Court, even there, through the heathen office-bearers, justice fails.

If it were under the government of heathen kings that this injustice were shown to Christians, it would not be a wonder; but that under the government of Christians and their servants, Christians should suffer injustice, and that by their means the increase of Christianity is prevented, is to us a matter of astonishment. Besides the above-mentioned matters, if we were to mention the many forms of injustice in the Criminal and Judges Courts, we should greatly increase their bulk. If the cause of the above six grievances, namely, the 1,880 heathen office-bearers, had an admixture of even a fourth of Christians among them, these evils could not exist in this zillah.

III. In former times, the heathen rulers of this zillah established certain Anin Sattirams (*i. e.* travellers' houses, where they are provided gratuitously with food), but passing over the great mass of the poor, they provided only for those whom they considered their gods, viz., the Brahmins. The Company, also, in like manner provide only for the Brahmins and some few Soodras, and leave the really poor and sick without any provision. Thus the Company, by feeding the rich Brahmins, have made themselves partakers of the institutions of those heathen kings. In this zillah, the Brahmins amount to - 51,566

While the Soodras amount to - - - - - -	680,796
Shanars - - - - - - - - - -	176,640
Pallars - - - - - - - - - -	145,683
Pariars - - - - - - - - - -	71,961
Sakkilyars - - - - - - - - - -	18,378
Mahommedans - - - - - - - - -	76,345
Christians, including Roman Catholics - - - -	80,945

Making together, 1,302,345.

Thus the rich Brahmins alone, who only amount to 51,566, have charitable food provided for them, while the 1,250,738 of the other castes, with a very few exceptions, though they be ever so poor, have no provision whatever made for them.

Thus, since the Company assist idolatry, and by withholding all offices from Christians, give place to so much injustice in this zillah, and withhold the charities of Sattirams, &c., from all the low-caste people, and bestow them only on Brahmins, we have considered it our duty to acquaint your Right honourable Houses of Parliament with these things, and we beseech you to consult together, and to come to your conclusion on the subject. And therefore your petitioners, praying for these things, wish you many salaams.

South India,
Tinnevelly Zillah, in the Government of Madras,
March 18th, 1833.

THIRD REPORT

FROM THE

SELECT COMMITTEE OF THE HOUSE OF LORDS,

APPOINTED TO INQUIRE INTO

The Operation of the Act 3 & 4 Will. 4, c. 85, for the better Government of Her Majesty's INDIAN TERRITORIES; and to report their Observations thereon to The House; and to whom leave was given to report from time to time to The House; and to whom were referred several Petitions, Papers and Documents, relative to the subject-matter of the Inquiry;

TOGETHER WITH THE

MINUTES OF EVIDENCE,

APPENDIX AND INDEX THERETO.

Session 1852–3.

Ordered to be printed 18th August 1853.

NAMES OF THE LORDS PRESENT AT EACH SITTING OF THE COMMITTEE.

MINUTES OF EVIDENCE - - - - - - - - - p. 3

APPENDIX - - - - - - - - - - - p. 103

REPORT.

BY THE LORDS COMMITTEES appointed a SELECT COMMITTEE to inquire into the Operation of the Act 3 & 4 Will. 4, c. 85, for the better Government of Her Majesty's INDIAN TERRITORIES, and to report their Observations thereon to the House; and to whom leave was given to report from time to time to the House; and to whom were referred several Petitions, Papers and Documents relative to the subject-matter of the Inquiry :—

ORDERED TO REPORT,

THAT the Committee have again met and further considered the subject-matter referred to them, and have examined several Witnesses in relation to the Works of Local Improvement executed, in progress, and now under consideration; and have directed the MINUTES of EVIDENCE taken before them on this head, together with an APPENDIX and INDEX thereto, to be laid before your Lordships.

18th August 1853.

MINUTES OF EVIDENCE.

LIST OF WITNESSES.

LORDS PRESENT:

The Lord President.	Lord Mont Eagle.
Earl of Albemarle.	Lord Wharncliffe.
Lord Elphinstone.	Lord Monteagle of Brandon.

THE LORD PRESIDENT in the Chair.

EDWARD THORNTON, Esquire, is called in, and examined as follows:

7461. *Chairman.*] YOU stated on a former occasion that you were the head of the Statistical Department of the India House?
I did.

7462. The principal works which have been carried on by the Indian Government have been canals and roads?
Yes.

7463. With respect to the canals, can you give any convenient division of them for the consideration of the Committee?
They may be divided into two classes, in this way—one class deriving their supply of water from the rivers, which are fed by the melted snows of the Himalayas, and the other from the rivers, which are supplied by the rains of the south-western monsoon.

7464. Can you state what are the principal rivers which carry away the snows of the Himalayas?
The first would be the Ganges, then the Jumna, and the different branches of the Indus.

7465. Can you state what use has been made of those rivers for the purpose of irrigation by canals?
The whole of the visible stream of the Jumna has been diverted from the original channel at Badshahmahal, 155 miles above Delhi, into two canals, called the Eastern and Western Jumna Canals; and those flow parallel with the parent river, and join it again at Delhi, on opposite sides of the river.

7466. Lord *Mont Eagle.*] Do you mean that the whole bed of the Jumna is dried?
It would be very nearly dry at certain times, between Delhi and the point where the waters are diverted to the canals; you do not get a navigable stream again till you get down to Agra, 200 miles below Delhi.

7467. Is not it very lately that those canals have been opened?
No; one of the Jumna canals was made about the middle of the 14th century; but both were suffered to fall to decay about the middle of the last century, and were restored by Lord Hastings between 1823 and 1830.

7468. Earl of *Albemarle.*] Is it not the fact that they are only partially restored, and that they are not put into the same condition as they were in before?
There may have been branches running from the western canal further than they do now, but the two main branches are precisely what they were. It is rather a curious circumstance, that while the whole visible stream of the Jumna

E. Thornton, Esq.
12th July 1853.

is diverted from the parent channel, and although no river of any magnitude flows into it above Agra, still there is a navigable stream at the last-mentioned city; and it is supposed that there is an under-current which percolates through the shingle and sand-stone, and makes its appearance lower down; and, judging by analogy, in making the Ganges Canal, which is now in hand, it is conjectured that the navigation of the Ganges will not be damaged below Cawnpore.

7469. *Chairman.*] Will you proceed with your enumeration of the rivers?
In proceeding southwards we have the Nerbuddah and the Taptee. I think no system of irrigation has been made upon either of those rivers; in fact, I doubt whether the water would be of any value for that purpose; they both disembogue into the Gulf of Cambay, and the whole of that coast is under the influence of the south-west monsoon, so that there would be no occasion to appropriate water for the purposes of irrigation. But proceeding further southward, we come first to the Godavery, and then the Kistna and the Cauvery; those are all fed by the rains of the south-west monsoon.

7470. Would they be fit for irrigation?
Systems of irrigation do prevail upon the Godavery and upon the Cauvery; and the waters of the Kistna are now being appropriated in the same way.

7471. Is the supply of water as great from the south-west monsoon as it is from the snows of the Himalayas?
I should say not; the south-west monsoon sets in sometimes a little sooner or a little later; but with the commencement of warm weather you have always the melting of the snow, so that you secure a full supply. In some seasons, moreover, the rain of the south-west monsoon has been scanty, so that the supply may not only be irregular but insufficient.

7472. What canals are dependent upon those southern rivers?
I think the whole Deltas of the Cauvery, the Kistna and the Godavery are supplied with water from those rivers. I think Major Cotton estimated the Delta of the Godavery at 1,200,000 acres, or 1,875 square miles, and I suppose the Cauvery and the Kistna would be pretty much the same. I think you might estimate the three at about 5,000 square miles.

7473. What you have mentioned now are canals already completed?
They are not canals exactly; the waters of those rivers, instead of being allowed to run to waste into the sea, are secured by a dam thrown across the river, and there they are diverted to the purposes of irrigation right and left; there are some minor systems of irrigation in the Derah Dhoon and in Rohilcund.

7474. Are there any great works of irrigation now in progress?
There is the system of irrigation on the Kistna in progress; it has been completed on the Godavery, and the working establishment was transferred to the Kistna in the course of last year.

7475. How soon will the Ganges Canal be completed?
It is expected that the water will flow in the first section in the course of this year; I suppose it will take many more years before the whole is completed. The Ganges Canal, with its branches, will measure 700 or 800 miles.

7476. What is the estimated cost of the work when it is completed?
A million and a half sterling.

7477. Lord *Mont Eagle.*] Will it be available for navigation as well as for irrigation?
When there is water enough; but supposing the whole of the water is required for irrigation, it will be employed for that purpose.

7478. But at times it will be available for navigation?
Yes.

7479. Will it be navigable on payment of tolls?
Looking at the Jumna Canals, I think there is not a great deal of navigation upon them; but I am not able to answer the question whether tolls are paid.

7480. Lord *Elphinstone.*] Can you give the Committee any information as to any new works of irrigation which have been commenced in the Punjaub?

The

The Home authorities sanctioned an outlay of half a million of money for the Ravee Canal, which is in one of the Doabs of the Punjaub. I think this canal will run about 400 miles; it has only been commenced within the last two years.

7481. You are aware that there is already a channel which conveys the water of the Ravee into the neighbourhood of Umritsir?

It is proposed that Umritsir and Lahore shall both be supplied by branches from this canal, although the main channel does not pass by those cities. There are the remains of an old canal running almost parallel with this. I think the head of the proposed canal is only a few miles above Umritsir; it is to run 300 or 400 miles parallel with the river.

7482. I believe the new channel is to irrigate a part of the Doab lower down than the part which is irrigated by the existing channel?

Both Umritsir and Lahore are to be supplied from this; and if that be so, I should think the old channel would be superseded; I know that there are branches from it to both those places.

7483. Do you know the extent of the land that is to be brought into cultivation by means of this new channel in the Punjaub?

It will depend altogether upon the issue of water; it has been ascertained by engineer officers that a cubic foot per second is sufficient for the annual irrigation of 218 acres, or about one-third of a square mile; so that, if the supply of water be ascertained, it is easy to calculate what extent of area can be irrigated. The discharge of the Ravee at the source of the canal is 3,000 cubic feet per second; if the whole of that were taken away for the purposes of irrigation, it would be sufficient for an extent of country about equal to that irrigated by the Jumna.

7484. A large tract of country will be brought under cultivation by this means?

Yes. I see that, taking the whole of these rivers, the Ganges, the Jumna, the Ravee, the Chenaub, the Sutlej and the Jhelum, you get a discharge of 24,000 cubic feet per second; but it appears that the people of the villages do not irrigate the whole of the surface, they only irrigate about one-third; a cubic foot per second will, therefore, irrigate about a square mile; consequently, 24,000 cubic feet per second are sufficient for the annual irrigation of 24,000 square miles, actually irrigating one-third of it, the other two-thirds not being required to be irrigated.

7485. *Chairman.*] Do you know of any works of this description in any other of the non-regulation provinces?

There is a small river running through the Derah Dhoon, and there are two or three in Sirhinde, the Soorsutty and the Cuggur; I think there are systems of irrigation upon those.

7486. Can you state what are the principal communications by roads in our Indian possessions?

We made a return upon that subject to your Lordships' House some little time ago. I think the principal trunk-roads might be considered the road from Calcutta to Delhi, and onward to Peshawur; the road from Bombay to Agra, and the road from Bombay to Calcutta *viâ* Nagpore. I think that within the last two or three years, a system of trunk-roads has been laid down in Madras, and some progress has been made; but they have not been completed, except in one or two instances. The road from Calcutta to Peshawur would be 1,400 or 1,500 miles in length.

7487. Lord *Elphinstone.*] Besides those which you have named, are there not several roads which deserve the name of trunk-roads, although they are not of any great length; for instance, the road from Bombay to Poonah, and from Madras to Arcot; are not those trunk-roads, although they are not of equal extent with those you have mentioned?

Yes; that from Bombay to Poonah will come into the one I have mentioned from Calcutta to Bombay *viâ* Nagpore: it will go up to Ahmednuggur, and from thence to Poonah, and onward to Bombay. Then there is also a road from Juggernaut to Midnapore, which I have understood is as good a road as any in India.

E. Thornton, Esq.

12th July 1853.

7488. From Masulipatam to Hyderabad?

Yes; an excellent one from Masulipatam to Hyderabad, constructed at the expense of the British Government; and there is another, the great Deccan road from Mirzapore through Jubbulpore to Nagpore.

7489. *Chairman.*] Are the trunk-roads generally in good repair?

The road from Calcutta to Delhi is a macadamized road; and I believe, with the exception of the Soan and the Jumna, it is also a bridge road. There are no bridges upon this road over the Soan and the Jumna. I see that a carriage dawk, leaving Calcutta for Lahore, arrives at Lahore on the sixth day, including all the delays from unbridged rivers. That will give a speed of $8\frac{1}{2}$ miles an hour throughout the six days. I recollect that, during the Affghan campaign, the Governor-general's express was 10 days in coming from Lahore to Calcutta, a distance now performed in less than six days.

7490. Earl of *Albemarle.*] Are the roads available for commercial purposes?

The Delhi road certainly is: it is not open continuously to Peshawur; but the intermediate portions of it are. It is only lately that Lord Dalhousie has carried out the latter part to Peshawur.

7491. Do you recollect when that road was first commenced?

There was formerly an old road running through Bancoorah, and I think the new road must have been commenced about the year 1833.

7492. *Chairman.*] Can you give any account to the Committee of the annual expenditure upon those roads?

Taking the last 15 years, and including only roads, canals, embankments and bridges, you would have an average annual expenditure of 240,000 *l.* for the first 10 years, and 400,000 *l.* for the last five years. I see that, altogether, the whole sum expended in the 15 years was 4,49,59,921 rupees, which would give an average of 300,000 *l.* for the 15 years; but if you take the first five years, it gives an average of 240,000 *l.*; for the second five years also, an average of 240,000 *l.*; and for the third five years, an average of 400,000 *l.*

7493. Earl of *Albemarle.*] The last sum includes an estimate for two years?

It does; but there is no doubt that the estimate will be rather exceeded, because we have the Ganges Canal, for which 1,500,000 *l.* has been authorized; and the Punjaub Canal, for which 500,000 *l.* has been authorized. So that there is no doubt that, in the last two years, even that average will be considerably exceeded.

7494. What is included in the amount of expenditure which you have given?

It includes the heads of roads, canals, embankments and bridges, excluding all civil and military buildings, and excluding also the surplus ferry funds, which are appropriated to the improvement of public roads. The public ferries are in the hands of the Government, and the surplus funds arising from them by the receipts exceeding the expenditure are carried to the general fund, and re-distributed for local improvements throughout the Provinces.

7495. I presume that the cost of making roads varies very much in different districts?

In the grand trunk-road from Calcutta the cost of construction up to Delhi averaged about 1,000 *l.* a mile, and it costs about 50,000 *l.* a year to keep the whole distance in repair.

7496. Earl of *Albemarle.*] There is a vast difference between that and the Bombay Road?

Yes; that cost about 330 *l.* a mile; but the Bombay Road is what is called a fair-weather road, not a macadamized road: there are some portions of the road which cost nearly as much as a railway.

7497. But does it not yield an enormous profit by means of the tolls?

There is a toll on the Thull Ghaut; but I should doubt whether it is remunerative, because in addition to the road, the Government have to provide a supply of water; they have had to excavate large tanks, otherwise the cattle would perish; and it is very difficult to get a sufficient supply of water on the top of those ghauts. The toll of the Bhore Ghaut on the Bombay and Poonah Road has answered extremely well.

7498. Lord *Elphinstone.*] What is the reason that tolls have not been more generally introduced upon the roads in India?

There was no law authorizing the levy of tolls till one was passed about the beginning of the year 1852, empowering the Government to levy tolls upon all roads which were thenceforward constructed or repaired; but there was no power of doing that without the consent of the Home authorities.

7499. *Chairman.*] Are there tolls upon the bridges?

I am not aware of any road tolls in India, except upon three or four of the mountain-passes, called ghauts, which I have already mentioned.

7500. Do the Government erect stations for travellers along the great lines of road?

Yes, they do, along the whole line of the trunk-road; generally speaking, they are called travellers' bungalows.

7501. Lord *Elphinstone.*] But those are only available for European travellers, and, generally speaking, they do not erect caravanserahs or choultries for native travellers?

Those are to be found in the different towns.

7502. You mentioned that tanks were occasionally made on the side of the road; has that system of providing tanks been generally followed?

I think it is only on the mountain-passes on the ghauts. It was of no use to make a road over the Thull Ghaut, without at the same time providing an ample supply of water for the cattle. I think that no less than nine large tanks were made, at great expense; it was even then found that there was great deficiency of water for the ghaut.

7503. Generally speaking, does not the charity of the natives provide tanks, and frequently choultries also?

Yes; you scarcely ever see a copy of the Agra Gazette, which is published once a fortnight, without a sheet full of the details of public works which have been established by private individuals, stating their nature, and they are generally tanks and wells.

7504. Do you know whether the road which was sanctioned some time ago, from Madras to Poonany on the western coast, has been finished?

It is now open.

7505. That must be a distance of 500 miles?

Across the peninsula it must be about 400 or 500 miles; I believe it is proposed now to make a railway from Madras to Poonany.

7506. *Chairman.*] With respect to railways, what length is there completed in the Bombay territory?

From Bombay to Tannah, and on to Calian, a little higher up, a distance of about 30 miles.

7507. Is there any other railway in any other part of India?

There is the Bengal railway; the first section must be nearly completed; that will be opened in the course of this year, running towards Burdwan and Raneegunje.

7508. What distance will that be?

Probably 120 miles.

7509. Lord *Mont Eagle.*] Are those both being constructed by private companies?

Yes, with a guarantee in both instances.

7510. What has been the amount for which the guarantee is given?

In Bengal, two millions; the interest on the first million is limited to 5 per cent., on the second to $4\frac{1}{2}$ per cent. In Bombay, one million at 5 per cent., and in Madras, 500,000*l.* at $4\frac{1}{2}$ per cent.

7511. Lord *Wharncliffe.*] Is the amount of the guarantee for the second million of the Bengal line determined?

Yes; it is $4\frac{1}{2}$ per cent. for the extension up to Raj Mahal.

 7512. Lord

E. Thornton, Esq.

12th July 1853.

7512. Lord *Mont Eagle.*] Does the guarantee continue for ever?
I believe if the railway does not answer when it is completed, the shareholders are to have the option of transferring it to the Government at prime cost.

7513. Lord *Elphinstone.*] Do not you think that the East India Company would have made a better bargain to have made the railways themselves, rather than to guarantee the shareholders against loss, giving them the chance of whatever profit there may be?
I believe it is a point settled, that European Governments never work so advantageously as private companies.

7514. Lord *Wharncliffe.*] I believe the profits of the lines will be applied to the liquidation of the payments to be made on the part of the Government on account of the guarantee?
Yes; half the profits above five per cent. or other guaranteed interest.

7515. *Chairman.*] Can you state what lines are now projected?
I understand that Lord Dalhousie has recommended the immediate establishment of a line from Calcutta to Peshawur, and he has proposed to connect that with a line either from Bombay to Agra, or from Bombay through the valley of Berar to Allahabad; another line will traverse the country from Madras to Poonany, and one from Madras to Bellary and Bombay.

7516. Have any lines of electric telegraph been laid down in India?
A short one has been laid down from Calcutta to the port of Kedjeree; but it is proposed now to lay down a telegraphic system connecting the three Presidencies of Bengal, Madras and Bombay with each other, and with Agra, Lahore and Simla.

7517. Can you state at what expense this line of telegraphic communication is to be established?
At 35 *l.* per mile, or a total of 110,250 *l.* for a distance of 3,150 miles.

7518. Lord *Mont Eagle.*] Is it in the hands of the Government?
It is.

7519. *Chairman.*] Have there been any great works connected with navigation in deepening channels?
There has been one between the island of Ceylon and the continent of India, called "The Paumbum Passage," which has been deepened within the last few years at considerable expense; I think the survey of the Gulf of Manaar, which preceded the deepening of the passage, cost 25,000 *l.*, and the deepening of the passage cost about 20,000 *l.* more.

7520. Lord *Elphinstone.*] But was not the survey carried on simultaneously, and was it not necessary whether this passage was made or not?
But the survey may be considered a public work as well as the passage.

7521. Lord *Wharncliffe.*] Have the results of the deepening of that passage been very remarkable?
Very much so; I have heard that large ships now go through the Paumbum Passage, instead of going round the island as they did before.

7522. Lord *Elphinstone.*] How many feet of water are there now?
I will supply that. I know that ships of considerable tonnage go through now.

7523. *Chairman.*] What is the state of the trignometrical survey?
I think an arc of the meridian has been measured from Cape Comorin to the base of the Himalayas, about 1,100 miles; and that forms a starting point for triangulating the whole country, and for delineating its geography and topography. The great atlas of India is upon a scale of four miles to an inch, and it proceeds *pari passu* with the survey. I have seen as many as 70 or 80 sheets of it already.

7524. Lord *Elphinstone.*] What progress has it made?
It was stated in the last report, dated a year and a half ago, that the whole survey might be completed in about seven years; perhaps in five years from this time. It has cost, up to this time, about 400,000 *l.*

7525. What

7525. What number of officers are employed upon the survey?
I think there are several sections. The only particulars I have are these: that the area triangulated to the end of 1848, amounted to 477,044 square miles, at a cost of 341,278 *l.*, or about 14 *s.* per square mile.

7526. Lord *Wharncliffe.*] Can you tell us what the present position of affairs is with respect to works upon the Kistna and the Godavery?
The works upon the Godavery were all completed in the middle of last year, and then the whole working establishment was transferred from the Godavery to the Kistna; so that the works upon the Kistna have only recently commenced.

7527. Do you know what number of acres is included in the irrigation of those rivers?
I think that, as a rough estimate, the delta of the Godavery is taken at 1,200,000 acres; and it would appear that the deltas of the other two rivers are nearly similar in extent.

7528. Have you any information yet as to the results, with reference to the revenue, from the works upon the Godavery?
Only that I know that the revenue has been increasing for several years.

7529. Was there a partial irrigation before those works were completed?
Yes.

7530. Can you state the progress of the revenue in that district, from the time at which the first portion of the Godavery works were executed?
That could be furnished very easily.

7531. *Chairman.*] How long did it take to complete the survey of the North-Western Provinces?
The survey of the North-Western Provinces must have been commenced some years ago; it was subsequently suspended. When again resumed, it occupied about five years, from about 1837 to 1842.

7532. At what cost?
The survey and the settlement together cost about half a million of money; the survey cost 235,000 *l.*, and the settlement 337,000 *l.* Every field has been measured, and the interests of the landlord and the tenant have been ascertained and recorded.

7533. What has been done in the way of experiments as to the growth of cotton in India by the Company itself?
The Committee are probably aware that some American planters were sent to India for the purpose of introducing the American species of cotton; but, looking at the results, it does not appear that there has been any increase in the export of cotton from India. If the Committee will allow me, I will read the figures of three or four years. It appears that in the year 1844–45, the export of cotton from India was 164,000,000 lbs. Then, if we go to the year 1846–47, it was 169,000,000 lbs. In the next year, 1847–48, it was 160,000,000 lbs. In the next year, 1848–49, it was 168,000,000 lbs. And in the year 1849–50, it was 165,000,000 lbs. So that comparing those different years, it appears that there has been no increase in the export of cotton. It is very curious that, although the demand from England varies 50 per cent. from year to year, still it does not alter the total export. The total export remains precisely the same; the only difference is, that in one year a larger portion goes to China, and in another year a larger portion comes to this country.

7534. Have the proportions exported to England and to China varied much?
They have varied 50, 60 or 70 per cent.

7535. Has not the export been greater to China lately than to England?
Taking the years which I have mentioned, beginning with 1844–45, it was 58,000,000 lbs. to England, and 106,000,000 lbs. to the rest of the world. The next year it was 43,000,000 lbs. to England, and 83,000,000 lbs. to other parts. The next year, 91,000,000 lbs. to England, and 78,000,000 lbs. to other parts. The next year it was 94,000,000 lbs. to England, and 66,000,000 lbs. to other parts. The next year it was 67,000,000 lbs. to England, and 101,000,000 lbs. to other parts. And the next year, in 1849–50, it was 110,000,000 lbs. to England,

E. Thornton, Esq.
12th July 1853.

and 54,000,000 lbs. to other parts. So that, although the relative proportions alter considerably from year to year, still the total remains the same: the inference is, I think, that India can export no more at a profit; that is to say, you get all the cotton from the maritime districts, but you cannot get it from the interior with the present means of communication with the ports.

7536. Lord *Wharncliffe.*] Do you suppose that that argument would be equally applicable if the communication with the cotton districts were improved?

There is no doubt about it. Take the article of salt: salt is sold at Calcutta at 1 *d.* a pound, and at Benares, 400 miles from Calcutta, in a very adulterated state, it is sold at 2*d.* a pound. Now, I believe the Bombay Railway Company propose to carry at the rate of $2\frac{3}{4}d.$ per ton per mile, which will allow a pound of cotton to come from Oomrawuttee, 400 miles from Bombay, for a halfpenny; while it appears that you cannot convey salt a distance of 400 miles at less than a penny.

7537. *Chairman.*] Have any experiments been made with respect to tea?

The original growth of tea in Assam was under the patronage of the Government, but they subsequently transferred all their interest to a Company; and the same in Kumaon, higher up in the hills, the Government has made the tea plantations, but a Company are now proposing to purchase the interest of the Government.

7538. Lord *Elphinstone.*] Have you heard anything of a survey of the navigation of the Godavery River?

I have seen notices on the Court's correspondence.

7539. On that survey being made, was it not found to be navigable several hundred miles into the heart of the Deccan?

I believe it was only a very partial survey. The Madras Government proposed to the Home authorities that a survey should be undertaken, but I do not think that a professional survey was ever made.

7540. If that river is navigable into the heart of the Deccan, surely that would bring down a great quantity of cotton?

No doubt about it; I suppose, however, that the Godavery, but for the dam that is put across it, would be dry in the months of March, April and the beginning of May.

7541. If it was navigable for three months in the year, all the cotton could come down?

Yes; it would be navigable certainly during the rains.

7542. *Chairman.*] Have there been any unsuccessful experiments, with a view to improvements, which have cost considerable sums of money to the Government?

There was an attempt to improve the breed of Deccan sheep, which ended in failure; it cost, I think, about a lac of rupees. There was also an attempt to introduce the culture of silk in Bombay, at Poonah; but that failed; the trees decayed, and the silk-worms all perished. There was also an attempt to improve the breed of Deccan horses; there was a large stud at Alligaum, which cost, during the period of the experiment, about 100,000 *l.*; but that ended in failure. All those experiments have been tried within the last 12 or 14 years.

7543. Lord *Elphinstone.*] The Company have several studs still, have they not?

They have cattle studs, and for horses too; they have one in Mysore. Although the attempt to improve the Deccan breed failed, I think the experiment is still going on in Kattywar.

7544. Do you know the proportion of stud-bred horses to purchased horses in the cavalry?

I am not aware of that; I think the army purchases must be larger than the number bred by the Government, because they are purchased not only in India, but in the Persian Gulf, the Cape of Good Hope, Australia and other places.

7545. But that is for the Madras and Bombay Armies; are not the Bengal Cavalry chiefly mounted upon stud-bred horses?

I am not aware.

7546. Lord *Wharncliffe.*] In the published accounts of the Indian Government, the expenditure on public works in India appears to be comprised in an item which is stated as "Buildings, roads and other public works, exclusive of repairs," amounting, in the year 1849-50, to four lacs and above 800,000 rupees; can you say what that item is intended to comprise?

It must include civil buildings, and it must include all original outlay upon tanks, wells, embankments, canals, and so on.

7547. The object of the question is to ascertain what proportion of that item would belong to civil buildings and to military buildings, and what proportion of such expenditure can be correctly styled expenditure upon public works; namely, upon roads, irrigation, canals, navigation, and matters of that kind?

I have already read to the Committee the results of a "Statement, showing the amount expended on public works in India, comprising roads, bridges, embankments, canals, tanks and wells in each of the following years, being the latest period up to which the accounts have been received."

7548. The total amount of those items, in the account for 1849-50, would be 26 lacs and 29,000 rupees, that would be about 262,000 *l.*?

For 1848-49, inclusive of repairs of roads, but exclusive of salaries, it is 310,181 *l.*

7549. I see this division of accounts is intituled, "General Civil Charges," and therefore no military charges are included in it?

This account, which I have read, is exclusive of civil buildings.

7550. Will it be possible for you to furnish an explanation of this head?

This account which I have read is taken from the general books; we have gone over the whole of the books item by item, and made up this account from them; it is the amount spent on public works in India, comprising roads, bridges, embankments, canals, tanks and wells, and nothing else.

7551. This account, then, may be understood as representing the real expenditure upon works of public utility?

Yes; exclusively of the Surplus Ferry Funds, which are re-distributed among the different Provinces.

7552. Earl of *Albemarle.*] What proportion of the tolls levied at ferries is applied to the ferries themselves, and how much is transferred from that to other purposes of utility?

I will take, for instance, Cawnpore, in the North-Western Provinces. There are 31 Regulation Provinces in the North-West, Cawnpore is one of them; and I see that in one year Cawnpore gets 3,000 *l.* out of the Surplus Ferry Fund. I do not know whether Cawnpore would be a fair criterion of the whole; but if so, the Surplus Ferry Fund would be about 100,000 *l.* per annum in the North-Western Provinces.

7553. Lord *Wharncliffe.*] I observe that in 1849–50, the amount of expenditure, in this account, was 310,000 *l.*; and in 1850-51, 334,000 *l.*; and in 1851-52, the estimate amounted to 693,529 *l.*, showing a great increase?

In that year, a large portion of the sum which has been authorized for the Ganges Canal to the amount of 1,500,000 *l.* would be expended; and in the Punjaub 500,000 *l.* has been authorized for the construction of the Ravee Canal; and a large sum for the irrigation works on the Kistna, in the Madras Presidency, and so on; but that estimate is not ours, it is the estimate of the Indian Government.

7554. What do you understand to be the cause of the great increase?

The large sums paid by the Indian Government, during the last two years, for the Ganges Canal, the Punjaub Canal, for the works on the Kistna, and others of like character.

7555. Are you aware that suggestions have been made to the Government several times to establish a system of tolls for the purpose of aiding the construction of roads?

Yes; an Act of the Government of India was passed, either late in the year 1851 or in the beginning of 1852, empowering the Government to levy tolls upon all roads thenceforward made or repaired at the charge of the Government.

E. Thornton, Esq.

12th July 1853.

7556. Are you aware whether any such tolls have been levied yet?

I think, except upon the mountain passes, the Act has not yet come into operation; but it may come into operation at any time; and whenever there is a necessity for a road, the presumption is that it will now be made.

7557. But there has been no experience at present, showing the result of the system of levying tolls?

No; the Act did not pass till the beginning of 1852, so that there has not been time. There has been no toll levied, except upon the Thull and Bhore Ghauts, and some other mountain passes.

7558. Is not it pretty well ascertained that the transit duties, which were abolished a short time ago, were originally established under the native dominion as a form of tolls, which were levied especially for the purpose of maintaining the communications?

I think not. If you look into the institutes of Menu, there you see provision made for transit duties, having reference to the length of the journey, the expense of food, the charges of securing the goods and the profits of trade, as the conditions that are to be observed, and which are to be considered by the sovereign, so that he and the merchant may receive just compensation; therefore, I think it is clear that from the first institution of Hindooism it must have been a transit duty and not a toll duty, seeing that it was to vary with the value of the commodities, and so on.

7559. *Chairman.*] Have you any other information to give to the Committee upon the subjects which have been referred to?

It might be mentioned generally that the best macadamized roads that could be constructed would not make India an exporting country, from the circumstance that the cost of transporting commodities 500 miles is so great that it will never pay unless the commodity is a very valuable one. If you were to make the best roads in the world from Agra to Bombay, you could not make India an exporting country without railways; you would still get only the produce of the maritime provinces.

7560. Lord *Elphinstone.*] Does not the opium come by the present roads?

Opium is a most valuable article: but we are speaking of cotton, sugar and other raw produce. We may judge of it from the analogy of salt, the price of which at Benares is more than double the price at Calcutta, notwithstanding all the adulteration that takes place.

7561. Although there is the finest water communication from Calcutta to Benares?

Yes; although there is a great trunk-road, and the river also; but Calcutta salt is sold at Benares at 2*d.* a pound, while it is bought at Calcutta at 1*d.*; and it is, moreover, bought at Calcutta pure, and sold at Benares in a very adulterated state.

7562. Lord *Monteagle* of Brandon.] Is there any trade carried on along the Ganges that will enable you to calculate what the freight would be?

There are returns which have been made both to your Lordships' House and to the House of Commons, showing the exports and imports of the country; but the produce coming down the Valley of the Ganges would pay well for any railway.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Two o'clock.

Die Jovis, 14° *Julii* 1853.

LORDS PRESENT:

The Lord President.	Lord Mont Eagle.
Earl of Albemarle.	Lord Colchester.
Earl of Harrowby.	Lord Wharncliffe.
Earl of Ellenborough.	Lord Wynford.
Lord Elphinstone.	Lord Stanley of Alderley.

THE LORD PRESIDENT in the Chair.

Evidence on the Government of Indian Territories.

Lieut.-Col. J. P. Kennedy.

14th July 1853.

LIEUTENANT-COLONEL JOHN PITT KENNEDY is called in, and examined as follows:

7563. *Chairman.*] WILL you state what appointments you have held in connexion with India?

I went out, in the year 1849, as Military Secretary to Sir Charles Napier, and held that appointment till he came home; towards the end of his residence there, I was appointed Consulting Engineer to the Government of India in the Railway Department; and previously to that appointment I had carried on some public works in the Himalaya Mountains. I was also appointed head of a commission to report upon the system of public works in Bengal, and the improvements of which that system was susceptible.

7564. What was the nature of those public works in the Himalaya Mountains?

It was the construction of a new road intended to do away with a very oppressive practice that existed in the Hill States, of tribute-labour for the conveyance of baggage, in consequence of the imperfection of the road which existed between the plains and our sanataria in the hills. It was likewise intended to carry this work on as a commercial road between the plains and the Thibet territory.

7565. What system did you adopt in making that road?

The reason of my taking charge of the road was, that the works which I had seen constructed in the Hills were of a most imperfect character, as well as very costly in their construction. I had had a good deal of intercourse with Mr. Edwards, who was the chief British Magistrate in the protected Hill States, and he had frequently explained to me the extreme inconveniences that arose from the want of roads through those hills. There was, in fact, no good road through any part of the territory; and after a good deal of consideration, he became convinced, from what I said to him, that it would be possible to construct such works at a moderate rate of cost. I volunteered, with Sir Charles Napier's consent, to superintend the work in question myself during the intervals of my duty as Military Secretary. Sir Charles Napier likewise permitted the officers of his staff to assist me in their leisure hours, and I had three other officers besides, who were paid. Sir Charles Napier gave me a company of native Sappers to assist me. One of the chief difficulties in carrying on works in India, is the want of an efficient supply of subordinate overseers, and my first operation was to train those Sappers as overseers, not to employ them as individual labourers, which is generally the use they are put to both in England and in India. I had but a very short time for the work; it was in June when this measure was decided upon, and Sir Charles Napier was to leave India in November;

Lieut.-Col. J. P. Kennedy.

14th July 1853.

ber; it was necessary to give up nearly a month to the training of the Sappers, by putting them actually to do the work in the first instance, and making them take tours of direction, and thus accustoming them to the duty of overseers. After they had done that, they were placed as overseers and assistant overseers, subordinate to the officers, who had charge of districts. I had already an accurate knowledge of the country for about 50 miles on either side of Simla, therefore it cost me only a few days to lay out the line to that extent; I had only time for a very general inspection of the country beyond that, and obtained reports from officers of the districts with respect to the details of the remaining portion of the line as far as Chini, nearly 200 miles. The road was to be ultimately carried on as far as Ladak, at the northern side of the great range, and in the Thibet territory. We had thus laid the foundation for carrying on the works, and marked a considerable portion of the line very accurately on the ground. I had previously framed rules, and laid down principles for the guidance of the officers engaged in carrying on the work. Those rules and principles were afterwards printed by Mr. Thomason, Lieutenant-governor of the North-West Provinces, and I believe circulated by him for general adoption of the engineers throughout his provinces; this is a copy of those rules [*producing the same.—The same are delivered in: vide* Appendix A]. What showed me more especially the importance of thus seeking to give an example of the economical and scientific construction of roads in India was the fact of a road which was being constructed within a very short distance of Simla, to communicate between Kalka, the nearest station on the plain, and the new cantonment of Dugshai; it was a distance of about 19 miles; it had then occupied about four years in construction; it was not nearly opened, and I think the cost was somewhere about 1,040 *l.* a mile. I was certain, from my own experience, that similar roads ought to be made in those hills for a seventh or an eighth of that price: about 130 *l.* a mile ought to have sufficed. We commenced our absolute work about the beginning of July; I came away in the November following, and then the Commander-in-Chief, with his staff, travelled from Simla to Dugshai by the new road about 40 miles, it being opened then for animals, not for carriages; not effectually opened, because Sir Charles Napier's party was the first that passed over it. It was then likewise nearly passable as a bridle road for about 40 miles to the northward of Simla; and I have little doubt that I should have succeeded in opening in like manner, as a mule track, the whole line to Chini within that time, but for the unavoidable delay in furnishing us with the proper tools for dealing with rocks, and but for the failure of the Rajas in the different states in furnishing the proportion of workmen that I was led to expect; we had, in fact, only about one-half of the number of labourers estimated, and they were working for a considerable portion of the time with very little beyond their own miserable tools, so that half the number of workmen employed half the time without proper tools would reduce the effective effort to between one-third and one-fourth of what I had estimated, and certainly more than one-third of the whole mule track between Dugshai and Chini had been executed. I enter into this question because my successor, Lieutenant Briggs, in his report, states that it was impossible my anticipation in this respect could have been verified. It most assuredly would have been verified if the men and tools calculated upon had been furnished in time. Lieutenant Briggs is an officer of very great intelligence and energy, and it is much to be regretted that his constant exposure to the sun, in the zealous discharge of his duties, has forced him to come to England in search of health. His report, in general, is most satisfactory. The consideration of the enormous extent of roads which it is essential to make to promote the prosperity of India has convinced me that it is impossible for the Government to do what is required at the high rate which such works usually cost under the Military Board. There are not, probably, at present in India above 3,000 or 4,000 miles of good metalled roads, whilst the estimated amount of roads in England has been taken at about 120,000 miles. If we assume that even one-tenth of that proportional extent would be required in India, it would still give a demand upon the Government of India for the construction of about 200,000 miles. Irrigation canals are required to probably as great an extent as roads; and one-tenth of the ratio of English railroads applied to India would probably amount to 13,000 miles. It is clear that, with such vast and important requirements, the utmost economy, both of time and of money, are essential to give any hope of their timely execution.

Appendix A.

7566. Lord *Elphinstone.*] Do you know whether the extent of roads in France or in Germany, which are the most advanced and civilized parts of the Continent of Europe, bears anything like the proportion to the extent of roads in Great Britain?

I could scarcely venture an opinion on that point, but assuming such to be the case, it affords one reason why there is such an extraordinary difference in the wealth and civilization of those countries compared with England, that they are deficient to a very great degree in what is essential to their prosperity. I do not think that one-tenth of the roads of England is nearly enough for any country that is to be put into a prosperous position.

7567. Earl of *Albemarle.*] You are aware that there is very imperfect means of communication between the north and the south of France?

I believe that such is the case.

7568. And that there may be a famine existing on one side of the country while there is great plenty on the other, from the want of proper communications in France?

I am sure that there can be no more distinct cause for such derangements in any country than the want of communications; and like effects are supposed to proceed from a like cause in India.

7569. Lord *Elphinstone.*] But still you would not compare the civilization and prosperity of India with those of France or Germany?

No; and there again this fresh distinction would tend to confirm the view, for India has not a tenth or a hundredth part of the advantages in the way of communication that France or Germany has; whilst England, with ten-fold prosperity and civilization, has likewise ten-fold facilities for the production of wealth, amongst which intercommunication is the greatest.

7570. *Chairman.*] Have not the roads been rather the result than the cause of that prosperity?

I do not think prosperity could exist without them.

7571. Lord *Wharncliffe.*] Does not the cheapness of both land and labour in India form a case peculiarly favourable to the construction of these works?

Exceedingly favourable.

7572. *Chairman.*] Will you be good enough to state when your attention was first called to the best mode of economizing expenditure in the construction of roads?

My attention was first called to it when I was a very young officer of engineers, having been invited by Sir Charles Napier on his appointment, about the year 1822, as Resident (Lieutenant-governor) of the island of Cephalonia, to go out as his secretary, and also in charge of the Public Works Department of that island. The revenue of the island, I think, was about 30,000 *l.* or 32,000 *l.* a year; there was everything deficient in it; I do not think there were more than three miles of carriage road in the island; there were none of the public buildings which were essential; the harbour was deficient in every way; there were no lighthouses or quays; in short, there was nothing that indicated the pre-existence of a civilized Government, either in the physical condition of the island, or in its administrative departments; therefore, when we commenced our works there, it was essential either to leave undone a great proportion of what was necessary, or to find out the most economical principle that could be imagined upon which to effect them. We had got possession of the island, I think, in the year 1815; up to the time when Sir Charles Napier went there, there had been nothing done; within seven or eight years he constructed roads through every part of the island, and his principle was taken up by the other islands. He likewise established a quay along the whole extent of the town in the harbour at Argostoli; he had a lighthouse in the form of a Grecian Doric column, about 90 feet high, built at the entrance to the exterior harbour, at a cost of 753 *l.*; and a second lighthouse was placed at the entrance to the inner harbour; its form was that of a circular Grecian Doric temple, with 20 columns; the cost of this was 117 *l.* These are designs of those, and other buildings that he erected in Cephalonia [*producing drawings of the same*].

Lieut.-Col. J. P. Kennedy.

14th July 1853.

7573. Lord *Elphinstone.*] What were the materials of which those buildings were constructed?

Something like Bath stone. In Cephalonia, the greatest economy was essential in the construction of these works, because the funds of the island were very limited; about one half of them being devoted to the cost of the local Government and to the various public works, the other half going to the general Government at Corfu; so that there was only about 15,000 *l.* a year for all the expenses of the Government and the public works.

7574. Lord *Colchester.*] Were not many of those roads carried over a mountainous country?

Yes; there were several ranges of mountains. The highest pass over which a road was carried was about 3,000 feet high, and the highest mountain summit about 5,000 feet. There were many other works constructed, including a large prison built on the panoptic principle, at a cost of about 8,000 *l.* I trust I may be excused in mentioning these things; but as all that I have to say, with reference to what should be done in India, depends upon economy in the construction of public works and roads, I thought it essential that I should show something more than bare theory upon which to base my opinions.

7575. *Chairman.*] Will you state in what way you were able to economise in Cephalonia, and how you were able to apply the same principles to India?

The first thing I did was to get a number of privates and non-commissioned officers of the regiment serving in Cephalonia, and to train them; when trained, they were placed as overseers, with distinct written rules for their guidance, in charge of parties of labourers in different parts of the island. I was very accurate in laying out the work myself for the various parties; we had about 17 or 18 different parties detached. The rules, of which I have given in a copy, in reference to the works in the Himalaya Mountains, were based upon those I had long since established in Cephalonia, with such differences in detail as local circumstances required. In Cephalonia there was a road fund established, to cover the expense of overseers, artificers, tools, &c., by the payments of rich people; and the labouring class gave their personal attendance at the work about one day in every month; by these means, and by economising and regulating the work, we got a very good result from the labour we employed. We were very particular in the mode of mustering the men, and placing them at proper intervals to work, so that the precise labour of each man during the day could be accurately ascertained before his dismissal in the evening.

7576. Were those the principles which you adopted in carrying on the construction of this road in India?

Yes; the chief difference was, that in India the company of Native Sappers, placed under my orders, were trained and employed as overseers. In Cephalonia, we had no Sappers, and we used private soldiers of the British regiment serving in the island.

7577. Was the economy which you effected entirely owing to this new mode of arranging the labour, or did it proceed partly from any difference in the mode of constructing the work?

It was from both; there was great attention paid to laying out the work. Generally speaking, in laying out such works, the lines are not sufficiently defined, so as to enable every overseer and labourer to see by a line marked on the ground, or by pickets with strings between them, precisely the levels and sections over the whole extent of his work. A vast amount of labour is wasted in many works by doing and undoing, first cutting down what is not required to be cut down, and then filling up again, also by filling too high and then cutting down again. The principle which I established, as just described, for laying out the work avoided those sources of waste. The foundations and slopes of revetment walls, where required, were likewise marked off by numerous pickets placed with the regulated inclinations, before the men were brought to execute the work. All being thus prepared for large working parties, their industry was secured by a strict observance of the rules already referred to as established for the guidance of overseers, &c. It is difficult to estimate the cost that want of such rules entails; it is illustrated generally by the crowded state of working parties. The waste in the Irish relief works originated in that;

I have

I have seen men so crowded, that if they were to work effectually, they could only do so at the risk of maiming each other; that I saw in the Irish relief works, and that I likewise saw in the Indian works in progress under the Military Board. I recollect that, in riding past a place where several hundred men were supposed to be at work, they were ordered to fall back from where they were working to allow us to pass. They appeared to be very nearly three deep, as close as they could stand: it is impossible that men can work when they are placed in such a manner.

7578. Lord *Elphinstone.*] And there would be much time wasted in talking and chattering together?

Yes; unless you can see precisely what each man does separate from others, he has no object in working.

7579. Lord *Wharncliffe.*] From the result of your experience in the construction of those works in Cephalonia, can you state at what average rate per mile roads can be made under those circumstances?

I do not recollect the exact cost of the Cephalonian roads, but it was small; in our Hymelea works, it was sometimes convenient to estimate the expense of a road by the number of days' labour employed upon it, and not always by the actual money cost, because a great portion of that work was done by tribute-labour. Our treaty required that the protected Hill States should, when called upon, supply tribute-labour for the construction and repair of roads, as well as for the transport of public baggage. This was a serious inconvenience to the people, and its removal was one of the chief reasons why this road was sanctioned by the Governor-general, for as soon as the road is constructed, the baggage of the troops and of public departments can be conveyed by beasts of burden and carts. Upon the old road it was impossible to do that, and therefore the only mode of transport was by making men do what was wanted.

7580. *Chairman.*] To what amount did you reduce the expenditure per mile upon the road?

I had estimated the expenditure for a road 18 feet wide reduced to 12 feet at cliffs, at about 130 *l.* per mile, supposing the whole labour paid for; a great deal of it was tribute-labour.

7581. Does that include the labour in preparing materials for the road?

Yes. But I did not recommend that the roads should all be made at that rate; only the roads immediately required as carrriage roads, because, looking at the large demands for public works in all parts of India, even 130 *l.* a mile would be beyond what it would be reasonable to expect the Government to afford for all the roads that are required in the mountains, and, therefore, I recommended that a mere mule track, laid out upon the best possible level, the maximum being 3 in 100, and capable of future enlargement to a carriage road, should be the general rate of construction; that it should be eight feet wide, with frequent passages of about 12 feet wide; and I estimated that a track of that description could be constructed at an average of 1,682 days' work per mile. Lieutenant Briggs' last Report shows, that an average mile of 12 feet road costs 155 *l.*, supposing all the labour paid for. The actual money paid, deducting the tribute-labour, was 123 *l.* a mile. His experience of a six-feet road was, that 3,585 days' labour were requisite per mile.

7582. Earl of *Ellenborough.*] What is the nature of the soil, generally, that you had to cut through in constructing the roads?

There are great varieties of rock, amongst which are granite and slate of different qualities.

7583. What you cut away made the materials for the road?

There was no difficulty in getting materials; the difficulty was to get rid of them. There were ample quantities of stone. It was not like the districts in the plains, where the great difficulty is to get metalling.

7584. Lord *Wynford.*] Was there a great deal of blasting required?

Blasting was everywhere required to a very great extent, and in many places it was requisite to blast the whole width of the road along the face of perpendicular cliffs.

Lieut.-Col. J. P. Kennedy.

14th July 1853.

7585. Lord *Wharncliffe.*] Are you acquainted with the roads in the Deccan?
I have never been in the Deccan.

7586. Lord *Colchester.*] Does your estimate include the expense of superintendence and of the powder for blasting, or is it merely for the labour?
The estimate of Lieutenant Briggs included the whole, with the exception of powder and a portion of the tools received from the Government stores.

7587. Did your estimate also include the whole?
Yes, with the same exception of tools and powder; and I think I calculated a lower rate for superintendence, as I had the gratuitous assistance of several officers on the work.

7588. Earl of *Ellenborough.*] You had no difficulty in getting rid of the surplus materials; you pitched them over the side?
We had no difficulty whatever in that.

7589. *Chairman.*] Had you any tunnelling?
We had one tunnel which has been cut through, and a second projected, but not yet commenced.

7590. Lord *Mont Eagle.*] Do not you consider that a man working voluntarily would give you a better day's work than a man working at tribute-labour?
I do not think it makes any very material difference. It depends almost entirely upon the species of superintendence established, no matter what you pay them. There is one thing to which it is necessary to refer here, in seeking to establish a minimum rate of cost in this class of work. Lieutenant Briggs's executed work agrees pretty nearly with my estimate in the wider road, where we both pursued the same course; but there is a considerable excess of labour in his construction of the mule track, as compared with my estimate. He thought it desirable to add retaining walls, which I had omitted, in constructing the mule tracks, and his day's work per mile appears to be double the amount of mine. I thought the retaining walls were not necessary here, because where the tracks are widened into carriage roads, other walls, surmounted with parapets, would then be built outside of them, and in the meantime the tracks would be as useful without retaining walls.

7591. Lord *Elphinstone.*] But when the hills are so steep as they are in the Himalayas, is not some sort of revetment necessary?
The tracks by which the traffic is at present carried on are so very dangerous, that ordinary beasts of burden cannot be employed. The produce is carried in baskets, on the backs of human beings, or in little bags slung over the backs of goats and sheep, the load of each little animal being eight pounds. Flocks thus loaded have to clamber up steep stairs, fixed on to the faces of cliffs that are perfectly frightful, so that none but people accustomed to the high lands would venture over them. Sometimes you find as much as a quarter of a mile with excessively high steps and very narrow treads, generally not above two or three feet wide. From Narkunda towards Cheenee, such specimens of road are met at intervals of about 20 miles. Now, where the existing roads are of that nature, and when one reflects how extensive are the demands for improvements in every district of that vast empire, every shilling that can be saved in the cost of works becomes important.

7592. Earl of *Ellenborough.*] Are communications of this description now made between the military stations in the Himalayas?
There is a great deal being done in the neighbourhood of Simla; the new road will, when completed, connect all those stations.

7593. Is there any road passable by carriages from Subathoo to Cashepore?
None, that I am aware of.

7594. Lord *Wharncliffe.*] What material do you use for the purpose of making the surface of these roads?
Stone; varying according to the locality.

7595. Was it broken in the same way as a macadamized road is made here?
There was always sufficient *debris* from making the road to give an excellent surface; I think, for the reasons I have stated, it would not be advisable to go to any great expense for the surface of the road until carriages come into general use.

7596. Earl of *Ellenborough.*] Was there much wood along the line?
Yes; they got the wood for Dagshai Barracks from the Simla Mountains.

7597. Was there much wood in the district through which you carried the road to Cheenee?
In some parts of it there was magnificent wood; similar to the Deodar of the Simla Mountains.

7598. What was the inclination of the road where there were hills?
The maximum inclination of the slopes was 3 in 100, which is about the gradient that used to be adopted for the mail-coach roads in England.

7599. Had you any tunnel?
In the neighbourhood of Simla there was a point where it was advisable to make a tunnel, and, in reference to railway works, I was anxious to show that cheap tunnelling could be effected as well as cheap road-making. The length of this tunnel was nearly 200 yards; it was chiefly done by convicts supplied by Mr. Edwards; the convicts were divided into two parties, and we commenced to open the tunnel at each end; they very soon bored through the rock a safe prison for themselves, and a cool place for working in during the summer. The whole of the day-work was executed by convicts, who relieved each other every six hours; but we were obliged to employ paid labourers for the night-reliefs, because it was not the custom to employ the convicts at night-work, although there would be no hardship or inconvenience in doing so. The tunnel, 560 feet long, cost, as stated in my successor's report, about 61 *l.* This did not include the value of the powder, or of a portion of the mining tools, which were furnished from the Government stores. The rate of excavation was 2·71 cubic feet per man per day. This rate applied to the construction of a tunnel for a single line of railway, and supposing all the men to be paid at the Indian rate of 3*d.* per day, would make railway tunnelling, for a single line, cost about 4 *l.* 7*s.* per yard forward, or about 7,700 *l.* per mile, exclusive of cost of powder.

7600. Lord *Mont Eagle.*] Do you consider that a high price for tunnelling?
No; it is a very low price; but if the whole work were executed by convicts, the whole of this cost, except a small amount for artificers' work in repairing tools, would vanish. It would be a most interesting and useful application of convict labour if the Government were to permit the railway company at Bombay to employ the gratuitous labour of the Bombay convicts in effecting the herculean operation of tunnelling required for ascending the Ghats to reach the Deccan by first-rate gradients. My impression is, that when I left Simla, we had been working at a more economical rate of labour in the tunnelling than that returned by my successor in his report; but the expense of course was greater after I left, because up to that time the runs for the trucks were shorter than afterwards, and, therefore, it must have become more expensive as they got further from the mouths of the openings.

7601. Earl of *Ellenborough.*] Is it not possible that the officer who made the estimate may have taken the expense of the more difficult part of the work, and by mistake carried it over the whole as an average?
I think not, because his calculations must have been made from the official records of actual work done.

7602. Have you any experience of making roads in the plains in India?
No, I have no practical experience, but I have had a good deal of consideration of the subject from having sat at the head of the Commission which made a Report to the Government upon the Public Works generally in Bengal.

7603. *Chairman.*] Did you find that the labour of convicts was useful, and that it was a profitable sort of labour to employ?
Very good labour indeed, and, if properly applied, it is capable of producing most important results. I think that is a particularly interesting fact in the present state of things in this country, referring to the intended abolition or diminution of the application of transportation to penal settlements, and to the necessity of introducing a substitute for that punishment.

7604. To what extent did you find the natives qualified to act as superintendents of the work?
I found them very clever indeed, but requiring distinct training and well-

Lieut.-Col. J. P. Kennedy.

14th July 1853.

defined rules for their guidance, and I found them full of energy. If your Lordships will allow me, I will give a description of the enduring physical powers of native Indians which I witnessed: in one of my tours connected with the examination of the railway lines between Calcutta and Benares, I found myself somewhat pressed for time at Patna, where the usual 10 mile dawk ceases and I was obliged to employ a party of palanquin coolies to go to a point on the River Soane, 25 miles distant, and to return the same day; that is, the same men were to take us out and bring us back in our heavy palanquins, making 50 miles altogether. We started in the morning, and were just 16 hours absent under a very hot sun; they gave us four hours to examine the river at the middle of our journey, and they came back, having completed their 50 miles in 12 hours of actual travelling; they did not exhibit the appearance of oppression or fatigue, and they did not appear to think that they had done anything extraordinary.

7605. Lord *Wynford.*] How many reliefs had you?

There was a party of 20 to each palanquin; I do not think any man was above five minutes under bearing at a time, but I was never more struck with the energy of any people than I was upon that journey. A friend of mine made the journey from Bombay to Agra, where they have no regular dawk; he was obliged to take on the same party for several days together, and travelled 300 miles in 10 days, which is 30 miles a day, with the same party.

7606. *Chairman.*] On what sort of food do they live?

When they have those long journeys, in addition to their usual food, I have heard that they consume considerable quantities of a preparation of opium; and when they come to the end of the journey, they are much exhausted, and they take a considerable time to return to their homes.

7607. Earl of *Ellenborough.*] Will you state what occurred to you with respect to the manner of making roads in the plains?

In the case of a hill road, the chief cost is in the formation. In that of the plains, on the contrary, the cost of formation is small, that of metalling considerable. The metalling of the roads in the plains is a matter of some difficulty, but the practice has generally been to metal the road with burnt clay. I think that, even in our railways, we shall often have occasion to come to that, because there is great difficulty in getting stone. In many districts there is what is called cunker, a sort of limestone, which is very useful, and makes a good surface; but I think generally in the plains we shall have to calculate upon burnt clay.

7608. At what expense can you lay down a road with burnt clay?

I forget the precise rates.

7609. Those roads which have been made are not very broad?

They are wide in their general form, but the part metalled is not very broad; I think there is at least 15 feet of metal.

7610. Lord *Wharncliffe.*] Does that burnt clay stand the rains?

Yes, it stands the rains pretty well; but with very heavy traffic it soon wears.

7611. Earl of *Ellenborough.*] Have you seen the road from Burdwan to Hooghly?

Yes.

7612. Did you ever see a worse road?

It was bad; but I believe there has been a good deal of improvement upon it lately.

7613. Is there not extremely heavy traffic upon it, coal traffic?

There is heavy traffic upon it. The coal, I believe, for the most part goes by water.

7614. Lord *Wharncliffe.*] What is the actual condition of the great trunk road from Calcutta to Allahabad?

The condition of it from Calcutta to Allahabad was not uniformly very good when I came down. I have understood that there is a great improvement upon it since, and great improvement likewise in the mode of travelling. The last time I came

I came down I travelled in something like an English stage-coach drawn by 16 coolies. The old palanquin is a much preferable conveyance.

7615. Earl of *Ellenborough.*] Did you ever put your palanquin on wheels?
Yes.

7616. How fast did you go then?
I have seldom travelled faster, except on railways, than by horse dawk, from Allahabad to Meerut. I have gone at the rate of 10 miles an hour there: but that was the only portion of the road where such a rate of speed could be accomplished. The surface of the road was beautifully smooth and hard, and the line level.

7617. Were you pushed along at the rate of 10 miles an hour?
I timed several of our stages at 10 miles an hour; it was a horse dawk, not coolies.

7618. When you were pushed by men how fast did you go?
They went not, I think, beyond three miles an hour; not anything near so fast as the usual palanquin, particularly in the heavy parts of the road. In travelling up with the Commander-in-Chief, some of us had palanquins, and others had four-wheeled carriages impelled by coolies; the palanquins invariably beat the four-wheeled carriages.

7619. Earl of *Albemarle.*] In what state are the bridges on the great trunk road from Calcutta to Delhi?
The bridges in general are very good. There are one or two bridges that were down, and not repaired when I came.

7620. Are you aware what width they are; can two bullock carts go across them at once?
Yes, they are fine stone bridges. Perhaps your Lordship's question refers to suspension bridges. There have been some failures in the iron suspension bridges; but the stone bridges are very fine works in general.

7621. Lord *Wharncliffe.*] There are two or three bridges that have been washed away; are they in situations in which it would be easy to repair them, or in which it would be a very considerable work?
I do not consider that there is any great difficulty in repairing them.

7622. Can you form any opinion as to the outlay that would be necessary to restore the communication across those gaps where the bridges have been washed away?
I cannot say, but I do not think that it ought to be a matter of any great difficulty. As far as I recollect they were not over very wide openings.

7623. Are there not two or three places of that kind which entirely interrupt the continued communication?
There were ferries on them when I passed through the country.

7624. How long has that been the case?
I think there were two gaps when I came down two years and a half ago.

7625. Before those gaps occurred was there any wheel communication along the road?
I think not; I believe the first approach to a wheel communication was what I have mentioned as resembling a stage-coach hauled by coolies, and that was inferior to the ordinary palanquin.

7626. What is the actual substance of the road; is it a macadamized road?
The surface is chiefly made of that description of limestone which I have mentioned, made into a sort of concrete; it is a very beautiful surface when you have got it. There is very heavy traffic upon the upper line; they have now regular stage-waggons there.

7627. You mean above Allahabad?
Above Allahabad. Those stage waggons are generally adopted by travellers there; and I believe they are always full.

7628. What is the difference in the condition of the road itself, above Allahabad, and below it?

Lieut.-Col. J. P. Kennedy.

14th July 1853.

The road above Allahabad was in Mr. Thomason's district. I do not know to whom we are indebted for the horse-dawk there, but I imagine that the road was brought up to its present high state of perfection to meet the capabilities of that 10 miles an hour dawk which has been established upon it. Below Allahabad there was no horse-dawk, with the exception of the letter conveyance, when I was in India. I think the attempt to introduce quick traffic has been the cause of greater attention being paid to the road above than below Allahabad; some portions of the road below Allahabad were very good, but there were portions which had not then been metalled. When I came down the road last time, however, there were several parties of labourers at work, metalling those parts.

7629. Earl of *Ellenborough.*] What is the state of the road between Allahabad and Benares?

From Allahabad to Benares, it is very good. I think the whole of the road, from Benares to Meerut, was as good as I ever saw in any country.

7630. Lord *Wharncliffe.*] Are you acquainted with the line which was opened for a mail road between Bombay and Calcutta?

No. I think the dawk was always carried by coolies on that road, when I was in India.

7631. *Chairman.*] What is your opinion as to the probable return for the expenditure upon the public roads?

It is very difficult to estimate a direct return for the expenditure, because I trust that tolls would never be put upon any new road in India. I think that would have an injurious effect: it is trying to create traffic and to encourage commerce by one set of operations, whilst you repel them with another. I do not see how you can calculate upon a direct return from the construction of roads; but I imagine that a most extraordinary indirect return must arise, that commerce, manufactures, and everything connected with the prosperity of the country, will repay the outlay for roads a hundred-fold. I do not think it possible to estimate the amount of the indirect advantages.

7632. Earl of *Ellenborough.*] Unless the toll be placed upon the road at a bridge, is it not impossible to levy it?

It is very difficult to levy it. It is always a subject of difficulty, in the first establishment of a road, that very little traffic goes on; traffic has always to grow up, as a consequence of the road. If you impose a toll, you have all the expense of the establishment requisite to levy the toll; and I have heard of instances where, for many years, that expense was supposed to absorb the whole revenue collected.

7633. Lord *Wharncliffe.*] Has not authority been lately given to the different Presidencies to levy tolls upon roads where they think it expedient to do so?

I am not aware. I think there has been a good deal done to lighten former tolls upon merchandize which existed.

7634. Earl of *Ellenborough.*] Is there not a toll levied on passing ferries?

I think there is a toll on the ferries already referred to.

7635. When a bridge is built where a ferry was, is the same toll taken that was taken before?

I am not aware whether that is the case; but I think the tolls that were levied generally, were not with respect to the repair of roads, but merely as an item of revenue.

7636. Earl of *Albemarle.*] An additional tax, in fact?

A tax. I speak of the old tolls which were levied upon the Ganges.

7637. Lord *Elphinstone.*] But the transit duties have been abolished for some time?

Yes, I believe so.

7638. But the proceeds of the tolls now taken at those ferries are given to the district officers, to form a fund for making cross roads, are they not?

That was the intention, I believe; but I do not think they have been generally applied in that way. I have heard that in the North-Western Provinces there is one per cent. upon the revenue given to the roads.

7639. Lord *Wharncliffe.*] Apart from the difficulty of collecting those tolls, why do you think that a system which has been adopted generally in European countries, and which is in operation in this country universally, should be so entirely inadmissible in India?

I think it must always tend to impede travelling and commerce, and the transit of articles in countries where there is not a decided spirit of enterprise and speculation existing.

7640. Earl of *Ellenborough.*] You think that the state derives more advantage from the freedom of commerce than it does from the tolls?

I think it does. I have seen a good deal of the toll system in Ireland, and there it had a very injurious effect; for in some districts I know, the people objected, very foolishly, to do work which might be profitable, because they had to pay a toll.

7641. Lord *Wynford.*] Is not the toll often made a ground of extortion by the natives?

I fancy the old principle of revenue tolls was, but that, I believe, is abolished.

7642. Is not it the case still with the ferries?

There may be something of that sort, but I cannot say so from personal experience.

7643. Lord *Elphinstone.*] Are you aware that, in Ceylon, we have made some roads, and that the tolls not only pay all the expenses of those roads, but that they actually afford some revenue?

No, I am not aware of that. I think the only sound principle of roads is to make them, and to leave all the world to travel on them freely. I feel convinced that that would be the most profitable to the Government and the people in the end.

7644. Lord *Wharncliffe.*] Looking at the enormous extent of India, do you think it desirable that the Central Government should be responsible for the construction and repair of all the roads in the country, without any assistance from local funds?

I think that the Government is distinctly responsible for this most important of all branches of administration, as roads are the first indispensable preliminary to national improvement and progress in other matters. It is only a central or general government that can lay down a proper system of roads, because the roads of small districts should be laid out with reference to a general system. The cost of construction must of course fall in one way or other upon the people, either by payments from the public revenue, or if the revenue be deficient, and the people incapable of further taxation for the object, but possessing unemployed time, of which they cannot profitably dispose, then by personal or tribute labour. If we wish to foster enterprise, when that quality is deficient, the roads should be free from toll afterwards. Tribute-labour is understood now amongst the Indian people, and the principle upon which the new road in the Himalaya mountains has been done was partly by that means, one distinct object being to get rid, by that very process, of tribute-labour altogether. The first great effort of establishing roads in a country where the people are poor and unemployed, assuredly justifies the application of tribute-labour for that vital object; and there can be little doubt that the maintenance of the roads afterwards could be borne by the public revenue.

7645. Does your experience lead you to the conclusion that tribute-labour is as effective and as good as paid labour?

It all depends upon the superintendence established. I do not think it is desirable to have tribute-labour if the public finances can bear the cost of paid labour, particularly in India, where you get labourers for 3 *d.* a day; but I think the employment of tribute-labour, for this one object, is better than leaving the country without the power of easy and profitable intercommunication.

7646. Supposing an extensive system of cross roads to be carried out in India besides the main roads, do you think it would be desirable for the Government to superintend the construction and management of those roads rather than to commit it to the local authorities by the aid of local funds?

Everything should be placed under local superintendence; but I think it most desirable that Government should look to the laying out and construction

Lieut.-Col. J. P. Kennedy.

14th July 1853.

of the cross roads, as well as the general roads, and leave any part of this subject to the discretion of local bodies, who are totally unfit for executing such a trust.

7647. *Chairman.*] Independently of the question of whether it would be desirable that local funds should be found for making roads, either by tolls or in some other way, is not there this great difference between the system adopted in England, and any system that could be adopted in India with regard to raising tolls, that in England the roads pass through an inclosed country, with fences on each side of the road, so that persons going from one town to another must pay toll; whereas the roads in India pass through an open country, so that persons passing along the road can easily, if they please, avoid the payment of the toll?

Yes, in the plains this is so much so, that what is called the road is frequently the only part upon which people do not travel.

7648. Lord *Elphinstone.*] You said that everything should be placed under local superintendence; do you mean by that, more localised superintendence, or central superintendence at the Presidency?

I think that in India everything must go from the centre; it is not a country that can well be managed at present under municipal arrangements; everything must go from the centre.

7649. But you are aware that the ancient system of the country was pre-eminently municipal, every village managing its own affairs, and every local governor having entire control and authority within his own province?

The result of that system, as regards roads, the first preliminary to the production of wealth and civilization, is, that nothing was done, and that the people are now poor, and, commercially speaking, shut up in their respective districts.

7650. *Chairman.*] Will you state the constitution of the Military Board which you have mentioned, which superintended the construction of public roads?

I have great pleasure in saying that I believe that system is at an end, or at least that the important branch of public works has been taken out of its jurisdiction; our commission recommended that course, and I understand that our recommendation has been adopted by the Government, and sanction has been given by the Court of Directors to the Supreme Government to carry measures nearly analogous to what we recommended into operation.

7651. Lord *Elphinstone.*] Did they not superintend all the roads in the Presidency?

The Bengal Military Board consisted of four members, namely, the Chief Engineer, the Commandant of Artillery, the Commissary-general, and a stipendiary member. They had charge, first, of public works; second, of the army commissariat; third, of the studs for supplying horses to the cavalry, artillery, &c.; fourth, of the ordnance, including the foundry, the gun-carriage agency, the powder-mills, the arsenals, and the military equipments of the army, with the exception of clothing. Three members of this Board, namely, the Chief Engineer, the Commissary-general and the stipendiary member, directed the public works department, and audited the accounts connected with it; thus there were two unqualified members who could at any time outvote the one qualified member upon the most important engineering question that could arise. The consequence was, what might naturally be expected, public waste, confusion and delay, with much oppressive inconvenience and danger to the officers employed in the execution of works; in fact, we had no alternative but to urge a total change of the system. What we recommended was, that in each Lieutenant-governorship there should be an individual responsible officer charged with the whole conduct of the works, with a sufficient assistance of subordinates.

7652. Earl of *Ellenborough.*] Did you look back to the constitution and mode of proceeding of the Military Board in former times?

We went pretty closely into the investigation of the history of the Military Board.

7653. Lord *Wharncliffe.*] Are you aware whether the changes recommended in your Report have been adopted by the Government of India?

I have

I have been told that orders have gone out to India to carry the recommendations, based upon that Report, into operation by the Supreme Government.

7654. But you have not heard of their being actually carried into operation?

I have not. With regard to commissions, I have served with several, both executive and deliberative, and I believe that the best commission, composed of the ablest and most conscientious men that can be put together, is still a very bad head for an executive department. As a deliberative body, a commission may be useful, although, I think, its recommendations seldom offer more than a compromise of antagonistic opinions, without consistence as a whole; but of all the commissions I ever heard of, the commission for managing public works in India was the worst constituted, and its practice perfectly accounts for the difficulty that the Indian Government must have had in any effort to extend useful public works.

7655. When you talk of the Commission for managing Public Works, do you mean the Military Board?

I mean the Public Works Committee of the Military Board, composed of one engineer, and two other members who were not engineers.

7656. Earl of *Albemarle.*] Do not you attribute the enormous expense of the Delhi road to the Board under which it was formed?

I think a good deal would be owing to that; but it is necessary to go a little into an analysis of the construction of public works before I can answer that question. There are two different ways of constructing public works: one is by contract, the other is by private agency, that is, employing an engineer, and letting him execute by day-work, or in any other manner. A contractor who takes a work either makes money or he loses, and may enrich or ruin himself; he has so direct and strong an interest at stake, that he will use his talents to the utmost degree, in order to save himself; the consequence is, that the arrangements of a contractor are always good; he always goes into every minutiæ, taking care that he gets a full day's labour for the wages that he pays; unfortunately it is frequently different in the case of an agent who is acting for another, without attributing the least dishonesty or impropriety; but there is that difference in our motives, that we do not think so minutely of money that we pay out on another man's account as we do of our own, especially when our own ruin or wealth depends upon it; consequently, you rarely see labourers in works carried on by day-labour under an agent so well managed as a contractor's party: I think that that is one great cause why the works ordinarily done by day-labour under engineers are more expensive than those done by contractors. We do not know what the contractor's actual cost is, because he takes care not to acknowledge how much he has expended, or what have been his profits. The profits, however, must generally be very great. There is nothing to prevent an engineer from looking as closely to his expenditure and to the arrangements of his work as a contractor does, and if he did so, the profits of the contractor would go into his employer's pocket.

7657. Lord *Wynford.*] Is the system of contract being adopted to any extent in India?

There are efforts being made with that object; Colonel Tremenheere, I think, told us that they had been successful in establishing contracts in some parts of his district in the north-west of India. We recommended in our report that the effort should be made universally; because, even supposing the contract price is high at the first introduction of the system, competition will soon bring it down. One thing which I urged strongly in my railway reports was, that contracts should be made very limited in their extent; because you cannot get extensive competition in India, except for small contracts; there are not many large capitalists in India, and if you have the large contracts, which most railway engineers are anxious to establish, because it saves them trouble, you introduce a monopoly amongst the few capitalists who would be found capable of undertaking extensive works.

7658. Lord *Wharncliffe.*] Are you aware that contracts have been given to native contractors for the railway works in Bombay?

I am not aware of the details in this respect on the Bombay side of India.

7659. Lord *Elphinstone.*] Would you not find it difficult to meet with people capable of taking contracts in the country districts?

Lieut.-Col. J. P. Kennedy.

14th July 1853.

I think they will be obtained if the tenders be called for with judgment; but a great deal of trouble must be taken, in the first instance, to fit the work to the capacity of the people who are expected to make tenders for it. For instance, I would insist upon separate contracts for embankments and cuttings, and separate contracts for masonry. If we seek to bring forward the Indian people to do the work themselves, we must rear them to it in that way, though it will give us a good deal of trouble to do so.

7660. Earl of *Ellenborough.*] What is your opinion of the manner in which the public buildings have been executed?

I have not seen much in detail of the buildings in India.

7661. Lord *Wharncliffe.*] Is there not additional difficulty in India, with respect to contract work, from the necessity for a great deal of superintendence?

There is a great necessity for it.

7662. More than would be found in European work?

The small contracts would require an additional amount of superintendence, and all that must be calculated upon; for I saw in the evidence that came before us upon the general subject of public works, that it is exceedingly wanted. In the repairs of embankments there is an opening for fraud from the want of proper contractors to undertake repairs.

7663. Earl of *Ellenborough.*] Do you know the buildings at Umballa?

I do, generally speaking.

7664. Did they appear to you to be built in a way to be likely to last a considerable period?

Yes; I think they appeared pretty well built.

7665. Do you think that the more recent buildings are as well built as the old ones; for instance, the old works at Ghazeepore and Dinapore?

The new barrack buildings at Dagshai and Lahore were the last I saw, and I thought they were well built.

7666. What material is used in the buildings?

Bricks at Lahore; stone at Dagshai.

7667. Are the bricks generally of a good description?

Yes; I think the bricks that I saw were generally of a fair quality. In Colonel Cautley's works on the Ganges Canal he was successful with his bricks.

7668. Lord *Elphinstone.*] Is not the mortar particularly good?

Very good.

7669. Lord *Wynford.*] Is it the sun-dried brick?

Sun-dried brick is only used in temporary buildings, and ought never to be used in any sunk foundation. What are intended for durable buildings are generally of burned bricks.

7670. Lord *Elphinstone.*] In making the surface of a road with brick, would you pave the road with bricks, or would you break them up?

I think it is better to pave the road with bricks on end. If the brick or burnt clay is broken small, the action of the wheels is more likely to grind it into powder.

7671. Earl of *Ellenborough.*] What material is used in building bridges in India?

Generally stone, in the districts where they have stone, and in other places, brick.

7672. Does that brick stand well?

I think it does when it is properly burnt.

7673. Are not there many ancient buildings at Agra, for instance, internally of brick and externally of granite?

I do not recollect making that observation. It struck me that the ruins of the old mausoleums were of brick entirely. I do not recollect seeing stone, except in the beautiful marble facing of the Tage.

7674. Lord *Wharncliffe.*] You have told us what you know of the great trunk road,

road, and of the road on which you yourself were employed through the mountains; are there any other roads in India with which you are acquainted?

No; the roads that are usually travelled are just the ordinary field.

7675. Do you know the line from Bombay to Agra?

No, I do not know the line from Bombay to Agra.

7676. Earl of *Ellenborough.*] You do not know the road from Calcutta to Bombay?

No.

7677. Lord *Wharncliffe.*] You know none of the roads in the South of India?

No; with the exception of those immediately about the city of Madras.

7678. *Chairman.*] Had you any means of becoming acquainted with the system of irrigation canals in India?

I saw the works going on under Colonel Cawtley; they were very valuable works, I think.

7679. In what state are the embankments in Calcutta, which have been made as a defence against inundation?

The embankments made against inundations, in Bengal, are a source of considerable expense to the Government. I think that they were originally constructed without much consideration: the space for the water, I believe, is generally less than it ought to have been; and the embankments are generally of a section very inferior to what they ought to have had; they were made too narrow, and much too steep for the inundations of that country, and the consequence was, that every year there was considerable damage to those embankments, causing much cost, both in the repair of the works and the damage done to crops by the inundations.

7680. Lord *Wharncliffe.*] Was not there a Commission issued some time ago to examine into those embankments, which recommended that they should be left to a state of nature?

Yes, there was one. I think it is very likely that, if the country were gradually brought to a state of highly improved irrigation, the water might be distributed something upon the system which has been found to succeed so admirably in the district near Florence, and then you might do away with the embankments; but until something of that sort is done, it would be most injurious to do away with the existing embankments.

7681. Lord *Elphinstone.*] But in Lombardy, is not the Po embanked to a great height above the level of the country through which it flows?

I speak of the Maremma and the Val di Chiana, in the Tuscan territory, in which so many of the population were destroyed by malaria from the swamps created by sluggish rivers bringing down large quantities of detritus, materially affecting the course of the rivers. The whole of that was corrected by the plans of the celebrated Fossombroni and Nanetti, whose principle was merely to form dams, inclosing large surfaces of the flooded land, so that when the water came into one of those basins, it became still, and made its deposit; the consequence was, that in a very short period it raised the surface of the land, and sent the water into proper channels.

7682. Earl of *Ellenborough.*] Had you ever occasion to consider the means of improving the navigation of the Ganges?

I have not gone minutely into that subject: it is a very difficult one; and, under the present prospects and experience of railways, I think it would not be a judicious investment, even supposing it could be done at a moderate cost.

7683. Earl of *Albemarle.*] What depth of water is there in the shallow parts of the Ganges?

I am not certain, but I believe it varies very much: then it is very difficult to secure that the impediments which are removed at one place do not arise at another: there have been some very large estimates as to the improvements of the Ganges. Some engineers have suggested improvements in parts of the river at a cost of 60,000 *l.* a mile.

Lieut.-Col. J. P. Kennedy.

14th July 1853.

7684. Does not the water carry, suspended in it, vast quantities of the finest sand?

I believe so; and vast varieties of soil.

7685. Lord *Wharncliffe.*] With regard to the embankments in Bengal, what would be the course that the Government, in your opinion, ought to take with respect to them?

I think that any project upon this subject ought to embrace two principles, a general irrigation of the land, together with a power of correcting the course and facilitating the exit of the waters after having made their enriching deposits. I think that by extending broadly irrigation canals, the waters would become so spread that by making very slight horizontal dams, inclosing large surfaces of land, the velocity of the water would be so checked that little damage would occur; and, at the same time, the valuable particles in suspension would be deposited, thus securing a general power of irrigating and top-dressing the land by the same process that would avert the damage now arising from concentrated waters flowing with a high velocity.

7686. *Chairman.*] Do you consider that there is no danger to health from such a system of irrigation?

No, I think not; the danger to health, I believe, is where there are swamps, with stagnant water, producing noxious weeds, which would here be avoided.

7687. Earl of *Ellenborough.*] Have you ever studied the neighbourhood of Kurnal, and endeavoured to ascertain the cause of the great mortality there?

No; but I have heard that the irrigation has been allowed to go very wild there, and that there were considerable swamps.

7688. Lord *Wynford.*] In making those embankments, what do you consider the best slope to adopt in order to secure their standing?

We established a slope of five to one, which is a very ample one for the embankments of the East Indian Railway: there were very extensive dilapidations on the Damooda embankments, and on the embankments lower down, which were generally attributed to the deficiency of the slope, and we thought it advisable to give that slope to the embankments for the railway.

7689. *Chairman.*] What is your opinion of the works upon the Ganges canal?

I think very highly of them indeed.

7690. Will they affect the navigation of the lower part of the river?

I should think not.

7691. Earl of *Ellenborough.*] Not by taking away seven-eighths of the water above Hurdwar?

Perhaps in very dry seasons it may; but I have not given sufficient attention to this to offer an opinion; however, I think that the question of the navigation of the River Ganges is a secondary one to that of agricultural irrigation, looking forward, as we now may, to a broad extension of railways.

7692. Lord *Elphinstone.*] Is not it the case, that below the place where the waters of the Jumna are diverted for the purposes of irrigation, the stream again recovers itself and becomes again a considerable river, without any very perceptible cause, so that it is supposed that the water comes under ground?

There are so many tributary streams to the Jumna, that if you cut off one of them, it would be but an inconsiderable diminution.

7693. Earl of *Ellenborough.*] But does not the canal cut off seven-eighths of the whole water of the Ganges above Hurdwar?

I do not know the precise proportion, but I should be glad to see the whole of its waters applied to agricultural production.

7694. How far above Hurdwar does it turn off from the Ganges?

Quite close above Hurdwar.

7695. *Chairman.*] You were understood to say that you think it possible to guard against injury to health by works of irrigation, by proper attention to raising the works, and not allowing them to degenerate into swamps?

I think a great deal may be done both to prevent the evils of malaria and to accomplish

accomplish the objects of general irrigation, by proceeding upon one combined principle.

7696. Earl of *Ellenborough.*] Were you in Rajpootana?
No.

7697. You have not seen Colonel Dickson's tanks?
No.

7698. Did you ever see a tank formed in the manner in which they form them in India; large lakes, in fact?
No.

7699. Earl of *Albemarle.*] Have you ever considered the question of applying the same principle of private enterprise which is adopted with respect to the railways now contemplated to the canals and embankments? As the East India Company is in debt, how do you think it would operate if those canals and embankments were open to be conducted by private enterprise?
I think you would be putting away a very large amount of profit from the Government by doing so, for I believe that there is no undertaking that will be so profitable as the irrigation canals.

7700. *Chairman.*] Will you be good enough to state to the Committee the history of what has been projected with regard to railways in India?
Upon going down to take charge of the railway department as consulting engineer to the Government at Calcutta, I found that the first section of the East Indian Railway Company's line was sanctioned as far as Pundoah, a distance of about 40 miles.

7701. In what year was that?
In the latter end of 1850; and there was an undecided question pending, as to whether they should then go, as intended by the original project, in a direct line to the north-west, over the hills close to the present great trunk road, or whether they should go round by the Ganges. Before leaving India I examined the district, and made a report on this point, in which the engineer of the railway agreed with me, and the consequence was, that the Ganges line was selected by Government. There were only then two lines commenced in India. The operations of the Bombay line never came before me whilst I held the office of consulting engineer to the Government, an office which I was induced to resign, and leave India by medical advice, in consequence of injuries received from exposure to the sun whilst I was conducting the Himalayan works already described. I knew nothing of the Bombay operations till I came to England. When I found that it was proposed to carry the great trunk line from Bombay, the most important port in Western India, over the Ghauts, and thence to the northern parts of India, thus showing that the only two lines which had been commenced in India were projected upon most erroneous principles, it appeared, therefore, essential that the Government should lay down some distinct sound maxims for the guidance of projectors in this most important class of works. Having seen the necessity of this before I left India, I had sought, in my reports, whilst officially employed there, to inculcate such maxims; and on my return home I took a good deal of trouble in the preparation of a general report, based on very broad principles, in reference to the proper selection and the after-working of railway lines in that country.

7702. Will you be so good as to state what that broad principle is?
It was to secure, by a right selection of lines, that with the smallest outlay in money, the power of the engine shall be enabled to convey the largest possible loads rapidly and safely through the country. If this result be accomplished, the best security will be obtained for railway investment, and the lowest possible rates of freight will be charged to the public who use the railways. The only way by which that result can be accomplished is by ascertaining that every portion of every line of railway approaches as nearly to a level as the circumstances of the country will admit between its termini, having due regard, but not excessive regard, to cost of construction and length of line. Before any sanction is given to commence construction, it ought to be mathematically proved that the very best line has been selected in this important respect. The first mathematical principle, as regarding railways, is admitted by all in theory, that the ratio of the power to a load moving up an incline is as the height to the length of the incline; and

Lieut.-Col. J. P. Kennedy.

14th July 1853.

and in practice this should never be forgotten; the peculiar structure of India calls for its incessant application. There we have an opportunity of selecting either the best or the worst levels to be found on any railways in the world, with the necessary consequence of either the highest or the lowest rates of freight and personal safety in the transit of goods and passengers. In projecting Indian railways, with reference to those principles, we must keep in view the regulating features of the country; namely, the great Himalaya range and its spurs, the range north of the Nerbudda River, that between the Nerbudda and Taptee, the range south of the Taptee, and all those nearly parallel to it to the southward; the whole of those ranges now mentioned run nearly east and west. Then there is the Omerkuntuk tableland, which sheds its waters in all directions, north to the Ganges, west to the Bombay coast, and south, east and south-east to various parts of the Bay of Bengal. Again, we have the great range running south from the Taptee River, and close to the western coast, sending its waters across nearly the whole breadth of the Peninsula till they discharge themselves into the Bay of Bengal. We have the magnificent valley of the Ganges and Jumna, with a thousand miles of course from the Bay of Bengal, and so gradual that the rise does not exceed one foot per mile; the valley of the Indus, which offers a track for our commerce from the sea at Kurachee into Thibet and Central Asia; the Baramputer and other cuts in the great Himalaya chain, which would afford like facilities; the level belt or coast line girding the Peninsula from the Ganges to the Indus, with the palpable facility presented by the valleys of the Mhye and Chumbul Rivers to unite the Bombay coast with the northern and central parts, and by the valleys of the Nerbudda, Taptee and Soane, with the north-eastern portions of our empire. With such broadly marked indices to what is right, it would be inexcusable to err; still the only security against error, and grievous error, will be found in starting from the very commencement with those indices distinctly in view, and requiring that every detail, no matter how gradual the progress, shall be executed in reference to the ultimate completion of a perfect whole. Such were the principles that influenced me in every suggestion which I have ventured to make to the Government, both before my appointment to office, during my tenure of it, and since its relinquishment. Amongst those suggestions will be found a series of projects for intercommunication throughout India, many parts of which I had never seen; and although I felt that, upon examination, some of them may be found inferior to others which minute local knowledge may suggest, still it appeared the best and most practical mode of bringing timely attention to the subject, and of avoiding a future repetition of those errors which have appeared to characterize the first projects for India. In my last report I sought to illustrate some of the important consequences which railways might be expected to have upon India, and with that view I selected the Military Department, not because the consequences were likely to be nearly so important in that department as they would be either as regards commerce or manufactures, or many branches affecting the physical and social condition of the people, but merely because the effects upon the military expenditure, and upon the efficiency of the army, could be more easily estimated than the consequences upon other branches. I stated my conviction that the power of concentrating troops, which a good system of railways would afford in India, would enable you to reduce one-fourth of your army, and that your army would still be in a much more efficient state for both offensive and defensive purposes; because you would have the power of concentrating them within a very limited space upon any point that was attacked; at present, if you wish to concentrate, the loss of time is very great. The time given for an officer to join his regiment at Peshawar, when he arrives at Calcutta, is six months, and so with any movement of a regiment; if you have a combination of troops to make in some distant part, your country may be in possession of the enemy for a long time before you can bring an adequate force to meet it. Therefore, under the present system, it is extremely difficult to defend India, even with the present force; but with railways, if you had one-fourth less of military expenditure, you would be in a stronger condition. I do not think that any danger is to be apprehended in war from railways, because we have seen the case of the French Revolution. I do not think that five miles of railway were taken up in the whole of France, although the French are a very ingenious and active people; and even if a short piece of the rails were taken up in any line, in a few hours they could be replaced. If an enemy were to go upon the principle of breaking up the railway generally, the consequence might be serious;

but

Lieut.-Col. J. P. Kennedy.

14th July 1853.

but I do not think that could ever happen, because the railway is the best defended line that you have; you can show yourself rapidly upon every point of it: it is a well-protected line too, because the mere staff of your railway gives it a great deal of protection. Therefore I do not think that any danger in war is to be apprehended to railways. I do not mean to say that railways are of any use in actual operations; but in concentrating your troops, and furnishing them with stores, provisions and reinforcements, they are of the utmost importance, particularly in India. If you have not railways, every small district must have an actual garrison, because India is essentially held by military occupation, and you must have in every district a garrison equal to the protection of the district under ordinary circumstances.

7703. Will you point out the system of railways which you would recommend?

In the report before referred to, I gave a schedule of lines which I suggested for examination, placing them *seriatim* in the order of their comparative importance. No. 1 in that schedule was the line from Calcutta to Agra, which it was suggested in time to extend by Delhi, Kurnoul, Loodiana and Lahore, to the Indus, at Attok: this line is in progress. No. 2 was a line from Bombay, passing along the coast by Surat, Baroach, Baroda and Neemuch, following the valleys of the Mhye and Chambul Rivers, to Agra. No. 3 was a line breaking off from No. 2, at Surat, and following the valley of the Taptee to Omrawutty, the chief market of the principal cotton district; and thence following the valley of the Godavery to the Bay of Bengal, and proceeding by the coast to Madras. No. 4 was a line from Madras, south to Trichinopoli; thence west, by a river to the favourable dip in the western ghauts at Paulghatchery, and continuing west by a valley falling to the Malabar coast. No. 5, a line from Madras westward to Bangalore. No. 6, a line from Bombay over the ghauts into the Deccan. No. 7, a line breaking off from No. 2 trunk line at Baroda, passing through Goozerat, and thence to Kurachee. No. 8, a line breaking off from the Madras trunk line at Masulipatam, and going to Hyderabad, in the Deccan. No. 9, an extension of No. 1, from Agra by Delhi, Kurnoul and Loodiana, to Lahore. No. 10, a line from Kurachee, by the Indus valley, to Mittankote. No. 11, a line branching from No. 1, near Rajmahal, and going towards the Baramputer River and on towards the Sanitarium of Darjeeling. No. 12, a line branching from No. 1, and going by the Jumna and Ghiree valleys towards our Sanitaria of Simla, &c. in the protected Hill States. These 12 projects would embrace about 5,177 miles, which, at the average rate of 5,000*l.* per mile which I estimated for their construction, would require a capital of about 25,885,000*l.* A second schedule in the same report, containing the foregoing and seven additional projects, estimated at the same rate of mileage cost, would raise the capital required to 39,160,000*l.* The same report contained numerous suggestions, having reference to the after-working of lines, calculated to guard against the inevitable waste and danger that must attend the running of numerous trains, at high rates of velocity, in quick succession after each other.

7704. Lord *Wharncliffe.*] Do you think it would be at all necessary, in the establishment of railways in India, to aim at a very high rate of velocity?

No; that is exactly the point that I have felt it essential to guard against, because in employing English engineers who have indulged both in high velocity and in numerous trains, they are likely to forget the first principle of economy and safety, which would be to run as few trains as possible, with the heaviest loads possible, and at moderate speed. I think that is the great principle of economy; and economy is everything in that country, because you have not the margin in India which exists in England: in England, with all its immense traffic, we find that the railway interests are at a very low ebb indeed; and it certainly is of vital importance in India to take care that no error shall be introduced in the commencement of railways there. The thing to look to is to give to your engine, whatever power it may have, the greatest possible advantages with respect to inclines; that is all that you can do, and the engine-maker will do everything that is requisite after that by the strength of his engines; but let the lines be level: the general lie of the country in India is such that you ought to have beautifully level lines. I recommended a principle which I think would give all the practical advantages of absolutely level lines even where country is moderately ascending; and I tried, experimentally, the efficacy of that principle on one of the worst gradients in England.

Lieut.-Col. J. P. Kennedy.

14th July 1853.

7705. Assuming those two points which you consider so desirable to be gained, namely, that you should be able to obtain level lines, and that you should be able to work large trains upon those lines, do you consider that there are no other points to be considered in the selection of a particular line of railway with respect to the distance to be traversed, the expense of construction, and the expense of the maintenance of the line afterwards?

Undoubtedly the mercantile requirements of the country generally are the first considerations in the selection of lines, but I think that the more we look at the great features of India, the more we shall find that the valley lines will generally fulfil those requirements, and be the cheapest lines, because the moment you leave them to cross valleys and mountain-ranges, you incur the necessity of tunnelling, viaducts, and all that is most costly in railway construction.

7706. You have intimated that you disapprove of the line which has been proposed from Bombay across the Ghauts into the Deccan?

Yes, as a trunk line, not as a branch line: I think that a branch line from Bombay into the Deccan is very essentially wanted, but not as the main line to the north, north-west and north-east of India.

7707. Are you acquainted with the district which has been called the Concan, which ranges below the Ghauts from Bombay northwards to the mouth of the Taptee and the Nerbudda?

Not personally.

7708. Supposing there was a district intersected frequently by streams from very steep mountains, subject to violent torrents, and with a number of mountain spurs running close to the sea, which would require in each case tunnelling, and probably embankments and viaducts across the rivers, do you think that it would be more advantageous to run along some 300 or 400 miles of a country like that than to go over one single range of hills, supposing such a line to be practicable, with tolerable gradients?

I think that I would rather take all the difficulties that could possibly arise in a sea-coast line, with such breaks as there are upon the western coast between Surat and Bombay, a distance of 190 miles, than attempt even a single rise over the first range. Every description that I have received gives me the idea that the coast is not a very difficult country; but we must recollect that scientific discovery has come very much to our aid of late. I do not know whether your Lordships are aware of an improvement which has been made by a French engineer, M. Arnaud, who has invented a very ingenious method by which very short radii of curvature, down to 40 or 50 yards, can be travelled by his engines; I know that as yet that principle has not arrived at the result at which one may hope it will arrive, but it is a very important improvement.

7709. Has it been adopted in practice?

Yes, from Paris to Sceaux, a length of 10 miles, and I believe it has been determined to carry it further. I know the difficulties that are usually met with in India. For example, you cannot travel across the Punjaub without going over five enormous rivers—seas you may almost say—because some of them in floods are miles in breadth; but I would rather face three miles of inundation than face those hills. It is true, that if you choose to make a base of 90 miles to ascend the great Ghauts, you will then get a slope of 1 in 330, that is, a rise of 16 feet in a mile; but that would take above 90 miles to ascend the Ghauts.

7710. Is not there an enormous amount of traffic carried on in this country with gradients ten times steeper than that?

Yes; but we see that, with all that enormous traffic, the shareholders are ruined. I come to that as the great test of the whole principle; that if the system is so defective here, that with the immense traffic in this country, which never can be thought of in India, your shareholders have not a profitable concern, that must be a complete condemnation of the whole principle.

7711. Do you see no difference in the probable returns upon a line that should be executed at a cost of 40,000 *l.* a mile, and upon another line executed at a cost of 7,000 *l.* or 8,000 *l.* a mile?

Yes, I am aware of that. I think that part of the difficulty of English shareholders arises from unnecessary extravagance in the cost of construction, and from

from the bad selection of lines. I do not blame the engineers in England, because here they had to deal with a very undulating country; but the fact of running upon inclines of 1 in 37, as they are doing upon the Birmingham and Gloucester line, would be inexcusable in India. I think myself that it was perfectly inexcusable in England.

7712. *Chairman.*] Is it fair to attribute the low rate of interest enjoyed by railway shareholders in this country to the mere expenditure consequent upon steep gradients?

No. I think that there are two great heads of expenditure: one is the expenditure of the original construction, and the other is the expenditure of the after-working; of the two, I think the expenditure of the after-working is the most important to deal with. Your steep gradients materially affect your expense in after-working; because you must regulate your load according to your inclines, and you must regulate the number of your trains in the same ratio. If you have such gradients that you cannot carry very heavy trains, you must have numerous trains; and there is nothing that you can have to deal with in railways so expensive as the great multiplication of trains.

7713. Lord *Wharncliffe.*] According to the principles which you have laid down, I understand you to recommend that the great lines of railway for India should be taken along the river valleys, in order to follow the natural inclination of the ground?

Yes; to the utmost extent that that principle coincides with the broad interests of commerce, &c.

7714. Then supposing, on the one hand, a case where you follow a stream up to the crest of a chain of hills, and then, after passing the chain of hills, you find, on the other side, nothing that presents any serious difficulties whatever; and comparing that with a case, such as you have lately described, of running across a number of streams, and through hills which divide them; do you think that, in the choice of evils, the former of those two cases may not be the best to select?

I should face a vast number of difficulties of every other description, rather than an ascent of 1,700 feet, which I could possibly avoid. It would be difficult to lay before me any case of any description so difficult, that I should not prefer it, rather than going up 1,700 feet.

7715. Supposing that the worst portion of the railway was about eight miles in length, and that the worst gradient was several feet better than the Lickey incline upon the Birmingham and Gloucester line?

There is nothing that in every case I should so studiously avoid as that. I know the Lickey incline; it is, for two miles and a quarter, 1 in 37. But all those things are rather beacons to avoid, than examples to imitate.

7716. Is not it a choice of difficulties?

I do not think there is any difficulty in dealing with an ordinary river.

7717. Lord *Wynford.*] Has not legislation had more to do with the reduced profits of the shareholders in this country than anything else?

I think the extraordinary expense of the original construction, growing out of the course of legislation, is one very great evil.

7718. Earl of *Ellenborough.*] Will you state the line that you would propose to carry along the valley of the Ganges, from Calcutta to Raj Mahal; how far would it go?

I imagine it would cross the Jumna at Allahabad; thence to Cawnpore, Agra, Delhi, Kurnoul, Loodiana, Lahore, and end at Attok, on the Indus.

7719. Would there be any material difficulties arising from water during the inundations of the rivers?

The principle we took was to give ample room for the water, and to raise our roadway a certain distance above the highest flood that has ever been known; I do not think there is anything to apprehend from that cause.

7720. Must it not be carried upon arches for a considerable distance?

Arches or embankments. That was one question to settle: how far arches

Lieut.-Col. J. P. Kennedy.

14th July 1853.

should be used, or how far the bank of the railway should be considered as a bund against the water.

7721. How do you propose to pass the mouths of the Jumna and the Soane?

I recommended that they should be left as breaks in the line till additional experience should have been gained; I think that is the only safe way to treat it. Speaking of India, we are not speaking of a country circumstanced as England is, with millions to spare, but of a country where you are now travelling at the rate of three miles an hour, and where, if you make a mistake in your plan, the consequences may seriously affect its success. If you can go 1,000 miles, with only the inconvenience of getting twice out of your carriage, I think that is enough till we get additional experience.

7722. Lord *Wharncliffe.*] Supposing those two breaks to exist in a line of that description, with heavy trains passing between Calcutta and the North-West Provinces, would it be no inconvenience to have to unship those goods every time you crossed those rivers?

The inconvenience would be infinitely less in India than in any other country. After all it comes to a question of expense, and where you have to deal with wages at 3 *d.* a day, it is a much smaller consideration than where you have to deal with labour at 2 *s.* or 3 *s.* a day.

7723. Must you not have a separate plant for each portion of the line that is so cut off?

Yes, or you must do what I think would very likely be found to be the best, as I have heard is sometimes practised in America, provide the means of carrying the trains across by rafts.

7724. Earl of *Ellenborough.*] Would not there frequently be very great difficulty in carrying your works over the large tracts of sand which exist on the banks of the rivers?

I do not think there would be any difficulty which could not be got over. I beg to be clearly understood, that I have never meant to recommend that permanent breaks should be left in the line; but what I recommend is, that no hazardous expenditure should be incurred, and that greater experience than we now possess, in reference to Indian rivers, should be obtained before we encounter the enormous expense of bridging over those large rivers: one of them is a river three miles wide at floods, and the stream, it is said, sometimes changes its course at places.

7725. Lord *Mont Eagle.*] Would not the building of a bridge across such a river cause such changes to be still more frequent?

I cannot say that it would positively have that effect. I do not think, if there were sufficient openings, it would injure the current of the water.

7726. Earl of *Ellenborough.*] Have not you seen in the upper provinces bridges which have been entirely choked up, the water taking a course at some distance from them?

I cannot distinctly remember observing any instance of that kind; but I have frequently heard of it.

7727. *Chairman.*] What is your opinion with regard to the possibility of executing those works by private enterprise?

I think that would precisely depend upon the course which is taken as regards the first railways. If a prudent and economical course be adopted—I do not mean economical as impairing the efficiency of the work, but economical in every way that efficiency will permit—the first railway which opens and pays well will settle that question in favour of private enterprise; but if, unfortunately, a useless expenditure is incurred, I think it will settle it the other way, and you will never be able afterwards to get a company without guarantees from the Government. Now I do not think you can consider a work as being executed by a private company where a guarantee is necessary from the Government.

7728. Do you think it dangerous for the Government to give that guarantee in the first instance?

No; I think such a guarantee is essential till that experience has been obtained which I think a fair and useful construction of the works will afford, so as to

to give confidence to the public. The money then may be forthcoming without it. I do not think you can consider the principle as fairly established till companies can go into the money market, and obtain their money without the assistance of the Government.

7729. Lord *Wharncliffe.*] You think if a Government guarantee is given in the first instance, and a proper superintendence is exercised over the money, no further guarantee will be necessary, and that you will in future find private capital to execute the works?

I do hope that the works may be so constructed, and such judicious superintendence exercised, that every kind of expense shall be avoided which shall place the return for the outlay in the slightest jeopardy. I think, if that is the case, there will be ample remuneration derived, particularly from the Calcutta line, and then that will give a confidence to the money market which will render guarantees in future unnecessary.

7730. Earl of *Ellenborough.*] There is to be a branch, in the first instance, to Burdwan, is not there?

Burdwan will be on the main line; it is above Burdwan that the branch to the collieries goes off.

7731. Is Burdwan on the main line to Rajmehal?

It is.

7732. Earl of *Albemarle.*] The contract of the Bengal Company is very high, is not it?

I think it is very high as regards the price of labour in Bengal, but that was to be expected in the first undertaking of this kind.

7733. Is not the charge to the Company about three times the amount which the contractors pay to the workmen?

It very much depends upon the class of work; I have never had a satisfactory report upon that point.

7734. Lord *Elphinstone.*] Do you propose to make double lines or single lines?

Single lines invariably, with the exception of the first 40 miles, commencing at Calcutta.

7735. Earl of *Ellenborough.*] Would you, in the first instance, take ground enough for two lines?

Yes; they are obliged in India to take much more ground than in England, because where there is any embankment, the great slope required to meet inundations, adds very materially to the quantity of land required.

7736. What would you lay your rails on?

I suppose generally, in a flat country, the material would be burnt brick; where kunker can be had, that would be used, and any ordinary stone when furnished by the district.

7737. For sleepers, what would you employ?

Iron sleepers would be the best, until sufficient experience is obtained in the preservation of timber against the destruction incidental to that material in India.

7738. Lord *Mont Eagle.*] Will not the expense of iron sleepers be very great?

Not very great.

7739. Lord *Wynford.*] A wooden sleeper would be liable to be consumed by the white ants, would not it?

It could not be depended on at present; there were no experiments as to the preservation of timber when I left India, which had been of sufficiently long standing to give confidence in them.

7740. Lord *Mont Eagle.*] Have you ever calculated the expense per mile of a single line of railway?

I have made several calculations, and have little doubt that upon the average they

Lieut.-Col. J. P. Kennedy.

14th July 1853.

they will be found to range within 5,000*l.* per mile, if iron can be had at a reasonable price.

7741. Would it be nearly the same throughout the country?

By no means; it would vary very much; where there are large rivers to cross, or where much waterway is required under the road in districts subject to inundation, or where viaducts, tunnelling, or heavy rock cuttings occur, these matters cause considerable variation as compared with the lighter class of works.

7742. *Chairman.*] What system would you adopt to secure the greatest possible economy in the construction of the railway, and in its maintenance after it is made?

In the first place, the Indian practice is clear of many expenses which occur in England. There is no Parliamentary investigation; the system is upon an admirable footing in that respect. The land, too, has been given by the Government up to this time; there are no law expenses, as in England: all these are vastly favourable circumstances. If, in addition to these matters, the contracts be let in small lots, so as to avoid monopolies and to promote competition; the engineer using his ingenuity and every exertion to suit his contract to the capacity of the natives; making bargains for quantities of bricks, lime, &c., and separate bargains for the mere building with bricklayers; by such means he will produce economical work, and gradually train the people up to taking contracts. In short, the engineer of a line in India ought to be able, if necessary, to take the same measures that a contract or would, and execute works occasionally himself, if necessary: such a course would effect all that can be done in the way of economy of construction. I cannot help hoping, too, on this subject, that efforts may be made to work the native iron, as the large demand upon England, growing out of active railway operations in India, would assuredly increase enormously the price of that article in this country. With respect to the economical working of lines, that can be best secured by the proper selection and laying out of the line at first, as on that will depend the weight of the trains that the engine can convey, and the consequent number of daily trains required to execute any necessary amount of traffic.

7743. Lord *Elphinstone.*] Can the Government give the land of the zemindars?

The Government pays them a very high price for it; I think the price per mile in the lower country of Bengal was nearly 500*l.*

7744. Earl of *Ellenborough.*] How many acres would be taken in a mile?

There was a very large demand made upon Government in the first instance for the Bengal Railway: I had it brought down, I think, to 14 or 15 acres in the mile for permanent occupation, and the temporary use of additional quantities of land from which to obtain fillings, clay for bricks, spreading ground, &c., in proportion to the exigencies of the different parts of the line.

7745. Lord *Wharncliffe.*] The average in England is about 10 acres, is it not?

Ten or eleven acres.

7746. Lord *Mont Eagle.*] What was the average expense per mile?

I was in great hopes at one time that the line would be made all through, from Calcutta to Allahabad, which is much the most expensive portion, for 7,000*l.* per mile.

7747. Lord *Elphinstone.*] Where would you have recommended it to begin, at Mirzapore?

I was very anxious to begin above Allahabad; I think it was very important that it should have begun there; but that question had been decided before I was appointed.

7748. Earl of *Ellenborough.*] Have you ever calculated at how many trips you could carry a regiment, with all its followers, and the hackerries which accompany it?

No, I never have.

7749. Earl of *Albemarle.*] Have you made any computation as to the period of time which will be occupied in the formation of the railway?

It depends on the energy of the Company carrying it on; they have been slow, I think, in the execution of the Bengal line.

7750. Lord *Wharncliffe.*] You said just now, that you hoped the first section of the line from Calcutta would be executed at 7,000 *l.* a mile?

I hoped at the outset that it would; I know now that it will be considerably beyond that; I thought that the works below Allahabad, where they are costly, exclusive of the bridging of the Soane, would have been executed at 7,000 *l.* a mile.

7751. Supposing the line which you have condemned so strongly, from Bombay, running across the mountains into the Deccan, can be executed at a rate of from 7,000 *l.* to 8,000 *l.* per mile, would that be an exorbitant amount?

I think it would be a very cheap amount; but I do not think that has anything to do with the question. I would rather have a level line at 14,000 *l.* a mile, than a steep one at 7,000 *l.*

7752. Lord *Wynford.*] If you were to make it subservient to the interests of trade, it would be necessary to carry it across the mountains?

Yes; it is highly important, I think, to carry the line into the Deccan, but merely for the traffic of the Deccan. What I wish is, that the traffic in the north, north-east and north-west of India, where it has an opportunity of passing along a level line, shall be permitted to do so. I know if it comes over the hills, it will have to pay extra for every ton carried.

7753. Lord *Wharncliffe.*] They will have equally to pay extra if they are carried a long distance round out of the direct line?

I think that for Guzerat, Malwa, and all districts north of the Nerbudda, the coast line would be shorter, as well as more level, than any line through the Deccan.

7754. Is not one of the great objects of a line on that side of India to obtain access to the cotton districts, and thereby carry a large and bulky traffic?

That is a most important object; and I think that for Kandeish and the northern part of Berar, it would be better attained by the coast line than by a line through the Deccan. Then I think the south part of the Berar district would come into a line going through the Deccan by one of the northern sources of the Godavery River; that would be quite justifiable, and, as a branch line, very useful.

7755. Earl of *Ellenborough.*] Where you are obliged to carry your line of railway on arches, it becomes, in fact, a long bridge, and must be so considered in calculating the expense?

Yes.

7756. Could you survey the country while the waters were out?

No; but the course taken by the engineers of the line was to get the best information they could as to the highest point in every place to which inundations had ever been known for several years to have risen.

7757. Is not it the fact that it is not only the height of the inundations, but the extraordinary rapidity and force of the water that creates the difficulty?

Of that question we have had considerable experience as regards the effects upon different embankments. To embankments with deficient slopes great damage has frequently been done; I think where there have been good slopes to the embankments they have stood well against the current of water; therefore, when we gave the large slope of five to one there was very little apprehension. Many of those embankments where there were very rapid streams, even though constructed with slopes of three to one, have done their work well; others again have given way.

7758. The peculiarity of the seasons in India is, that the rain all comes down at the same time?

Yes, but a large proportion of those embankments has stood all those seasons, although defectively constructed.

Lieut.-Col. J. P. Kennedy.

14th July 1853.

7759. Earl of *Harrowby.*] Do those embankments become covered with jungle?

I think they generally remain clear.

7760. The jungle does not continue to sow itself?

They are coated with grass, but you do not often see jungle upon them; there are certain plants which would be desirable for the purpose of strengthening them.

7761. Earl of *Ellenborough.*] For military purposes it is only above Allahabad that the railway would be of much value, is it?

At present the war is lower down.

7762. Generally it is in the Upper Provinces that you would wish to concentrate the troops?

Yes.

7763. What time does a regiment take in going from Calcutta to Allahabad in boats?

It is a tedious voyage.

7764. Earl of *Harrowby.*] Can they go 10 miles a day by water?

I cannot say the precise rate; I have seen some of the river boats completely stopped in their voyage.

7765. Earl of *Ellenborough.*] What was your calculation of the traffic upon the railway between Allahabad and Calcutta?

I forget the precise calculation.

7766. Have you ever considered the expediency of making a railway from Calcutta to a point on the main stream of the Ganges to which there is a clear course from the sea?

I have heard it discussed; but as it was the intention to carry it on, it did not come maturely before me. I have no doubt that the small branches which are necessary to the different navigable points ought to be made in connexion with the great trunk lines.

7767. A railway from Allahabad to the Upper Provinces would run very nearly in the line of the intended canal irrigation, would not it?

It could not go far from it; the Douab is a narrow district altogether.

7768. Earl of *Harrowby.*] Could the two be combined, so that the one should pass on the embankment of the other?

I do not think it would be desirable.

7769. Earl of *Ellenborough.*] The canal is to run on the highest point between the two rivers, is not it?

Yes, it should be so, in order to command the whole district.

7770. Lord *Wharncliffe.*] In speaking of the interruptions upon the river, you referred to the possibility of carrying the trains upon rafts, as you say is the case in America?

I have heard that such a practice exists there, but I do not know the details.

7771. Are you aware of the state of affairs in India, with respect to the possibility of procuring iron?

I had an opportunity of seeing the report of the geologist who was sent out there about two years ago; he has been examining the districts to the northward of Calcutta. I think there is a great deal that is satisfactory in his report; but I do not like the conclusion of it, because I think he seems to throw over the extraordinary advantages of cheap labour in India. We find that he brings out a comparison between manufactured iron in India and manufactured iron in England, showing very little difference. He gives a comparison as to wrought iron, showing a saving in favour of India of only about one-eleventh of the whole cost. I think he has not given full consideration to the difference of the value of labour in the two countries, as forming an element in the price. I have no doubt, from what

what he says, that a sound speculation in iron will afford important facilities to the construction of railways in India.

7772. Lord *Elphinstone.*] Is coal found near the iron ore?
Yes, there is coal in those districts; it is not a very good class of coal which they have yet found.

7773. Lord *Mont Eagle.*] There have been iron founderies worked for years in the Saugur and Nerbudda territories, have not there?
I have heard so, but have not seen them.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Tuesday next, Two o'clock.

Die Jovis, 28° Julii 1853.

LORDS PRESENT:

Earl of Powis.	Lord Wharncliffe.
Earl of Harrowby.	Lord Wynford.
Earl of Ellenborough.	Lord Ashburton.
Lord Bishop of Oxford.	Lord Stanley of Alderley.
Lord Mont Eagle.	Lord Broughton.
Lord Colchester.	

THE EARL OF HARROWBY in the Chair.

ROBERT TORRENS, Esquire, is called in, and examined as follows:

8420. *Chairman.*] WHAT situations have you filled in India?

The first appointment I held was assistant to the collector and salt agent of the 24 Pergunnahs in the immediate vicinity of Calcutta. Afterwards I held the appointment of acting collector of land revenue in the zillah of Tippera, and after that I was appointed joint magistrate of the district of Bogra. While holding the appointment of joint magistrate of Bogra, I also was appointed deputy collector of that district, and then I was removed to the appointment of joint magistrate and deputy collector of the district of Moldah. After that, I was appointed magistrate and collector of the zillah of Moorshedabad. Then I was appointed additional judge, or merely civil judge, of the zillah of Chittagong. I then was appointed civil and sessions judge of the zillah of Mymensing. From that district I was removed to the zillah of the 24 Pergunnahs as magistrate, and shortly after was appointed as civil and sessions judge. From the 24 Pergunnahs I was appointed commissioner of the 16th or Chittagong division, and subsequently commissioner of police in that division.

8421. You have been engaged in various branches of the revenue and judicial system?

Yes.

8422. What was the population which you had under your charge in Chittagong?

I cannot exactly state that I am not aware, but in the zillah of Chittagong I suppose there may be about 700,000 people. I ought to mention that the division comprises other districts besides Chittagong; the division is called the Chittagong division, but there are the zillah of Tippera and the district of Noacolley or Bhoollooah also under the jurisdiction of the commission of Chittagong. Tippera, I dare say, may comprise a population of 800,000, or perhaps a million, and I believe the population of Bhoollooah has been stated, though I cannot exactly refer to the document, at about 400,000 people.

8423. So that the whole population which you had under your charge at one moment was, to what amount?

I should think a million and a half.

8424. What were the functions which you exercised within that district?

I was commissioner of revenue and superintendent of police.

8425. What were your duties?

My duties were to hear appeals from the collector of revenue in various matters that were placed under him; also to confirm settlements of the jumma of

Robert Torrens, Esq.

28th July 1853.

estates of a certain amount, and to correspond with the Board of Revenue in all matters; to be a medium of communication between the collector and the Board of Revenue, in a manner.

8426. You have had an opportunity in these functions of seeing the working of the police system, have you not?
I have.

8427. Is it efficient, as it is now organised?
No; I do not think it is efficient.

8428. What is the defect?
I should think that the want of integrity and the want of energy among the native police themselves is the grand objection to employing them, as far as my experience goes; also the little assistance that the natives of the country will afford to the police in the detection of crime and the general disregard of truth, and the general readiness which they exhibit to commit perjury.

8429. Are there any defects in the organization which can be remedied?
I consider that there are; for instance, I think that it would be a matter of great importance to reduce the extent of the districts which are placed under the magistrates.

8430. Is the magistrate who acts in a judicial capacity also the head of the police?
He is of the district, but above him is a Superintendent of Police, which office was held by me in the division. He is merely the head of the police in the district, and I consider it a very objectionable arrangement.

8431. The same man has to hunt out the crime and the criminal, and to decide upon the crime afterwards?
He has.

8432. That is objectionable, not only in theory, but found to be so in practice?
I think highly so; in my experience it has been so.

8433. Can you suggest any means by which the interests and the natural influences in the country can be more enlisted in aid of the police; could you make any use of the resident landholders for the purpose?
I should think that would be attended with considerable risk; I question whether the Native landholders would be sufficiently disinterested to adjudicate on any cases, where their own estates were concerned at least.

8434. Either to adjudicate, or to bring before adjudication?
Your Lordship means, perhaps, to be employed as the head of the police; I think that would be still more objectionable.

8435. They cannot be trusted in any case?
I should not trust them in criminal matters with any powers, either as police or as criminal judges.

8436. Is the position of the judicial officer independent at present in the Bengal Provinces?
In practice I consider that it has been sometimes improperly interfered with by Government, and that it ought to be made more independent; that Government ought to be prevented from such interference.

8437. What is the kind of interference which has been exercised?
I have known one or two instances of letters being written to judges, which I think should not have been written, and which would very likely tend to disarrange their thoughts during trials in which Government was interested.

8438. Earl of *Ellenborough*.] Will you mention the particulars of any of those cases?
In the first instance, I refer to a letter written by the Secretary to the Bengal Government to the Judge of Chittagong, No. 13, dated the 5th of January 1837.

8439. What was the occasion on which that letter was written?
The Government of Bengal interfered with the perpetual settlement of the land revenue in the zillah of Chittagong, and it was supposed that the Judge of Chittagong,

Chittagong, as far as I can judge from the tenor of the letter, was opposed to the proceedings of the Government.

8440. In what manner had the Government interfered with the perpetual settlement there?

They had increased the assessment of perpetually settled estates, and settled for the jumma of the surplus lands of those estates with parties other than the possessors and proprietors of that land.

8441. Had the person dispossessed no remedy at law?

Undoubtedly he had a remedy at law.

8442. In this particular case to which you are referring, did the person aggrieved take advantage of the course of the law?

I am not referring to a particular case, but to the general proceedings of the Government in the district; and it was supposed that the judge was opposed to the proceedings of the Government in the district of Chittagong.

8443. Were there any instances in which the persons aggrieved sought their remedy at law?

There were.

8444. Were they numerous?

Very numerous; I believe a great number of cases.

8445. Where the property in dispute was very considerable?

No, I believe it was all trifling. Generally speaking it was trifling; there may have been some cases of value tried in the courts, but the estates in Chittagong are of an exceedingly small extent, and I believe, generally speaking, that the cases were of very small value which were tried in court.

8446. What led to the Government pursuing so very different a course of conduct there from that which they pursued generally elsewhere with respect to the perpetual settlement?

I believe that the Government stated that they had a right to do so because the settlement was founded on a measurement of the lands in Chittagong; I am aware of no other reason.

8447. *Chairman.*] These lands were supposed to be outside those which were measured, so as not to be included?

Outside of that measurement.

8448. Lord *Mont Eagle.*] As I understand, the letter to which you allude did not refer to any particular case which had come before the judge?

No.

8449. But to the general duties?

To the general duties; it was laying down the views and determination of Government for his guidance, which I quote as an instance of improper interference.

8450. Was it addressed to him in particular, or was it a circular to others?

It was a letter addressed in particular to him.

8451. Earl of *Ellenborough.*] Have you a copy of that letter?

I have quoted it in the paper now before me; I have not an authenticated copy.

8452. Have you any doubt that that is a correct copy?

I have no doubt of it, except the last paragraph; I have not quoted the last paragraph, because it was unimportant.

8453. *Chairman.*] Is it in a pamphlet which you published?

Yes.

8454. Earl of *Ellenborough.*] Will you be good enough to read it?

"Sir,—The Right honourable the Governor of Bengal having had before him a copy of a letter addressed, under date the 13th ultimo, by the Collector of Chittagong, to the Commissioner of the Division, a transcript of which, as appears from the last paragraph, has also been forwarded to you by Mr. Havey, the Collector, I am directed, with reference to the great importance of the subject as regards both the due maintenance of the authority of the Government and

Robert Torrens, Esq.

28th July 1853.

preservation of the peace of an extensive district, to address you direct, for the purpose of impressing on you the mischievous consequences which must be expected to ensue if those classes of the agricultural population of Chittagong, who appear to be opposed to the survey now in progress, and to be in a state of considerable excitement in consequence of that measure, should be deluded by designing persons into a belief that you, the highest judicial functionary, are disposed to support them in opposition to the views of the Government, and to become a partisan in their cause. With reference to your established character as a public officer, the Governor feels confident that you have not in any manner willingly afforded grounds for erroneous impressions of the nature above alluded to; and this communication is not made with the slightest intention of imputing blame to you, but merely in order to remove at once, at a time when a considerable degree of excitement appears to prevail, and on a point of much importance, all room of misunderstanding, and to place you fully in possession of the views and determination of the Government. You must doubtless be well aware with what avidity, in moments of excitement, the support of the local authorities whose views are assumed to be opposed to those of the Government is caught at by the disaffected, and that therefore special caution is necessary to prevent misconception, which must embarrass the public service, and not improbably lead those who labour under it to commit overt acts of resistance to constituted authorities, seriously affecting the peace of the community and compromising themselves. As these overt acts have been committed, you will no doubt feel it to be your duty to take every suitable and proper measure to correct any false impression in regard to your sentiments that may have gone abroad. The Governor regards the survey of the district now in progress as a measure of great public utility, seeing that it is no less calculated to define and secure the rights of individuals, and to correct the serious evils, of which litigation has been the most prominent, arising from the irregular intermixture and confusion of landed tenures and of property in Chittagong, than to bring to right and maintain the just dues of the revenue. The survey was commenced after long and careful inquiry and deliberation; and the public officers best acquainted with the peculiarities and wants of the district have been unanimous in declaring their opinion that it would confer a great and substantial benefit on all parties concerned, with the exception only of the fraudulent. Under these circumstances, operations having been already carried on with the best result to a considerable extent, his Lordship is of course determined to prosecute the measure to completion. In itself it must be productive of good to all honest persons; and those who may think themselves aggrieved by any ulterior proceedings, founded on the data which it furnishes, will have, of course, full opportunity to appeal, either to the Court to which the revenue authorities in such cases are amenable, or to lay their complaints before the Government, where they will have due attention. It will be your duty, as a high public officer of the Government, thus made acquainted with its views and objects, to forward them by the zealous exercise of your influence, and the employment, on all fitting occasions, of the authority which is vested in you." I remark upon that: "I may remark that this Court was presided over by the Judge to whom this letter was addressed." There is a further remark: "The last paragraph need not be quoted, as it refers to the conduct of some Native judicial functionaries. It may again be observed that the Judge addressed in the dictatorial tone of the Government Secretary was the functionary presiding in the Court to which the revenue authorities are liable; and it may be inquired whether the tenor of the letter cited was such as to encourage the self-possession of the presiding functionary, and tend to his arriving at a prompt and judicious decision in any case between the revenue authorities and the aggrieved agriculturists. Would the Secretary to Government in any of our colonies, or the Home Secretary of State, be tolerated in addressing any of the Judges in such a tone? Is it only in remote India that such a tone is to be adopted?"

8455. *Chairman.*] This happened in the year 1837?

In the year 1837, when the proceedings were first commenced, or shortly after the commencement of the Government proceedings in Chittagong.

8456. Were you the Judge addressed on this occasion?

No; Mr. Henry Moore was the Judge.

8457. Earl of *Ellenborough.*] Are you aware what steps he adopted?

He

He replied to the letter, and explained that he had no feeling against the Government at all; that was all, I believe, he did. I have not a copy of his letter?

8458. Lord *Mont Eagle.*] That pamphlet does not give the answer of the Judge?

No.

8459. *Chairman.*] Are you aware of any similar instances of interference?

Yes. In the year 1848, I consider that there was an interference, which should not have been exercised, on the part of Government, in a criminal case which I tried myself.

8460. Earl of *Ellenborough.*] What was the nature of that case?

The interference was exercised in a letter addressed to the Superintendent of Police, a copy of which he was directed to send to the magistrate who committed the accused for the offence of affray, attended with murder or homicide; and I think that that letter, addressed to the Superintendent of Police, was such as might have biassed the magistrate in some way, and was not unlikely to bias him in the decision at which he arrived, and to induce him to commit men for trial who should not have been committed.

8461. Have you a copy of that letter to the Superintendent of Police?

I have not.

8462. *Chairman.*] Was this letter addressed to him in his executive capacity, as having charge of the police, or in his judicial capacity?

Certainly, as having charge of the police of the district; but I consider that it was impossible that he could read it with one mind as a police officer, and not be biassed as magistrate to decide on the guilt of the accused.

8463. Lord *Mont Eagle.*] By what official was the letter written?

By the Secretary to the Government of Bengal.

8464. Was that the same individual who wrote the former letter?

Not the same individual.

8465. Lord *Wynford.*] Was it in stronger terms than the former letter?

It certainly was in stronger terms, for it found fault with the apathy of the police officers in the case to which I am alluding.

8466. Earl of *Ellenborough.*] What was meant by "apathy"?

Not discovering the criminals.

8467. *Chairman.*] But, as far as interfering with the apathy of a police officer, is there anything objectionable in the Government doing that?

Not in addressing the Superintendent of Police, certainly; I should not say there was: but I think it was objectionable to send a copy of the letter to the magistrate. I myself was the judge who tried the accused, and I think that it did bias the magistrate, unintentionally perhaps, in the decision at which he arrived, and occasioned him to commit innocent people.

8468. Earl of *Ellenborough.*] What was the particular censure conveyed to the Superintendent of Police?

I recollect that one objection by the Governor-general or the Governor of Bengal was, that he had omitted for some number of days to report the occurrence of the affray and the death of the Natives to the Government; that, I think, was particularly objected to by the Governor-general.

8469. Were these persons afterwards arrested?

Some of them were afterwards arrested.

8470. And then they were brought before the magistrate for this offence?

They were brought before the magistrate, and committed by him for trial before me. I was specially sent to try this case. I might mention, as an instance to exemplify the bias of the magistrate, that he did not take any evidence before the accused, who were referred to in the Secretary's letter; he merely, on one occasion, caused the evidence to be read over to them, took their plea of guilty or not guilty, and then committed them for trial. I think that that almost bears me out in the opinion that he was biassed by the letter to which I refer.

 8471. *Chairman.*]

Robert Torrens, Esq.

28th July 1853.

8471. *Chairman.*] The Superintendent of Police was instructed by the Government to send a copy of a letter, charging himself with negligence in a particular case, to the magistrate?
Yes.

8472. The magistrate in this case was to act, not judicially, but to act as the head of the police?
He was, first of all, to act as the head of the police; to apprehend the criminals, and to ascertain their guilt afterwards, and commit them, if he thought proper, for trial before the Sessions Judge.

8473. But as magistrate he was responsible in some degree for the conduct of the police, was he not?
Quite so.

8474. Is it not almost inevitable, from the confusion of the two duties together, that the interference which might be exercised by the Government in one capacity fairly enough, would be improper in the other case?
It would be so, I think.

8475. Lord *Mont Eagle.*] As I understand, the head of the police was to send a copy of the letter to the magistrate, he being the same individual; namely, to send a copy of the letter to himself?
No; the Superintendent of Police is over all the magistrates as regards the police; the magistrate is the head of the police of the particular district, and he sent a copy of it to him. In course of trial, the copy also came before me, the judge who was to try the case.

8476. Lord *Wynford.*] Do I rightly understand you to say, that the mere circumstance of the charges being read over to those men, that is to say, the depositions, caused in the mind of the magistrate a feeling of bias against the prisoners?
I think, if he had not been biassed against the prisoners, he would have taken the evidence in the presence of the accused. The witnesses who gave this evidence were not present; they could not put a single question to them. The witnesses who had given the evidence were not present, and the accused were never confronted with them; they had no opportunity of cross-examining them, to ascertain whether they told truth or falsehood. I afterwards ascertained that these witnesses were perjured men; at least, as far as I could ascertain at the trial.

8477. Was this the first opportunity of examination?
The first opportunity; in the first instance, in the magistrate's court.

8478. And then they were examined behind the accused men?
They were.

8479. Is that the general course of administering justice in India; namely, taking evidence in that mode?
No; these are exceptions, I should say, to the general rule.

8480. In ordinary cases, as in this country, is the evidence taken before the offender's face, and is he fairly confronted with the witnesses?
No. I did not understand your Lordship's question. Not in petty cases; it used not to be the case: what the rule is since I left India I do not know. I have been absent for a year; but it used not to be the case, in petty cases, to take the evidence before the accused; and generally the accused parties were not summoned until the evidence was taken, and the magistrate had heard the evidence, and could decide whether it was necessary to summon the accused or not. That was in petty cases.

8481. This was in a case of homicide?
A very important case indeed.

8482. Lord *Mont Eagle.*] Was there any peculiarity in the case which made it more right for the Government to interfere?
Yes; there was the peculiarity in the case that the affray had taken place close to the Governor-General's seat at Barrackpore, and I understand that on that account it was a very unusual occurrence, and the people were killed not very far from the Government House.

8483. Earl

8483. Earl of *Ellenborough.*] Was it an affray in which the military were engaged?
No; it was an affray for crops.

8484. Lord *Mont Eagle.*] There was no political element in it?
Not the least.

8485. Earl of *Ellenborough.*] Have you observed that any particular inconveniences arise from the union of the magisterial and police functions in the same individual?
I have; I consider, in the first place, that a magistrate cannot so dispassionately consider the evidence, if he exercises the united duties of police officer and magistrate.

8486. Do you think that when he has exerted himself for the purpose of arresting the person accused, he may perhaps feel a certain disposition to find that he has got the right man?
That is my opinion; I think my experience bears me out in that opinion, and in consequence I think that appeals are very much multiplied to the judges.

8487. In consequence of there really being a defect in the evidence?
A defect in the evidence which perhaps the magisteral police functionary does not perceive; he is unable to discover it.

8488. Is your experience of the evidence such as to give you a good deal of distrust of it; did you feel satisfied when you were convicting a man, that you were quite right that the evidence was true?
I had very great distrust of native evidence; generally I was guided more by circumstantial evidence, than by direct evidence.

8489. How were the persons appointed who acted as policemen; did you appoint them?
The magistrate appointed the subordinate officers, all subject to the control of the Superintendent of Police.

8490. That is to say, he had a negative upon the appointment?
He had.

8491. How did you find out the persons whom you considered fit to be made policemen; who suggested their names to you; did they offer themselves?
They offered themselves in general. Perhaps a man might have distinguished himself in some way; he might have shown alacrity in giving information leading to the apprehension of a criminal, or he might have been of some use in some public matter, and in so far he was selected; but, generally speaking, it is quite a lottery who are selected as the very subordinate police.

8492. Were there generally a number of persons applying at the same time for the situations?
A great number.

8493. Did they appear to be put forward by the native officers about the court?
I do not consider that they were. As far as my experience goes, I think that they appeared in too great numbers to be put forward by the native officers.

8494. Did you ever take the opinion of the native officers as to the eligibility of particular persons?
I have no recollection of having done so, but I suppose I must very often have done so.

8495. What had you to make you decide between one man and another; you could know nothing of any of them personally?
Very little, excepting in one or two instances, could I know of any of them.

8496. Did you make any inquiries as to their connexions, as to their former life?
I presume I must have done so; but I cannot say that I recollect instances of doing so. I should think it most likely that I took the most athletic-looking person, and the man who might be recommended, in case I did make any inquiries regarding them.

 8497. Were

Robert Torrens, Esq.

28th July 1853.

8497. Were any of these men recommended by indigo planters or persons engaged in trade in the neighbourhood?
No; I think not.

8498. Had you occasion at any time to dismiss any of them for improper conduct?
I have constantly been obliged to dismiss the subordinate police officers.

8499. Did you find them efficient in detecting the perpetrators of common thefts?
No, not at all; they were inefficient.

8500. Were they inefficient, if there was any riot?
Perfectly so.

8501. They ran away?
They ran away.

8502. Lord *Broughton.*] Are these deficiencies of the system exceptional, or general?
With regard to the subordinate native police, it is not exceptional, but general, I think.

8503. Earl of *Ellenborough.*] Did it ever occur to you in what manner the police could be improved so as to make it more efficient and trustworthy?
I think if European superintendence was multiplied, the police would be improved, certainly.

8504. If you put at the head of detachments of it non-commissioned officers from the army?
Tried non-commissioned officers, I dare say, would be of very great use, provided their health would stand in Bengal, which is a matter of doubt.

8505. Earl *Powis.*] Was the inefficiency from the deficiency of pay, or from other causes?
The deficiency of pay, I think, is also an objection.

8506. If the pay had been raised in the provinces of which you are speaking, would there have been a better class induced to become policemen?
I doubt whether we should have had a better class. They might have been induced to be more honest and more scrupulous in the discharge of their duties. I doubt whether you could have got different men there.

8507. Earl of *Ellenborough.*] Would it not be necessary to raise the pay very greatly, in order to take them out of the reach of temptation and bribery?
It would be requisite, certainly, to raise it very much.

8508. Lord *Broughton.*] Have you had any experience of the military police?
No, I have not.

8509. Earl of *Ellenborough.*] These policemen are armed to a certain extent, are they not; have they not swords and shields?
They have swords and shields provided by themselves; they are not given by Government.

8510. No matchlocks?
No matchlocks in Lower Bengal.

8511. Did there appear to you, while you were administering justice in this district, to be any improvement in the general condition of the people?
I did not remark it.

8512. Were there any persons of considerable property amongst them?
In the particular district of Chittagong there were very few persons of property; the tenures there were exceedingly small.

8513. Did you ever reside in a district in which there were persons of large property?
I did.

8514. In what manner did they employ their property; had they a great many servants?
Generally speaking, a great number of retainers.

8515. Did they nautche?
Some of them did; for instance, the Rajah of Tippera, who is a zemindar, and also an independent sovereign, used to give a number of nautches, I understand.

8516. But their expenditure is only occasional, not general?
Their expenditure in those respects is only occasional; but the practice of the old families, and of those who have large landed possessions, is to be exceedingly wasteful and disregardful of their money.

8517. In what manner do they employ it in ornaments; do they buy rich ornaments for their wives and children?
No; I think it is very often expended in entertainments and dissipation, and displays, perhaps.

8518. What kind of dissipation; have they a great number of women?
I believe they have.

8519. Then the Brahmins get a good deal out of them, do not they?
I dare say they do, especially on the occasion of their funeral ceremonies.

8520. And their marriages?
And their marriages.

8521. They complain of it a good deal, do they not?
They practise it. I am not aware that they complain of it.

8522. If a great native goes to the Ganges and shaves his beard off, he has to pay very heavily for it, has not he; for any ceremony?
For ceremonies he has certainly to pay.

8523. Did cultivation appear to be extending?
I consider that it was considerably extending, in all the districts of that division.

8524. Were the occupiers bringing uncultivated lands under the plough?
They were.

8525. Where they brought uncultivated lands under the plough, what did they pay for them to Government; how was it assessed?
Generally it was on what they call the russidee jumma; that is, a yearly progressive increasing sum, at a low rate the first year, and raised gradually till it got to the full amount assessed on each begah.

8526. Were there no cases in which they had cultivated and uncultivated property, and could extend their cultivation without paying any additional rent?
No, I am not aware of any cases where they could get the uncultivated lands without paying additional rent.

8527. The uncultivated were not let to them with the cultivated at a fixed sum?
Not in Chittagong, under the Government assessment latterly made there. I refer to jungle land.

8528. What course is a man to pursue if he wishes to bring land under cultivation at present uncultivated; to whom must he apply?
To the collector.

8529. What would the collector do?
He would give him a lease of it at this progressively increasing jumma.

8530. Before that, must he not either see the land himself, or some one else?
Undoubtedly.

8531. What is the extent of the collectorate in acreage, or the number of square miles?
It may be about 25 miles broad; it is a very narrow district. It may be upwards of 100 miles long.

Robert Torrens, Esq.

28th July 1853.

8532. Do you think it is possible for the collector in each case to see the land, and to assess its value?
I do not.

8533. What would he do in that case, where he could not see the land?
He was guided by his subordinates.

8534. Were those subordinates trustworthy?
Not in every instance, I should say; some of them might have been, and some might not; I should not say it would be the rule that they were untrustworthy.

8535. Had a man who was desirous of extending the cultivation the option of refusing the land at the rent asked for it?
If he applied for it he would be expected to take it.

8536. No matter what the rent was?
No; if he agreed to the rent proposed by the collector.

8537. Lord *Mont Eagle.*] Would he receive information as to the rent before he began the tillage of it?
Before he began the tillage of it he would enter into his agreement as a matter of course.

8538. Earl of *Ellenborough.*] After how many years' service have you known gentlemen appointed to the office of collector, which requires this knowledge?
I can speak of my own case, in the first instance. I was appointed acting collector after I had been in the public service about 10 or 11 months; having the full powers of a collector, of course.

8539. We have been told that the collector has, to a certain extent, judicial authority; that is, that he deals judicially with the tenures of land and the rights of property. How had you been able to acquire any knowledge upon that subject in the 11 months which had elapsed since you came into the country?
I had been assistant to a collector during those 11 months.

8540. Do you consider that you had taken any information or knowledge so rapidly as to be able to perform satisfactorily the duties of the office at the end of the 11 months?
No, I do not consider it now.

8541. Do you think that anybody can in that space of time acquire a knowledge of the tenures of India?
Certainly not.

8542. May not the collector, therefore, in many cases unintentionally do grievous wrong to the persons who are placed under him?
He may.

8543. Lord *Mont Eagle.*] Is it not very unusual for a man to be appointed after so short a service?
I should think at present it would be.

8544. Do you know what the term of service now is before a party becomes acting collector?
I cannot give any exact answer to the question. In case of a collector going away sick, or dying, or anything of that sort, an assistant would be called upon on the emergency to perform the duties of acting collector.

8545. Earl *Powis.*] Where was it that you had acted at the time you mention?
At Tippera.

8546. Earl of *Ellenborough.*] How did you set about acquiring the knowledge requisite to perform the duties of collector; how could you acquire from any books a knowledge of the tenures of the district in which you were a servant?
If I had an opportunity of reading any books upon the subject, I might have acquired it.

8547. What books are there upon the subject?
There are the different regulations of Government, and also a book called "Murshman's Revenue Guide." There is another book, by Mr. Boutros, published

lished on the subject; and there are some other works which an officer now might have an opportunity of reading. In those days such works were comparatively few and difficult to obtain.

8548. Do not the forms of tenure vary in different districts?
Very much.

8549. So that what you acquired, and what made you master of the experience of one district, would not assist you very greatly in another?
Not in a distant district, certainly.

8550. In what manner did these cases affecting the right to property come before you?
The most important cases that came before me were cases for the assessment of land, commonly called resumption cases, adding to the Government jumma of an estate.

8551. Were those cases in which the Government claimed that the person was not entitled to be rent-free?
The la-khiraj, or rent-free cases, were another description of cases. The cases to which I first alluded were generally increments, land thrown up on the river: the Meyna, for instance, which was a very large river, and where there were very important cases. The other cases were also important; besides that there were cases, called summary suits, where a collector sits judicially trying claims for rent between zemindar and ryot.

8552. Those were cases which would be decided in other countries only by a judicial tribunal?
Only by a judicial tribunal, I presume.

8553. And of course requiring all the knowledge which is requisite to enable a judge to decide?
It would require a knowledge of the laws of evidence, or experience in evidence, certainly; but it would not require such a complete knowledge as a judge is required to possess sitting judicially.

8554. In the la-khiraj cases, there might be required a very long distant proof of the rights of possession of the party, going back many years, might there not?
I should say not; that the principal point to be looked to would be the validity of the document under which the lands were held free from the payment of rent.

8555. But must not that document be of a certain date to give it validity?
Undoubtedly it would be required to be of a certain date.

8556. In all cases, did they produce some document to prove their rights?
In all cases where they appeared, so far as my experience goes, a document was produced to prove their rights.

8557. Was there reason, in any cases, to doubt the genuineness of the document produced?
Considerable reason.

8558. Were they accomplished forgers?
Very much so. I consider that some of the natives are very accomplished forgers.

8559. The signature was always affixed by a seal to these documents, was it not, or was it in hand-writing?
With respect to the sunuds, if the document was granted by a European functionary, it was in hand-writing and with a seal; if given by any of the native powers previously to our tenure of the country, it was generally by a seal.

8560. But the rent-free tenures originated before we were in possession of the country, did they not?
They did, generally speaking, but I imagine that there were a considerable number of documents that were registered. They were required to register to ensure their validity afterwards; and these documents being registered, were signed by the European revenue authority, or some European functionary.

Robert Torrens, Esq.

28th July 1853.

8561. That signature only attested the authenticity of the previous document?
It was corroborative of the document having been registered.

8562. For what period did you go back, in order to establish the right to la-khiraj; was it to 1765?
To 1765; I understand, it has been so ruled now.

8563. Have there been any cases, to your knowledge, where the Government have resumed lands which appeared to have been in possession previously to the year 1765?
I am unable to quote such a case at present.

8564. Were there many cases in which persons, who had been evidently for many years and for many generations in possession of rent-free tenures, were unable to produce the documents, and were therefore dispossessed?
I could not specify cases of inability, but I could particularly refer to cases where the Government took a portion of the land from the la-khirajdar without taking the whole, and without calling upon the la-khirajdar to produce any document.

8565. Was there no length of proved occupancy rent-free that was held to be as valid as a document to prove that there must have been some document upon which that possession was founded, so as to establish the presumption that there must have been originally a good title?
No, I consider that a document must have been produced in every case.

8566. Then the longer the possession, the less the chance of being able to produce the document?
There was a liability to its being lost or destroyed. If the original document was lost, and it was proved that the document had once been registered as valid, that would be sufficient to exonerate the la-khirajdar from the payment of rent.

8567. If a proprietor could prove that from the time of Akhbar he and his ancestors had held certain land rent-free, was not it considered as affording sufficient presumption that there must have been a document to give him that right?
I do not consider that it would have saved him.

8568. Lord *Colchester.*] Were they in the habit of registering them in the courts of the native prince?
It was one of our laws that they were to register all their sunuds or documents in the office of the collector.

8569. It was a British regulation?
It was an enactment of the British Government.

8570. There was no necessity for it, extraneously?
Not under the native princes, that I am aware of.

8571. Lord *Mont Eagle.*] Are the records of the collector very carefully kept upon a change of appointment?
I do not think that they are carefully kept generally.

8572. What is the value of registering if the records are not carefully kept?
I have seen cases where they have been very badly kept.

8573. Then the registry of the document is of very little value?
It is very difficult to discover in some instances whether it has been registered or not, in consequence of the document being nearly illegible or destroyed.

8574. Earl of *Ellenborough.*] Did you ever hear complaints on the subject of the administration of the law in the resumption of rent-free tenures?
I have heard general complaints of it.

8575. Did it appear to you to shake very much the confidence of the native proprietors in the administration of justice by us, and the security of their property?
My own opinion is, that it must have shaken their confidence in the security of their property as regarded the la-khiraj tenures.

8576. Do you recollect any case in which a witness was imprisoned in order to secure him as a witness upon a particular occasion?
I cannot exactly refer to any case at present.

8577. Did any such happen within your own knowledge at any time; had you ever reason to imprison a man in order to keep him as a witness?
Without being able to particularize any case, I consider that I must at some time or another—perhaps not on one occasion, but on several occasions—have put witnesses in confinement; not exactly in prison.

8578. Under detention?
Under detention.

8579. For any considerable period?
I should say not.

8580. Lord *Wynford.*] Was that to prevent them from being tampered with, or from being ill-treated?
Either to prevent their being tampered with, or to prevent their going away without giving their evidence.

8581. Earl of *Ellenborough.*] May not those witnesses have come from a considerable distance?
They may have done so. From the great extent of the districts, in many cases witnesses must come from a great distance.

8582. At what distance from each other were the points between which you administered justice in your court; was it the end of a march?
I should think one or two days' journey would be the distance between each two courts.

8583. Two marches; about 18 or 20 miles?
The districts in Bengal are not so close as that in general.

8584. Do they march more than 10 miles a day?
Your Lordship is alluding to the case of a magistrate moving about his district.

8585. Yes?
Ten or twelve miles might be about the distance.

8586. Then you think you generally moved about two days' journey from court to court?
I did not understand the question which your Lordship put; I understood it to relate to the distance of each permanent magistrate's court from the other.

8587. The magistrates travelling about——
About a march each day is the distance which the magistrates travel. I had very little travelling about myself as a magistrate; I was generally stationary.

8588. When you were stationary, what was the extent of the district from which the witnesses had to come to your court?
Particularizing a district I held, the office of magistrate of the 24 Pergunnahs from Saugor to Calcutta, I should think a distance considerably upwards of 100 miles.

8589. Do you mean to say that yours was the only criminal court in that district to which all persons were to resort for justice, and that you remained fixed in the same place?
Mine was the only criminal court between Saugor and the suburbs of Calcutta.

8590. How far were you fixed from Calcutta itself?
At Allipore, about a mile from Calcutta.

8591. Then the furthest part of your district was 100 miles from your residence?
At least that, I should think.

8592. The witnesses from the extreme point would have to come 100 miles?
They would.

Robert Torrens, Esq.

28th July 1853.

8593. Lord *Mont Eagle.*] And that for the most trifling cases?
For the most trifling cases, even of petty assault.

8594. Earl of *Ellenborough.*] Was it never suggested to you by the Government that it would be better for you to live somewhere nearer the centre of the district?
No, it was not; and with regard to that particular magistracy, it would have been impossible to have moved the magistrate elsewhere, for he was also superintendent of the gaol at Allipore, unless there had been a separate superintendent appointed. That was a large convict establishment.

8595. What was the extent of your judicial duties as a judge; were you occupied for a considerable period of every week?
Every day most busily occupied.

8596. Lord *Wharncliffe.*] Did you ever visit the distant part of your district?
Not in the zillah of the 24 Pergunnahs. I only held the appointment for a year.

8597. You never went beyond the place where you held your court?
No; it was impossible I could do so.

8598. Had you many cases brought from these remote parts of the district?
I should say, speaking from my recollection of the district, the cases of importance were few from the remote parts of the district; it is a part of the country very thinly inhabited, among the Sunderbunds; but cases did occur, certainly.

8599. Earl of *Ellenborough.*] Was there a good deal of water communication in your district?
A great deal of water communication.

8600. It is upon that water communication that a good many of the dacoities take place, is it not?
Undoubtedly there are very grievous dacoities.

8601. What means had you of repressing them; was there any good strong river police?
There were a few guard boats.

8602. Were they manned by these men who had swords and shields?
They were manned by the same class of people as the common burkandauzes.

8603. Was no attempt ever made to get any seamen or maritime persons into that boat police?
I am aware of none.

8604. Had they any fights with any of the dacoities?
During the year that I was magistrate I have no recollection of such an occurrence taking place.

8605. But were there dacoities in that time?
I am not aware of river dacoities; there were several land dacoities.

8606. Lord *Wharncliffe.*] Is the superintendence of the gaol at Allipore always connected with the magistracy of that district?
It is.

8607. Is it subject to general changes?
No; the changes are perhaps fewer in that appointment than generally speaking. I had held the appointment of the judge of a district before, and came down to the magistracy; and when the judge vacated the appointment of judge of the same district, I was removed from the magistracy to the judgeship in that short space of time.

8608. Earl *Powis.*] What class of person was the actual governor or resident at the head of the gaol?
He was a European.

8609. Not one of the Company's servants?
He was an uncovenanted European.

8610. What

8610. What sort of position did he hold, and what allowance had he?
A very subordinate position, and small allowances. The person who last held the appointment (I forget whether it was during my time or not) had been a serjeant in the Company's artillery; and a very good gaoler he made.

8611. Earl of *Ellenborough.*] How many prisoners are there ordinarily in Allipore Gaol?
I think the last time I saw a return there might be about 1,100. That is considerably reduced, for the courts now very seldom sentence prisoners to imprisonment in the gaol; they are generally transported.

8612. Earl *Powis.*] What was the largest number while you were magistrate there?
I should think between 1,400 and 1,500, as far as my recollection goes.

8613. Earl of *Ellenborough.*] If a gentleman happens to be sent to prison, he goes to Allipore, does not he?
No.

8614. Would it not be possible and convenient to unite the superintendence of the Allipore Gaol with some magisterial office in Calcutta, rather than with the magistracy of the 24 Pergunnahs; would it not be convenient that it should be united with the office of the Chief Magistrate?
I should say it would be inconvenient, because the Chief Magistrate of Calcutta ought to reside within Calcutta, and the Superintendent of the Allipore Gaol, in my opinion, ought to reside quite close to the gaol. Sudden outbreaks occur there, when the Superintendent's presence is urgently required; for instance, very lately there was one.

8615. The distance is not above a mile, is it, from the residence of the Chief Magistrate of Calcutta to the Allipore Gaol?
It depends upon where the Chief Magistrate resides.

8616. It could not well be more than a mile?
It could not be more than a mile, I dare say.

8617. The Calcutta militia is close by, is it not?
It is.

8618. Can there be anything much more inconvenient than giving the superintendence of the gaol to the magistrate of the 24 Pergunnahs, who has so very extensive a district?
Formerly the inconvenience was great, I think; but at present, when there are such a number of deputy magistrates, I do not think that the inconvenience is so great.

8619. How many deputy magistrates are there in the 24 Pergunnahs now?
I am not aware.

8620. Some of those deputy magistrates are uncovenanted, are they not?
All the deputy magistrates are uncovenanted.

8621. Is there a separate salary for the superintendence of the gaol, and for the magistrate's office?
No, they were consolidated.

8622. Had they always been consolidated?
As far as my recollection goes, they had been; the salary was 28,000 rupees a year.

8623. Are there any other points upon which you would wish to give evidence?
I would particularly wish to make one or two remarks regarding the extreme youth of the magistrates who have been at different times, or may be, employed in the districts; and I could do it more conveniently, perhaps, to your Lordships, if I were to read an extract from a letter which I submitted to Government on the subject. It is not only the union of the office of Criminal Judge and of Executive Police Officer in the same person that operates banefully in our judicial system; the extreme youth, too often, of the magistrates, is another and just cause of complaint against the constitution of our criminal tribunals in the Lower Provinces of the Bengal Presidency, and, it seems to me, is cause of objection

Robert Torrens, Esq.

28th July 1853.

objection in the Upper Provinces too. It has been stated that a magistrate can sentence one whom he may consider an offender to imprisonment for three years, with labour on the roads, and in irons. These are powers more extensive than are exercised by any single magistrate in other parts of the dominions subject to Great Britain: these powers are, I think, in fact, now unsuited to and uncalled for in the Lower Provinces. The youth and inexperience of the magistrates who exercise such powers has, I am aware, formed the subject of comment and objection in a letter written by one of the Zillah Judges to the Register of the Sudder Court. That was the letter I alluded to as having written myself. I, in the letter referred to, made the following statement regarding the period at about which several magistrates, or officers exercising the powers of magistrates, had that authority entrusted to them after they had been declared qualified for the public service: "One was a magistrate, or exercised the powers of a magis- "trate, three months after being declared qualified for the public service; three "were magistrates, or exercised the powers of magistrates, seven months after "being declared qualified for the public service; one was a magistrate, or "exercised the powers of a magistrate, seven months and a half after being "declared qualified for the public service; one was a magistrate, or exercised "the powers of a magistrate, eight months after being declared qualified for the "public service; one was a magistrate of a district, or exercised the powers of a "magistrate in a district, eight months and a half after being declared qualified "for the public service; one was a magistrate of a district, or exercised the "powers of a magistrate in a district, nine months after being declared qualified "for the public service; two were magistrates of districts, or exercised the "powers of magistrates in districts, 11 months after being declared qualified for "the public service; one was a magistrate of a district, or exercised the powers "of a magistrate in a district, 11 months and a half after being declared qualified "for the public service; one was a magistrate of a district, or exercised the "powers of magistrate in a district, one year after being declared qualified for "the public service; two were magistrates of districts, or exercised the powers "of magistrates in districts, one year and two months after being declared qua- "lified for the public service; one was a magistrate of a district, or exercised "the power of one, one year and four months after being declared qualified for "the public service; two were magistrates of districts, or exercised the powers "of magistrates in districts, one year and six months after being declared qua- "lified for the public service."

8624. You have mentioned 17 magistrates, all of whom exercised the power of magistrates within 18 months after they were so declared qualified?
Yes, and one even at three months.

8625. Lord *Mont Eagle.*] Out of what length of time have you selected those examples?
It is during a period of several years.

8626. Over how many years does it extend?
The first case is dated in 1837, and I go on to 1843, I think.

8627. Earl of *Ellenborough.*] That is all in the course of six years?
Yes.

8628. There is no person in India to assist the magistrate with a trustworthy opinion as to what he should do, is there?
No person officially appointed so to do; he may consult a friend, if he has one.

8629. He is in fact alone?
He is.

8630. Unless he consulted a Native, who would give him a bad advice?
He might, perhaps, consult the Collector, who is at the station; or even the Judge, if it would not be incompatible with the Judge's hearing an appeal from his decision afterwards.

8631. Would it not be rather inconvenient that the Judge and the Collector should be interfered with in the middle of the transaction of their duties by an application from the magistrate to know what he was to do?

In

In the midst of the transaction of their duties it would; but I was not alluding to their being so employed.

8632. In the administration of his duties, the magistrate has no one to assist him from the first?
He has not.

8633. What could that gentleman do who had only been three months dismissed from college; how could he perform the duties of magistrate?
I do not consider that he was qualified to perform them. May I add, that I believe, that in the Upper Provinces, at least, that system is still continued of appointing very young men with the powers of magistrates; it may not be carried to such an extreme extent in the Lower Provinces at present.

8634. Is it not, in point of fact, the necessary consequence of the system of appointment at present; are there any means by which it could be avoided, unless the number of persons in the service were very greatly extended; in that manner at some distant period it might be avoided, but could it be so under the present circumstances of the service?
In that way it might be, by appointing a greater number of persons in the service.

8635. But at present, unless you took the young gentlemen, you would have no one to take?
At present you would have no one in India.

8636. Is there any other point to which you wish to refer?
I believe I have alluded to the junction of the police and the magisterial functions.

8637. Lord *Wharncliffe.*] Was that letter, from which you have quoted, a letter from yourself to Government?
It was to the Register of the Calcutta Sudder Court; it was published afterwards by orders of the Government.

8638. Earl of *Ellenborough.*] Can you suggest any mode of training persons for the judicial office which would enable them at once to perform its duties satisfactorily?
What occurs to me as the best remedy at present, would be to keep the judicial department quite separate from all others, and to have the European or covenanted functionaries appointed to some very subordinate judicial office, and so trained for higher employment.

8639. Lord *Broughton.*] Do you mean such subordinate judicial offices as are filled now by the Natives?
Such subordinate judicial offices, with similar powers to those which are held now by the Natives, or even inferior.

8640. A moonsiff, for example?
I would even in the first instance give them less power than a moonsiff at present has.

8641. Earl of *Ellenborough.*] Would it not be most convenient that before any gentleman is called upon to exercise judicial duties himself, he should have previously seen judicial duties exercised by others, and so have learned them?
I consider it would be very useful to him if he sat occasionally in courts with some of the experienced Judges, or even was obliged to attend in the Supreme Court in Calcutta.

8642. That he should have the practical education which is always obtained by persons destined for the legal profession in this country?
Yes; and that he should understand how to conduct himself with calmness and dignity in his own office.

8643. In this country, a young man who wishes to get forward in the profession does not satisfy himself with reading books at home, but attends the courts, and makes notes of causes, does he not?
I presume he does.

8644. But in India a young man would have no opportunity of doing that?

Robert Torrens, Esq.

28th July 1853.

He would neither have opportunity, nor would he have leisure, unless he were allowed or directed to attend as part of his duties.

8645. If intended for the judicial service, might not he be in Calcutta for 18 months or two years, and required to attend the courts, and report his observations, and show his notes upon the cases which occurred?

He might be so, certainly; or with equal advantage he might be in the Mofussil attending the court of some judge of repute.

8646. Lord *Wynford.*] Is there not this difficulty, that if you put these young gentlemen into these smaller offices, you displace the Natives, whom you wish to encourage, and if you do not, you give them no training whatever?

The European functionaries are so comparatively few, that I question whether it would operate prejudicially by displacing any Natives; it might displace one or two, but the offices of Moonsiff are very numerous, and I should think it would hardly displace any Native.

8647. Earl *Powis.*] At what rate would you pay these Europeans, filling these offices, such as moonsiffs?

About the same as they are now paid as assistants to magistrates and collectors, which is about 400 rupees a month in the lower grade. At present, I believe, no covenanted servant holds a smaller salary than 400 rupees a month.

8648. Earl of *Ellenborough.*] He has 300*l.* a year if he is unemployed, has not he?

I fancy something about that.

8649. Have the gentlemen appointed to the situation of Sudder Judge been, as far as you are aware, persons who had been for a considerable period employed in the judicial service, and competent therefore to act as judges of appeal?

In my experience, gentlemen are appointed to the Sudder who have not had much, or sometimes any, judicial training. I could refer to the constitution of the Sudder Court, as it existed at the time when Mr. Frederick Millett was examined before your Lordships' Committee. I observe that he remarked on the great evil of the want of training of Zillah Judges, and he also stated in his evidence that the Sudder Judges generally were officers of the greatest judicial experience; but my experience leads me to form a different opinion. At that time there were three Judges in the Sudder Court, who were appointed without, I believe, ever having sat as Judges in any subordinate court.

8650. To what period are you referring?

May 1852.

8651. Had they been in the Revenue service, and not in the Judicial service?

One had been a very distinguished Revenue officer; another had sat as the magistrate of a zillah for many years; and the other, Mr. John Colvin, who is now a Judge of the Court, I am not aware had ever been in the Revenue or Criminal Judicial department at all.

8652. Is that the Mr. Colvin who was private secretary to Lord Auckland?

Yes.

8653. Was not he afterwards commissioner somewhere?

He was commissioner at Moulmein.

8654. Was not he at Nepaul?

For a few weeks I believe he was.

8655. But he had no experience in the internal administration of the country?

In the internal judicial administration of Bengal he had no experience.

8656. Lord *Broughton.*] It has been suggested to the Committee, that occasionally it would be advantageous if vakeels of experience and character were raised to the Sudder Bench; is that your opinion?

Not to be raised directly to the Sudder Bench. I think they might go through the lower departments of the Judicial service, and arrive at that position.

8657. It

Robert Torrens, Esq.

28th July 1853.

8657. It has been stated that a man in good practice as a vakeel could not afford to accept one of the lower judicial places which are now given to Native officers, and that, therefore, unless he should be raised to the Bench, it would not be worth his while to give up his practice?

He would have to make that sacrifice, I should think. With regard to the three gentlemen whom I have mentioned, one of them did sit as a Zillah Judge for about one month, and that was all the experience that he had when he was appointed as a Judge of the Sudder.

8658. Earl of *Ellenborough.*] Is it not only very recently that gentlemen have been appointed to the Sudder who have had no previous experience; is it not within the last three or four years?

It has become the practice more recently, I think; indeed it appears to be almost the rule now.

8659. Mr. Millett had been in the Judicial Department, had he not?

He had been a Zillah Judge.

The Witness is directed to withdraw.

G. G. Macpherson, Esq.

GEORGE GORDON MACPHERSON, Esquire, is called in, and examined as follows:

8660. Earl of *Ellenborough.*] WHAT was the extent of your residence in India?

I went to India in the Bengal Medical Service, and I remained there consecutively for 21 years, during which time I was attached to every branch of the Military Service; but the latter and by far the greater part of my service was in the Civil Department, at the stations of Beauleah and Moorshedabad. I retired from the service, and subsequently became a member of the firm of Carr, Tagore & Co., of Calcutta, of which firm the late Dwarkauth Tagore, who was in this country, was the head.

8661. In what year did you leave?

I left in March 1847.

8662. Had you been 21 years in the country; or was it 21 years before you left the Medical Service?

I was 21 years in the country before I left the Medical Service, and two years afterwards as a commercial man in Calcutta.

8663. Have you still mercantile connexion with India?

I have not; I have had scarcely any since 1849.

8664. In the course of your experience in different parts of Bengal, had you any opportunity of observing the efficiency or the inefficiency of the police?

I had various and many opportunities during the time I was both at Beauleah and Moorshedabad. At that time the police was, I think, worse even than, from all accounts, it is now; at least it was when I left Calcutta. There was then very great difficulty in laying hold of dacoits; in fact they very seldom were laid hold of; frequently the wrong persons were apprehended and kept for considerable periods in durance under examination, and after all acquitted. I have known, when at Beauleah, people brought from upwards of 100 miles, and kept for weeks at the zillah station, and then dismissed, there being no proof against them.

8665. What was the extent of the Moorshedabad district?

It is a large district; I cannot say the exact extent; it extends as far as the mouth of the Bhagrittye, and towards the Jallinghy River.

8666. Does it extend to the main stream of the Ganges?

To the main stream of what is called the Pudda, at its confluence with the Bhagrittye River.

8667. Is it of any considerable breadth?

G. C. Macpherson, Esq.

28th July 1853.

It varies; I should think the distance from the Bhagrittye to the Ganges is about 27 miles.

8668. Is the population very considerable?
The population is very large indeed, but I do not know the exact amount; it is one of the most populous districts in Bengal.

8669. What is the population of the city of Moorshedabad?
I cannot recollect what the population is, or was, when I was there; there were various calculations made, but I have not them by me just now.

8670. Is it not very much diminished from what it was?
The town itself is very much diminished, and a great deal of it is in a dilapidated state; but whether the population is diminished or not I am not aware; there certainly is a very great diminution of opulent people in that part of the world.

8671. What was the strength of the police in the city of Moorshedabad?
I really cannot tell; there was a large number of burkandauzes, and these were increased and diminished. The magistrate had the power, I believe, to employ what they call teka burkandauzes occasionally, when necessary. The number of the police I am not aware of, but I know that they were considered very inefficient.

8672. Did you ever suffer any loss yourself from theft?
I did not. I was a proprietor of silk filatures in the district and neighbourhood of Moorshedabad, and I may have suffered some trifling losses, but not to any very great extent. I generally had a considerable number of up-country people taking care of my property, and I found them efficient; I consequently never lost anything of importance myself.

8673. Did any material losses sustained by others come to your knowledge?
I was constantly hearing of serious losses and dacoities; they were frequently occurring, but it was seldom that the depredators were found.

8674. Were the dacoities attended by loss of life?
Not often; it sometimes did occur, but not at all frequently.

8675. How is a dacoity perpetrated?
The Natives of Bengal, as your Lordships are aware, are timid, and very easily alarmed. A noise is heard in the village when it is dark, perhaps in the middle of the night. The chookedars generally decamp: they may have been, or may not have been, in collusion with the people committing those illegal acts. The inhabitants bar their doors and windows, and conceal themselves in every possible way; in fact the dacoits are allowed to do whatever they please.

8676. What do they do; do they attack the houses of wealthy Shroffs and merchants, or do they pillage the villages?
They usually confine their acts to villages, and do not attack the Shroffs, because they have almost invariably a very large force of up-country burkandauzes to take care of their property, who can really be trusted. The consequence is, that the dacoits rarely attack those persons; but the poor Native, if it is supposed or known that he has money or property, his house is attacked, and the property is carried off.

8677. Do you see any objection to the Government maintaining as its own servants some of these up-country people, giving them arms and a certain degree of discipline, and employing them as policemen for the defence the people?
No, I see no objection at all to that. On the contrary, I should conceive it to be one of the first steps necessary to render the police of Bengal efficient. It has been said that these up-country people would be cruel and oppressive amongst the Natives of Bengal; but I think they would do a great deal more good than harm.

8678. Lord *Wharncliffe.*] When you talk of up-country people, whom do you mean?
I mean the Rajpoots. They are men of high caste, and from the North-West Provinces.

8679. Earl of *Ellenborough.*] The persons to whom you allude are those who probably

probably would be hardly received into the army, but of the same description as the Sepoy?

Yes; and I imagine more of them would be received into the army.

8680. Men of inferior stature would answer for this purpose?

Yes; but the up-country burkundauzes generally employed in Bengal, I think, are stronger and finer men than the Sepoys of India.

8681. Do they get higher pay?

From the Mahojjans, and Shroffs, and large merchants they get, perhaps, not such high pay; but they get a good many perquisites, ghee, and various other things.

8682. In short, it is a better thing to be one of the private burkundauzes of a Shroff than to be a Sepoy?

No, I do not think so; but it is a thing which is much coveted by the Natives. They are anxious to get into the employment of a wealthy man, with whom they sometimes remain a long time.

8683. Then the defect of the police is such, that in the Lower Provinces a person is obliged to employ private parties for himself, and to depend upon them for his security?

I should say, almost entirely.

8684. Were many dacoities committed on the river?

When I was stationed at Rajshye they were very frequent; the guard boats that were employed were found very inefficient. In fact, it is a most difficult thing, and I am really at a loss to suggest any plan by which these river dacoities can be stopped, because when the streams are very strong (which is the case, as your Lordship is aware, during the rains, and just as the waters are subsiding), these dacoities are committed, and having fast long boats, they are perhaps 30 or 40 miles away before the magistrate or police are aware of it.

8685. On the other hand, when the river is low, the dacoites are sure of their prey, for the men cannot escape up the steep banks?

No. I am aware that in these cases very many dacoities take place which are never reported; that the people are absolutely afraid to say that they have been robbed for fear of being detained, which would most assuredly be the case, for perhaps some time before the case was fully investigated. With regard to the inefficiency of the police, I conceive that in Bengal it owes its origin to the very small amount expended for that particular object. I believe that the amount expended for the whole of Bengal, which has a population of about 40,000,000 of people, is about 100,000 *l.* Now, in the North-Western Provinces about 170,000 *l.* is expended for the same purpose.

8686. But if the policemen are so very inefficient, and run away, there would be no very great use in adding to their number, would there?

I am of opinion, and I always was of opinion whilst in India, that the Government did not make use of all the assistance that they might have commanded. I think that military men, for instance, might be much better employed in aiding in police matters, than in escorting treasure from one part of the country to the other, which, in fact, is the principal duty they have to perform, excepting when on actual service. I refer to European officers belonging to native regiments, many of whom are, I should say, peculiarly well qualified for police duties.

8687. Lord *Wynford.*] Can you state the difference between the pay that the shroffs give to the up-country men, and the amount which the Government pays to the common policemen?

I believe the common police of Bengal get on an average about four rupees a month; I believe sometimes even less than that. I may mention that the amount received in pay by a policeman of Bengal, (and I fancy the remark applies equally to the Upper Provinces) is a very small consideration with him. He would be happy to take the work for nothing, because he never goes to execute a warrant without being well paid and feed by various parties before he finds the right one.

8688. What pay does the shroff give?

The shroff, I think, never gives less than five rupees.

8689. Does that secure a trusty servant?
It does. I mentioned, in reply to a former question, that these men, besides getting five rupees, are generally kindly treated by the shroffs, who give them ghee, rice, and various things, in addition to their pay. I cannot say exactly the value of these perquisites, but the shroffs endeavour always to make their burkendauzes content and satisfied.

8690. Earl of *Ellenborough.*] So that the five rupees may almost be considered as net pay?
It may be so considered.

8691. The expense of the maintenance would not be above two rupees, would it?
It would be more; these up-country Natives eat a great deal more, and they are not satisfied with the same food as the Bengalese.

8692. They do not like rice, do they?
They eat very little rice; they generally eat dawl and ottah, and such things.

8693. Then you would wish rather to give a military organization to the police; to place it under military officers, and to have a superior class of persons from the up-country?
These are points which I think advisable. To a certain extent I would do so; but I would strongly advise the employment of any efficient person who was willing to take service, whether a Native or a European, who might be considered eligible for any appointment which might be vacant.

8694. For superintendence?
For the superintendence of a certain portion of a district. I conceive that it is an absurdity to talk of one magistrate superintending a district 120 miles in length.

8695. Was not there an irregular battalion in the neighbourhood of Moorshedabad at no distant period?
It is a considerable time ago.

8696. Ten years ago?
It is much more than that. There was what they call a provincial battalion at Moorshedabad.

8697. Subsequently to that period, was not there an irregular battalion, o which the head quarters were in that neighbourhood?
No, none. There were provincial battalions all over Bengal at one time.

8698. They were abolished?
They were abolished. They were to a certain degree of use at times, but, upon the whole, I should say scarcely worth the expense. They employed low-caste men, and I think they were a very indifferent description of military police, and at times very oppressive.

8699. Lord *Wynford.*] Your suggestion for the improvement of the police is, the better payment of the men, and military organization?
Military organization, to a certain extent; that would only be in the first place, for I conceive that by-and-bye the Natives themselves will be able to do a great deal, if they are employed, especially since it has been determined that moonsiffs are to do some part of the magisterial work. I think that such an arrangement will assist very considerably. Formerly the moonsiffs did nothing but civil business; and now I understand that they are to have magisterial powers to a certain extent, which I think will work well.

8700. Earl of *Ellenborough.*] Have you considered the composition of the Legislative Council, and whether it would be expedient to make any additions to it, or alterations in it?
Yes; I have given that subject serious consideration, and I think the natives of India will be exceedingly dissatisfied when they ascertain that they are debarred from having anything to say in legislating for their own country.

8701. Are you speaking of the Bill now in the House of Commons?
I am.

8702. If you look at that Bill, do you not see in it the power of appointing two Natives?

I confess I cannot see it; it must be at a long distance.

8703. By that Bill the Governor-General is authorised to appoint two additional members of the Council, and may appoint any person who has been 10 years in the service of the Government. Any Natives, therefore, who have been 10 years in the service of the Government are eligible to fill those two situations in the Council?

I am very glad to hear it bears such an interpretation; in the copy of the Bill that I received, it stated civil servants.

8704. In point of fact, without being civil servants covenanted, if they have been 10 years in the service of the Government they will be equally eligible as uncovenanted servants under the Bill as it stands?

I am very glad to hear it.

8705. Without admitting the Natives to the Council itself, has it ever occurred to you that advantage would be obtained by constituting, by the authority of the Government, bodies of Natives, Hindoos, and Mahommedans respectively, to which body should be submitted any particular matter more especially connected with their respective religion, for their opinion, not for decision?

I have not given any consideration to that point; but I think it would be one which the Natives themselves would very much prize, provided there was a probability of their suggestions being followed up by the Government.

8706. Would it not be more advantageous to the Government to have the power of communicating with a constituted body of that description, rather than to be obliged to go to individuals who might be selected for their private opinions?

Most assuredly. My own idea is, that it is almost impossible for any Legislative Councillor to obtain opinions from Natives on subjects that might be before the Legislative Council, of such value that he could by any possibility legislate on them.

8707. Lord *Broughton.*] Is it not the case that between the first and the second Reading, as we call it in England, of a proposed Act of the Legislative Council, three or four months generally intervene, and that during that time it is not at all an uncommon thing that petitions are presented against the clauses of that Bill, which petitions often come from Natives?

I am aware that is the case; but I know that remonstrances against Acts have not been attended with much success.

8708. Do you think that instead of that form of remonstrance, namely, by petitioning, it would be advisable that persons entertaining objections to the clauses of a proposed Act, should have the opportunity of orally stating their objections?

I think that it would be of very great importance if they were allowed to do so.

8709. Do you not think that it would give greater satisfaction to the Natives generally if they were aware that persons entertaining objections, whether just or unjust, were heard personally before those who had finally to pass a law?

I am perfectly certain that such a course would give the greatest satisfaction to the Natives.

8710. And you do not see any practical objection to such a course being pursued; you do not see any practical objection, to individuals who object to a proposed law, stating personally and orally their objections, instead of stating them by writing?

None whatsoever.

8711. Lord *Wynford.*] It would give greater satisfaction?

Much greater satisfaction, because they are not aware from whence the law emanates now. They hear that it is from the Board of Control, from the Court of Directors, or from the Government. In fact, they do not know where to apply, or what to do. Naturally they remonstrate or send in a petition to the Government, and these petitions generally are attended with no good result.

8712. Lord *Broughton.*] Do not you think that if such a course were pursued, some

G. G. Macpherson, Esq.

28th July 1853.

some faults which occasionally appear in the legislation of India would be either altogether obviated or very much palliated?

I am quite sure of it, and I would instance one particular Act, that is No. 21 of 1850, which has been so much objected to. If Natives had been allowed to come forward and state orally before the Legislative Council their objections to this Act, I cannot but think that the Government would have paused before they made the enactment.

8713. But more particularly in the mode in which it is to be carried out, than in the spirit of the Act itself?

Decidedly. The consequence is, that this Act has created very great agitation at the Presidencies, and I trust and believe that that agitation is as yet confined very much to the neighbourhood of the Presidencies, because there the people are more educated, and look more to what the Government are doing than they do in the interior. But if the Native army were once to become impressed with the idea that we were legislating to make converts of them and their children, I am afraid to think what the result might be.

8714. It has been stated, with reference to that Act to which you refer, by a witness before the Committee in the other House of Parliament, that the objections to it were not so great as were usually supposed, and that if that sort of examination had been given to it to which I have before alluded, there would have been very little, if any, of this agitation?

I cannot say from my own knowledge what might have been the effect; but I cannot help thinking that a law which strikes at the root of Hindoo inheritance would have occasioned a great deal of dissatisfaction to the Hindoos generally, under any circumstances.

8715. Earl of *Ellenborough.*] If a Native were to be selected for a seat in the Council otherwise than as is practically provided for by the Bill, as it now stands, how would you propose that he should be selected?

I should propose that he should be selected by the Governor-General, and that it should be publicly intimated that such a person had been selected. If any serious objections were entertained by parties who paid a considerable amount of revenue to the Government, I should suggest that those parties should state their objections to this nominee, and that the Government should nominate another, if thought necessary.

8716. Lord *Broughton.*] Do you mean the Governor-General in Council, or the Governor-General personally?

I meant the Governor-General personally. The chances are, I think, that he would require from his Council, or he might not; he might know of a person whom he thought eminently qualified for that situation, who might not be a friend of the Secretary or any of the parties about Government, who exercise a good deal of power in the distribution of appointments generally; the Governor-General might thus appoint a person who would give very great satisfaction to the country generally.

8717. Earl of *Ellenborough.*] Do you think that it would give general satisfaction to the country, speaking of the whole of Bengal for instance, if any gentleman who was merely known to the society at Calcutta were appointed as a Native Member of the Council?

I should say so, decidedly; that they would be very highly pleased if a Native were appointed to the Legislative Council. I conceive that the appointment of a Native to the Legislative Council would act beneficially in various ways; and in no way more so than this: supposing an Act is about to be made which the Natives at first might consider objectionable, I think that a Native in the Legislative Council might convince his brethren that it was not so, by stating the opinions given by the gentlemen of the Legislative Council, and thus prevent agitation, and do a very great deal of good.

8718. In order to give satisfaction, would it not be necessary that any Native appointed to the Council should be a very zealous religionist; that his religion should not be suspected in any way?

I should say so; I do not think it is necessary that he should be a particularly high-caste man; but whatever his caste may be, that he should pay particular attention to what is deemed necessary, according to the particular caste to which he

he belongs; some Hindoos are not allowed to eat anything that has ever lived; others again may eat meat.

8719. It would be satisfactory, then, to the Natives to know, that under the Bill, if it should pass into a law as it stands now, the Governor-General being authorised to nominate two persons to the Council, might nominate any Native, provided he thought that Native a proper person to nominate, and provided that Native had filled a situation under the Government for 10 years?

Yes; I conceive that that would be satisfactory to the Natives.

8720. Under the Bill as it now stands, if a Nawab of Moorshedabad, or the Rajah of Belgaum, held a situation under the Government, he would be eligible for the Council?

Yes. I am, however, scarcely aware of any Natives, excepting those who have held the offices of Sudder Ameens and Moonsiffs, and that description of people, who have been actually in the service of the Government; there may be some, but I am not myself aware of any.

8721. Lord *Broughton.*] Do not you think it possible that the complete separation, or the almost complete separation which is now contemplated, of the Executive from the Legislative power, and the creation of a body composed of persons of great authority, for the sole purpose of Legislation, may, in the eyes of the Natives, very much or somewhat diminish the respect and the authority of the Governor-General?

No, I am not of that opinion; I think that the circumstance of the Governor-General having a Council to assist him in making laws, will rather strengthen the respect of the Natives towards him, and favour any law which is enacted.

8722. But is it not the fact that Orientals generally look up to the Supreme Power as the author of all law, totally distinct and irrespective of all other authority whatever, and all other assistance?

That was the case some years ago, but I do not think it is so in India now; not to the extent that it was when I first went there, by any means.

8723. You do not think, then, that there is any danger of a diminution of the power and authority of the Governor-General in the eyes of the Natives by such a distinction between the two powers?

No, I do not think so at all. I might mention, with regard to the Act which has created so much agitation (namely, No. 21 of 1850), that the Natives considered it very irritating, and it is, in fact, inoperative. I am aware now of a Hindoo father who is willing away all his property, because his son has become a convert. If this law had not been enacted, the chances are that he would have done nothing of the sort; so that, in fact, it is punishing the very person whom the law intended to protect. I have heard of two other young Hindoos in Calcutta, sons of one of the most affluent men in Calcutta, who were educated, I believe, at the Hindoo College; they are now said to be neither Hindoos nor Christians, and they are dissolute characters. Supposing their father was to die, by the Hindoo law they could not succeed to the ancestral property, either from having become apostates to their religion or from being highly immoral characters. They would have nothing to do but to declare themselves Christians, get baptized, and become immediately entitled to that ancestral property.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Tuesday next, Two o'clock.

Die Martis, 2° Augusti 1853.

LORDS PRESENT:

The LORD PRESIDENT.	Lord WHARNCLIFFE.
Earl of ALBEMARLE.	Lord STANLEY of Alderley.
Lord ELPHINSTONE.	Lord MONTEAGLE of Brandon.
Lord COLCHESTER.	

THE LORD PRESIDENT in the Chair.

COLONEL DUNCAN SIMS is called in, and examined as follows:

8724. Lord *Elphinstone.*] WILL you state to the Committee what appointment you held in the Engineer Department of Madras?

I went to India in 1810; in 1819 I was appointed Civil Engineer of one of the three divisions of Public Works into which the Madras Presidency was then divided. In 1825, I was advanced by Sir Thomas Munro to the head of the Public Works Department as Inspector-general of Civil Estimates, and continued so till 1834, when I was forced by ill-health to visit England. I returned to India in 1838, and was appointed a Stipendiary Member of the Military Board, and an *ex officio* Member of the Board of Public Works. In those two situations I had the direction of all Public Works in the Madras Presidency till 1845, when I again returned to England.

8725. You were an *ex officio* Member of the Board of Works?

Yes.

8726. That is in the Revenue Department?

It is. I was, during the last three years, Chief Engineer, a Member of the Military Board, and *ex officio* Member of the Board of Works in the Revenue Department.

8727. The Board of Works is combined at Madras with the Board of Revenue, and is totally distinct from the Military Department?

It is.

8728. What was the description of works superintended by the Department of Public Works?

The Department of Public Works comprises all the works of irrigation; viz., the tanks or reservoirs, the watercourses and wells and anicuts, all of which are used for the purposes of irrigation; and also the civil and judicial buildings, and the roads. The fortifications and military buildings are under the Military Department.

8729. The tanks are of immense importance in the Madras Presidency, are they not?

They are. I may mention that a tank is not, as might be supposed from its name, an excavation; but an embankment carried across a stream or valley for the purpose of intercepting and retaining the drainage of the country, for the purpose of irrigation during the dry months. In some cases they are of great extent, some of them being nine miles in length, and their banks from 15 to 45 feet in height, and irrigating land of the annual value of from 1,000 *l.* to 10,000 *l.* a year. Some of the watercourses again are as long as 30 and 35 miles, and some of them also irrigate lands, yielding a revenue to the Government to the extent of 10,000 *l.* a year.

Colonel D. Sims.

2d August 1853.

8730. Do you know anything respecting the former condition of those works in the Madras Presidency?

When the country first came into the possession of the English, the works of irrigation generally were in a very bad condition, and many of them in a state of ruin. India had been distracted by constant wars, and the Madras Presidency particularly had been the scene of a long-protracted struggle between the different claimants to the Nabobship of the Carnatic, the country had been laid waste, the tanks neglected and destroyed, and numbers of the people carried into captivity by Hyder Ali and Tippoo Saib, his son.

8731. Lord *Stanley* of Alderley.] Are any of those tanks of very ancient construction?

They are all of them very ancient; they were constructed by the Hindoo Governments.

8732. Is it known at what period they were constructed?

Some of them bear the names of the Kings by whom they were constructed, but the dates of their construction are remote, and not known with certainty.

8733. Were any of them constructed under the Mahomedan Government?

Some few of them may have been, but they were chiefly constructed by the Hindoo Governments.

8734. Lord *Elphinstone.*] Can you state what the annual revenue derived from the irrigated lands in the Madras Presidency is?

The annual return is valued at about 3,000,000 *l.* or 3,250,000 *l.*, of which, about 1,300,000 *l.*, or a million and a quarter, is the portion of the Government, the rest being the share of the cultivators.

8735. Can you state to the Committee what degree of attention has been of late years paid to those works of irrigation?

A very great degree of attention has been paid to them, especially since the time of Sir Thomas Munro. In his time attention first began to be paid to the works of irrigation, and it has gone on increasing ever since. Since Sir Thomas Munro's time, considerable sums have been expended annually, the works have been repaired and extended, and many new ones constructed, with wonderful beneficial results.

8736. What is the present annual expenditure upon works of irrigation?

For the last 15 or 20 years the average expenditure has been 70,000 *l.*; but the average expenditure during the last five years has been 100,000 *l.*, including the large works on the Godavery.

8737. Do you consider that that is a sufficient expenditure?

I do not by any means.

8738. Can you inform the Committee what have been the results of this increased attention to works of irrigation?

I may particularly mention the district of Tanjore, where more attention has been paid to the works of irrigation than in any other part of the Madras Presidency. For the last 20 years, up to 1851, about 90,000 *l.* have been spent on works of irrigation; and comparing the annual collections during that period with the average revenue of the preceding ten years, there has been an increase in the collections of about 270,000 *l.*, being three times as much as the money laid out in the repair and improvement of the works of irrigation. But Tanjore is a favoured district. It is far better irrigated than any other, with a rich soil, and has had a succession of able Collectors and Engineers, and is much indebted to its present able and zealous engineer, Major Lawford, who has completed many fine works and bridges.

8739. One of the principal works was the upper anicut on the Coleroon?

Yes, it cost for its construction, and during the following 14 years, for keeping it in repair, and improving the works connected with it, about 22,000 *l.* The increase of revenue has been annually equal to the amount so spent.

8740. Lord *Colchester.*] Was that an entirely new work?

It was.

8741. Lord *Elphinstone.*] The Committee cannot judge of the extent of those works by the sum which they cost, can they?

No; labour in India is extremely cheap; I suppose not more than one-fifth of what it is England.

8742. Lord *Monteagle* of Brandon.] When you state that labour in India is much cheaper than it is in England, do you measure it by the money wages paid to the labourer, or by the respective cost of given works?

The quantity of labour actually performed.

8743. A given work per cubic yard may be performed cheaper in India than in England, in the proportion you have stated?

At about one-fifth of the expense, or certainly one-fourth.

8744. Lord *Stanley* of Alderley.] Should you say, generally, that the cost of constructing works in India is about one-fifth what they would cost in this country?

Yes.

8745. Would that include works of masonry as well as other works?

Yes; we pay for a good mason from 6 *d.* to 9 *d.* a day in the interior, and from 9 *d.* to 1 *s.* at the Presidency.

8746. Lord *Monteagle* of Brandon.] What paper have you in your hand?

A plan of the anicut I have been mentioning, with the bridge thrown over it.

8747. Lord *Stanley* of Alderley.] Will you have the goodness to state what is the nature and construction of the work, a plan of which you now produce to the Committee?

It is the weir or dam across the Coleroon River, called the Upper Coleroon Anicut; it is a dam built of masonry across the river, six feet in width, from four to seven feet in height, and 2,526 feet long; and with all the necessary works and channels connected with it, it cost 22,000 *l.*

8748. What is the object of the construction of that work?

For the purpose of turning the water of the Coleroon into the Cauvery, which waters the whole of Tanjore; it irrigates 600,000 acres, and yields a revenue of 40 lacs of rupees annually.

8749. Was the country entirely without artificial irrigation before?

No, it was irrigated in the same manner before. The Cauvery separates into two branches above Trichinopoly, termed the Coleroon and the Cauvery; temporary works had been previously erected across the Coleroon every year, for the purpose of turning a sufficient quantity of water into the Cauvery branch to be employed for irrigation in Tanjore; those works began at last to fail; the irrigation was decreasing; the cultivation, as a necessary consequence, was diminishing also, and the apprehension was excited that in a short time the people would be deprived entirely of the water requisite for irrigation; to prevent that calamity, a permanent work of masonry was commenced in 1836, by Captain, now Colonel, Cotton, and completed in 1850, by Major Lawford, most efficiently and economically.

8750. Was there much new land brought into cultivation in consequence of this improved irrigation?

The cultivated land has been increased from 540,000 acres to 670,000 acres.

8751. What increase of revenue has the Indian Government obtained in consequence of this increased cultivation?

I mentioned before that during the last 20 years there has been an increase of collections of 270,000 *l.*

8752. Lord *Monteagle* of Brandon.] What per-centage do you apprehend that would represent upon the outlay?

About 300 per cent., from which, however, is to be deducted the cost of superintendence. A statement was prepared by the Board of Revenue three years ago, giving the amount of money spent in new works during 13 years; the amount was 54,000 *l.*; the increased revenue derived from that expenditure was 37,000 *l.*, amounting to 70 per cent.; and if from that the expense of superintendence be deducted, it may be reckoned at from 40 to 50 per cent.

Colonel D. Sims

2d August 1853.

8753. If the Government of India were to borrow money at 4½ or 5 per cent. those public works would repay the advance in the course of a very short period indeed?

Undoubtedly; but it is right to mention that the examples I have given are favourable ones.

8754. From your knowledge of the country, do you consider that although those are favourable examples, yet there exist within the districts in which you have been employed, and to which your attention has been directed, other opportunities of carrying out great public works from which a good return would be certain?

Most certainly, very extensive ones. With the permission of the Committee I will give one or two other examples. In the district of Tinnevelly, there has been for the last seven or eight years a very zealous and excellent engineer. The average expenditure on works of irrigation formerly was 2,600 *l.*; latterly it has amounted to 6,400 *l.*; and the revenue has been increased from 110,000 *l.* to 129,000 *l.*

8755. Who is the engineer there?

Captain Horsley. The Godavery Anicut, a large work which has lately been begun, cost, from 1847 to 1851, 126,000 *l.*; the collections during the period above the average of the preceding years, amounted to 195,000 *l.*, showing a clear gain to the Government of 70,000*l.*; in 1850-51, the collections were 50,000 *l.* above the average collections of the 11 years previous to the commencement of the construction of the anicut.

8756. Lord *Stanley* of Alderley.] Are the whole of the profits from those works derived from the increased land collections, or are there also payments made by the cultivators for the use of the water?

Entirely from the land collections; there is no payment in Madras for the use of the water; the Government supply the water; formerly there was a tax upon irrigated lands, which formed a fund for the purpose of keeping the works of irrigation in repair; that, however, has been resumed by the Government, and the Government take upon itself the expense of keeping the works in repair: I ought to mention that, in the district of Rajahmundry to which I have alluded, there has been a large sugar manufactory established, in consequence of the facilities of cultivating the sugar-cane from the increased irrigation; large sums have been spent by the proprietors of that manufactory, and large sums are spent annually in the purchase of jaghery or coarse sugar, and no doubt that has contributed as well as the irrigation towards the improvement of the revenue.

8757. Lord *Monteagle* of Brandon.] The cultivation of the sugar-cane is infinitely preferable to the production of sugar from the date, is it not?

The sugar is much finer.

8758. Was that sugar cultivation for the most part newly introduced, or was there a previously existing cultivation which was extended and improved?

It existed formerly among the Natives, but there was no European manufactory.

8759. Have the proprietors of those European manufactories introduced improved machinery, and are they on a very considerable scale?

They are on a very large scale, with all the improved machinery of the West India manufactories.

8760. You are familiar, probably, with the observations made by Lord William Bentinck, to the effect that the introduction of European establishments and machinery formed in itself a training of the most valuable kind for the Natives, as well as occasioned an increased demand for labour?

Certainly, the observation is most just.

8761. In this instance, you consider those collateral and consequential results of public works to have been developed?

Yes, very greatly.

8762. Lord *Elphinstone.*] Have you any other examples to give the Committee of the advantages derived from works of irrigation?

There are many others, but they do not occur to me just now.

8763. What were the principal difficulties which had to be contended with in making those improvements?

One of the greatest difficulties, I may, indeed, say the greatest of all, is the want of a sufficient superintending and directing establishment; the want of engineers has been very severely felt, and been productive of much injury and delay, and also the want of subordinate agents, such as overseers and inspectors.

8764. Does that remark apply to the Board of Works, or to the superintending engineers in the provinces?

It applies to both, in fact, but chiefly to the civil engineers in the provinces and to the public works.

8765. What is the usual mode of obtaining the requisite sanction for works of irrigation?

The Madras Presidency in the Public Works Department is divided into eight divisions, to each of which there belongs a Civil Engineer with two assistants, though from the want of engineers, that establishment is never completed. The works of irrigation are immediately under the Collectors. The Civil Engineer assists the Collector's establishment in preparing the estimates; and prepares, himself, all the estimates for new works, which estimates are submitted to the Board of Public Works; they are submitted by the Board of Public Works to the Government for sanction, and are returned, when sanctioned, to the Civil Engineer, who again delivers them to the Collector, and by the Collector's establishment, aided by the Civil Engineer, the works are carried into effect.

8766. Has the Madras Government the power of sanctioning those estimates?

Not in the case of new works; they must go to the Supreme Government for its sanction.

8767. Does not the necessity for all those various references occasion great delay?

The reference to the Supreme Government is attended with a great deal of delay, and a great deal of inconvenience, and it often results, that works of the greatest importance and value are not sanctioned, in consequence of the authorities in Bengal not being acquainted with the local causes and reasons for those works; I think that control has operated most unfavourably, and is not necessary.

8768. Earl of *Albemarle.*] Can you give the Committee an example of that inconvenience?

I can mention the case of the Great Western Road, which was commenced in 1838, during the Government of Lord Elphinstone; it was undertaken and carried on with the assistance of convicts; the work went on most successfully; the health of the convicts was perfectly satisfactory, and the work was well and most cheaply done; but because a similar experiment had failed in Bengal, it was ordered to be discontinued.

8769. Lord *Monteagle* of Brandon.] Was the discipline of the convicts maintained during the progress of the work?

It was perfectly so; no injury was experienced by them; they did not suffer in health: they were employed, I think, from 1838 to 1844, and the value of the work obtained from them was computed, after paying all their expenses, at about 28,000 *l.*, when they were ordered back to their gaols.

8770. *Chairman.*] Have you prepared any statement showing the results of the convict labour on that occasion?

I have a Report from the Board of Public Works which gives the result of this experiment of employing convict labour in the construction of public roads.—[*The same is delivered in.—Vide* Appendix B.]

Appendix B.

8771. Lord *Elphinstone.*] Upon the whole the result was very favourable?

It was extremely satisfactory, and would have proved more so as experience was gained in the management of the convicts; but up to the time when it was discontinued, the experiment was perfectly satisfactory, and most favourable in all respects.

8772. Lord *Monteagle* of Brandon.] Was the giving up of that work productive of any local inconvenience from the discontinuance of the employment of the convicts

Colonel D. Sims.

2d August 1853.

victs as well as from the discontinuance of a work which, in itself, was likely to be useful?

It produced both of those effects.

8773. Lord *Elphinstone.*] The gaols were more crowded, and the works were stopped?

Yes; the gaols being more crowded, became less healthy.

8774. Lord *Monteagle* of Brandon.] If the convicts were transferred to a prison where they had no labour to perform, the beneficial result of employing them in useful works as compared with the expense of maintaining them without any labour was lost, and in that way a further disadvantage was caused to the Presidency?

It was a further loss to the Presidency and to the Government. I may mention another case in the southern talooks of South Arcot, which had been very much benefited by the construction of the lower Coleroon Anicut; an estimate was sent up and submitted to the Government for the construction of a road, which was considered necessary for completing the communication with the sea-port town of Porto Novo; it amounted to only 2,800 *l.*, and the work was considered extremely necessary: it was strongly recommended by the Madras Government, but was refused by the Supreme Government. Many other instances might be given, but probably those will suffice.

8775. Lord *Colchester.*] Did you always find the Madras Government ready to carry out works of improvement as far as their means enabled them to do so?

As far as their means and authority went, they were always very willing and anxious to carry them out; and I do not remember any case of a well-digested project not meeting with attention, though the power often lacked to sanction it.

8776. Lord *Elphinstone.*] In Sir Thomas Munro's time, was any difficulty of this kind experienced?

Sir Thomas Munro had great influence; his character stood very high for experience and judgment as a public servant; and what he recommended was always, or at least generally, approved. He attached great importance to works of irrigation, and was the first person who drew up a set of rules, prescribing the manner of carrying them on, when he was Collector of Bellary.

8777. Can you state to the Committee what was the effect of Sir Thomas Munro's annual tours for the purpose of visiting different districts in the Presidency of Madras?

Sir Thomas Munro usually made a visit every year for the purpose of ascertaining the state of the country, the state of the people, the equity of the assessment, and the condition of the public works: he had thereby the means of communicating personally with the officers in charge of those works, and the advice and assistance which they received from him upon those occasions proved most beneficial and encouraging.

8778. Latterly those tours have been discontinued by order of the Court of Directors, have they not?

They were disapproved of by the Court of Directors, it was understood, and have been discontinued in a great measure, which, I think, is much to be regretted.

8779. Can you give the Committee any idea of the effect of these and other improvements upon the price of provisions and upon the condition of the inhabitants of Madras?

Experience has shown that in proportion as the public works and roads have been improved, the circumstances of the people and the public revenue have also improved; cultivation has been extended, manufactures have increased, and the price of food has been cheapened. I may instance Tanjore especially, where the value of land has been raised, cultivation greatly extended, and the condition of the people ameliorated materially.

8780. You think the breadth of country under cultivation has increased?

In the districts where the improvements have taken place, such as Tanjore, Tinnevelly, Rajahmundry and Salem, the quantity has increased very considerably. In other districts, where less attention has been paid to works of irrigation, I am afraid it has diminished rather than increased.

8781. Do you think it has increased in a greater ratio than the increase of the population?

Yes, rather greater, I should think. Tanjore produces twice as much grain as it requires for the support of its inhabitants.

8782. Have any of those improvements, do you think, prevented the recurrence of the famines which used periodically to lay waste the country?

There has been no famine since 1832, and consequently their influence in that respect has not been put to the trial; but undoubtedly they will have a powerful effect in mitigating the severity of famines. The last severe famine was in 1832; there was in that year a general failure of the north-east monsoon, which was felt most severely in Guntoor and Masulipatam, but chiefly in Guntoor. Upon that occasion it was calculated that about 200,000, out of a population of 550,000, died from starvation, or from the fever which followed the famine.

8783. Lord *Colchester*.] Does the failure of the monsoon produce a failure of rain?

Yes. By the failure of the monsoon, I meant a failure of the usual rains. It is expected, and no doubt will be realized, that the Godavery and the Kistna Anicuts, which are in the immediate vicinity of Guntoor, will have a very beneficial effect, if not in preventing entirely, at all events in mitigating very considerably the miseries consequent upon such visitations, and which have twice during the last 60 years nearly depopulated that part of India.

8784. Lord *Elphinstone*.] It is of very great importance to have works in the neighbourhood of the place where the drought is felt; the grain grown in Tanjore, for example, owing to the want of communications, is hardly within reach of those Provinces?

It is obtained with very great difficulty, and at greatly increased expense, and after much delay, and in insufficient quantity.

8785. You spoke of the Western Road; can you state to the Committee what the condition of the roads was when you first went out to India?

When I first went to India, in 1810, there were literally no made roads, in the English sense of the term, in the Madras Presidency. It was not the practice of the Native Governments to construct roads; there were no roads, but beaten tracks from town to town, indicated occasionally by fine avenues of trees; there were no made roads, and not a bridge in the interior of the Presidency, with the exception of one or two across the Cauvery, built by the sovereigns of that country.

8786. There has been a great improvement in that respect, has there not?

Since that period very extensive improvements have been made: between 300 and 400 miles of good roads have been made, a number of passes opened, and a great many bridges, some of which would do credit to any country, built. The first attempt to make a continuous good road was in the case of the Western Road, during Lord Elphinstone's Government; that has been completed to the extent of 120 miles from Madras; it has been bridged and metalled throughout, with the exception of the Pallaur; and the road repaired beyond that, as far as Bangalore. Another road has been completed from Bangalore to Mangalore, by the Mansurabad Ghaut. Three very fine ghauts, between the Mysore country and the Western Coast, *viâ* the Mansurabad Ghaut, the Sumpajee Ghaut and the Perumbuddy Ghaut, have been opened.

8787. Are those all made passes?

They are all very excellent passes.

8788. When were they constructed?

The road by the Sumpajee Ghaut was commenced shortly after the Great Western Road, in 1839; the road, 70 miles in length, including a difficult ghaut, cost 400 *l.* a mile, and is an excellent and very cheap road, compared with the cost of roads in other countries, and in Ceylon.

8789. The country through which that road passes is very mountainous, is not it?

It is very difficult and mountainous; the road crosses the great range of mountains on the western coast of India.

Colonel D. Sims.

2d August 1853.

8790. By whom were those three passes made?
The Sumpajee Ghaut was made by Lieutenant Fast, who died two years afterwards, when superintending a similar work in the Coimbatore District; he was an officer of great skill and promise.

8791. Have those roads all been managed by the Department of Public Works?
Up to 1846, the roads were all conducted by the Department of Public Works; in 1846 an alteration was made in the management of the public roads; a Superintendent, with two assistants, was appointed, who communicated directly with the Government.

8792. Was greater efficiency obtained by that means?
No; the department was insufficient; a Superintendent and two assistants had the charge of about 1,400 miles of road; the department was quite insufficient for so extensive a line of road, and the expectations of the Government were not realised.

8793. Would not it be better to leave the roads under the superintendence of the Civil Engineers of the divisions through which they pass?
Certainly, it would.

8794. Under the general control of the Board of Works, with some controlling authority at the Presidency?
Yes, as was formerly the case, only increasing the strength of the establishments; a larger number of engineers is required, and a large increase to the establishments of overseers and superintendents.

8795. Is not that one of the great difficulties under which you labour?
It is: the greatest difficulty we have always experienced has been the want of a sufficient superintending and executive department; a great evil, which cannot be too soon remedied.

8796. *Chairman.*] Have you found the natives able to afford you assistance in that capacity?
Very much so; they only require to be educated and trained, and they will make the most useful and efficient servants as superintendents which can be obtained for India. They possess great advantages over Europeans in many respects: they speak the language of the workmen; they are accustomed to the habits of the people; they are not so expensive, and they do not suffer from the diseases of the country to the same extent that Europeans do.

8797. Lord *Elphinstone.*] I believe you are one of the Governors of the Madras High School?
Yes.

8798. I believe you prepared a set of rules for an engineer class?
I did; it was not carried out then; I understand that lately it has been resolved to add to the High School an engineering class, but I do not see that the means for conducting that class efficiently have yet been provided.

8799. It would require a professor?
It would require a professor expressly for the purpose, and teachers, and the means of communicating with the public working departments at the Presidency, in order that the pupils may obtain practical training and information, as well as theoretical knowledge.

8800. All those requirements were provided for in your plan?
They were all provided for at that time.

8801. Do you remember why that plan was not carried out at the time?
There was a difference of opinion between the Government and the Governors of the University respecting the system of education; it did not receive, in consequence, the support and encouragement which was requisite for its efficiency, and little was done comparatively while I was at Madras; still some excellent scholars were educated there. With respect to the engineering class, nothing was done. I consider an engineering class to be indispensably necessary for the efficient management of the Public Works Department.

8802. There

8802. There was a small establishment of youths who were brought up in the Survey Department?
Yes.

8803. Are you perfectly satisfied with their proficiency?
I had charge of that establishment for many years; the surveyors turned out most efficient and useful surveyors.

8804. Do you happen to know anything of a school which bears some analogy to the Survey and Engineering Department which is attached to the gun carriage manufactory under Captain Maitland?
I do.

8805. Have not the boys who are trained in that school shown great aptitude in their mathematical and mechanical pursuits?
Captain Maitland's school has always appeared to me to be, in its way, one of the most useful educational establishments which exist in Madras. The pupils are instructed in the elementary parts of mathematics, and at the same time are taught to be good mechanics, expert smiths, carpenters, wheelwrights, &c.; so that both the theoretical and the practical parts of their trades are combined, and a number of most useful and excellent men have been turned out, and chiefly at the cost of the zealous Superintendent.

8806. Most of those boys are East Indians, are they not?
Almost all of them are East Indians, with a few Europeans.

8807. Do you expect that the engineering class which you proposed to form in the High School would have been chiefly attended by the same class of youths?
By all classes; by Hindoos as well as by Indu-Britons. I think, upon the whole, the native pupils would turn out the most useful, from their being constitutionally better adapted to the climate than Indu-Britons.

8808. What has been the effect of the making of roads upon the people of the country generally?
It has had the effect of cheapening carriage very much, and thereby facilitating the transport of the manufactures and produce of the country to the sea-port towns. The carriage of goods on the Great Western Road is about half what it formerly was. In Salem, where great attention was paid to the roads, and where the natives submitted voluntarily to a light tax upon their carts, for the purpose of keeping the roads in repair, carriage hire has fallen from 14 annas to 8 annas for every 10 miles, and the load has been increased from 300 lbs. or 400 lbs. to 900 lbs., and the number of carts has been doubled in the district.

8809. I suppose, previously, the carriage was principally on the backs of bullocks?
When I went to India, it was entirely so; all the cotton from the ceded districts was brought down on bullocks, and grain was carried on bullocks.

8810. Do you think that India can ever become an exporting country of cotton, while the cotton has to be brought on the backs of bullocks to the coast?
It is one of the greatest drawbacks; the expense is very considerable; but more than that, the delay and injury which the cotton sustains during the transit are very great.

8811. Do you think that by common roads you can ever so reduce the cost of transit as to bring down the cotton to the coast at such a price that it can be exported with profit?
In many parts, I think so; in Tinnevelly, for example, and Coimbatore. The transport of cotton by common roads, where the distance is considerable, would always, however, add to its cost, and thereby prove an obstacle to its becoming a profitable export. Railways, it is to be hoped, will effect the desired object, both by bringing it down in a better state rapidly, and also at a much cheaper rate.

8812. Do you think that it would be practicable to make canals from any of the great cotton fields to the places of exportation?
Not into the interior of the country, I think; along the coast, canals may be usefully constructed.

8813. Do you think that the navigation of the rivers Godavery and Kistna,

Colonel D. Sims.

2d August 1853.

the Godavery in particular, can be so far improved as to make them great channels of communication with the coast?

I am not sufficiently acquainted with the state of the Godavery to be able to answer that question satisfactorily; but I think there are sufficient grounds for having it surveyed and examined; it is very possible that it may be made a very cheap and useful outlet for the cotton which is grown in the Berar Valley, and in the Nagpore and Hyderabad countries; but the river is little known.

8814. Did not Colonel Cotton go up the Godavery two or three years ago, as far as Bezoarah?

He went up a short distance only. The river is so far navigable at some periods of the year, that quantities of timber have been brought down; but it flows through an exceedingly unhealthy country: very little is known of the state of the river. There are probably serious obstructions from rocks in many parts of its course.

8815. Have you heard of any plan, on the part of Colonel Cotton, for making extensive canal communication between the northern districts and Madras?

He proposed a canal running along the coast from Ganjam to Madras, and from Madras to Porto Novo.

8816. Do you conceive that there would be any great advantage in forming that communication?

It would prove useful; but its usefulness would be considerably affected by its running along the coast, and thus having to compete with the sea-coasting vessels.

8817. Lord *Colchester.*] Was that plan looked upon favourably by the Government of Madras?

It has never, I believe, come officially before the Government in such a matured form as to call for serious consideration, or a decided opinion. It has been rather a suggestion than a well-digested plan hitherto, I think.

8818. Lord *Elphinstone.*] Formerly, in some districts, there was a large surplus from the funds belonging to the pagodas, which were then administered by British officers; that surplus was generally expended upon roads and bridges, was not it?

In several of the districts, especially in Tanjore, there are some celebrated pagodas which were richly endowed by Native Princes. The endowments were administered by the collectors of the districts; the collectors had charge of the pagodas, kept them in repair, paid the priests, &c.; and from the funds being managed economically, a considerable surplus often remained, which was usually appropriated to the repair and improvement of the roads and other communications of the country. In Tanjore, which has now very good roads in all directions, the roads were chiefly formed and kept in repair by the surplus of the pagoda fund.

8819. Has any portion of that fund been reserved for those purposes, or was the whole of it made over to the priests?

A few years ago, the connexion between the servants of the Government and the pagodas was entirely discontinued. There was then a considerable surplus remaining, I think about 120,000 *l.*; of that I understand 80,000 *l.* was reserved for the purposes of education, and the remainder was distributed among the districts for the improvement of the roads.

8820. Have those sums been expended?

There has been very little money spent on education. The money for the roads has, I believe, been spent.

8821. Has any part of that 80,000 *l.* been spent?

None that I know of, or that I ever heard of.

8822. The whole fund was given up, was not it?

The management of the endowments was entirely given up.

8823. And no portion of the annual income reserved for roads and bridges?

No; the funds are now administered by native trustees.

8824. Do

8824. Do those native trustees appropriate any portion of that fund to the maintenance of the roads which have been created out of it?
None whatever, I believe.

8825. Then those roads are probably falling into disrepair?
They are kept up by other means, that is, the cost of maintaining them falls on the Government.

8826. I believe you are the chairman of the Madras railroad?
I am.

8827. Has a beginning been made of that undertaking?
It was commenced on the 9th of June. The first sod was turned on that day by the Governor of Madras. Part of it has been marked out, and a commencement has been made before this time.

8828. I believe it is intended to carry that railroad from Madras to the western coast?
It is intended to carry it by Vellore, through the Salem district, and Coimbatore, to the western coast, near Ponany.

8829. What is the length of that line of railway?
About 380 miles, I think.

8830. The effect of making that railway will be to diminish the expense of maintaining the Great Western Road?
The Great Western Road then will not be so much used, and will not be so much valued as it is now. By connecting the two coasts by means of a railway, there will always be a fine-weather coast, accessible for vessels at all seasons of the year. During the north-east monsoon, the eastern coast is approached with danger and difficulty: it is then fine weather upon the Malabar coast, and conversely during the south-west monsoon it is fine weather on the eastern coast. The railway will, therefore, be of great value for commercial purposes. It is also intended to have one or more regiments of Europeans located upon the Neilgherry Hills, and possibly the regiments of Trichinopoly and Bangalore and Cannanore may ultimately be stationed on the hills; and if so, they may be transported at any time, if required, either to the west coast or to the east coast, according as necessity may arise, rapidly and without any difficulty. It will thus be very useful also in a political point of view.

8831. How near would that railway pass to the base of the Neilgherry Hills?
There is a branch to lead up to the fort of the hills from Coimbatore; the main line will pass within 15 or 20 miles of the hills, and there will be a branch up to the hills; the precise direction of the line is not yet determined. In a political point of view it will be of great importance; a great saving of life and of health will result from keeping the European regiments in a healthy climate, and they may be transported to any part of the coast rapidly, and without difficulty.

8832. What do you estimate will be the cost per mile of that railway?
We estimate that it will be about 6,000 *l.* per mile; but our data are not sufficient to speak very positively yet.

8833. It is to be a single line, is it not?
Yes; the estimate of the Bombay line is 10,000 *l.* a mile, I believe; we have an easier and cheaper country.

8834. *Chairman.*] You take land enough to enable you to double the line if required?
Yes; and the bridges will all be made sufficiently wide for a double line, if hereafter required.

8835. Lord *Elphinstone.*] Is there a uniform gauge for all railways in India?
Yes, a uniform gauge of five feet six; it is intermediate between the broad gauge and the narrow gauge in England.

8836. Can you give the Committee any information upon the works at the Pamben Passage?
The Pamben Passage is the passage between Ceylon and the main land. When it was examined in 1829, it was a narrow, tortuous, passage, with not more than five feet of water at high tide: except in very fine weather, vessels drawing more than 4½ feet, could not pass through it, and even such vessels were detained frequently

Colonel D. Sims.

2d August 1853.

quently for two or three days before they were able to pass through; it has now been deepened to 10 feet at low water, with the exception of a few parts, which are 8½ feet. The tonnage has increased from 30,000 tons, which was the amount in 1829, to 160,000 tons at the present time: vessels of a superior description now use it, and it has proved of the greatest possible benefit to the coasting trade of India.

8837. What is the saving of time in the voyage of a vessel going from Negapatam to Titucurin?

Frequently coasting vessels would not be able to go round Ceylon, in consequence of the winds; even in favourable circumstances the saving in time would not be less than five or six days.

8838. War-steamers can pass, cannot they?

Yes; the "Nemesis" and the "Phlegethon" passed through it without any difficulty before it was increased to its present depth: it will now admit steamers drawing eight or nine feet of water passing through without any difficulty.

8839. The saving in the consumption of coal, without taking into account the saving in time, must be very considerable?

It is calculated that the saving to the coasting trade alone amounts to 50,000 *l.* or 60,000 *l.* a year.

8840. Have you any means of showing the expense incurred in making that passage?

Its cost altogether amounts to 15,000 *l.*, and about 2,000 *l.* more are required to complete the work.

8841. Was there a steam-dredge used for clearing the channel?

There was, but it was not very successful; it got out of order.

8842. Is the cost of that dredge included in the 15,000 *l.*?

It is; all expenses are included.

8843. Do you think that the natives of the south of India will travel by the railway?

Yes; if they are carried sufficiently cheaply there will be no doubt of their making use of it; they are quite alive to their own interests and convenience.

8844. Do you apprehend any difficulty from the difference of caste?

No. There will be carriages for different castes, as here for different classes; and, moreover, the strictness of caste is diminishing. In the schools in Madras now we find the Hindoo, the Mahomedan, the Pariah, and all castes studying in the same class, and sitting side by side; probably education, among its other blessings, will have an exceedingly beneficial influence in relaxing the influence to caste, and railways may operate silently the same way.

8845. Have you made any calculation as to the probable fare that will be charged?

The expense of carriage at present is supposed to be 2½ *d.* a mile per ton by carts: we hope that we shall be able to reduce it to about half that sum, or to 1½ *d.* a mile: we have made no calculation at present with respect to passengers.

8846. I suppose the rate at which you will be able to carry passengers will depend very much upon the cost at which you can construct the railway?

It will be our object, of course, and for the benefit of the railway, to make the fares sufficiently low to induce the natives to make use of it; we are in hopes of being able to do that, and profitably.

8847. Do you reckon chiefly upon goods traffic or passenger traffic?

The calculations are made chiefly on goods traffic.

8848. You must have had many opportunities, in the various employments in which you have been engaged, of becoming acquainted with the character of the people; what is your opinion of them?

I entertain a very favourable opinion of the natives of India, both of their intellectual and moral qualities; I have seen boys in the High School, who entered it without knowing the English alphabet, in three or four years studying the higher branches of mathematics, and passing an examination which the English chaplains, who attended, observed would have done credit to the Universities of Oxford

Oxford and Cambridge; and in point of honesty, and even veracity, I think they are not inferior to the people of other countries; I speak of the people in the interior of the country, the agricultural classes chiefly, with whom I had much intercourse.

8849. There is a great difference between the ryots and the people living at the Presidency towns and at the European stations, is not there?

Yes. Persons are apt to judge too frequently of the natives of India by those whom they find about the precincts of the different courts of justice; there are many temptations there to mendacity, and the atmosphere is unfavourable to truthfulness; but probably the same thing will be found in other countries under the same circumstances. In all the situations in which the natives have hitherto been employed, they have proved very efficient and valuable servants, and as education advances, and they become more enlightened, and freed from the prejudices and customs of the country, and improved by the example of their European rulers, I believe they will qualify themselves gradually for higher employment and offices than they have yet filled.

8850. Lord *Wharncliffe.*] Did you leave India after the works on the Kistna and the Godavery were commenced?

I left before that; but I have been in constant communication with the officers engaged on those works, and with Colonel Cotton, who designed them.

8851. They have been obliged to enlarge the original estimates, have not they?

Considerably.

8852. Lord *Elphinstone.*] Was not there difficulty experienced in carrying on two such expensive works as the anicuts across the Godavery and the Kistna simultaneously?

They were not begun simultaneously; there would have been a difficulty in obtaining sufficient workmen.

8853. The population is hardly sufficient to supply such a great demand for labour as the execution of one of those great works occasions is it?

It is not; in that part of the country, that is in the Northern Circars, very few works of any magnitude had been previously undertaken; in the southern part of India, in Tanjore, for example, the same difficulty would not have been experienced; there they have been in the habit of carrying on very extensive works for many years; but the supply of labour, as well as of money, in India is limited.

8854. Lord *Wharncliffe.*] Have you turned your attention much to the state of the Native tanks throughout the Presidency of Madras?

I was employed on them for 20 years, and had immediate charge of them for 14 years.

8855. Should you say, from your knowledge of their present condition, that there is any large number of them which are capable of effectual repair?

A number of them are in tolerably good order at present; a large number of them are capable of being very much improved, and the cultivation increased thereby.

8856. I suppose there is a great number of them which have been so much neglected as to be no longer worth repairing?

Not a very great number, I should say; there are some which have been long neglected, and are in complete ruins; some of these might be restored. There are again others which were badly chosen in the first instance, and some have, in the course of time, been filled up with accumulations and deposits of soil brought down by the rains, and are no longer worth repair.

8857. Are they generally formed upon streams?

They are generally formed across valleys, but sometimes across streams also; the usual way is to construct an embankment across a valley to intercept the drainage of the country; some of them, as I have mentioned already, are nine miles in length, and from 15 to 45 feet in height; there are not many of them, however, which are of that size.

8858. What should you say would be about the average size of the tanks?

They are of all sizes, from 20 yards to 9 miles in length; every village in South India has its tank; some of them have two or three tanks.

Colonel D. Sims.

2d August 1853.

8859. Are there any local funds available for the repairing of those tanks?
Under the Hindoo Governments there was a tax upon all irrigated land, for the purpose of keeping the tanks in repair; that has been assumed by the Government, and the Government keep the tanks in repair now.

8860. Lord *Elphinstone.*] Was that assumed by the British Government or by the Mahomedan Government?
I believe it was collected irregularly, and was not always applied to its legitimate use.

8861. Lord *Wharncliffe.*] But it has been re-imposed by the British Government, has not it?
No, not in the Madras Presidency; the Government there keep the tanks in repair. The land is considered as belonging to the Government, and every person occupying that land pays a certain rent, which varies in different districts, but is usually supposed to amount to about two-fifths of the gross produce of the land, and in return maintains the irrigation.

8862. Are they generally built with masonry?
They are all of earthwork, faced very often with large loose stones, for the purpose of protecting them from injury from the waves in the tank in high winds.

8863. They are not faced outside at all?
Not at all.

8864. In most of those cases in which the tanks have been neglected the cultivation has suffered very severely from the condition of the tanks, has not it?
The cultivation has ceased altogether in the case of those tanks which have fallen into ruins; but that was anterior to the country coming into the British possession. There was a long series of wars carried on by the claimants for the Nabobship of the Carnatic, during which the country was laid waste, and the tanks neglected, and very often destroyed; and when the country came into the possession of the British, the tanks, generally speaking, were in a very neglected state, and many of them nearly useless.

8865. I suppose there is no part of the Madras Presidency where such works are not to be found?
In no part, with the exception of the western coast.

8866. Lord *Elphinstone.*] Have the zemindars taken good care of their tanks?
In some few cases very good care; but, generally speaking, they have neglected them very much.

8867. Generally speaking, the tanks are not in as good condition under zemindary management as under ryotwar management?
No; the zemindars being deprived of those objects of ambition and employment, which people in their rank of life find open to them in other countries, generally sink into a state of indolence, extravagance and self-indulgence, and too often neglect their estates and true interests.

8868. Are there any further observations which you wish to offer to the Committee?
There is one observation I would beg permission to make, which is the great importance, and indeed absolute necessity, of reorganizing the superintending and executive department of public works, and largely augmenting its strength: till that is done, it is quite hopeless to expect any large and comprehensive system of improvements to be carried out, or that the views of an enlightened and liberal Government can be fulfilled: that has been the great difficulty all along, and till it is removed the most skilfully designed improvements will be marred in their execution, as has sometimes already happened, and the public funds granted, be spent unprofitably in many cases.

8869. And an insufficient supply of engineer officers?
Yes; in the first place, a very insufficient supply of engineer officers, and also of overseers and assistants under them, without whom the officers cannot work.

8870. Lord *Wharncliffe.*] Have you seen the Report of the Commission of Madras upon the Department of Public Works?
Yes; a few of the details I have given are from that Report.

8871. Do you concur generally in the views they have taken?
I do, generally, but think them occasionally rather sanguine.

8872. Do you concur with them respecting the continuance of a Board?
Probably it is the best system for the Madras Presidency. I think there are great advantages from individual agency; the responsibility is greater; there is more expedition; there is more activity and energy, but there is the risk occasionally of the single individual not being so efficient and so well informed in all branches of the duties as could be wished; and perhaps in so large a department as that of Public Works, a Board properly constituted, and consisting of two or three officers, is preferable.

8873. Lord *Elphinstone.*] Do not you think there is advantage in combining a revenue officer with an engineer officer?
That is one of the great advantages of a Board at Madras. The works of irrigation are so intimately connected with the revenue of the country, that the opinion of an experienced revenue officer is often of the utmost value in deciding upon the value and expediency of proposed improvements.

8874. At present the engineer officer who is attached to the Board of Revenue in the Department of Public Works, has generally some other office, has he not?
He has; he is generally the Chief Engineer.

8875. If the engineer officers were attached entirely to the Revenue Board, and made members of the Board of Revenue, would not that be the preferable plan?
I am not sure but that would answer in practice as well, as the new Board proposed by the Madras Commissioners; it would be the most economical, in the first place, and the engineer officer would have the benefit of the collective wisdom and experience of the members in all questions touching the revenue, and productive capabilities of the country.

8876. Lord *Wharncliffe.*] Do you concur with the Commissioners, who are the authors of the report I allude to, that much more might have been done within the Madras Presidency if the Government of the Presidency had applied itself properly to the work?
The Government have been very much restricted by the want of means. The Indian Government has been engaged in very expensive wars; there was a want of money very frequently; at the same time I think more might, perhaps, have been done than has been done; but a great deal has been done, much more than is generally supposed, and frequently there were not officers for the superintendence.

8877. Lord *Elphinstone.*] You said before that public works were a good deal delayed by the reference to the Supreme Government?
Yes; that has interfered very much with the intentions of the Government; it has deadened the zeal of the subordinate officers also; frequently plans which they had taken a great deal of trouble to prepare and mature were, on being submitted to the Supreme Government, disapproved of by parties who were unacquainted with the local circumstances; that has had a discouraging effect, and prevented them from carrying on their observations.

8878. Lord *Wharncliffe.*] Should you say that there were many works in the Madras Presidency which would justify the Government in raising money for the purpose of executing them?
Certainly.

8879. Where it can be shown that the returns would be very large, would not it be desirable for the Government to provide the necessary sums, by raising money for the purpose?
Yes; and, generally speaking, the Madras Government has shown great anxiety to carry out such plans.

8880. Has money ever been raised for such purposes in India?
Not specially; but portions of loans raised for general purposes have, no doubt, been so applied, when the money could be spared from more pressing exigencies.

Colonel D. Sims.

2d August 1853.

8881. Lord *Elphinstone.*] Is it your opinion that railways could be more economically constructed by the Government than by a private company?

Yes, I think more economically.

8882. *Chairman.*] What are your reasons for that opinion?

My chief objection to the Indian companies is the guaranteed interest; a company, having a certain rate of interest guaranteed to it, whether the undertaking proves remunerative or not, finds its most powerful incentive to economical management thereby in some degree weakened. The great superiority which private companies have over Governments, consists in its being their self-interest to carry on their undertakings in the cheapest and most economical way, in order to make them remunerative as soon and as largely as possible. When a rate of interest is guaranteed by the Government, there is a risk of the company being satisfied with that rate of interest, without looking so keenly as it ought to greater advantages.

8883. Would not that depend very much upon the rate of interest which was so guaranteed?

Undoubtedly; but the rate of interest must be necessarily rather higher than the ordinary rate of interest at the time to induce people to embark their money in distant undertakings like those of India; the rate of interest is 4½ per cent., which is higher than the public funds give, and money for distant undertakings cannot, I believe, be obtained on lower terms.

8884. Lord *Elphinstone.*] Do not you think that the Government would have peculiar facilities for constructing railways in India, which companies probably cannot possess in the same degree?

They would have the advantage of employing partly their own engineers, in the first place; they would have the advantage of the services of the Collectors and Magistrates in the districts through which the lines pass, in affording facilities and furnishing workmen and materials. These facilities, however, the Government will still give, I am persuaded, as far as it consistently can do so without injury to the people, and it is its interest to do so; but I think the facilities would, perhaps, be somewhat more easily obtained if the works were undertaken by the Government.

8885. Lord *Wharncliffe.*] You spoke of the little inducement which would be felt by private companies to observe economy, in consequence of their having guarantees; did you say that having reference to the circumstance that the guarantee on the part of the Government will involve the Government having an effective voice in the undertaking?

I am aware that the Government, having the responsibility, very wisely retains the control and superintendence entirely in its own hands; having done so, I think it might with advantage have taken the execution of the works also, with the chance of the profits.

8886. Should you say that, generally speaking, Government works in India have been very cheaply executed?

In the Madras Presidency they have been executed very cheaply, as the plans of the bridges and anicuts exhibited to the Committee abundantly prove.

8887. Do you mean cheaply, not in reference to the cost of works in this country, but in reference to the general cost of works in India?

In both respects, decidedly.

8888. When you say that you think the Government ought to undertake the construction of railways in India, do you mean that they ought to send out a civil engineering staff from this country?

They would have had to send out a railway engineering staff from this country, just as the companies have done; they would have employed their own officers in the superintendence. There is now a consulting engineer in the case of each railway. The Government would have employed many of their own officers; but practical railway engineers must have been sent out from this country, at the commencement at least.

8889. One of the first necessities, on the part of the Government in India, in your

your opinion, is, that it should take means to increase the supply of engineering ability?

That is the first and greatest necessity at Madras.

8890. Lord *Elphinstone.*] Do you think that there is any prospect of so many railways being constructed as to compete in any degree with each other?

Not so long as only one company is sanctioned in each Presidency; if two or more companies are sanctioned for the same Presidency, the rivalry which will ensue would lead to very injurious consequences.

8891. The supply of the subordinate staff is not sufficiently extensive, you think, to supply the demands of two railway companies bidding against each other?

Yes, that would be one; and then, competitions for materials and freight, another. It is difficult to obtain freight for supplies from this country. If there were two or more companies sending out articles at the same time to the same Presidency, there would be a competition between them, and that competition would prove hurtful in a great variety of ways.

8892. There would be a great competition for the services of the overseers employed there?

There would be; and it would be necessary to send out overseers from this country. In consequence of there being no civil engineers' college at Madras, we are obliged to instruct apprentices, and to train them for our purposes.

8893. You are, in fact, therefore, going to form a civil engineers' class, such as was proposed in the High School?

To a small extent only, in the expectation that a good civil engineers' college will be established by Government.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Two o'clock.

Die Jovis, 4° *Augusti* 1853.

LORDS PRESENT:

The Lord President.	Lord Wynford.
Earl of Albemarle.	Lord Ashburton.
Lord Colchester.	Lord Broughton.

THE LORD PRESIDENT in the Chair.

MAJOR PATRICK THEODORE FRENCH is called in, and examined as follows:

8894. Earl of *Albemarle.*] WHAT was your period of service in India?
Twenty-nine years.

8895. Will you state the nature of your services?
I went out to India in 1822, and came home in the end of 1851; for the first seven years I was engaged with my regiment, and then was put on the general staff of civil employment as Bheel agent in the Province of Candeish.

8896. ill you expl ain what is Bheel agent?
Agent for a class of men called Bheels in the Province of Candeish; I remained there four years; I was then transferred to Ahmednuggur as Bheel agent and commandant of a local corps; subsequently, in 1840, I was one of the assistants in the Scinde and Beloochistan agency; and on its abolition I was transferred to the agency in Rajpootana in Central India; there I remained two or three years in various employments, and was then transferred to the Province of Nemar, on the Nerbudda, under the Agra Government; I remained in that capacity for two and a half years, and became Private Secretary to the Governor of Bombay, Sir George Clerk. I was subsequently Town-major of Bombay, and Acting Resident at the Court of his Highness the Guicowar.

8897. Have you paid any attention to public works?
Yes, I have, from the period of my being Bheel agent in Candeish; although I was not a scientific officer, or in any way attached to the Department of Public Works, they have engaged my attention a good deal.

8898. Can you state what is the condition of the roads, bridges, tanks, canals and wells in the different provinces of Candeish, for instance?
I have brought a map of Candeish [*producing the same*]; it is one of those large lithograph maps that we have in India; in Candeish there are in fact very few roads; there is one road called the Bombay and Agra trunk road; but in reality there is no road beyond 12 miles from Dhoolia: in the printed Parliamentary paper I see it is put down as if made the whole way to Sindawa; but I have no reason to suppose that that is correct, and it is not bridged.

8899. *Chairman.*] Are you speaking from personal knowledge of the road?
Yes; I came down a portion of it not very long ago; two or three years ago; but I have made inquiries since that, and it is not very long since I saw in the papers a letter from an American gentleman who had gone down by that road to Agra, and described it exactly as I found it there three or four years back.

8900. Then your information, except with regard to four years ago, is derived from what you saw in the public papers?
Yes,

Major P. T. French.

4th August 1853.

Yes, and from inquiries I have made from people who have been there since then.

8901. From gentlemen that you have seen in this country?
Yes.

8902. And who have traversed that road?
Yes; I believe it to be in that state still; there may be an error in my mind, or in that of other parties, but I believe there is no made road beyond Sougur.

8903. But you are not able to give any positive information upon that point?
That is my positive belief; and it is not bridged; and very much of the road, for instance, the part below the Thull Ghaut, is rightly described by the head of the Revenue Survey Department, Captain Wingate, as a "most execrable road."

8904. Earl of *Albemarle.*] Are you acquainted with the description of this road which was given by a Mr. Taylor, a writer in a Bombay paper, on 19th January 1853?
That is the American gentleman I was referring to a little while ago, who attached his name to the letter which he wrote from Agra in one of the Bombay papers, having gone the whole trip; and he gave it station by station.

8905. What is the condition of the bridges in Candeish?
I am not aware that there are any.

8906. Are not bridges very necessary in consequence of the number of rivers which are crossed?
Most decidedly; it would be easy to detail various accidents which have occurred from the absence of bridges, producing great detriment to trade and commerce.

8907. Are there many tanks in Candeish?
There are a very few tanks indeed in Candeish; a part called Baughlana, now included in Candeish, has several old aqueducts and canals formed in the days of the Moguls, or even perhaps before that; but there are no new tanks there beyond one or two; yet, there is no country I am acquainted with so well adapted, from its undulating surface and its countless rivulets, for tanks as Candeish is; and perhaps still more for weirs across those rivulets; and the country exceedingly requires them.

8908. *Chairman.*] With regard to the absence of bridges, are there any natural difficulties in the way of bridging the rivers over which the roads pass?
I am not aware that there are. There are several places on the Tapty and the Nerbudda which would require very heavy outlay for the purpose.

8909. Lord *Wynford.*] Do not they occasionally shift their channels?
Not up the country.

8910. Are not they in the rainy seasons very broad?
No; the Tapty has been known at times, in 1822, for instance, to spread exceedingly wide; but that is not an ordinary occurrence.

8911. Earl of *Albemarle.*] Have not those rivers a peculiar direction, different from other rivers in this part of India; do not they fall into the Gulf of Cambay?
All those rivers do, necessarily, from the nature of the mountains.

8912. Are there any canals in Candeish?
There are no canals but those in Bhauglana.

8913. And no wharfs?
No; the wharfs would be on the sea-board, too far removed.

8914. Will you state the facilities afforded, and the impediments that occur to trade and navigation in the Province of Candeish?
The impediments consist in the entire absence of cross-roads, or even of any great trunk-roads, and the entire absence of bridges, and frequently the absence of surrais, places where travellers and merchants would stop, halt-houses, and caravanserais.

caravanserais. As regards other impediments they have been removed, in so far as the transit duties have been abolished.

8915. You are acquainted with Nemar, a non-regulation district?
Yes; I am acquainted with Nemar.

8916. Will you describe the condition of that district?
The Province of Nemar, in the valley of the Nerbudda, is a non-regulation district of about 4,000 square miles, under the Government of Agra. It came into our hands at the time when the Peishwa was removed from Poonah; and in 1845 I was sent there, and was placed under the Government of Agra. This is a map of the Province of Nemar, divided into districts [*producing the same*].

8917. Will you state what has been done of late years in Nemar, and what has been the cost?
During the period that I was in Nemar, having received from the Governor of Agra, Mr. Thomason, and from my immediate superior, the resident, at Indore, Mr. R. H. Hamilton, every encouragement, a vast deal was done more than could otherwise have been done. During the period of 30 months that I was there, 105 tanks were constructed or repaired, 60 new surrais or halt-houses built, and roads and passes through different mountains were made. A good deal was done owing mainly to its being a non-regulation district, and in no way under the Military Board or Sudder Adawlut, but all these matters being under the entire control of the Lieutenant-governor of Agra and the resident of Indore, whose liberal encouragement was doubtless the cause of so very much being done; that was in 1835, 1836 and 1837. Since then, the same liberal support has been extended to my successors, Captains H. L. Evans and R. H. Keatinge; and I believe there is now no part of the Bombay Presidency which can be compared to Nemar in all these material advances. Besides these works, 14 Vernacular Libraries were established. I had at first no assistant of any kind; but Mr. Thomason, the Governor of Agra, gave me an uncovenanted European assistant, on a salary of 300 rupees a month. On visiting the place himself, subsequently, he was good enough further to increase the establishment by a European covenanted assistant, an officer of artillery, Mr. Keatinge, now in charge of Nemar, and a native assistant, my Sheristedar, Lall Khan; so that then we had a full establishment, and were enabled to carry on the works at a rapid pace, and to do a great deal more than could otherwise have been done; and it was found exceedingly serviceable to have this European uncovenanted assistant, for although our revenue was small, we had to furnish as many returns as if it had been large: the treasury (a general account), and gaol, with other work, were all made over to this uncovenanted assistant. He corresponded directly with the Accountant-general, the Civil Auditor and other officers, touching fiscal matters. A native uncovenanted assistant was subsequently added to the establishment by Mr. Thomason; so that then we had an European uncovenanted and covenanted with native assistants, having equal powers with myself, as a magistrate (they being joint magistrates), as well as a deputy collector.

8918. You found them competent?
In every respect. The European has died, and has been succeeded by another uncovenanted assistant: so admirably well had the system been found to work.

8919. Can you give the Committee any idea of the cost of any of those works?
The largest sum expended was 5,000 rupees on a tank, the Lake of Lachma; it was one of those magnificent works thrown up by the former rulers of the country, the Kings of Mandoo, costing many lacs of rupees. When the great deluge came in 1802 or 1803, it burst, as every tank in the country did, and in that state it remained till 1845, when, under the encouragement of the Government of Agra, and Mr. Hamilton, of Indore, it was restored, and is still in useful operation.

8920. Lord *Wynford.*] What is the extent of that tank?
That tank is about three miles in circumference.

Major P. T. French.

4th August 1853.

8921. What is the quantity of water in cubic feet that it is supposed to hold?

I do not think that was ever calculated. We had too much to do to enter into those calculations, if we could have done it.

8922. Does it arise from damming up a stream?

Yes; there are several feeders to it, which are in operation only during the monsoon time; it is a stupendous work, that portion of it done by the Kings of Mandoo; ours was a very small affair, merely stopping up where it had burst.

8923. It is in a valley?

It is in a valley.

8924. Given the length of the sides and the width of the bank, it is no difficult operation to calculate the number of cubic feet of water?

No; it would not have been difficult, but I am not aware that we ever tried it.

8925. Earl of *Albemarle.*] Have you anything further to say with respect to the roads in this part of the country?

There have been a great number of roads made since then; a very fine road has been made from the top of the Ghaut, near Mhow, to Boorhanpoor, crossing the Nerbudda, where there is a trustle bridge lately made by Mr. Keatinge; it is a good buggy road the whole way down to Boorhanpoor, about 100 miles, for all seasons.

8926. Is it fit for commercial purposes?

Quite so; with tanks at every village and rest-houses.

8927. Have you anything further in particular to state with respect to the province of Nemar?

I should be very happy to say a good deal with reference to the system pursued there, and how it might be applied to the neighbouring province of Candeish, with regard to tanks, and with regard to placing at the disposal of European officers more leisure, by the employment of uncovenanted Natives and Europeans: a great deal might be done in that respect.

8928. Lord *Colchester.*] Is Candeish a regulation province?

Yes.

8929. Your evidence would show the difference between a regulation and a non-regulation province?

Yes; and the advantages the latter has over the former.

8930. *Chairman.*] Will you be so good as to state the system which you pursued in the non-regulation provinces, and which you think might be extended to the neighbouring province?

I would first say that in a regulation province, in Candeish for instance, there is a collector and four or five European assistants in the Civil Service, and two or three or four Bheel agents. It may be that one or two of them, the civil assistants, are of some five or ten years' standing, the others are of course much younger, and are as it were learning their duty. The collector of the province is at the same time magistrate and head of the police, and in fact should be called Governor of the province; every kind of improvement, whether with regard to roads or tanks, or anything of that nature, must originate with him—so that he has consequently a vast deal more to do than it is possible for him to get through. I may mention that when living there for years on the most intimate terms with many collectors, my own especial friends, I have frequently seen them, when far away from the head-quarters station, signing paper after paper which the native accountants have sent from head quarters for their signature; without of course being at the trouble of looking at them, but placing reliance on the accountant in the office, who was not even a covenanted or uncovenanted assistant, but a mere common ordinary accountant, indifferently paid or rewarded in any sense. Now, what I would say is, that in Nemar, where everything was so very different, I was enabled, as I before observed, to place the whole of the accounts of the treasury and the gaol, and of the revenue, in fact, as far as concerned the head quarters of the department, under an uncovenanted European assistant, who had been originally a clerk in some of the offices in the North-Western Provinces, and who was sent to me as assistant; he corresponded direct with the civil auditor and the

the Accountant-general; and I was of course held generally responsible for the accounts; this man was well paid, and was entitled to a pension, and to increase of pay with increased services, that would belong to him in a regulation district; in Candeish, for instance, such an officer could relieve the collector of a great deal of nominal work—work that he cannot be held responsible for, inasmuch as he has not time to get through it; and would have the effect of placing at the disposal of the European officers under him a vast amount of leisure for the discharge of their multifarious duties as regards tanks, road-making and many other necessaries. The Governor of the province and his assistants (for the expression "Governor" is far more applicable than that of "Collector") might, so aided, in various ways be of use to the people of the country by having placed at their disposal much larger funds for the purpose of carrying out those improvements, and having a certain degree of trust reposed in them; in Candeish I believe it is about 5,000 rupees a year, which the Governor of a Province of some 10,000 square miles, with those European assistants, are allowed to expend on roads, tanks and wells, and such things, without reference to the Government, and without being compelled to send for and obtain sanction; that sum they may expend, only rendering an account of the outlay, a most inadequate sum, amounting to about 500*l.* in our currency. But in Nemar, where I was, having got every encouragement from the Governor of the North-Western Provinces, and Mr. Hamilton of Indore, I spent a far greater sum than that, without getting any sanction, until I had completed several works and spent the money on them. Then I wrote for sanction, merely in a few words, explaining the necessity of such works, and got it. Mr. Thomason and Mr. Hamilton were good enough to repose that confidence, and of course the responsibility became the greater. I found no difficulty whatever through my assistants and the head man of the village, the patell, in running up the ordinary retaining walls of earth and clay of a small tank, weirs across rivulets, or anything of that kind, requiring a little science, as far as science is concerned; that is to say, in all that the eye can command, in which perhaps a Native will generally far excel a European in correctness and precision. In Ajmere, where Colonel Dixon has done so very much, he was in the same way uncontrolled by the Military Board, and got every encouragement from the Government; so that he was enabled in the same manner to carry out very great works, far greater than any I can lay claim to. I believe the revenue of the country is vastly increasing. The people that were before very uncivilised have become good, industrious, honest farmers.

8931. Lord *Wynford.*] In the districts with which you have been acquainted, is there any very remarkable deficiency in the means of communication between different provinces?

Very remarkable indeed; when I came down in the October of 1847, to join Sir John Clerk as his private secretary, I was coming along this very trunk-road from Bombay to Agra; when travelling on the trunk road I came to a place on the line near Seirpoor at night time, in a palanquin, and we had to stop because a cart laden with salt was passing along; its wheels stuck fast in a rut right across the road; I had sixteen bearers carrying my palanquin, and three or four times their efforts failed in trying to extricate the cart from this rut in which the wheels had sunk. That was in the high road leading from Malwa and Agra to Bombay.

8932. That was immediately after the monsoon?

That was immediately after the monsoon. That road ought to have been bridged, and it would have been bridged had it been in Nemar, because they have there a road fund, as well as a sufficient establishment; and I need not have written to obtain the sanction of the Government to the paltry outlay requisite to have made that; and so I could mention hundreds of anecdotes of a similar nature; and in fact the impediments to trade and commerce are innumerable, such as no other people would put up with.

8933. Is not that the principal site of a great deal of the cotton cultivation?

A great deal.

8934. This road leads from that cultivation towards the port of export?

Yes; to Bombay.

8935. Is that state of the roads such as to impede the transport of the cotton from the place where it is grown to the port of exportation?

Major P. T. French.
4th August 1853.

It depends upon circumstances; if the cotton is taken down on pack bullocks, as it frequently is, those bullocks wander over a wide space of country, and roads are of no avail to them; they wander along the jungle, feeding as they go: 1,000, 2,000, 3,000, or 4,000 bullocks are in the morning laden and driven away; they go along the whole day till evening, when there is a halt cried, and the packs are thrown off, and an encampment formed for the night: to them a road is of no consideration; but a road is very important where the cotton is pressed up the country, and taken down in waggons; that would be a far better way of transporting it, and no doubt far more economical. The cotton pack is dragged along through those jungles, or thorny bushes and trees, and suffers enormously; much cotton is dragged out of the pack; in fact one might very easily collect a large supply of cotton, by merely taking it off from the thorny trees all along the line that the bullocks pass; then in the evening that sack, torn as it has been during the day by those thorns, is thrown over upon the dusty ground; and, of course, when the cotton reaches this country, it is pronounced of very inferior quality, having in this transit of a month and a half or two months to Bombay each day taken in so much dust: if it could be carried in waggons, of course it would come in a very different condition.

8936. Earl of *Albemarle.*] A Return has been made to the House of Lords, showing the trunk-roads fit for the transport of goods by wheel carriages which have been constructed in the Bombay Presidency; will you look at that Return, and state what is the general condition of the roads there mentioned?

The first is the road from Bombay to Poona, 94 miles. The road is a fair road enough, but it goes over the Bhore Ghaut, with a gradient of one in 10 or 11 or 12, which is a frightful gradient; but otherwise, it is a fair road for India. Then the next road, I observe here, is the Mahabulishwar road, that is up the hills. The road, as far as the people of the country are concerned, is of no use at all. It is solely of use to Europeans, and in my opinion should not have been made; while other works of essential use are wanting for trade. The road from Poona to Ahmednuggur is very fair; and the road from Poona to Sattara is the same. The road from Poona to Narraingaum I do not know. Then with respect to the Bombay and Agra road, it is stated here to be made for 270 miles to Sindwa. According to my knowledge, derived from inquiries lately made, that road does not extend to Sindwa; it only extends to Soangier, which is 12 miles beyond Dhooliah. I am confident that nothing has been done to it up to Agra beyond the mere levelling, clearing, and throwing the stones aside. I am not aware that it is bridged anywhere scarcely; I know that the Tapty and Nerbudda are not bridged, the Girna is not bridged, nor is the Godavery, with many other rivers.

8937. *Chairman.*] Are the Committee to understand that you dispute the correctness of this Return?

No; I do not dispute any portion of the Return; I merely make this remark on the Poona and Bombay road, that there is the Bhore Ghaut with a gradient of one in 12; and this Bombay and Agra road to Sindwa is, I think, a little over-stated, though it is perhaps not worth noticing. Then this is not including bridging. Many of these roads are not bridged.

8938. You have previously stated that your own personal knowledge does not extend later than three or four years ago?

Yes, as to portions of it.

8939. Earl of *Albemarle.*] Will you state the general condition of the public works in Guzerat; such as roads, bridges, tanks and ports?

That is very easily summed up. There are no roads or bridges in all Guzerat; that is to say, in the collectorates of Surat, Broach, Kaira and Ahmedabad; there are none outside the military cantonments. There are no bridges, and the ports are in a state of nature. The ports are in the Gulf of Cambay, Tunkaria, Goga, and Broach; those different ports may be said to be in a state of nature, presenting very great drawbacks to trade. As to roads there are none in the whole country, in consequence partly of which, its trade during four or five months of the year with the ports is stopped; because it frequently happens that a late fall of rain coming on, the yet damp soil has the effect of shutting up trade for perhaps six weeks after the ordinary close of the monsoon, when boats come to the named ports. These boats have thus to remain idle until the mud dries,

so as to allow of carts to pass over it. This is a very serious drawback on trade and industry.

8940. Is there not a tramway there?

There is a tramway at Dholerah; owing to the exertions of Major Fuljames, commanding the Guzerat Regular Horse, now political agent in the Rewaconta, a tramway has been made there, which has proved of very great utility to the trade of the country it is in.

8941. Do you know anything of the expense of it?

No, I do not. With reference to harbours in the Gulf of Cambay, and places for loading and unloading goods, one of them is Broach on the Nerbudda; nothing can be in a more backward state than those are; there is no wharf or crane of any kind; and the trade has to contend with obstacles, which, perhaps, none would encounter but the patient and persevering people of India. For instance, at Broach, a place of great export of cotton, it is not uncommon to see the people lay a pathway of grass on the damp bed of the river, and then to spread their blankets or their coarse cloths on it, and roll bales of cotton down to the boat over this path. After a time, the pressure of their feet on this way so made of grass sinks into the mud; and the consequence is, that the bales arrive in Bombay damp, and they are injured to some extent; it would be a very easy matter at Tankaria Bunder, Broach, Surat and elsewhere, to have wharfs or conveniences such as trade and commerce require. In Guzerat the material for road-making is very deficient; but it would be a very simple matter to have the tracks of the country used as roads annually repaired; now the ruts formed by the wheels are frequently two feet deep.

8942. In fact the roads are concave instead of convex?

Yes; the axletree in going along frequently scrapes on the mound between the two ruts formed by the earth being thrown up by centuries of use by the wheels passing to and fro; and a more frightful thing to ride over or drive on than one of those roads it is impossible to imagine; it was frequently recommended to the Government to have them levelled and filled up; and if that were once done, the annual cost of repair would be a very small affair. But under the Presidency of Bombay it has generally been found that nothing could be done without such forms being gone through with the Military Board, and one impediment or another of the kind, that those things fell dead born, and nothing was done. When I was Acting Resident at Baroda, two or three years ago, being called upon by the Government to make some remarks upon these matters, I suggested having these roads filled up, and something being done for the port of Tankaria Bunder, but nothing was done; nor was the suggestion made by the Committee upon cotton in the year 1846 attended to; they recommended something being done to those ports, Tankaria Bunder, Broach and Surat, by at least constructing landing-places and cranes, but nothing has been done for that purpose, except that I am told that an expenditure of 30,000 rupees was sanctioned for the construction of a landing-place at Tankaria Bunder lately. In all Guzerat, so far as I am aware, there are but a few miles of tolerably clear and level road; and that was made a little time back by his Highness the Guicowar 14 miles from Baroda to Wassud on the Mhye; he repaired and bridged it, built one or two surais near it, and planted trees on either side the whole length.

8943. Do you know the road from Ahmednuggur to Bombay?

Yes; it is a fair road through Poonah over the before-named Bhore Ghaut, in which are gradients of one in 12, I believe.

8944. Has there been any increase of traffic upon it since the making of that road?

Vast increase. Previously to the construction of the road from Bombay to Poonah, and on to Ahmednuggur, carts were not very common in the country; but since then they have become exceedingly numerous, and in every direction wheelwrights are to be seen. The extension of the traffic has been very enormous, in consequence of the construction of those roads. If there were good roads to Candeish and Berar, no doubt that we should have fine large waggons and carts, such as are found in countries where commerce is more favoured.

Major P. T. French.

4th August 1853.

8945. Is there any outlet for the trade of the southern Mahratta country direct to the coast?

Not that I am aware of: I observe here it is stated that there is a road from Vingoola Port to Belgaum, Dharwar, Hooblee and Port of Coompta. But that is not a port for anything more than boats. Viziadroog is a small harbour, which, if attended to, no doubt a good deal could be made of; but then a road is required up the Phoonda Pass into those countries of Belgaum and the southern Mahratta country.

8946. Have you any other suggestions to make with a view of affording an outlet of the trade of the southern Mahratta country?

Not that I am aware of. The harbour of Viziadroog might, I think, be made with great advantage a harbour of refuge; and a lighthouse should be built there, and a Customs Department established there. The repair of the Phoonda or some other pass leading thence up into the southern Mahratta country is very essential.

8947. In what mode could the cotton of Berar and Candeish be best enabled to reach the coast?

My opinion is, that the better plan for the cotton of Berar and Candeish is to go to Surat down by the Isabarry Pass. This map [*producing a map*] is from a work on cotton and railways, by Colonel Grant, of the Bombay Engineers. There are no impediments to that line, and it is in fact the natural line. A survey of that line has just been sanctioned by the Board of Control and the India House, for the Baroda and Central India Railway Company.

8948. Have you any information upon the subject of linseed in those provinces?

I know that Berar produces a good deal of linseed. The obstacles to its being taken in any quantity to Bombay are the absence of good roads and bridges, and the consequent absence of carts and waggons, which of itself explains the difficulties the trade has to contend with. A friend of mine residing in Berar, who is a trader in cotton and various matters, sent some years back a quantity of linseed, as specimens to various mercantile houses in Bombay, asking the terms they would offer for that species of linseed, and they wrote to say that they would take any quantity of it; but the terms offered were such as that that gentleman would have merely saved his own if he had to carry the linseed on pack bullocks from Berar to Bombay; if he could have sent the linseed down in waggons or in any way except on the backs of bullocks, where it was liable to have the sacks torn and to encounter many accidents, the trade between the country we have just acquired in Berar and Bombay in linseed alone would have been very extensive; but it is like a good many cases in India of that kind, where a vast number of agricultural productions that will not bear the expense of transport to the coast are grown, owing to the absence of roads.

8949. Lord *Wynford.*] Can you explain how it is that the cotton is not transported for the purpose of exportation to the mouth of the Godavery instead of to Bombay?

A good portion of the cotton of Berar goes to Mirzapore; the remaining part comes to Bombay, being the nearer port.

8950. As a great proportion of the cotton is afterwards shipped to China, and does not come to England, surely it would be much better to ship it to China from the mouth of the Godavery, than from the Bombay side?

I do not know anything of that part of the country; I know a great deal goes to Mirzapore and to Coringa.

8951. Earl of *Albemarle.*] You have spoken of the works which are required and of the facilities which exist for executing them; but would they not require a large engineer's staff?

No, I do not think they would; because, from what I have stated, from the way in which things were done in Nemar and in the Ajmeer Provinces, there would be great facilities for doing those things so soon as the means were placed at the disposal of the Collector. Give him the men and means of doing the works, and he would very soon get them done. But to enable him to superintend those works, and to look after them, he must be relieved of a good deal of petty minor detail, involving some responsibility, before alluded to, in the shape of accounts and other

matters

matters of that kind. This object might be elucidated by anecdotes which we have all heard of, instances of accounts remaining unclosed for many years together. That kind of thing would never have occurred were there the uncovenanted assistants, that I have before referred to, in some manner placed at the disposal of the Collector; it would save money as well as time; and he, with his assistants, would do a vast deal without any extra staff of engineer officers.

8952. The uncovenanted servants would supply the place of the covenanted?
Of course they would.

8953. And efficiently?
In my opinion most efficiently; over them Government would have a far greater hold than they have over the covenanted; they would be Natives of the soil, or Europeans duly qualified in a knowledge of the habits, customs and language of the country, such as few covenanted ever possess; and ere possessing this knowledge, the uncovenanted should not be employed. The covenanted goes out employed, and is on a high salary while acquiring a portion of that the others would have previous to drawing a salary. In the North-Western Provinces uncovenanted servants are extensively employed.

8954. You are speaking now of the Natives of the country?
Europeans and Natives of the country; I have had no opportunity of judging of the efficiency of Europeans not born in the country.

8955. Broach is a port, is it not?
Broach is a port on the Nerbudda River.

8956. What condition is it in?
In the condition in which nature left it, wanting in every sense. There is no means of any kind afforded to benefit the trade there; it has been sadly neglected. Everything is wanting; there is no landing-place; there is no such thing as a crane or work of any kind to aid in loading and unloading boats.

8957. What would you suggest for the ports in the Gulf of Cambay?
Good roads cannot be made very easily, from the absence of stone or other material of that description along the lines leading to these ports; the best thing that can be done is to level and raise the line of country as a road; and to mark it out with a drain on either side, and bridge it as best may be done, making at the ports such landing-places, and erecting such cranes and other means as are called for to load and unload boats.

8958. Lord *Elphinstone.*] Is not the Guicowar making a railway somewhere in that direction?
No; there was a scheme talked of when I was at Baroda, some years ago, which is now embodied in a Company lately started, called the Baroda and Central India Railway Company.

8959. Earl of *Albemarle.*] As you were interested in the introduction of railways in Guzerat, will you state the present prospects of the undertaking?
A Company has been formed which has addressed a memorial, of which I have a copy, to the Court of Directors, called the Baroda and Central India Railway Company. As yet very little has been done; but within the last week or fortnight the Court of Directors and the President of the Board of Control have sanctioned our now proceeding to work, by sending out a staff of officers to survey the line, and in fact making a beginning.

8960. Lord *Wynford.*] It appears that there is a line projected up the Valley of the Taptee, into Berar?
It is one of our branch lines.

8961. Earl of *Albemarle.*] What do you consider to be the best line for the conveyance of cotton from Candeish and Berar to the coast?
The natural line is by the valley of the Poorna and the Taptee, through Berar and Candeish to Surat, descending *viâ* the Isabarry Pass, a pass that I went down a few years ago with the Guicowar, who had in his train 1,200 carts. We found the road a very easy descent, and according to my opinion, for a very small sum of money, it could be made a very excellent road; it was in fact levelled and repaired to some extent in 1824, but since that time it has been much neglected.

Major P. T. French.

4th August 1853.

8962. Lord *Elphinstone.*] Are the lines marked in this map which you have produced, the lines which you would recommend for the construction of railways in the Bombay Presidency?

No; the lines which I would recommend are naturally those of the Company of which I am a director, the Baroda and Central India Railway Company, being from Bombay to Surat, and on to Baroda through Malwa to Rutlam, and to Agra by the valley of the Chumbril.

8963. By that line you would avoid the Ghauts?

Yes; you flank the Ghauts, with branch lines from Baroda to Ahmedabad, and from Surat up the valley of the Taptee to Oomrawattee in Berar.

8964. Would those lines be constructed and worked at less cost than lines which cross the Ghauts?

I firmly believe so.

8965. Would they be very circuitous?

No, not very much so; that to Berar would be somewhat circuitous; but the others are exceedingly straight, taking in all the great commercial cities of the West of India and Malwa, which export annually two millions worth of opium.

8966. Earl of *Albemarle.*] Besides the advantages of railway communication to commerce and to agriculture, have you anything to say with respect to the facilities which it would afford for the transport of the army?

I think that the introduction of railways would, as stated by the Governor-general in his late invaluable minute, enable a vast reduction to be made in our army, as well as much facilitate its operations, and add to our prestige.

8967. Lord *Broughton.*] Are you aware that Lord Hardinge made a calculation that the having a railway from Calcutta to the North-Western frontier would enable him to reduce the army by 50,000 men?

I think it is very likely indeed. Lord Dalhousie does not state what amount of reduction could be made, but he says he thinks that a very great one indeed might be made if railways were established.

8968. Earl of *Albemarle.*] Can you suggest any means by which our finances may be placed in a condition to meet the guarantees for, or the construction by the State of such costly works as railways?

I suppose that any person who has been the length of time that I have in India in such different capacities, political and other capacities, would be enabled to point out various ways in which large sums of money certainly might be saved. The estimate formed by any witness will of course be dependent upon the earnestness with which he viewed the want of roads and such like things up the country. His enthusiasm or earnestness in the cause would determine how far he may or may not be carried away, in judging of the necessity of this or that or the other appointment. Having served so very long in India, in the interior of the country, having resided very much among the people, I have very strong notions on the matter, and, I confess, perhaps a little enthusiasm. I am of opinion, that very large sums of money are needlessly squandered, while, at the same time, the wants of the people are in proportion neglected. I would, if it were thought requisite, mention those particulars in which I consider that money might be saved.

8969. Will you state what those are?

I know not but that I may be trenching upon matters of which it has not been customary to speak in the evidence before this Committee, but, being of opinion that every man might, to a certain extent, be enabled to point out how the Government would be placed in a position to carry out these works, which are so essential to the country, I think there is no indelicacy in saying how the means are to be acquired, in my opinion. Therefore, I would say, that I think the first thing would be to do away with sinecure appointments; and having myself held one or two of them, I am, perhaps, the better able to judge of that. I would say, that there are at Bombay, and perhaps elsewhere also, appointments which I think might very reasonably be curtailed, or modified extremely; for instance, the appointment of Private Secretary to the Governor, and of Military Secretary to the Governor. I held, myself, the appointment of Private Secretary to the Governor, and I must confess that I know that to be a sinecure, and I believe that the other is also.

8970. Lord

8970. Lord *Broughton.*] Do you speak only with reference to the Government of Bombay, or do you speak of the other Presidencies also?

I speak of the private secretary to the Governor of Bombay; I cannot speak with reference to the other Presidencies, but I can with reference to Bombay, having been myself secretary to Sir George Clerk; and if any doubt should exist upon the matter, it would only be requisite to state a list of those who have filled the offices for the last 20 or 25 years; and it will then be seen whether the State can afford to pay 1,500 rupees a month, or 18,000 rupees a year, on the simple article of salaries, to persons in such a position. I deem the situation of private secretary to the Governor to be a sinecure, inasmuch as the Governor has the secretaries of the Government from whom to take advice, and to consult. If the Governor knows his duty, he will, through them, be enabled to carry on his work; if he does not, he may rest overmuch on his private secretary.

8971. Lord *Elphinstone.*] Had not the Governor of Bombay very numerous correspondence to conduct?

I should imagine not.

8972. Were there no applications for appointments that came to the Governor?

Yes; applications for appointments came in in great abundance, mere matters of form.

8973. Were there no petitions that reached him?

Petitions which came in would be transferred to the department to which they belonged, in the secretariate; they would probably come in in the vernacular language, and be sent to the Persian department, and by that department be made over to their proper one.

8974. Was it not your habit as private secretary to answer any of those petitions yourself?

No; there may have been one or two that would be addressed to the Governor, not as Governor in Council; I speak with diffidence; I am not very certain that I did reply to even one or two, unless they might have been petitions presented at the Government House, when Sir George Clerk might tell me personally to speak to the petitioners.

8975. Then it was not the habit at Bombay for the Governor to receive petitions either personally or through his private secretary?

If any were brought, the private secretary would transfer them to the secretary to Government, to whose department they belonged.

8976. But it was not his habit to answer them either himself or through his private secretary?

Not through his private secretary; if people themselves came with a petition, and asked to see the Governor or to see his private secretary, his Excellency might in person reply to them, and very likely it might eventuate in their taking back their petition upon his explaining that it was a thing which he could not interfere with.

8977. But, generally, you had no extensive correspondence to carry on?

No; acknowledging applications for appointments is not worth mentioning.

8978. Had the Governor no extensive correspondence to carry on?

No, I should say not; but Sir George Clerk was a man who had served so long in India that he was quite at home in every department; and being of active habits, he saw every man at the Presidency himself.

8979. What number of letters do you think the Governor might receive in the course of a day to be answered through his private secretary?

I should say that he never received five or six; I should doubt whether he ever got so many; I may add any. The Governor would probably correspond with one or two persons from whom he might wish to elicit information; but the ordinary course is to correspond through the secretary of the Government, in whose department the matter lies, he being more conversant with the matter than the private secretary could be.

8980. With regard to the establishment at the Government House, were there no

Major P. T. French.

4th August 1853.

no duties devolving upon the private secretary connected with the management and payment of the Government House establishment?

That devolved upon the military secretary; and having seen much of the military secretary, I class his appointment very much under the same head under which I put my own; I do not think that either can be required. Sir G. Clerk was the only Governor I am aware of who nominated servants of the East India Company as his private and military secretary. These situations are always filled by sons or relations of the Governor, gentlemen of Her Majesty's service, army or navy, or of our service; so naturally they can be of no use to India, which pays them.

8981. Lord *Wynford.*] Is there no direct correspondence between the Government of Bombay and the authorities at home?

Yes; the official foolscap correspondence is of course voluminous beyond description; the letters go from the Governor in Council, and are signed by one of the Secretaries; the ordinary correspondence is in that fashion.

8982. Lord *Broughton.*] Have you ever considered the question of the expediency of the Governor of Bombay and the Governor of Madras having councils?

I have frequently considered it, having been thrown in the way of looking at such subjects, not only during the period I was with Sir George Clerk as private secretary, but long before, from other circumstances, and my opinion is, that where a Governor is sent out conversant with the duties he is called to perform, a council can be of no necessity.

8983. Do you not think that Mr. Thomason, for example, would be rather impeded in his administration by a council than assisted by it?

Most certainly he would be impeded, because during the period that I was connected with the Government of Bombay, being the Governor's private secretary, the council tended much to impede, by constant strictures on everything, and critiques, and reviews and revision, and never themselves originating anything.

8984. Earl of *Albemarle.*] Have you any other reductions to suggest?

I have mentioned that the private and military secretaryships of the Governor, amounting in salary, the one to 1,500 rupees per month, and the other to 1,000, might be reduced; but it is requisite for the Committee to bear in mind that this is the salary only; they travel at the Government expense, and all and everything, except their horses and servants, are furnished by the State; then I think that considering the extreme want which there is in the country of roads and bridges, and the wants of the people generally in the interior of the country, we are not in a position to expend upon such things as the Governor's band 2,000 rupees a month; I think that certainly might, with great propriety, be abolished.

8985. Is there any other band of which the Governor could avail himself?

Yes; every regiment has a band; that in question is commonly called the "garrison band" of Bombay. When it was originally raised, many years back, there were then no bands with the Company's regiments; now there is a band with every regiment, supported mainly by the State, and this garrison band of Bombay, or the Governor's band, which is under the town-major, does no military duty. It performs twice or thrice a week on the Esplanade in Bombay for the Europeans of one of the richest towns in the world perhaps, who should in lieu support a band by subscription. But seeing how the people in the interior of the country are suffering from the want of roads and bridges, and wells, and many things, I do not think that can be regarded as a legitimate manner of expending about 2,000 rupees a month by the Government, besides other expenses, attending on such a body, while only one lac or five times the cost of the band is sanctioned for the education of the whole Presidency, containing 11,000,000 of souls.

8986. What other economical measures would you suggest?

I think also that the whole of the garrison staff of the Presidency might be remodelled, and the saving by that would amount to 1,000 or 1,200 rupees a month. The Governor of Bombay is Commander-in-Chief of Bombay, not the Commander-in-Chief of the Army; the Commander-in-Chief of the Army has no authority over the garrison in the island of Bombay. The consequence is, there is a double establishment, and I think a revision of it would be attended with a very

very considerable saving of expense, making the Commander-in-Chief of the Army, Commander-in-Chief in Bombay.

8987. What amount of reduction do you contemplate by that item?
I think in round numbers it might be put down at 1,200 rupees a month; that is 1,400 *l.* a year.

8988. What is the next item?
From inquiries I have made, I have satisfied myself that the appointments of Military Secretary and Persian Interpreter to the Commander-in-Chief of the Presidency are quite needless, and may be dispensed with, without detriment to the service at large.

8989. Has the Commander-in-Chief no necessity for an interpreter occasionally?
No, I think that he has not. He sees very little of the army. But even were it otherwise, his aides-de-camp may be supposed to be interpreters, or should be so qualified; and every regiment has an interpreter. He never sees the men without an interpreter being there, and besides which it is pretty well known that the situation is a mere situation. If he requires anything with reference to the army at large, there is always the Quartermaster-general or the Adjutant-general, and the different heads of departments at call. It has also occurred to me, that a great deal might be saved were the public offices of the Presidency of Bombay transferred to the now useless town barracks in the fort of Bombay. The idea is nothing new; but I mention it, as the non-performance of that proposal shows that there is little regard paid to the introduction of economy, and consequently to the means of supplying the wants of the people up the country. That I calculate would be attended with a saving of about 3,000 *l.* a year. How far the different points I referred to would be applicable at Madras I am not prepared to say; but if applicable there also, the saving would be of course double.

8990. What would be the aggregate amount of saving that would be effected by the adoption of those measures?
I think it is about two lacs of rupees per annum; that is with others I could name.

8991. About 20,000 *l.* a year?
Yes; but I only speak of what has come within my own observation. No doubt if the Committee have put similar questions to other witnesses, they would have elicited a good deal of information. These suggestions of reductions would, of course, never be supposed to apply to the incumbents of offices at present.

8992. You stated that the Collectors and their assistants are allowed a small sum annually to expend on roads without any reference to the Government?
Yes, 5,000 rupees.

8993. Lord *Elphinstone.*] And without any reference to the amount of the collection in their district?
I believe so. My information upon that point comes from a gentleman now at home; and as far as I can recollect, it was 5,000 rupees that they all had.

8994. Earl of *Albemarle.*] You would recommend that that amount should be increased?
I would certainly, to carry on public works.

8995. Lord *Wynford.*] And you would provide for that by the means you have proposed?
By curtailing useless expenditure; this is one means.

8996. Lord *Broughton.*] Did not it appear to you, when you were Secretary to the Governor of Bombay, that there was an unnecessary multiplication of correspondence backwards and forwards from one Board to another?
Exceedingly so; that seemed to be admitted on all hands. Even in Bombay itself they allowed it.

8997. Earl of *Albemarle.*] Do you think that the Collectors at present have time to superintend advantageously the outlay of a much larger grant for roads and other useful works?
No,

Major P. T. French.

4th August 1853.

No, I do not think they have; but that would be met by the introduction of uncovenanted assistants, by employing, as I was enabled to do in Nemar, Natives to carry out many of those works. I found them then perfectly equal to do it, and I found them trustworthy.

8998. With respect to public works, you are for a much greater employment of Natives in their construction, and in performing many of the functions now performed by covenanted servants?

Yes, I would employ the Natives far more extensively and in higher positions than they are now; I did in Nemar, as well in judicial, revenue and general matters, as in the construction of many of those roads, small bridges and tanks, and weirs across rivulets and things of that kind, which they would do better than I myself could, or at least as well, where they require no engineering skill; where there was an engineer required, then I would have one of course. The great trunk lines of road should be laid out by them; and when there are broad rivers to be spanned, they should be employed to do it.

8999. You had in the Nemar district, Europeans and Native assistants; how do they act together?

Exceedingly well; as magistrates they had power equal with myself, being joint magistrates; and their power was double that exercised by any collector or magistrate in one of the regulation provinces. It was found that they exercised it with great judgment and propriety, and to this hour they have given every satisfaction, and, in fact, in the North-Western Provinces, they have been most extensively employed. It is only on the Bombay side that there seems to be a reluctance to give them the encouragement which the behests of the country point to. We have not got covenanted Europeans in sufficient numbers to discharge the various duties, even if the men themselves, in respect of capacity and endurance of the climate, and knowledge of the Natives and their habits and customs, were equal to what is required.

9000. There were certain suggestions made by the Committee of the House of Commons on the cotton cultivation in the year 1846, regarding the ports of Guzerat; how have they been acted on?

They have not been acted on. The Cotton Committee of 1846 recommended certain improvements of the ports.

9001. Did they not recommend facilities to be provided for landing goods?

Yes, for landing and discharging in the Gulf of Cambay; they have not been acted upon; and the ports remain still as they have been, in a state of nature, as the roads are in Guzerat.

9002. Did not the Guicowar build a caravansary at Tunkaria Bunder?

Yes, he built a very fine one at Tunkaria Bunder, although a British port.

9003. Is it protected by any military force?

No, I cannot learn that it is; protection is exceedingly called for. A military post should be placed there, as was recommended to the Government; but they did not see the utility of the matter, and there is consequently no protection at Tunkaria Bunder for traders and others who resort to the port.

9004. Is that the reason that it is not more used?

That may be one of the reasons.

9005. What is the saving by Tunkaria Bunder as compared with the route *viâ* the Thull Ghaut from Malwa?

The saving of land carriage in going to Bombay by Tunkaria Bunder, by Baroda up to Rutlam, when compared with the route from Rutlam *viâ* the Thull Ghaut down by Nassick, is 214 miles. Against this, of course, there is to be put the sea voyage; but the road has been neglected and not protected by the police; and many other reasons exist why trade with that port has fallen off in latter days.

9006. What suggestions would you make for facilitating the import and export trade between Malwa and Bombay?

I should say, perhaps, the best mode of doing it would be to carry out the Governor-general's idea of railways, as lately published.

9007. Is there not a want of good materials for road-making in Guzerat?

There is; it is exceedingly deficient indeed.

9008. What

9008. What would you suggest as a substitute for stone for metalling the roads?
What we call morum is to be had in some places.

9009. Is it easily procurable?
In some places it is; but burnt earth or clay has been found to make very good roads; at all events the simply filling up of the ruts, raising the roads with a ditch on either side, laying down straight lines and bridging over rivers, would be itself a very vast concession to the trade of the country.

9010. Did you, while acting resident at Baroda, make any suggestions to the Government upon this subject?
I did; they were not attended to.

9011. Are you of opinion that the patells, the head men of the village, may be safely intrusted with the construction of small tanks?
Certainly; I found them fully equal to it in Nemar, and elsewhere, where I have been.

9012. Lord *Elphinstone.*] Do not those persons differ very much in different parts of the country?
I suppose they do.

9013. May not a patell in the part of India of which you are speaking be a much more intelligent man than a patell in Southern India, or a head man in Bengal?
I can only speak as far as I have seen. In Candeish or Guzerat or Nemar, they are fully equal to do anything of that sort, and to a good deal more, I think; many of them are very intelligent men.

9014. Earl of *Albemarle.*] On the maps which you have shown to the Committee, there are a number of rivulets; would it, in your opinion, be advantageous that means should be adopted for retaining the water in those rivulets by means of weirs?
I should say that they might be all so stopped up, and weirs thrown across, and be made to retain a very considerable amount of water.

9015. Would those constructions require an engineer officer?
Certainly not, in the places referred to.

9016. Who would superintend them?
The head revenue officer or Mamhildar of the Pergunnah would see to the construction, having obtained the sanction of the Collector, who or his assistants would see to its progress.

9017. You think that if the roads were improved, the present system of transporting goods by means of pack bullocks would be done away with?
I have not the least doubt of it; if the roads were improved, and good Ghauts of easy access made, waggons and carts would be used instead of pack bullocks.

9018. How many journeys in a year do the pack bullocks make to Bombay from Candeish?
I think two and a half; and then they are taken off, sore on their backs and sore afoot, thin and lean, and sent to recruit in the hills.

9019. By having carts and waggons, they would make more journeys in the year?
Yes; the bullocks would not suffer so much, and the goods would be conveyed without suffering so much injury as at present.

9020. Are there tolls levied on the roads and passes?
Only, I think, on the Bhore Ghaut and the Thull Ghaut.

9021. Do you think that people would object to the payment of tolls?
Certainly not, if there were good roads made.

9022. Sufficient in amount to keep the roads in order?
That, of course, would depend upon the number coming and going. I do not think the people would object to tolls were roads made.

9023. What is your opinion of the effect of the present export and import duties upon the cultivation and the manufactures of India?

Major P. T. French.

4th August 1853.

The duties have hitherto tended to destroy the manufactures of India, and they have effectually done so: we can all recollect, or have read, of the day when India was a great exporter of manufactured goods.

9024. Lord *Wynford.*] Would you like to have the import duties increased, for encouraging manufactures in India?

No; I am a free-trader; the manufactures have been ruined. In the words of Dr. Wilson, England made a most shameful use of its power, and destroyed the manufactures of India, in order to benefit those of England; as it did, for the same purpose, the woollen trade of Ireland. Now, it would be impossible to restore them; the manufactures of India do not exist now; but even if they did, I would not, on free-trade principles, give them any encouragement by a duty in their favour. But hitherto they have had, I believe, the reverse of encouragement: there was discouragement, in order to benefit the manufactures of this country. At the present moment a great irregularity exists: English manufactured goods on going to India pay only five per cent., while Indian goods on coming here pay ten per cent.

9025. Earl of *Albemarle.*] It is equal duties that you are advocating?

I advocate equal duties. The raw produce of India which comes into this country, by way of favouring the manufactures of England, pays no duty. In all respects India is sacrificed to this country.

9026. *Chairman.*] But surely, if the English manufactures paying five per cent. are able to drive out the manufactures of India, it shows that those manufactures cannot, under an equal system of taxation, compete with those of England?

It would be difficult for them to compete, under any circumstances, with English manufactures. But many years ago, Indian manufactures coming to this country were met by a prohibitory duty, and we favoured our own manufactures going to India to the exclusion of those of all foreign countries; so that the manufactures of India died under such treatment.

9027. Then you object to a prohibitory duty in this country, excluding Indian manufactures; but you do not object to free competition being allowed to exist between British manufactures and Indian manufactures in India?

Certainly not, to free competition; but at the present moment it is not free, inasmuch as Indian manufactured goods on coming to this country pay ten per cent. duty, and English manufactured goods on being taken to India pay only five per cent., while, with a view to give this country a further advantage, Indian raw produce on coming here pays no duty.

9028. Earl of *Albemarle.*] You are aware that Lord Ellenborough suggested a mode of raising money by loan in order to carry out great public works in India; have you considered that subject?

Certainly; if Lord Ellenborough's plan of paying as much as might be of the debt by a new loan could be carried out, it would no doubt be attended with a saving of a very considerable amount, and that would go a vast way towards supplying means for the improvement of India.

9029. Have you considered the subject of the sale of land in India?

Yes, I have, a great deal; and I have been for many years back an advocate for it.

9030. Upon what conditions?

I would beg to observe, not upon the principle followed on the Bengal side, when Lord Cornwallis introduced the system; but I would offer, for example, to a cultivator, the land which he holds, if he chooses to purchase it, on terms that may be agreed upon, he merely purchasing the Government rent or tax; all other demands on his farm on the part of the village and the village officers remaining, of course, in force. If he is not disposed to purchase it, he may retain it as at present, as a tenant-at-will, or a tenant for a term of years. The whole is summed up in these few words: tracts of land long out of cultivation I would dispose of, subject, of course, to the condition of paying the village its dues.

9031. What would you do with the proceeds of the land so sold?

The proceeds I would expend on the improvement of the country. Sir George Clerk in his evidence, before either this Committee or the Committee of the House

House of Commons, recommended that money should be raised by loan, for expenditure on local improvements in India. Without objecting to that opinion of Sir George Clerk, I should rather endeavour, in this fashion, to raise money to carry out improvements, and at the same time to encourage the formation of a class of men who would owe their existence as freeholders to the British Government. We have nearly pulled down the class of landed proprietors; they are becoming, day by day, under the operation of our laws, extinct. This would be a mode of reviving such a class, and giving to men who have the means of acquiring land in perpetuity the option of so spending their cash, the fruits of their industry or economy. Now, the people of India are, perhaps, the only people in the world who cannot expend their money in purchasing an acre or two of ground which their forefathers have from time immemorial ploughed, by purchasing the Government tax or rent of it; and in fact they cannot in any way invest in landed property, of which they are so exceedingly fond, the proceeds of their economy or success in trade, or agriculture in any shape. There is every encouragement held out to invest money in gold ornaments and other unproductive matters, or on costly marriage feasts, but in fact there is no encouragement to economy; none at least so acceptable and easy of accomplishment as by allowing the farmer to become a freeholder: were some lacs thus raised annually, and spent on the country, the unsold land would be doubly productive.

9032. Lord *Wynford.*] Surely in the North-Western Provinces they can invest their money in a 30 years' lease?

Yes, they can; but a 30 years' lease is as a few hours to a native of India: a native looks to sinking a well, or planting a tree, which his children and his children's children may possess for ever; we are content often with talking of one or two generations; but not so with the people of India, who desire to have a perpetuity for their children's children through all future times: a native line never fails, according to their native customs, because adoption supplies deficiencies.

9033. Earl of *Albemarle.*] To a native of India it is a reproach to be without an heir?

Yes.

9034. Are you of opinion that much advantage would arise from the appointment here and in India of finance committees, similar to that recommended by Lord Ellenborough?

I have not the least doubt that any witness who has appeared before this Committee, or the Committee of the House of Commons, could each and all have told of sums of money that might be saved to the State; each one could point out one or two ways in which economy might be introduced.

9035. What is your own opinion as to the expediency of the Governors making annual tours?

It is highly desirable.

9036. Lord *Wynford.*] Is it not attended with enormous expense?

It need not be so, and I do not know that it should be allowed to be so.

9037. Is it possible for a man in the Governor's situation to move without an immense retinue?

I know that Sir George Clerk, during the period I was much connected with him, not being in very good health, could not go about much; but before I joined him, he ordered horses to be posted, got into a curricle or some kind of conveyance with his military secretary, and drove to Ahmednuggur, that was 74 miles, without any escort: there was nobody else with him. He went over and saw the Judge there, looked at the gaol, fort, arsenal, and public offices, saw the schools and people, and in fact went about much. There is no necessity for a large retinue—it need not be attended with any expense; but it should be a part of the Governor's duty to travel about the country, far and wide, on any salary that may be fixed for him. Had Sir G. Clerk remained the usual period, and enjoyed good health, he would have seen every district ere its close; and recommended various undertakings to the Home authorities, I feel assured.

9038. Earl of *Albemarle.*] Have you anything further to say upon the subject of roads and other public works?

Major P. T. French.

4th August 1853.

Feeling the wants of the natives, and the wants of the country, I think too much cannot be said. It is sad to think of what the people have to encounter in taking their farming stock to market 30 or 40 miles over wretched roads, and when they get there, in consequence of the immense numbers of the agricultural classes, not getting more than they would have got at the retail rates in their own village, all the population being agricultural, and there being few manufacturers, and few purchasers except those who are actually people who have raised themselves by means of cultivating the soil. Roads will do much to make India an exporting country, and a vast consumer of England's manufactured goods.

9039. Lord *Wynford.*] You were understood to say in an early part of your evidence that several of the great trunk-roads were actually made, but that with respect to others, great difficulties would be experienced in making them, in consequence of the immense expansion of the rivers during the monsoons, and their contracting afterwards in dry weather, and from other circumstances?

No; I said that the Taptee expanded a good deal at certain seasons; that the last time that that happened was in 1822. But the question put to me was with reference to Candeish, a country presenting peculiar facilities for the construction of roads; it is very undulating, and the little ranges of hills which exist there of course afford means for metalling the roads. In Guzerat, the difficulty is the absence of that material.

9040. Is not a great deal of this a sandy district, where it would be difficult to find material for metalling roads?

There is no sand at all; it is all good hard country; sand is not to be found till you get a good deal north of Malwa, in Rajpootanah.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Tuesday next, Two o'clock.

ROAD-MAKING IN THE HILLS.

Appendix A.

Principles and Rules, having special reference to the New Road from Kalka *viâ* Simla to Kunawur and Thibet. By Major J. P. Kennedy.

No. I.—Principles laid down by Major J. P. Kennedy, for the guidance of all persons engaged in constructing the Road from Kalka, through Simla, to Kunawur and Thibet.

Every road should have its line as level, and its surface as hard, smooth and non-elastic as circumstances, under the most scientific management, will allow.

The subject of road-making may be divided into two general branches:—

First.—The laying out of the line.

Second.—The construction of the road.

Laying out of the Line.

When the grave charge of initiating the improvement of a district of country, by the construction of roads, is committed to a man of judgment, his first care will be to consider the features of the country, not only within his immediate charge, but far beyond those limits.

He should divide his road projects into three distinct classes. The first and most important containing the lines of general intercourse; the second containing the roads for merely local objects, and communicating with those of the first class; and the third, containing the farm roads communicating with those of the second and first. He should not, upon any account, permit the perfection of his roads of the first class to be in the slightest degree injured for the benefit of those of the second or third classes. His great lines of intercourse must be laid out solely with reference to the general levels of the country, and to the permanent markets, to which producers may afterwards have to convey their goods. If he think only of his own little district at this point of his operations, he will materially injure it, as in that case his general lines will probably not be such as to invite general traffic, and the mercantile interests of his district will be proportionally impeded. The co-operation of the circumjacent neighbourhood is essential to the improvement of any given spot of country, and must be earnestly sought for. Keeping these considerations constantly in view, we may now proceed to the rules applicable to all branches of laying out; viz.:

1st. That the line must never rise or fall unnecessarily; it must go round, or cut through impediments.

2d. That the quantity of ascent or descent, when such is unavoidable, should be divided uniformly over as long a distance of the line as the nature of the ground will permit, and thus the inclination at each particular part will be reduced to the smallest possible rate.

We should recollect that the loads carried along roads must be small in proportion as the inclination of the hills is great; that the steepest hill, in fact, regulates the load.

We must never forget, in laying out a line of road, that on an inclined plane or hill, of which the surface is hard and smooth, when any power holds a heavy body in equilibrium, the power exerted will have the same proportion to the weight as the height of the plane or hill bears to its length; and secondly, that whilst the effect of the load increases, the power of the animal employed to draw it diminishes in proportion as the degree of inclination increases. These two facts should never be absent from the road-maker's mind.

When this subject is fully understood, it will be evident that the ignorance of a person who undertakes to lay out a road may, and very often does, make the transport of commodities amount to many times what it should cost. There is little doubt that the greater number of the hills we generally find on roads might have been either wholly avoided, or their inclination very much diminished, by judicious laying out; and the greatest evil is, that the only wise remedy for such blunders is to make a new piece of road where they exist, and if they are numerous, to change the entire line. The common mode of correction is to cut down in some degree the hill, and to fill up a little the hollow; but this method rarely reduces the inclination as low as the natural features of the ground would allow; and

Appendix A.

and it generally costs much more than would be necessary to put the road in its right place by laying it out afresh.

The correction of hills on old roads has been alluded to here, to show the importance of extreme accuracy and sound principles in selecting an original line. Every Superintendent will now understand that if an error be made, it cannot be thoroughly remedied without abandoning that portion of the road where it exists, and taking up a new line, thereby losing the capital already invested, and injuring the speculators whom the road may have brought there; but if there be an error of construction, as for instance, the use of soft materials instead of hard, or the like, all this can be set right without abandoning the old line. The power of getting level roads by cutting through hills and filling up hollows is not disputed; and in laying out a line of railroad this method must be adopted, because the velocity of the steam-carriage will not allow of such rapid curves as a road must take which follows the natural inflexions of our hills; but the expense of such cuttings and embankments is so enormous, that to think of them for the ordinary roads would be quite out of the question. Our necessities frequently require that farm roads should be made, that roads for approaching minor villages, &c. should be made, and that extensive districts of almost unexplored countries should be intersected by numerous lines of general communication. If a costly kind of road be attempted in such cases, the necessary results cannot possibly be produced, because the necessary funds could not be provided; still it is essential that as accurate a regard should be paid to their laying out, as if they were to be immediately constructed on the most perfect models, and that the levels be the very best that the nature of the country will admit of. We must provide from the commencement that every successive operation shall tend to bring them ultimately to a state of the very highest perfection, and that nothing shall ever have to be undone.

False ideas of economy and inadvertence frequently lead to the employment of men who do not understand the principles of these essential operations, although they attempt to execute them, and hence the eternal toiling up and down hill to which they, their neighbours, the public, and future generations are condemned. Most amateur artists are time-killers and money-wasters; but of all the amateurs in the world, the road-maker is the most mischievous; there is no method of avoiding his ingenious contrivances to harass the weary traveller and reduce the profits of industry.

The first thing to be done, when it is determined to open a road between any two points, if they be distant, is to get the maps of the adjacent country, and to become thoroughly acquainted with every inch of the intervening ground in all directions, particularly the course of rivers.

If it be a hilly country, the greatest possible attention must be given to choose the most convenient passes of mountains with reference to their height, and the highest passes of valleys which, in all cases, must be considered as obligatory points of the line. The selection of these, therefore, is to be considered the first and most important point of laying out, and nothing short of mathematical proof of their superiority to all other points ought to satisfy the Superintendent that he has selected the right points.

It is much to be regretted that the Survey Department of India has not furnished the public with that most important class of information, a contour delineation of the hills; the want of which must be remedied by increased industry in all those who are engaged examining the country with a view to the selection of the line.

The most disadvantageous circumstances under which it can be required to lay out a line of road is, where the direction runs at right angles across a line of hills, to the passes of which there are no convenient approaches by means of under-features; this obliges us to resort to the expedient of zig-zags. There is no difficulty in laying out such a road to any required degree of inclination; but when done, it is always dangerous, as it is not possible to avoid very acute angles, which on a declivity are most objectionable. If an animal run away with a carriage in descending such a road, the first turn he reaches will probably finish the mortal career of the whole party.

The rule in such a case must be, to make as few turns as possible; and in general, there need not be more than one on each side of the mountain.

Having obtained a knowledge of the relative heights, as above described, both from maps and by taking lines of section with the level, and having thus selected all obligatory points, we may now proceed to the operation of marking out the exact line between all the points thus selected. This is done by fixing up pickets with flags attached, in the required slope, by means of either the plummet-level or a spirit-level, having a graduated vertical limb. These flag pickets may be placed at intervals of about 100 yards, more or less, according to the bends in the hills, taking care that one is put at every projecting and every retiring angle of the ground, and that from each picket the one on either side is distinctly visible. We proceed thus until the whole line is picketed off, observing to correct this line, if requisite; and it rarely happens that the pickets can be placed precisely in their right permanent position at the first trial.

Having got the long pickets accurately placed, the ground should be distinctly marked at each picket by cutting a cross, or some other convenient sign; and the second operation must be commenced by placing short pickets with the boning rods at intervals of about eight yards between the long pickets.

Third operation. Having placed the short pickets, long lines are then laid to the foot of the pickets, taking care that the lines run round all obstacles, and not over them. When these lines are fixed, some expert labourers, accustomed to the work, may be placed to cut out the lock-spitting exactly to the level of the line.

This

This operation should be done with great accuracy, that there may be no necessity for correction afterwards; and handy men, accustomed to the work, should be employed in lifting the lines and laying them again, as the lock-spit cutters proceed. This lock-spitted line being the sole regulator of the levels, must be examined, and re-examined to ascertain that in every part it has been accurately cut. The person charged with such a work must not spare himself at this point upon any account. Let him then bring every one whose opinion is worth having in the neighbourhood, to visit and criticise what he has done; let him reflect that, by any idleness or stupidity on his part, he passes sentence upon countless generations to suffer inconvenience and unnecessary toil for his omissions. The lock-spitted line, when completed, is not to be considered as anything but a gauge for the general level of the surface of the road. It is not the centre, as some suppose, although, upon a general principle, the nearer the centre line comes to it the cheaper will be the forming of the road, and the more we diverge from it the more costly it will be where the features of the country are of a hilly character.

With the completion of the above described lock-spitted mark, neatly cut along the whole length of the projected road, we shall consider the business of laying out the line to have been executed; and in order the more clearly to separate this most important operation from all others, we shall consider the subsequent picketing, ruttings and marking off the details, as appertaining to the subject of construction.

The average cost of cutting this gauge-line or lock-spit, independent of the preparatory surveying and superintendence, ought not to exceed 4 *s.* or 5 *s.* per statute mile; that is to say, for the actual pay of the labourers employed to execute it; and when completed, it ought to exhibit a perfect level or a perfectly uniform incline between every two of the obligatory or main points, and following every horizontal inflexion of the ground, it ought to stand the test of any instrument, and be pleasing to the eye. The want of accuracy in the laying out of public undertakings is the source of that constant doing and undoing, or playing at blind-man's buff with the work, which we so often see; doubling or quadrupling the proper cost, and leaving most discreditable results. The economy and perfection of the work will be in proportion to the judgment and accuracy applied in the laying out and making of this gauge-line, as it gives us the key by which to regulate, with the utmost precision, every subsequent effort of every labourer we employ, and to point out where every spadeful of excavation is to be dug, and permanently deposited with the smallest amount of exertion. We shall next proceed to the subject of

Construction.

As soon as the lock-spitted gauge-line shall have been well considered and criticised, and all necessary corrections completed, it may be widened into a 5-feet track. The next operation is to fix the pickets for the centre of the road.

This will regulate, first, the cost; and, second, the appearance of the work when complete. We must avoid objectionably sharp turns; but we must also studiously avoid heavy cuttings and fillings, and we must make our curves regular. These three points can generally be combined; and they must be combined, otherwise the Superintendent cannot be qualified for his charge. He should never have his eye off the gauge-line, and as each picket is placed, it should be accompanied with a mental calculation as to the quantity of cutting and filling, and consequent cost it will require to bring the road at that point to its proper width and to the level of the gauge or lock-spit. He will bear in mind, that as often as he can place a picket exactly at the lock-spit, without infringing on a principle, he should do so, as then the forming of the road will cost the least possible sum; unless when he has to deal with rock, which requires blasting. He must at all times think of his finances, taking care that the amount of money or labour estimated for the work shall be made to complete it, and he will be justly culpable if it fall short, as this consequence is very rarely attributable to any other cause than unfitness in the Superintendent. The wrong placing of a few pickets may cause a piece of work to cost double or tenfold, nay, a hundred times more than it should cost; and it is clear that the man who can perform the most perfect work at the cheapest rate must at all times earn character in proportion. It is evident that there may be a very great variety of curves made for rounding off the angle which the lock-spitted gauge-line forms in passing a valley or ravine, and that the more the curve is carried out from the angle the better will be that particular part of the road; but it must be recollected that the slight improvement thus effected on one spot is attended with most disproportionate cost; and if a man, deficient in judgment, be placed in direction of such works, he may use very fine arguments as to the utility of gradual curves, and the like, but the result will be, that instead of succeeding to fulfil the object of his employer, by opening in its full length a useful line of intercourse, he will find all his money expended on two or three fantastical embankments. He will leave the district as closely sealed up as he found it, and his employer will be justly disgusted with such costly enterprises. If he desire to serve himself, and to be useful to his neighbours, he will follow, as nearly as possible, the natural features of the ground, unless when there is the most indisputable reason against this; and keeping a watchful eye upon the money chest, he will never sacrifice the general result to any chimera whatever. This cutting and banking mania is the grand source of wasteful expenditure in the construction of our roads.

If, instead of going uniformly along the side of a hill, and making our road with the minimum of cutting and filling; if, instead of this, we seek to torture it into straight lines, still

Appendix A.

still keeping to certain predetermined levels, the line of road must be a succession of deep cuttings and high embankments; costly at first, and costly to the last, from their liability to dilapidation.

As soon as the centre line shall have been cautiously picketed out, all the side lines must be measured from it and distinctly rutted out upon the ground, taking care to lift the several shear-sods. These lines will show the verges of the road, the inside and outside of the fences when such are made on the road, and the width of the water-tables, as well as the position of the catch-water drains. Accurate *bonings* must be put in at every picket in the centre line, which will thus be level with the opposite points of the lock-spit gauge, and a correct longitudinal section must be made up between these pickets.

Cross-section lines should likewise be made up to the intended level of the road at every 100 yards, showing the precise fall that the road is to have from the centre to each side, when formed. But in making up longitudinal and transverse sections, it is necessary to observe whether the soil be of such a nature as to answer for the soling, or whether it be of so defective a quality as to require a superstratum to prepare it to receive the broken stones or surface gravel; and a corresponding distinction should be made as to the height to which the section lines should be raised in different places. If the natural soil be of the right quality for soling a road, it would be an unpardonable waste to require that more of the same description of material should be excavated elsewhere, and brought upon it, although we have known such surprising extravagance set forth in specifications. The cross-slope given to a road should vary according to circumstances. If its maintenance and repair be carefully provided for, on level ground a fall of 1 in 24 from the centre of the sides will be sufficient. If there be any doubt as to the future care, the best precaution is, to increase the cross-slope as a security against surface-water, and in all cases it is well to make the cross-slope somewhat greater on declivities than on the level ground, in order that the path of all surface-waters may be directed in the shortest lines to the water-tables; under these different circumstances, the cross-slopes may be made to vary from 1 in 24 to 1 in 12, and they should be accurately proved by the section level.

It is well to know that some authorities on this subject have recommended the cross-slope of roads on declivities to run the whole way from the outside verge to the inside, whilst others advise just the reverse, and not from the centre to each side. The chief object of the first recommendation is, to prevent the corrosion of the outside verge by the surface-water, and that of the second to prevent any accumulation of water in the water-tables, but they both appear to be most objectionable in practice, as they necessarily throw every carriage off its level, and bring an unequal portion of the load on the wheels of one side. They also give a longer run to the surface-waters on the road. No professional man should permit so serious an inconvenience to be inflicted on the public. His ingenuity ought to provide a remedy of a different kind. As soon as the longitudinal and cross-sections have been made up to the right level, the work may be considered in a state to employ large orming parties, who, after this preparation, can scarcely commit errors, if there be any degree of activity in the overseers.

When the road is constructed upon level ground, it is desirable to make two side fences with water-tables outside of these; when it is on sloping ground, one side fence will suffice, the cut face of the bank forms the other.

It is evident that on sloping ground, the Superintendent who desires to execute his work with economy must use every exertion to provide that the quantity of cutting shall, as nearly as possible, agree with the amount required for filling, that he may not be obliged to carry materials either to or from the place where he works.

The materials used for fences, retaining embankments, &c., will depend upon the nature of the soil in a great measure; and the best proof of skill, in this or any other art, is the power of making the most possible out of the circumstances in which we are placed. The man who cannot supply himself from his own vicinity, would fail if he had Guernsey granite and mines of gold at every perch of his progress. When the soil is stony, the fences and faces of embankments would naturally be made of this material, and, when built dry, they should have a slope of one-fourth of their height. If sod work be used, the slope should be increased to one-third of the height; and when a bank of earth or other material is faced without being supported, the slope will depend on the quality of the soil, observing to give the greatest slope to the most friable soil, and it is for the Superintendent to observe the natural slope at which each kind of earth will continue. The best soil that we can meet with in constructing roads is gravel; because, in the first place, it has natural drainage; secondly, when the road has been formed in such a soil, it is both soled and metalled, unless the traffic be of a very heavy description.

In making a road through any spongy or soft soil, it is well to let the work season, after the general drainage and forming have been effected, before proceeding further. When embankments are filled up, a considerable allowance must be made for sinking, and after allowing them to season, they should be again levelled up, If these points be not attended to, or if the work be hurried over, it will look well at first, but afterwards it will show many inequalities and defects that might have been avoided.

The liberal use of a heavy roller is an excellent way of consolidating the surface of a new road, preparatory to opening it to the public, and the difference in the quality of both gravel and stones should be well understood by every road Superintendent. Some stones can be broken with more profit to the workmen at one anna per ton, than others at six annas, and where heavy carriages are in use, the low-priced stone is in general the more costly in the end.

end. We must recollect that the price of breaking the stone forms but a portion of the cost of metalling a road, and the most durable material to be had within any rational limit, as to cost, is at all times the most desirable. Contracts for stoning, therefore, should always specify the precise kind of stones required, and from what quarries they are to be taken; and no one can be considered properly qualified for superintending such works as we are now considering, unless he have acquired a thorough knowledge of the several varieties of rock common in the country, with the different qualities and properties peculiar to each.

When we estimate the cost of a new road, we should divide the whole into three very distinct general heads. The first may include all the expenses of surveying, laying out, forming, draining, fencing, soling, gravelling, and all else preparatory for the stoning. The second head should show the cost of the stoning or metalling, and should detail minutely the quality of the stones required, and the quantity per perch; allowing a larger dimension to the broken stones in the bottom, and a small dimension at the surface. The third, the cost of the masonry, bridges, pipes and tunnels, if any.

It is extremely essential to separate thus the great heads of expense, in order to enable *all persons* to understand the way in which the total cost is made up on different descriptions of work, and, as it were, to get rid of that professional mystery which is generally made to envelope every thing relating to the expenditure of money.

The details here included under the first head are such as are required, with but little variety as to their application, in all projects for new roads, and their cost may be made to vary from 100 to 600 rupees a mile, according to the peculiarities of soil in which we are working. The second head or metalling may be either wholly omitted in certain cases, or it may be adopted to any degree that the circumstances render necessary. For instance, three tons of tender stone, at one or two annas a ton, may be thought applicable for the exigencies of one case, when in another it might be indispensable to apply 12 tons to the perch of the hardest stone to be had, at a cost of perhaps six or eight annas per ton; thus, making the rate for this branch of cost vary, from three or four annas, to 100 annas the perch, according to the means applicable for the construction, and the intensity of the traffic to be expected. The third general head, including pipes and masonry, is also capable of being effected in various degrees of excellence, and at proportional rates of cost, which can only be regulated by comparing the necessity of the work with the funds applicable for its construction.

(signed) J. P. Kennedy, Major.

Simla, June 15, 1850.

No. II.—Hindostan and Thibet Road.

Rules for Superintendents, Overseers, &c.

Officers employed on the survey of the line are to send in reports of their observations at least once a week, addressed to Major Kennedy, at Simla: these reports to be accompanied by sketch, plans and sections. The plans to be on a scale of two inches to one mile. The section horizontal scale to be likewise two inches to one mile, and the vertical section 200 feet to one inch.

2. The maximum incline is not to exceed 3 in 100, or 1 in 33⅓; and every exertion must be made to keep the inclines as much as possible *below* this maximum.

3. The whole line is divided into Superintendent's divisions, and each division to be designated by a letter.

4. The point from which all measurements are to be taken is marked by a picket sunk opposite Mr. Vivian's house, in the Simla bazar.

5. The first division, commencing southward, is denominated the A., or Krole division; the second B., or Simla division; the 3d C., or Mahassoo division; the 4th D., or Muttiana division; the 5th E., or Kotegurh division; the 6th F., or Teranda division; the 7th G., or Chini division; and so on to the end of the line northward.

6. All reports to be made on foolscap paper, and marked at the head of the report with the divisional letter, to which the portion of the line it refers belongs, as well as the territory. It will be folded in four, and docketed on the back by the officer who sends it with the divisional letter, and the substance of the report.

7. All officers will be expected to keep copies of their reports, plans and sections, for the convenience of future reference.

8. All officers employed in surveying the line, as well as officers in charge of divisions, and overseers in charge of sections, and also assistant overseers, will be required to make themselves thoroughly acquainted with the printed paper, containing the "principles of laying out and constructing the works," that a uniform practice may obtain throughout.

9. The working parties are to be kept under the superintendence of their respective mates,

Appendix A.

and each sapper overseer is to be appointed to his distinct and separate charge, consisting of one or more mate's parties, according to the strength of the whole party, as shown in the following Table :—

COMPOSITION of an Overseer's Party for working a Section of 10 Miles of the Line. Two or more Overseers' Sections to constitute a Superintending Officer's District.

SAPPERS.		MATES AND LABOURERS.												REMARKS.
		When Working Single Force.		Double Force.		Triple Force.		Quadruple Force.		Quintuple Force.		Sextuple Force.		
Overseer in Charge of Section.	Assistants in Charge of Sub-Section.	Mates.	Labourers.	Mates.	Labourers.	Mates.	Labourers.	Mates.	Labourers.	Mates.	Labourers.	Mates.	Labourers.	
1	1	1	50	1 1	50 50	1 1 1	50 50 50	1 1 1 1	50 50 50 50	1 1 1 1 1	50 50 50 50 50	1 1 1 1 1 1	50 50 50 50 50 50	This composition of the working parties will enable one Sapper Company to furnish overseers for 10 divisions, extending over about 200 miles. It gives us the power to employ efficiently under them from 2,000 to 12,000 men a day. Until the line is opened to six feet wide, the pickets showing each man's working ground must be placed, when working in clay or gravel, at seven yards apart, and in rock at two yards apart. A party working in double force would thus cover upwards of 1½ mile in clay, or about half a mile in rock work; and it is probable that the double force would, in the first operation, be better looked after than a more extensive party. Working our 10 divisions at double force would give us 4,000 labourers. When the widening of the road to its full extent commences, wall building, &c., then the larger forces may be called in with profit. One of the Assistant Overseers should always be a miner.
	1	1	50	1 1	50 50	1 1 1	50 50 50	1 1 1 1	50 50 50 50	1 1 1 1 1	50 50 50 50 50	1 1 1 1 1 1	50 50 50 50 50 50	
	1	1	50	1 1	50 50	1 1 1	50 50 50	1 1 1 1	50 50 50 50	1 1 1 1 1	50 50 50 50 50	1 1 1 1 1 1	50 50 50 50 50 50	
	1	1	50	1 1	50 50	1 1 1	50 50 50	1 1 1 1	50 50 50 50	1 1 1 1 1	50 50 50 50 50	1 1 1 1 1 1	50 50 50 50 50 50	
	4	4	200	8	400	12	600	16	800	20	1,000	24	1,200	

10. During the rainy season the working hours must depend upon the weather, the overseers using their discretion as to the hours for meals. When the weather, however, is fine, every party must be at work at 6 o'clock A.M., the dinner hours to be from 11 till 1, and to leave off work at 6 P.M.

11. As much waste of time occurs in mustering large parties of labourers, when this is not done with care, the overseers are required to put the men at once to work under their respective mates, at the established hour for commencing. The chief overseer will then immediately go round and muster each mate's party separately, noticing the absentees. Thus only one mate's party at a time will be diverted from work for this object.

12. A daily report in the following form will be sent from each party, showing the number of those present, and the quantity of work done during the day, as well as the total number of days' work from the commencement, and the total work done in the section.

Section Division Road Report, day of 1850.

These

These reports will show the mileage cost in labour at which each overseer is performing his work, and will afford a good comparative scale of the value of each overseer, and the names of those whose efforts prove them to be most deserving will be forwarded for the favourable consideration of Government.

13. Before the parties are dismissed in the evening, every mate must be informed of the precise point where his squad is to assemble on the following morning.

The distribution of the men, by assigning to each a regular portion of work, marked off by pickets, and sufficient to occupy him for the day, is the most important duty of the overseer and his assistants. By this method a fair principle of task-work can be established; and there is no other remedy against idleness, and consequent waste of the public resources. The omission of this practice frequently makes public works cost from 10 to 20 times the proper amount; and every superintendent and overseer employed in the present works will be held strictly responsible for the execution of this essential rule.

14. The breaking of tools is entirely attributable to the carelessness of the superintendents and overseers, by allowing the weaker tools to be applied to the work of stronger ones. The pickaxe and the hoe are frequently destroyed by attempting to remove heavy stones with them; a labour which ought to be reserved for the crowbar, the sledge and the wedge.

15. The present deficiency of crowbars, sledges, mining tools, &c., will gradually be remedied. In the meantime, overseers must employ the weak tools at the clay and gravelly portions of the work, where, after a 5-feet track has been completed, with convenient passing places 12 feet wide, the width of the road may then be generally increased to 12 feet, with passing places of 18 feet wide at salient and re-entering angles of the ground, and at other convenient places.

16. The ultimate width of the road may be considered at 18 feet throughout, with the exception of difficult cliffs, where the width of 12 feet will suffice. In every part of the road, a retaining wall on the side of the precipice will be requisite to completion, with a parapet raised two feet three inches above the road level. Small weep holes, four inches square, to be constructed under the parapet for the escape of the surface water, at every 50 feet.

17. At every re-entering angle of the ground, and at distances not exceeding 100 yards, substantial cross-drains must be made under the road, of ample dimensions, to carry off all the water that can be expected in the heaviest rains, and in no case are these drains to be of smaller dimensions than four feet high on the outside, and two feet wide, which is sufficient to admit a man to clean or repair them.

18. Great care must be taken in preparing sound foundations for all walls which, when built dry, as retaining walls on the outside or precipice, should have a slope of one-fourth of their height, and a thickness, at their foundation, not less than one-fourth of the height, plus two feet six inches. These retaining walls it is not desirable to make generally more than four feet high, exclusive of parapets, although many emergencies will render much higher walls occasionally requisite.

19. In opening the first five-feet track, where very difficult cliffs occur in the line, temporary tracks may be made, either above or below the proper level, as the nature of the case may permit, taking care, after passing the obstacle, immediately to regain the proper level. By this means an immediate passage can be obtained long before the permanent passage could be made in its proper position. And it is desirable that such temporary passages should be above rather than below the proper level, because, in that case, the progress of the permanent track in its proper position along the cliff will not be impeded by persons passing on the temporary track. These temporary tracks should be suitable for the passage of mules, and they may, in many cases, be made to occupy either the brow of the cliff, which shall ultimately be worked down to the road level, or the foundation of a wall to be subsequently built up to that level.

Trades.	Names.	Month of 1850.																													Total Time Days.	Pay Department. Daily Pay in Annas.	Total Amount during Month. Rupees.	Annas.	Pie.

We, the undersigned, hereby certify that the persons above-named have been present at work for the time specified opposite their respective names.

Overseer in charge of Section.

Superintendent in charge of Division,

I certify that I have paid to the several individuals above-named the sums opposite their names.

Accountant's Pay Clerk.

We certify that the several individuals in the above list were paid the sums opposite their names in our presence by Mr. ———— Pay Clerk.

Overseer of Section.

Superintendent in charge of Division Work.

FORM of REQUISITION for TOOLS and MATERIALS.

REQUIRED for use at the tunnel on the Hindostan and Thibet road :—

5 seers steel,
4 seers iron,
1 dubba oil.

Simla, 25 September 1850. W. NAPIER.

(Approved) J. P. KENNEDY.

Received the above articles, W. NAPIER.

FORM of BILLS for TOOLS and MATERIALS.

Dr. The Honourable East India Company.

FOR materials on account of the Hindostan and Thibet road :—

Appendix B.

REPORT from Board of Public Works, on the Experiment of employing Convict Labour in the Construction of Public Roads.

No. 707.—Department of Public Works.

LETTER from Captain J. H. Bell, Secretary to the Board of Revenue in the Department of Public Works, to the Chief Secretary to Government.

Sir, Madras, 15 October 1846.

Para. 1. The Board of Revenue direct me to request you to submit to the Most noble the Governor in Council the accompanying Tabular Statement of the expenditure incurred on the High Western Road during the whole period that convicts were employed on it, from February 1838 until the 7th October 1844, together with the letter with which it was forwarded by Captain Worster, the Superintendent of Government roads.

Dated 17 July 1845.

A.

2. This statement shows the expense in each month throughout the period, and exhibits, in a convenient form, a summary of information regarding the cost of the work.

3. The total amount accounted for in it is *Rs.* 10,04,760. 1., and may be classified generally as follows:—

	Rs.	*a.*	*p.*	Total Convict Expenses. *Rs.*	*a.*	*p.*
Hire of carts and workmen, and cost of materials, paid for	4,36,609	4	6			
Food and clothes of convicts	2,66,576	11	1	5,28,296	3	7
Medical attendance, guards, batta, &c.	2,61,719	8	6			
	Rs. 9,64,905	8	1			
Superintendence and Office Establishment	39,854	8	11			
	Rs. 10,04,760	1	–			

4. Captain Worster has appended to the abstract of expenses a valuation of the earthwork, bridging, metalling, &c., the total of which he makes to be *Rs.* 8,53,474. 12. This is assumed as the amount which the work would have cost had it been executed by free labour; although it cannot be asserted that the valuation is absolutely exact, it must be very nearly so, for the quantities are taken from true measurements, and the prices are about the same as those that are charged for work of the same kind in the districts through which the road passes.

Rs.	*a.*	*p.*
* 4,36,609	4	6
† 8,53,474	12	–
4,16,865	7	6

5. The sum* paid for carts hired, workmen and materials, being deducted from this † leaves *Rs.* 4,16,865. 7. 6. for the value of the convicts' labour, and when this again is taken from *Rs.* 5,68,150. 12. 6., which is the total of convict expenses and superintendence, the remainder is found to be *Rs.* 1,51,285. 5., which is the uncompensated cost of the convicts. About 1,500 on the average were employed during 66 months, and 900 for 16 months; and from this it follows, that when they were employed on the High Western Road, each prisoner cost the State only *Rs.* 1. 5. 4. per month.

	Expense.	Work.
	Rs.	*Rs.*
1838 - -	1,49,366	
1839 - -	2,75,193	
	4,24,569	3,07,925
1840 - -	1,94,410	1,64,854
1841 - -	1,46,258	1,59,399
1842 - -	1,21,471	1,08,855
1843 - -	79,638	75,933
1844 - -	38,422	36,508
1840 to 1844 -	5,80,201	5,45,549

6. In the margin the expense in each year is compared with the value of work done, and from this comparison it appears that it was only in 1838 and 1839, while the work was yet quite new, and the management not perfected, that this excess of expense above valuation existed to a great extent. For this period there was an excess of 27½ per cent., but in the following years the average excess was only 6 per cent.; the result on the whole affording grounds for the opinion, that the employment of prisoners in this manner almost entirely counterbalances the expense of maintaining and guarding them.

7. The Board do not here intend to offer any opinion on the road as a work of engineering, and still less would they enter upon the subject of the best manner of employing or disciplining prisoners. They are desirous to state the economical result of the great experiment that has been made, and it is satisfactory to find that the labour of the convicts has been very nearly as cheap as free labour, a determination very different from that of the Bengal Prison Discipline Committee, but which does not admit of doubt, and which they believe may be attributed not only to the wholesomeness of the country in which the prisoners worked, but also to able superintendence, and good discipline and management.

8. The number of convicts employed at different periods, and the gaols to which they belonged, are shown in the Statement C.

9. Captain

Appendix B.

9. Captain Worster has made out the statement under twelve different heads; some of these did not come under the control of the Board of Revenue; viz. the military pay and batta of the military and medical officers,* the cost of military stores,† batta to military guards,‡ and medicines.§ All these are charges audited in the Military and Medical Departments respectively.

	Rs.	*a.*	*p.*
*	50,015	1	1
†	33,436	14	1
‡	4,414	10	3
§	1,417	7	2

10. The sums entered as Superintendent's pay and batta,‖ medical officers' head-money and palanquin allowance,¶ batta to apothecaries and dressers,** include such portion of their salaries and allowances as are properly chargeable to the road, but not their military pay.

‖	23,334	6	4
¶	23,013	7	4
**	3,667	3	5

11. The head-money was paid to the medical officers on the muster rolls of the convicts attached to their abstracts. The pay of jemidars, overseers, duffadars, maistries and peons, was also passed in the same manner, after examination in this office. The cost of feeding and clothing the convicts, and other expenses, were defrayed by the Collectors within whose districts the work was in progress. The Collectors subsequently furnished the bills to this office, when they were compared with the muster-rolls and accounts of the Superintendent, and from time to time submitted to Government for sanction, as shown in the Statement B., which has been prepared here.

12. The cart hire is the most important item of all, being *Rs.* 4,33,106. 9. 2

13. At first, as ordered in the Minutes of Consultation, No. 1,562, carts were supplied by Collectors at a monthly hire of 14 rupees. The Superintendent afterwards himself entered into agreements with contractors. The rates of hire were reduced to 11 rupees per month; and this was paid only when the proper quantity of material, as agreed upon, was brought from the proper distances, the number of cart-loads demanded per day being regulated by the number of trips. Dated 7 Nov. 1837.

14. Captain Worster, in his letter, observes, that the statement can only be considered an approximation, because certain sums are yet to be deducted on account of arms and stores returned, and articles sold, the value of which has not been ascertained. This affects the statement, however, but very little, as the sum realizable is only about 8,000 rupees. It will have to be carried to the credit of the work, and will reduce the expense from *Rs.* 10,04,760. 1. to about *Rs.* 9,96,760. 1. Dated 17 July 1845.

15. On finally closing the accounts, the discrepancy noted in the Chief Secretary's letter, No. 633, which arose from the Collectors and the Superintendent taking credit for the same expenditures at different dates, has been reduced to *Rs.* 145. 6. 8.,†† in which sum the accounts sanctioned in this department are in excess of those furnished by Captain Worster, and which appears to have been expended since the latter were finally made up. Dated 10 June 1843.

††		*Rs.*	*a.*	*p.*
	Sanctioned in this Department -	9,12,128	8	4
	Reported by Captain Worster under the same Heads of Expenditure - -	9,11,983	1	8
	Difference -	*Rs.* 145	6	8

16. The medical charges are only *Rs.* 28,098. 1. 11., about $5\frac{1}{3}$ per cent. of the total expense of the convicts, and very nearly $1\frac{1}{3}$ rupee per prisoner per year.

17. The superintendence has cost *Rs.* 39,854. 8. 11., about 4 per cent. on the whole expenditure, a charge certainly very moderate; but it may be more correct to state it as a per-centage on the cost of the road, as distinct from that of the prisoners. Taken in that manner, it will be from $6\frac{1}{2}$ or 8 per cent., if the road be reckoned to have actually cost from 50 to 60 per cent. of the total sum entered in the statement.

18. The whole amount of convict expenses, or *Rs.* 5,28,296. 3. 7., might be taken from *Rs.* 10,04,760. 1., the gross total, and the cost of the road stated at 4,76,464 rupees, but that the guards were somewhat stronger than they would have been had the same convicts remained at their gaols, that a greater quantity of daily food was allowed, and that in the neighbourhood of the gaols their work would have been of some little value, while the expenses of medical attendance, and some other items of outlay, were not counterbalanced by equivalent reductions in the expenses of maintaining the establishments at the gaols, whence they were removed.

19. It is believed that the sum of 5,70,336 rupees, derived, as shown in the margin, is very nearly the true cost of the road, and 2,83,138 rupees, which is the difference between this sum and the value of the work done, very nearly the true amount of saving to Government, arising from the convicts having been so employed.

20. The

Appendix B.

20. The Board hope that the Most noble the Governor in Council will notice, with approbation, the great exertions bestowed on the work by Captain Worster and his subordinates, Captains Robertson, Jenkins, Burton and the late Lieutenant Slack. Their zeal and industry are especially evinced in the circumstance that no fewer than 392 bridges and tunnels, containing about 8,77,150 cubic yards of masonry, have been built by the convicts. The value of this work, at the usual rates, would be about 1,09,644 rupees, but the expense incurred, in addition to the convict labour, was only *Rs.* 22,813. 12. 10. for bricklayers and maistries, and *Rs.* 3,900. 2. 9. for chunam purchased.

21. Some of the bridges are of considerable size, and they are generally well built, and in good condition, the number of failures and accidents being proportionately very few when it is considered that they were not made by skilful practised workmen, but by fettered convicts, instructed, as the work proceeded, by officers themselves possessed of little experience in the arts of brick-making, lime-burning and building.

22. The wood used as fuel was cut by the prisoners, stone and gravel quarried by them, their tools, stores and fetters repaired under the superintendence of one maistry smith, and many of them became very useful as carpenters and blacksmiths; others were taught to make baskets and ropes, &c., and, as far as possible, the indents on the stores confined to raw material, such as iron.

23. The cost of the convicts who were aged or sick, of those who attended the sick, built and cleaned the temporary gaols and lines for the peons, who dug wells, planted and watered trees, &c., are all charged in the statement; and in comparing the quantity of road work done by the prisoners, it should be taken into account that they did not work on Sundays as ordinary labourers do, and were healthy and well fed and comfortable, so that in these respects few ordinary labourers would match with them. Still there is no doubt that the arrangements made by the officers under whose control they worked were so judicious and well carried into effect as to have secured superior discipline, and a very unusual amount of really hard labour fairly divided.

24. The various reports and letters already before Government render superfluous any particular relation of the progress of the Western Road. In submitting this summary of the accounts of expense attending its construction, it will be sufficient to state that it was ordered originally by Government in Minutes of Consultation, No. 1,562, in which, although the Superintendent was placed under the immediate orders of the Board of Revenue, it was not left to them to instruct him as to the dimensions to be allowed, or the manner in which the work was to be done.

Dated 7 Nov. 1837.

25. These particulars were dictated to him in the orders of Government, and the road was made accordingly, and proceeded without interruption as far as Vellore, 72 miles from the Cooum Bridge, and 82 from the Wallajah Bridge at Madras. This portion was nearly complete at the end of the year 1841, the width of the road being from 24 to 30 feet, and its surface formed of laterile jelly, or gravel nine inches thick. The work was carried on in the same manner, and during the year 1842 was entirely finished to 5½ miles beyond Vellore, and the embankments and bridging partially to Amboor.

Minute of Consultation, 7 Nov. 1837.

26. Early in 1843 the Government determined that the road should not be continued on the same costly scale, and that the work should be confined to partial metalling and the bridging necessary to keep the road passable throughout. From Vellore, therefore, to Amboor, excepting for 5½ miles, a less width and thickness of metalling were applied, the former being from 15 to 24 feet, and the latter four to six inches.

27. During the monsoon of 1843, the embankment was carried on nearly to Vaniembaddy. In this and the following year the whole of the bridges, and most of the metalling, were finished up to Amboor, great part of the road being covered with broken granite or trap rock found in the neighbourhood, and much better calculated to resist the wear and tear of carts and cattle than the laterile used in the parts first constructed.

28. In the early part of 1844 the convicts were gradually removed to other works, as it had been decided not to employ them at a distance from their permanent gaols; and, consequent on orders issued on the 19th August 1844, they entirely left the road, which all had quitted on the 7th October.

29. The road was soon after placed under the superintendence of the Chief Engineer, but before that, an estimate had been made of the sum required to construct the bridges, and metal the surface of the road from Amboor to Vaniembaddy, being all that remained to complete the original design, and the communication with the good road which traverses the Salem district, and leads through Mysore, and by the Sumpajee Ghaut to the sea at Mangalore, forming a grand line from the Presidency of Madras, nearly due west across the Peninsula.

30. Of 126 miles from Madras to Vaniembaddy, only 10 miles remain, and the small sum of 28,811 rupees only is wanted now to terminate a work that would have cost, by free labour, nearly nine lacs, and which will actually have cost less than six lacs of rupees. Neither of these sums can be looked upon as too great, if a little attention be paid to the effect which has been produced by this noble work upon the commerce of the country, and to the convenience which it affords.

31. In

31. In 1842 the Board reported to Government that 7,000 carts, entering and quitting Madras by the Western Road, passed over the Cooum Bridge in each week, or 1,000 per day. It was well known then that this number was greater than what had been usual before the work began, but, unfortunately, no account had been taken, and an accurate comparison could not be drawn. It has since been ascertained that the daily average is 1,700.

32. The carts now travel in a day at least 50 per cent. further than they used to do, and this alone is a direct benefit to the community, equivalent to the hire of one-third the number of carts used, or of 566 carts, a sum of 12 rupees each per month, which, in one year, amounts to no less than 81,504 rupees.

33. But there are many collateral advantages. The hire of carts has fallen 25 per cent., although the work done by each pair of bullocks is so much more; and this is not to be attributed entirely to the competition arising from the great demand, or to the greater cheapness of food and commodities in general, but also to the more active employment found by the road being now passable in seasons when it was not so formerly, and when the expense of keeping the cattle was lost from their being idle, and earning nothing during from two to three months in each year.

I have, &c.
(signed) J. H. Bell, Captain,
Secy to the Board of Revenue in the D. P. W.

No. 106.—Public Works Department.

EXTRACT from the Minutes of Consultation, under date the 8th June 1847.

Para. 1. The Most noble the Governor in Council has been gratified by the perusal of the clear, concise and interesting report furnished by the Board of Revenue in the Department of Public Works on the High Western Road, and on the expenses attending its formation. This great work occupied nearly seven years, having been commenced in February 1838, and closed in October 1844, by convicts, of whom, on an average, it is stated 1,500 were employed during 66 months, and 900 for 16 months.

2. The total cost has amounted to *Rs.* 10,04,760. 1., of which *Rs.* 4,36,609. 4. 6. were for cart-hire, materials, &c.; *Rs.* 5,28,296. 3. 7. for convict expenses, and *Rs.* 39,854. 8. 11. for general superintendence.

3. It is unnecessary to follow the Board throughout the details given in their report. It is sufficient to observe that the cost of the road, as computed by them, from the value of the materials and workmanship employed, is *Rs.* 8,53,474. 12., obtained at an expenditure of *Rs.* 10,04,760. 1.; that the difference, *Rs.* 1,51,285. 5., the extra expense to which the Government have been subjected, is properly chargeable to the maintenance of convicts, amounting, on an average, to *Rs.* 1. 5. 4. per month for each prisoner, and that "the labour of convicts has been very nearly as cheap as free labour." The extra expenses arising from the employment of the convicts at a distance from their gaols is, however, not to be overlooked. The Board advert to the guards being somewhat stronger; to the greater quantity of daily food allowed to the convicts while so employed; the expenses of medical attendance, and other items of outlay, not counterbalanced by equivalent reductions in the expenses of the gaols whence the convicts were removed; and lastly, it must be remembered, that the convicts did not work on Sundays, which alone amounted to 10 months; while the expenses of feeding them for that period were brought to account without any returns. But this is the case also with convicts confined in gaols.

Para. 18.

Para. 23.

4. The Board, after apportioning the total expenses fairly chargeable to the different heads, compute the cost of feeding and guarding convicts, which would have been the same had they continued in gaol—

Para. 19.

To - - - - - - - -	*Rs.* 4,26,424
Actual cost of road - - - - - -	5,70,336
Stores returned - - - - - -	8,000
	Rs. 10,04,760

The difference between the cost of the road, computed from the materials employed, and the actual cost, excluding convict expenses, they observe, is "very nearly the true amount of saving to Government arising from the convicts having been so employed."

5. The Most noble the Governor in Council is of opinion that the calculations on which the Board of Revenue have entered, and the results they have deduced therefrom, approximate as nearly as possible to the truth, and there is reason to believe that had the work been undertaken by free labour, the actual cost, together with the expense of maintaining convicts in the gaols, with the small returns from out-door work on which they are usually employed, and which should at the same time be duly considered, would have amounted to much more.

6. His Lordship in Council has already, in Extract Minutes of Consultation, dated 18 February

R. D. 185. Para. 4.

Appendix B.

February 1843, expressed his satisfaction at the "testimony borne by the Board of Revenue to the durable construction of the road, and to its continued and growing influence on the progress of the internal traffic of the country as evidenced by the increased transit of wheeled carriages, the improvement in their construction, and the fall in the rate of cart-hire," and he observes that these results are corroborated by the Report under consideration. His Lordship in Council notices, with approbation, the exertions bestowed on the work by Captain Worster and his subordinates, Captains Robertson, Jenkins and Burton, to all of whom he desires this commendation of their services may be duly communicated.

P. W. D., 16 July 1844, Nos. 1 to 7.

J. D., 18 July 1843, Nos. 3 and 4.

7. The employment of convicts in gangs, at a distance from their gaols, has been peremptorily prohibited by the Honourable Court of Directors and the Government of India, chiefly on account of the sickness and mortality which followed the adoption of a similar plan in Bengal; and the Court of Foujdaree Udalut at this Presidency, to whom a reference was made on the subject, seemed to consider the system one "almost entirely subversive of what is called prison discipline." In this respect, the Madras convicts have been peculiarly fortunate; the several periodical Reports * of the Medical Board, from the year 1839 to 1844, show the general healthiness of the road gangs; of this result, however, various opinions were entertained; but it has been finally agreed † upon, both by the Medical Board and the Government, that this was greatly owing to the "able-bodied men being sent out to be employed on the roads, while the aged and infirm are retained; and those, also, who become sickly and weak are returned to the gaols."

* I. 7 Apr. 1840 - No. 91 K.
23 June 1840 - Nos. 8 & 9.
16 Feb. 1841 - Nos. 3 & 4.

Ditto - - 1844 - -	5,166	3,282
Ditto - - 1845 - -	2,610	7,905

8. In their Report for 1844, the Medical Board observe [4 Nov. 1845, No. 15], that "the general health of the prisoners, both in gaols and in gangs, has been remarkably good throughout the year; and the casualties, as compared with 1843, are considerably reduced. The gangs of convicts were much reduced in numbers, and the strength of prisoners in gaols increased in proportion; from which circumstance, the results of the past year do not appear to be so satisfactory, as regards the system of road labour, as they have been for some years past, or during the employment of the large gangs on the Great Western Road: the proportion of deaths in gangs appearing to be increased, whilst the deaths in gaols are diminished, from the inmates of the prisons being no longer composed of the old and sickly, who were unfit to be employed in gangs at hard labour."

9. On the whole, however, the system of employing convicts in large gangs at a distance from their gaols must be regarded to have succeeded in the experiment of the High Western Road; and the results may, as the Board of Revenue observe, in para. 7, be "attributed, not only to the wholesomeness of the country in which the prisoners worked, but also to able superintendence and good discipline and management;" and, with reference to these circumstances, his Lordship in Council proposes to bring the foregoing letter, and observations thereon, under the notice of the Government of India, in continuation of the letter to their address, dated 11th July 1844, No. 126.

10. His Lordship in Council also resolves to call upon the Board of Revenue to furnish a statement, showing the cost of construction per mile of each of the great roads made under their superintendence, such as the Sumpajee Ghaut, the road on which they have now finally reported; part of the High Northern Road, &c. Information of this character, he observes, will serve as a guide for future estimates of the road department.

NATIVE STATES.

With the exception of the Kings of Ava* and Siam,* with whom the East India Company have entered into diplomatic relations, it can scarcely be said that there remains any independent prince in India, unless it be the Rajah of Dholpore† and the Rajah of Tipperah.‡

The Rajah of Nepaul, though not otherwise dependent, is bound by treaty‡ to abide by the decision of the British Government in the event of any dispute arising between him and his neighbour the Rajah of Sickim; and he is restrained from employing in his service any European or American subject.

Over all the other native states§ in India, the paramount authority of the British power has been established, and the relation of ally has in all cases merged into that of superior and dependant.

Under native rule the efforts of contending princes were ever directed, not to the defence of their own rights and a just limitation of the power of others, but to the total subversion of their rivals, and the absorption of their neighbours' dominions into their own. There was sometimes a dominant power, capable in some degree of controlling the country; but the object of such power was the common one of self-aggrandizement at the expense of all around. Moreover, the authority exercised was, in many cases, little more than nominal, more especially in regard to provinces and states at a distance from the chief seat of authority.

Under the system by which this reign of usurpation, tyranny and anarchy has been superseded, the British Government has defined the limits of the several native states, and restricting each within those limits, secures to all the enjoyment of their just rights.

The means by which these desirable objects have been accomplished are *subsidiary and protective treaties.*

Under the *subsidiary* system the British Government provides a regular military force (special¶ or otherwise) for the protection of the native state, and the native government defrays the cost. With the states not included within that system, the engagements involve the obligation of protection on the part of the paramount power—allegiance on that of the subordinate. In some instances the dependent state is subject to the payment of tribute; in others it is exempt from any pecuniary claim.

Under both subsidiary and protective treaties, native governments relinquish the right of self-defence, as well as that of maintaining diplomatic relations with other states; and the British Government, which guarantees external security and internal tranquillity, is constituted

* Treaty dated in 1826.

† Under the treaty of 1806, the territories of this Rajah are held by him in absolute sovereignty, free from any right of interference on the part of the British Government, which Government is also thereby relieved from any responsibility as to assistance or protection.

‡ This district bears the same name with one contiguous to it in Bengal, with which it must not be confounded. It lies to the eastward of that part of the British dominions, and is a wild jungly tract, with the ruler of which the British Government have never established any diplomatic relations.

§ Treaty dated in 1815.

‖ A treaty (concluded nearly 80 years since) subsists between the British Government and the Rajah of Bootan, but the country of the Rajah may be considered as connected with Thibet, rather than with India.

¶ Under the stipulations of the treaty with the Guicowar, the subsidiary force to be furnished by the British Government is to consist of 4,000 infantry, two regiments of cavalry, and one company of European artillery. In respect to the Nizam's dominions, the subsidiary force is not to be less than 8,000 infantry, two regiments of cavalry, and a complement of artillery. But in regard to Oude, and most of the remaining subsidiary and protected states, the British Government is bound to the defence of the principality against all enemies, and exercises its own discretion as to the requisite number of troops.

Appendix C.

tuted the arbiter of disputes arising between native princes. In one half of the subsidiary treaties, however, and in the large majority of the protective treaties, the British Government engages to refrain from interference in the internal administration of the native state.* The stipulations in other respects vary in the several treaties and engagements, but a prohibition of the employment of Europeans or Americans is a common article, and one binding the native chief to act in "*subordinate co-operation*" with the paramount power is almost universally introduced into the engagements concluded with protected states.

But though debarred from the exercise of military power in respect to external aggression, the native governments are not prohibited from maintaining a separate military force; in some cases they are required to maintain such a force, and which, in the event of war, is to be available to the British Government † against the common enemy. In some instances the number of troops to be maintained is restricted.

In accordance with what is above-mentioned, the native states become divisible into two classes:—first, subsidiary; second, protected.

The states with which subsidiary alliances have been contracted are ten in number:

Cochin;
Cutch;
Guzerat (territory of the Guicowar);
Gwalior (possessions of Scindia);
Hyderabad (territory of the Nizam);
Indore (territory of Holcar);
Mysore;
Nagpore, or Berar;
Oude;
Travancore.

In the following states, contained in the above list, the charge for the maintenance of the subsidiary force has been commuted by cession of territory to the British Government:

	Locality of Ceded Territory.	Date of Cession.
Guzerat (Guicowar)	Districts in Guzerat	1805
	Ahmedabad farm, &c.	1817
Gwalior ‡ (Scindia)	Upper Dooab, Delhi territory, &c.	1803
Hyderabad (Nizam)	Northern circars	1766
	Guntoor	1788
	Districts acquired from Tippoo	1800
Indore (Holcar)	Candeish and other districts	1818
Oude	Benares	1775
	Goruckpore, Lower Dooab, Bareilly, &c.	1801

The Rajah of Nagpore, or Berar, in addition to the cession of territory on the Nerbudda and parts adjacent, pays to the British Government an annual subsidy of 80,000 *l.*

The four remaining subsidiary states pay annual subsidy, as under:

Cochin	£. 24,000
Cutch	20,000
Mysore	245,000
Travancore	79,643

The British Government has reserved to itself the right, in the event of misrule, of assuming the management of the country in the states of—

Cochin, §
Mysore, ‖
Nagpore, ¶
Oude, ¶
Travancore.**

The

* Some notice of this subject will be found hereafter.

† It may here be mentioned that a *subsidiary* force is composed of the regular troops of the British Government; a *contingent* is a force raised and maintained by the native state, though it may be commanded by British officers.

‡ By the treaty of 1817, funds were set apart for the payment of a contingent to be furnished by Scindia, and commanded by British officers. These provisions were modified by treaty in April 1820, and by a new arrangement in 1836. By the treaty of Gwalior, concluded in 1844, certain districts were assigned to the British Government for the maintenance of an increased force, to be commanded by British officers, and stationed within Scindia's territories.

§ In Cochin, in consequence of the mismanagement of the Rajah, the affairs of the state have been conducted since 1839 by a native minister in communication with the British resident.

‖ In respect to Mysore, the administration was assumed by the British Government in 1834, in consequence of the misrule of the Rajah. The claim of the Rajah to be reinstated was deemed inadmissible in 1847, on the ground of his incompetency to govern.

¶ Oude and Nagpore remain under the government of their respective rulers.

** In 1805 the entire management of the state of Travancore was assumed by the British; but in the year 1813, the minor Rajah, upon attaining his 16th year, was admitted to the full enjoyment of his rights.

(20-III) Ordered to be Printed, 18th August, 1853.

The other subsidiary states,—

Cutch,	Hyderabad,
Guzerat,	Indore,
Gwalior,	

are not subject to control in ther internal administration; yet so oppressive in some instances has been the rule of the chiefs, and, in others, so lawless the habits of the people, that the interference of the British Government has been occasionally rendered absolutely necessary, in some of the above *subsidiary*, as well as in several of the *protected* states. Indeed, a clear necessity must be held to confer the right of such interference in all cases, as the prevalence of anarchy and misrule in any district must be fraught with danger to all around it; while its long continuance would lead to the dissolution of the state itself where it prevailed, and consequently interference would become essential to the effective exercise of that protection which the British Government has engaged to afford.

Besides the native states having subsidiary treaties, there are about 200* others which acknowledge the supremacy of the British Government, and which, by treaty or other engagement, are entitled to its protection. The rulers of these states are of various creeds, as shown in the following list:—

Mussulman;
Hindoo, or orthodox Brahmins;
Mahratta, Boondela, Rajpoot, Jaut, Sikh, Bheel. } all professing Hindooism, with some modifications;

In some of the petty states included in the above enumeration, the chiefs are not absolutely independent, even as to matters of ordinary internal administration. In several states on the south-west frontier of Bengal (Sirgooja, and other districts), civil justice is administered by the chiefs, subject to an appeal to the British agent, while in criminal matters their jurisdiction is still more strictly limited.† Somewhat similar is the position of the southern Mahratta jaghiredars, who are required to refer all serious criminal matters for British adjudication.

In two of the protected states, Colapore and Sawunt Warree,‡ the administration has been assumed by the British Government, and carried on in the names of the native rulers, who are in the position of stipendiaries. In respect to Colapore, the re-transfer of the Government to the minor chief is made dependent upon the opinion which may be entertained by the British Government of his character, disposition and capacity to govern. In Sawunt Warree the heir-apparent, having forfeited his rights, the country, upon the death of the present chief, will be at the disposal of the paramount authority.

In some other states, as those in Kattywar, the Myhee and Rewa Cauntas, and others which are tributary to the Guicowar, or ruler of Guzerat, arrangements have been made, under which the Guicowar abstains from all interference, and the British Government undertakes the management of the country, guaranteeing the Guicowar's tribute. In carrying out such arrangements the British Government has conferred important benefits upon the country by abolishing infanticide, suttee, slave-dealing and the marauding system, termed bharwuttee, § as well as by the introduction of a Criminal Court for the trial of the more serious offences, through the agency of the British resident; the native chiefs of the several states within the jurisdiction of the court acting as assessors.

From the year 1829, when the practice of suttee was abolished throughout the British dominions, the British Government have strenuously laboured to procure its abolition in the native states of India, and to a very great extent have succeeded. This success has been attained without either actual or threatened coercion, resort to such means having been deemed indiscreet and inconsistent; but by vigilant watchfulness for appropriate opportunities, and perseverance in well-timed suggestions, the desired object has been effected in almost every native state where the rite was practised.

---

* This number does not include the petty Rajahs in the Cossya and Garrow Hills, those of the Cuttack Mehals, or the chiefs in the province of Kattywar. The addition of these would more than double the number given in the text.

† The power of passing sentence not involving the loss of life is exercised by them; but where the punishment is severe, it is under the control of the British agent, while sentence of death can only be passed by him in cases regularly brought before his tribunal; and each infliction of punishment must be included in a monthly report to the Government.

‡ These two states were long convulsed by internal disorders, which at length burst into a general rebellion.

§ Resort to indiscriminate plunder, with a view to extort the favourable settlement of a dispute with a feudal superior.

* An experiment of great interest, not only to Alwur itself, but to the States of Rajpootana generally, and even to the British Government, was commenced in this principality a few years since, and is still in progress. The Rajah, becoming dissatisfied with the administration of the old and hereditary servants of the State, called to his assistance some of the revenue and judicial officers from the British service, the principal of whom had filled the office of sheristadar under different commissioners at Delhi, and subsequently became the head native officer under the sessions judge. This person was appointed Dewan of Alwur, and others brought up in the same departments with himself were selected to perform, under his control, the duties of all the civil offices of the Government. By the exertions of this minister many important reforms have been effected. The revenue farming system has been abolished; the practice has been introduced of supporting the military establishments by cash payments, instead of assignments of land; a vigilant examination of accounts has been adopted, and by these means the revenue, which previously fell short of the expenditure to the extent of two lacs of rupees per annum, has been increased to three-and-a-half beyond former collections. Revenue and police duties have been separated, and the administration of justice has been divided into civil and criminal departments.

† Irrespective of the revenues of feudal grants and religious endowments.

\- - - of the Political Supremacy of the East India Company—*continued.*

Nature of Connexion with British Government.	Military Resources.			REMARKS.
	Artillery.	Cavalry.	Infantry.	
Protected, but not tributary -	- -	4,000	11,000	By an engagement dated in 1826, the Chief of Alwur ceded to his cousin Bulwunt Singh the territory of Tejarra, which, however, has now lapsed to Alwur on the failure of direct heirs. The Chief of Alwur, in the event of war, is bound by treaty to assist the British Government with his whole force.
Protected and tributary -	- -	150	225	By the treaty of 1818, the tribute was not to exceed three-eighths of the annual revenue. In 1831 it was fixed for a specified number of years at *Rs.* 25,000.
Ditto - - - - -	- -	1,581	2,100	The military force is irrespective of the quotas to be furnished by the Feudal Chiefs, amounting to 1,500 horse, but inclusive of a mounted police, numbering 535 men.
Ditto - - - - -	150	1,000	520	Irrespective of a police force of 2,000 men, and also of an irregular feudal force of 2,500. The tribute payable by Boondee under treaty was *Rs.* 80,000, but among the items comprising that sum is *Rs.* 40,000 on account of Patun; but as this district was not relinquished to Boondee, the tribute was diminished accordingly. It has been subsequently proposed to transfer Patun to Boondee.
Ditto - - - - -	- -	125	200	This force is exclusive of a police force, amounting to 100 men. The tribute is not to exceed three-eighths of the annual revenue.
Protected, but not tributary -	30	754	252	
Protected and tributary -	692	2,096	18,377	The military force here stated is exclusive of the troops maintained by the Feudatory Chiefs, amounting to 5,690 men, and exclusive of the garrisons of forts, amounting to 5,267.
Protected and tributary -	500 ‖	450	3,010	There is also a police force of 1,500 men in Jhallawur. This State was formed in 1838 out of the Kotah dominions, as a separate principality for the prime minister (*vide* Kotah).
Protected and tributary, both to Scindia and to the British Government.	- -	2,630	5,850	This force is irrespective of the Joudpore legion, which was embodied in 1847, in lieu of the Joudpore contingent, and consists of— Artillery - - - - - 31 Cavalry - - - - - 254 Infantry - - - - - 739 Bheel Companies - - - 222 1,246 Men, commanded by British officers. There is also a force of 2,000 men maintained by the Feudal Chiefs.
Protected, but not tributary -	- -	248	546	The State of Kerowlee was formerly tributary to the Peishwa, but the tribute has been remitted by the British.
	—	—	—	(*continued*)

‡ Irrespective of feudal estates and religious endowments.

§ The revenue, as here stated, is independent of feudal jaghires and charitable endowments, producing 40,00,000 more. The amount of tribute payable by Jyepore under the treaty of 1818, viz. *Rs.* 8,00,000, was reduced in 1842 to *Rs.* 4,00,000.

‖ It was stated in 1848, that the military force of Jhallawur was about to undergo considerable reduction.

¶ Annual tribute formerly paid to Scindia, but transferred by that prince to the British Government - - - *Rs.* 1,08,000
Annual payment towards expense of Joudpore legion in lieu of contingent - - - - - - - - - 1,15,000
Rs. 2,23,000

The amount received under the first head, viz. *Rs.* 1,08,000, is applied by the British Government to the maintenance of Scindia's contingent, under the stipulations of the treaty of 1844.

** This amount of revenue is inclusive of feudal jaghires and charitable endowments.

rotected, but not tributary -	- -	- -	- -	The area of Sikkim, as here given, is independent of the Terrai, a portion of territory of which the Rajah was deprived in 1850, in consequence of outrages committed against British subjects. The Rajah was, at the same time, mulcted of the annual sum of *Rs.* 6,000, which had been granted to him as compensation for the territory of Darjeeling.
Ditto - - - -	—	—	—	
ndependent - - -	- -	- -	- -	This district is hilly, much covered with jungle, and very thinly inhabited.
Protected, but not tributary -	- -	- -	- -	This prince receives a pension of *Rs.* 600 per annum, in consideration of the cession of certain territory; and makes an annual present of elephants' teeth to the British in token of allegiance.

- - the Limits of the Political Supremacy of the East India Company.

Subsidiary alliance - -	- -	- -	- -	In Cochin, in consequence of the misrule of the Rajah, the affairs of the State have been conducted, since 1839, by a native minister, in communication with the British resident. The result has been highly successful.
Protected and tributary -	—	—	—	
Subsidiary alliance - -	- -	- -	2,472	In addition to this force, the Rajah, by treaty dated in 1807, is bound to maintain a body of 4,000 horse; but owing to the state of the finances, the strength of the contingent amounted, in May 1847, only to 2,702.
Protected, but not tributary -	- -	- -	- -	In 1845 the British resident divested himself of all interference in the State of Poodoocottah, except the control of unusual expenditure.
Subsidiary alliance - -	- -	- -	- -	In 1805 the entire management of the State of Travancore was assumed by the British; but in the year 1813 the administration was restored to the Rajah upon his attaining his 16th year.

* On the subjugation of the Mahomedan dynasty in 1799, the British Government restored a Hindoo prince to the throne of his nily, from which it had been expelled by Hyder Ali. But the Rajah's misgovernment having forced the inhabitants into rebel- n, the British Government, in accordance with the treaty, set aside the administration of the Rajah, and assumed the management affairs in 1832.

The

* Where no distinction has been made in the official records between the cavalry and infantry of a Native State, the whole armed force has been included in this Statement under the head of Infantry.

† In reference to this enormous force, it is proper to observe, that considerable portions of the regular troops of Native States are described in the official returns as fitted rather for police purposes than as available for regular military duties. Where the military force of a Native Prince is not under the command of European officers, it rarely happens that there exists any regular system of payment; and under such circumstances, a native army is invariably found to be badly organized and inefficient. The figures above given do not include either the police corps or the quotas of troops which the military chiefs are bound to furnish to their feudal superior.

The contingent troops of the Native States commanded by British officers, and available, under treaties, to the British Government, amount to about 32,000 men; viz. :—

Hyderabad (Nizam's) Auxiliary Force - -	8,094
Gwalior (Scindia's) Contingent - - -	8,401
Kotah Contingent - - - - - -	1,148
Mysore Horse - - - - - -	4,000
Guzerat (Guicowar's) Contingent - - -	3,756
Bhopal Contingent - - - - - -	829
Malwa United Contingent - - - -	1,617
Carried forward - - -	27,845

Brought forward - - -	27,845
Malwa Bheel Corps - - - - -	648
Joudpore Legion - - - - - -	1,246
Meywar Bheel Corps - - - - -	1,054
Colapore Local Horse - - - - -	907
Sawunt Warree Local Corps - - - -	611
	32,311

Holkar and the Rajah of Nagpore are bound by treaty to furnish contingents, the former of 3,000, and the latter of 1,000 horse; but these troops are not commanded by British officers.

* Including officers attached to Native regiments.

Appendix C.

LAND TENURES.

The Government land tenures may be distributed into three* principal classes :—

1. The Zemindary;
2. The Putteedaree; and,
3. The Ryotwar; as it prevails in the South of India, where the cultivators are also the proprietors of the soil.

Under both the Hindoo and Mahometan law of inheritance, all settlements have a tendency to break up into subdivisions and become ryotwar.†

The zemindary and putteedaree tenures may therefore be regarded as indicating the stages through which a domain usually passes before it becomes ryotwar, or broken up into petty and separate allotments.

THE ZEMINDARY TENURE.

An estate held upon *zemindary tenure* may occasionally belong to one individual; but under the native law of partition‡ it would shortly become a joint property, and might then be held in equal or unequal shares. But in either case there would be no separation of interests. The whole estate is cultivated as a joint-stock property for the mutual benefit of the proprietors, and after payment of the expenses of cultivation and the Government assessment, the net profits are divided among the shareholders according to their respective shares. The Government recognise but one individual (the representative of the family or proprietary body§) as responsible for the Government demand, and in the event of default the whole estate would be sold for its realization. The distinguishing feature of the zemindary tenure, when the estate belongs to several proprietors, is *cultivation in common or under joint stock.*

THE PUTTEEDAREE TENURE.

Under the *putteedaree tenure* the same estate is parcelled out into allotments, and thenceforward the shares in the net profits are commuted for equivalent portions of land. Each proprietor or shareholder undertakes the agricultural management of his separate allotment, paying through the representative of the proprietary body (the lumberdar, or perhaps the headman of the village) such instalment of the Government revenue as may have been agreed to among themselves in distributing the aggregate assessment. In the event of individual default, a joint responsibility attaches to the whole proprietary body;‖ but any proceedings instituted by the Government for the realization of the deficiency, would be directed, in the first instance, against the defaulting allotment. The characteristic of the putteedaree tenure is *cultivation in severalty with joint responsibility.*

RYOTWAR TENURE.

Under the *ryotwar tenure* the various proprietary subdivisions of the estate are recognised by the Government, and *joint responsibility ceases.* The aggregate of the Government demand upon the estate is distributed by its authority in distinct instalments, corresponding with the value of each separate allotment. The proprietor of each petty holding is thus made responsible to the Government for the payment exclusively of his own fixed assessment. The principle of the ryotwar tenure is that of a *field assessment with total separation of interests.*

RECAPITULATION.

* The talookdary system will be described separately.

† Evidence before Parliamentary Committee.

‡ Under the Mahometan law of inheritance, the right of primogeniture is unknown. Property is divided among all the children or other heirs in certain proportions. A wife, if there be no issue, receives a fourth; if there be an issue, an eighth. A male receives as much as the share of two females.

Under the Hindoo law, property is equally divided among all the brothers. Daughters are debarred from a share in the inheritance of their father, but receive portions out of their brothers' allotments. The widow appropriates only her own dowry.

§ The distinction between the zemindary tenure of Bengal and that of the North-West Provinces is one arising solely from the difference in the periods of their respective duration. That of Bengal dates from a recent period (1793), and the shareholders in an estate are there united by *community of descent*; the elder brother usually manages the estate, and he alone is responsible for the Government revenue.

In the North-West Provinces the tenure is of far earlier origin. There the shareholders, though probably deriving from one common stock, and possessing a property originally belonging to one individual, are at this time united rather by *community of rights* than by community of descent; and they elect from their own body a representative, who is regarded by the Government as responsible for the Government demand.

‖ But if the parties possessing the joint property, or separate properties subject to a common obligation, desire to have separate possession, they will be admitted to separate engagements with the Government, and each parcel of land will then be held exclusively responsible for the revenue assessed upon it.—Bengal, Regulation VII. of 1822, sect. 10, c. 9.

RECAPITULATION.

That the zemindary tenure denotes an estate, which, though held by several partners, is cultivated in its integrity for their mutual benefit, without any separation of interests.

The putteedaree settlement indicates the estate when parcelled out in allotments among the several sharers; the arrangement being sanctioned by Government, conditionally upon the aggregate assessment being guaranteed by the shareholders in the event of individual default.

The ryotwar settlement indicates the estate absolutely parcelled out into separate allotments under the sanction of the Government, each proprietor entering into a separate engagement with the Government for the payment exclusively of the assessment fixed upon his own allotment.

TALOOKDAR.

The talookdar is a middleman, interposed by the Government between itself and the landholders, for the purpose of collecting the revenue. The office is altogether of native institution. The talookdar might either contract with the sovereign for the revenues of a district, and pay himself from the profits of his lease, or he might collect a fixed amount, and receive a regular salary. The former expedient was usually adopted under the native governments.* The British Government insists upon the latter. Wherever a talookdar is now tolerated, the rights of the landholders are first ascertained and recorded, and the powers of the talookdar restricted to the collection of a fixed assessment, his compensation for the trouble and expense of collection constituting a deduction from the sum collected.

These tenures, simple enough when viewed in the relation of the people to the Government, become somewhat complicated when regarded in the relation of the people to each other, more especially as the beneficial interest therein becomes widely diffused, and separate transferable properties are possessed by several parties in the same parcel of land.

If, for instance, a portion of an estate held under the zemindary or joint-stock tenure, contained mines or fisheries, &c., and was thus not susceptible of equal division, then in the transition of the estate from the zemindary to the putteedaree settlement, such portion would be excepted from separate allotment, and continue as before to be worked as a joint-stock property for the mutual benefit of the several proprietors. The shares in this joint property would, in the first instance, correspond with the respective divisions of the estate, but thenceforward they might be held as a distinct property, and a proprietor might dispose of his separate allotment, and retain a share in the common fund, or, *vice versâ*, he might dispose of his joint-stock share, and reserve his individual property.

Again, one or more of the *primary* divisions of the estate, when held under *putteedaree tenure*, might be further subdivided. In the event of default in one of the subdivisions or puttees, the remaining puttees of the *primary division* would in the first instance be liable for the deficiency of the Government demand, although a joint responsibility would, as before, attach to the whole estate.

It was ascertained, during the recent survey of the North-Western Provinces, that the proprietors of a division of an estate, though themselves cultivators, rarely cultivate the whole of their property. A portion, sometimes a sufficient quantity to meet the whole Government demand, for which they are responsible, is let to tenants at will, or on lease, at an increased rental. The residue is then virtually held by the proprietors rent-free. The holders of these rent-free lands are the *village zemindars*; the tenants at will, the *pyecaust ryots*.

If the estate be sold for arrears of revenue, all these proprietors or village zemindars lose their proprietary rights; but as they are also cultivators, they retain their rights in that capacity, and become hereditary cultivators (khoodkust ryots), subject to the payment of the same customary rate of rent as all other non-proprietary cultivators. The purchaser of the estate would obtain an absolute property therein, subject to the payment of the Government revenue, and save and except as affected by the position of those hereditary cultivators whose rights to occupancy at specified rates might have been already adjusted and recognised by the Government. All lands virtually held rent-free by the village zemindars would be subject to the payment of full rents.

It will hence be seen that there are two distinct rights connected with property in the land.

1st. The right of the occupier, or that of cultivating the land, subject to the payment of the landlord's rent.

2d. The

---

* And where the rights of the landholders were not strictly defined, the talookdars succeeded in usurping them, and reducing the proprietors to the condition of hereditary cultivators. An intermediate position between the landholder and the State appears to have been occupied at one time or other by—

The Poligars and Mootadars of Madras.
The Dessayes and Mozumdars of Guzerat.
The Deshmooks of the Deccan.
The Talookdars of the Moguls, and by several others.

Appendix C.

2d. The right of the proprietor* or landlord, viz. the title to the rent, subject to the deduction of the Government revenue.

Principles totally different distinguish the native from the British system of revenue. The former is based upon a fixed proportion of the gross produce.† The latter deals solely with the surplus or net rent. The 52d section of the "Directions to the Revenue Settlement Officers" in the North-Western Provinces runs as follows:—

"It is desirable that the Government should not demand more than two-thirds of what may be expected to be the net produce to the proprietor during the period of settlement, leaving to the proprietor one-third as his profits, and to cover the cost of collection. By net produce is meant the surplus which the estate may yield after deducting expenses of cultivation."

BENGAL.

In the *Lower Provinces of Bengal*, the land is held chiefly upon the *Zemindary tenure*. The estates, though in the first instance granted to single individuals, are now, it is said, generally held in coparcenary. Under the permanent settlement of Lord Cornwallis, the Government is debarred from further participation in the agricultural improvement of the country. The step which has been taken is irrevocable.

NORTH-WESTERN PROVINCES.

In the *North-West Provinces*, the land is held under *putteedaree settlement*. The Government assessment, calculated upon the basis of two-thirds of the net rent, has been fixed for a period of 30 years. By this limitation of the public demand, a valuable and marketable private property has been created in the land, and every landholder, however petty his holding, is, to a certain extent, a capitalist. ‡

BOMBAY.

In Bombay, the revenue settlement is chiefly *ryotwar*. Under the new survey now in progress, the lands are subdivided into fields of moderate size, so that each subdivision is rendered easy of cultivation by a farmer of limited means. The Government assessment is laid separately upon each field, and leases granted for 30 years' duration, at a fixed and invariable sum, binding on the Government for the full term; but with the option on the part of the cultivator of surrendering any one or more of his fields, or altogether putting an end to his lease at the close of any given year.

MADRAS.

In Madras, a considerable portion of the land is also held under the *ryotwar tenure*. A maximum assessment is fixed by the Government for the best lands, which cannot be exceeded. Inferior lands, so long as they remain inferior, are of course assessed at lower rates. The contracts with the cultivators are renewed from year to year, when remissions of rent are made, if the unfavourable character of the season or the circumstances of the cultivator render such a measure expedient. In the south of India the seasons are unusually precarious, and the cultivators poor and improvident. Under such circumstances, it has been thought there were no means of securing to the Government a *fair* share of the surplus produce or net rent, than by taking more than the average in favourable seasons, and making corresponding reductions in those which prove unfavourable. Annual settlements are, therefore, in this view indispensable. But such a system must necessarily operate as

---

* The proprietary class, of which the Gram Adikars are the head, comprises—
The Putteedars of the North-Western Provinces.
The Bhumias in Rajpootana.
The Potails in Malwa, Guzerat, and the Deccan.
The Meerassidars, Mocuddums, and Wutturies, in the Carnatic and the Deccan.
The Vellalers of the Southern Peninsula.
The Zemindars of Bengal, &c. &c. &c.

† Large tracts of cultivable land are left waste, because not sufficiently fertile to pay for the cost of cultivation when subjected to an assessment of a *fixed proportion* of the gross produce. To this cause must, doubtless, be ascribed the vast quantity of waste land in a country so densely populated. The British system, by restricting the claim of the Government to a share of the net rent, does not encroach upon the profits of capital, and is consequently favourable to extended cultivation. Under this enlightened principle, it may reasonably be expected that in a brief period the waste land of India may be rendered productive.

‡ But the relation of the landlords to the Government was one only of the objects to be defined by the new settlement. Another object sought was to ascertain the relations of landlords and occupiers to each other, and the rights and obligations of both parties. This task has been accomplished by the completion of the revenue settlement. A survey has been made of each separate holding, and registers preserved, in which are shown—
The name of the proprietor, and the amount of assessment paid to the Government.
The name of the occupier, and the amount of rent paid to the proprietor.
The duration of the lease.
The area of the estate.
The quality of the land, &c. &c.

Ready means are thus possessed of verifying all particulars relating to landed property; and as the mass of litigation is connected with land tenures, such records go far to render the administration of justice simple and effective.

as a bar to agricultural improvement. It is obvious that but for the remissions, the land is over-assessed: it has, consequently, a very low marketable value.* Farming capital is borrowed at enormous rates of interest, not upon the security of the land, but solely upon the crop of the current year—a very uncertain one. Farming thus becomes a matter of wild speculation; and the net rent is divided, not between the Government and the cultivator, but between the Government and the usurer.

The character of this paper will not admit of any discussion of the question, *Whether the rent belongs of right to the Government?* It may, however, be noticed, that neither zemindar nor village headman, nor putteedar, nor talookdar, claim exemption from the payment of land assessment, except under a grant from the British Government, or one of its native predecessors.

THE MAHOMEDAN SYSTEM.

The Mogul Government was obviously entitled to the whole of the net rent, according to the Hidaya:—

"This tax ought not to exceed what the land *can afford to pay*. Our jurists have decided that the utmost which the land *can afford to pay is one-half* of the produce, and more than this ought not to be taken. If the land cannot afford to pay one-half, the prince must take less, for to take less is lawful; but to take more than the half is not lawful."

THE HINDOO SYSTEM.

The ancient Hindoo Governments are represented to have been entitled to a sixth, or at most a fourth of the gross produce of the land; but with regard to the practice of these governments, it appears, upon the authority of Sir Thomas Munro, that in the districts of the Hindoo chieftains of the Northern Circars, descended from the ancient sovereigns of Orissa, and in other Hindoo States, the *same rate of assessment prevails as in other parts of India*, fluctuating from two to three-fifths of the gross produce.

The first Regulation of the British Government (No. I. of 1793) declares it to be notorious that from the earliest times to that period the assessment was liable to increase, at the discretion of the native rulers; and Regulations of a somewhat later date reiterate the declaration that Scindia, the Peishwa, and other native powers, all exercised a despotic authority in fixing and again altering the assessment.

THE BRITISH SYSTEM.

A principle or rule of the land assessment has at length been defined by the British Government. *It is not to exceed two-thirds of the net rent.* †

The following Return of the Land Revenue, Area, Population and other statistical particulars connected with the North-Western Provinces, has been prepared from information collected during the recent revenue settlement of that portion of India. No means exist in this country for the preparation of similar statements for the Lower Provinces of Bengal, or for the Presidencies of Madras and Bombay:—

NORTH-WESTERN PROVINCES.

Number of Townships - - - -	80,883

* Or rather none at all. Where the Government assessment is moderate, but its payment peremptorily enforced, the revenue is safe, because the proprietor of land having in it a beneficial interest, the value of which can be precisely ascertained, may in case of necessity borrow on a security perfectly unexceptionable, or, if requisite, he may sell. The crops may fail in one year, but on the average matters will right themselves, the good years making up the deficiency of the bad.

† *See* Directions to Revenue Settlement Officers, as above.

NATIVE AGENCY.

THE principle of Indian administration, from the time of Lord Wellesley* to that of Lord William Bentinck, was the transaction of public business by means of European agency. The experiment resulted in disappointment, inasmuch as it was impossible to carry it out otherwise than very imperfectly, except at an enormous expense. Another mode, that of employing native agency to a large extent, was more readily available. Native functionaries might be obtained on lower terms, and in familiarity with the vernacular languages and insight into native character, they would enjoy an advantage. It was feared, however, that they could not be trusted; and if remunerated at the low scale formerly allotted to them, and unwatched by any superior, the apprehension was not unreasonable. The problem was to unite economy and despatch with efficiency and integrity, and the solution is found in the extensive employment of native agency, subject to careful European supervision. This has been tried, and works well.

The change has taken place within the last 20 years, during which period several new offices of trust and emolument have been opened to the natives of India, and those previously allotted to them have been materially advanced both in emolument and responsibility.

The principal offices now filled by natives of India, independently of the Hindoo and Mahomedan law offices of the Judicial Courts, which are of old standing, are those of—

Principal Sudder Aumeen.
Sudder Aumeen.
Moonsiff.
Deputy Magistrate.
Deputy Collector.

The Principal Sudder Aumeens in Bengal are divided into two classes.

The first class receive	£.720 per annum.
The second class	480 „
In Madras they receive	600 „
In Bombay	600 „

Sudder Aumeens.

In Bengal	£.300 „
Madras	240 „
Bombay	420 „

Moonsiffs.

From £.100 to £.200 per annum.

Deputy

* The duty and policy of the British Government in India, therefore, require that the system of confiding the immediate exercise of every branch and department of the Government to Europeans educated in its own service, and subject to its own direct control, should be diffused as widely as possible, as well with a view to the stability of our own interests, as to the happiness and welfare of our own subjects.—Desp. vol. ii. p. 326.

Deputy Collectors.

From £.360 to £.600 per annum.

In the Lower Provinces of Bengal there are 420 natives in Government employ, of whom—

1	receives	£. 1,560 per annum.
1	„	900 „
8	„	£.720 to 840 „
3	„	600 to 720 „
54	„	480 to 600 „
28	„	360 to 480 „
325	„	24 to 360 „
420		

In the North-West Provinces there are (exclusive of East Indians) 864 natives in Government employ, paid as under:—

7	receiving each	£. 720 to 780 per annum.
4	„	600 to 720 „
23	„	480 to 600 „
12	„	360 to 480 „
818	„	24 to 360 „
864		

In the Punjab, the salaried natives are 258 in number, receiving from 24 *l.* to 600 *l.* per annum each.

In Madras the number is 199, receiving from 960 *l.* to 24 *l.* each.

In Bombay there are 594, receiving from 600 *l.* to 24 *l.* each.*

Civil justice, in fact, is almost wholly dispensed by native judges. They are distributed into three grades—Principal Sudder Aumeens, Sudder Aumeens, and Moonsiffs. The jurisdiction of the two lower grades is limited to suits in which the matter in dispute does not exceed a certain value, the limit being of course higher in regard to the upper of these two grades than to the inferior. To the jurisdiction of the highest native judge there is no such limit. To these different classes of native judges is entrusted the original cognizance of all civil suits; and no person, whether British or native, is exempt from their jurisdiction.

The first grade of native judges (Principal Sudder Aumeens) may sit in appeal from the decrees of the two inferior courts; and as the law, except in special cases, allows but one trial and one appeal, the power of final decision in by far the larger number of suits rests with native judges.†

Further, suits wherein the amount in dispute exceeds 500 *l.* may be tried either by the Principal Sudder Aumeen or by the European Zillah Judge, if he so please. But in either case an appeal lies only to the highest Company's Court, the Sudder Adawlut.‡ Here then the native judge exercises the same extent of jurisdiction as the European functionary. Native and British qualification and integrity are placed on the same level. The suits now entrusted to a head native judge were confided, before the passing of Act No. 25 of 1837, to no officer below a European provincial judge.

The

* If the value of money be estimated by the wages of labour in the two countries, it would appear that its worth is about seven times greater in India than in England. The rate of wages issued to 2,000 men employed on the Calcutta and Bombay mail-road is three rupees, or 6*s.* per month each; and assuming the rate of wages in England at 10*s.* per week, 24*l.* in India is equal to 168*l.* in England.

† A. sues B. for a debt of 10*l.* The suit is instituted in the Moonsiff's court, and conducted by a vakeel, or pleader. The pleadings and motions may be submitted in writing, the pleader merely examining the witnesses, or he may have recourse also to oral pleading. The judge is required by law to record his decision, and the reasons for it, upon the face of his decree. The dissatisfied party may appeal from the decision to the European judge of the district, who either hears the appeal himself or refers it to his Principal Sudder Aumeen. The decision in either case is final, except upon a point of law, when a special appeal lies to the Court of Sudder Adawlut, and thus the proceedings of the subordinate courts are brought under supervision.

‡ The course of proceeding in such cases is as follows: C. sues D. for 1,000*l.* The suit must be instituted in the court of the head native judge; and if not withdrawn by the European judge of the district, it is tried by the native judge. The appeal in either case lies to the Sudder Adawlut, from whose decision, however, there is an appeal to the Queen in Council, in all cases where the value in dispute amounts to 1,000*l.*

Appendix C.

The number of appeals affords evidence of the feeling of the people in respect to the administration of the law. The number affirmed and reversed is evidence of the qualifications, intellectual and moral, of the native functionaries as estimated by their superiors. The proportion of appeals to original decisions in the suits disposed of in the North-Western Provinces for seven years is about 15 per cent.; the proportion of decisions reversed in the original suits is little more than four per cent, as shown in the following Table:—

	Original Suits decided on Merits		Appeal Suits		Reversals.	Proportion of Reverses to Original Suits.
	By Zillah Judges.	By Native Judges.	By European Judges.	By Native Judges.		
1843	31	39,181	4,505	3,083	2,301	$5\frac{3}{4}$ per cent.
1844	17	40,213	4,397	2,902	2,020	5 „
1845	10	40,579	3,980	2,809	1,895	$4\frac{1}{2}$ „
1846	3	41,775	3,900	2,392	1,676	4 „
1847	8	43,169	3,608	2,559	1,673	$3\frac{3}{4}$ „
1848	11	41,340	3,977	2,916	1,736	4 „
1849	20	44,933	3,802	3,674	2,042	$4\frac{1}{2}$ „

By a more recent enactment, natives of India are eligible to the office of deputy magistrate. They are competent in that capacity to exercise the powers of the European covenanted assistant, and even under orders of the local government, the full powers of magistrate. When entrusted with the latter, their power of punishment extends to three years' imprisonment, and they are also competent, in cases of assault and trespass committed by Europeans on natives, to inflict a fine to the extent of *Rs.* 500, and to imprison for the period of two months, if the fine be not paid. Natives are frequently invested with full powers of magistrates.

Native deputy collectors are subordinate to the European collectors, but they are competent to transact any of the duties of the collector. Their proceedings are recorded in their own names, and on their own responsibility.

The selection and promotion of native judicial functionaries are regulated as follows:

NORTH-WEST PROVINCES.

Vakeels or pleaders, before obtaining diplomas, must have passed an examination before a committee, consisting of the European Revenue Commissioner, the European Judge of the district, the Principal Sudder Aumeen, the principal of the college or other educational establishment at the station, and such other officers as may be appointed by the Government.

The examination may be presumed to be of stringent character, from the following results:—

In 1852. At *Agra*, twenty-seven candidates presented themselves for examination,—*none* passed.

Bareilly, forty-eight candidates, of whom *two* passed.

Benares, seventy-two, of whom *four* passed.

The Moonsiffs (lowest grade of native judges) are selected from the vakeels, and appointed by the Court of Sudder Adawlut.

The Sudder Aumeens are selected from the Moonsiff class by the Sudder Adawlut, and appointed by the Government.

The Principal Sudder Aumeens are selected from the class of Sudder Aumeens, and appointed by the Government.

The service is one of gradation, but not of seniority, the superior ranks being filled up by the most efficient men of the inferior.

CIVIL SERVANTS.

Civil servants are prepared for the higher offices in Bengal by previous instruction in this country. At Haileybury the basis of education is European literature and science (classics and mathematics), to which is added, the study of the general principles of law, together with political economy, history, and the rudiments of the Oriental languages.

At

At the College of Calcutta the studies of the civilian are resumed, and directed to the mastery of the vernacular languages, the acquisition of the principles of Mahomedan and Hindoo law, and a familiarity with the Regulations and the Legislative Acts of the Indian Government; the object of the two institutions being to combine the education of an English gentleman with the qualifications of the native law officer.

Upon passing his college examination, the civilian commences his career in the public service as assistant to a collector and magistrate. He is thus engaged alternately in the judicial and the revenue line. In his magisterial capacity, he takes the deposition of witnesses, and prepares cases for the decision of his superior; or he hears and determines, subject to revision, cases specially made over to him by the magistrate. His power of punishment extends to two months' imprisonment, a period which, when he is entrusted with special powers by the Government, is enlarged to 12 months. As assistant in the Revenue Department, he decides petty claims relating to arrears or exactions of rent.

After this apprenticeship of several years, the assistant is regarded as a candidate for promotion. He is then subjected to a further examination, with a view of testing his knowledge of the languages and the laws of the country; and his promotion is made dependent on the success with which he passes the test. That the examination is severe and searching may be gathered from the fact, that of 20 civilians who came up in 1852, seven only were passed. A successful candidate is then deemed qualified for the office of collector or magistrate.

As magistrate, he directs the police operations of his district, and takes cognizance of all criminal matters. The law provides for his dealing with certain classes of offences, but limits his power of punishment to three years' imprisonment. Parties charged with graver crimes are committed by him to take their trial before the Sessions Court.* In certain cases the magistrate may inflict corporal punishment, not exceeding a few stripes, and no other punishment is then superadded. Appeals from his sentences, or from those of his assistant, when vested with special powers, lie to the Sessions Judge.

As collector, he has charge of the district treasury. He superintends the collection of the Government rental; puts in execution coercive measures against defaulters; sells estates for arrears of revenue; and manages those escheated or bought by Government. He superintends the partition of estates, and regulates the distribution of the Government assessment among the several subdivisions. He also exercises judicial powers in settling, by summary process, disputes among the agricultural community regarding rents.

After further experience, the civilian is promoted to the judicial chair.

The Civil Judge presides over the Civil Courts in his district, and supervises the dispensation of justice by his native functionaries. It is competent to him to withdraw suits from the courts below, and to try them himself.† He hears appeals from the decisions of his principal Native Judge, when the matter in dispute does not exceed the value of 500*l.*; but he may transfer appeals from the decisions of the other subordinate courts to the file of the principal Native Judge.

In the Sessions Court the Judge is required to try all persons committed for heinous offences by the magistrates. He has not the power of life and death, but his jurisdiction extends to 16 years' imprisonment.‡ All capital cases after trial must be referred for the disposal of the Nizamut Adawlut; as also those cases in which the Sessions Judge dissents from the opinion of his Mahomedan law officer. Persons not professing the Mahomedan faith are not to be tried under the provisions of the Mahomedan law, but under the regulations, the Judge being assisted by a punchayet or assessors, or a jury, but having power to overrule their opinion. The Sessions Judge holds a monthly gaol delivery, though, in fact, he may be said to be constantly sitting. He sits in appeal from sentences passed by the magistrates and their assistants.

The

* British subjects guilty of felony or other grave offences are committed for trial before the Queen's Court. In cases of assault and trespass, they are subject to the jurisdiction of the magistrate (European or native), which extends to the imposition of a fine of *Rs.* 500, and to imprisonment for two months if not paid. An appeal from the decision of the magistrate lies to the sessions judge, and the case, if so appealed, is not liable to be removed to the Queen's Court by a writ of certiorari. Further, Europeans, by being rendered subject to penal recognizances for the maintenance of the peace, are virtually amenable to the jurisdiction of the Mofussil police.

† In the trial of civil suits, original or appeal, it is competent to the European judge to avail himself of the assistance of natives in one of the three following modes:—

1st. By a punchayet, who conduct their inquiries on points submitted to them apart from the court, and make their report to the judge.

2d. By assessors, who sit with the judge, make observations, examine witnesses, and offer opinions and suggestions.

3d. By a jury, who attend during the trial, and after consultation deliver in their verdict.

But under all the modes of procedure described in the three clauses, the decision is vested solely and exclusively in the judge.

‡ The great length of the terms of imprisonment in India is one of the vestiges of a barbarous law, or rather a consequence of its abolition. In 1793 the punishment of mutilation was abolished, and it was then ordained that if a prisoner be sentenced by the *futwa* of the Mahomedan law officer to lose two limbs, he should in lieu thereof be imprisoned for 14 years, and if sentenced to lose one limb, to seven years. Under a later law it is competent to the judge to impose two years' additional imprisonment in lieu of corporal punishment.

A reduction in the terms of imprisonment has been repeatedly urged upon the Government of India by the home authorities.

Appendix C.

The Sudder Dewanny Adawlut, the highest of the Company's Courts, is composed of the Judges selected from the Civil and Sessions Judges. It has ceased to exercise any original jurisdiction. It is the court of final appeal in the Presidency, and controls all the subordinate civil tribunals. Besides regular appeals from the original decisions of the European Zillah Judge, and in certain cases from those of the Principal Sudder Ameen, the Court is competent to admit second or special appeals from decisions of the Courts below on regular appeals. The grounds for special appeal are when the judgments shall appear inconsistent with law or the practice or usage of the Courts. The power thus given to the Sudder Court of hearing special appeals extends their means of supervision, and brings judicially before them the proceedings and decisions of all classes of judicial officers, and affords opportunity for correcting errors and ensuring consistency, it being one of their duties to regulate the practice and proceedings of the lower Courts. Moreover, each judicial officer is required by law to record his decisions and the reasons for them in his own vernacular tongue; and this affords the Sudder Court extended means of judging correctly of the individual qualifications of their subordinates. The Sudder Court sits daily, except during the Dusserah and the Mohurrum,* when all civil proceedings are suspended. In the trial of appeals, the proceedings of the lower tribunals are read before one or more Judges. A single Judge is competent to confirm a decree. Two or three sitting together must concur for its reversal, whether the appeal be regular or special. Decisions of the Court in suits exceeding in value 1,000*l.* may be carried by appeal before the Queen in Council. Monthly reports are received of the state of business from every district, and an annual report is made to Government of the administration of civil justice, both in the Sudder Court and in its subordinate Courts.

The Nizamut Adawlut.—The Judges of the Sudder Dewanny are the Judges also of this Court. The Nizamut has cognizance in all matters relating to criminal justice and the police of the country; but it exercises no original jurisdiction. Appeals from the Sessions Judges lie to this Court; but it cannot enhance the amount of punishment, nor reverse an acquittal. The sentences of this Court are final. In cases of murder and other crimes requiring greater punishment than 16 years' imprisonment (which is the limit of the Sessions Judges' power), all the proceedings of the trial are referred for the orders of the Nizamut. The Mahomedan law officer of this Court (unless the futwa be dispensed with) first records his judgment, and all the documents are then submitted to the Judges of the Nizamut. If the case be not capital, it is decided by the sentence of a single Judge. Sentences of death require the concurrence of two Judges.† Trials before the Sessions Judge for crimes punishable by a limited period of imprisonment are also referred, as already intimated, for the disposal of the Nizamut, in cases where the Sessions Judge differs from the opinion of the Mahomedan law officer. As in civil matters, monthly abstracts of all trials are laid before the Judges of the Court sitting together, when the proceedings of the Sessions Judges are reviewed. In sentences of acquittal which may be disapproved, though the Nizamut cannot interfere so as to affect the sentence, the Judge is admonished.

REVENUE COMMISSIONERS AND BOARD OF REVENUE.

In Bengal and the North-Western Provinces there are Revenue Commissioners, a class of officers superior to Collectors, each of whom has authority extending over a division comprising several collectorates; his duty being that of watching the proceedings of the Collectors therein, and ascertaining that in every respect they are regular and consistent with just principles of administration.

All matters relating to the settlement, collection and administration of the revenue ultimately fall under the superintendence and control of a Board of Revenue, which exercises a general supervision over the proceedings of Commissioners and Collectors. Some arrangements, not dissimilar, exist for the like purposes under the other Presidencies. Appointments to the Revenue Board, and also to the office of Revenue Commissioner, are made by selection from civil servants employed in the Revenue Department.

---

* The Dusserah is a Hindoo festival continuing for 10 days, which are appropriated to religious ceremonies.

The Mohurrum is a fast kept by Mahomedans in commemoration of the death of Hossein and Hassein, the two sons of Ali by his cousin Fatima, the daughter of Mahomet.

† If the Judges of the Nizamut concur in the verdict of the lower court, and the prisoner be considered deserving of a higher degree of punishment than could be awarded by the Sessions Judge, he may be sentenced to suffer death, or to undergo imprisonment for 21 years; but if sentenced to imprisonment for life, then transportation for life, either to the penal settlements of Singapore, Penang, or Malacca, the Tenasserim Provinces, Arracan or Aden, would be substituted; but no native of India can be transported to New South Wales or the adjacent islands.

MAP OF INDIA
ILLUSTRATING
THE DIVISIONS IN WHICH THE VARIOUS LANGUAGES PREVAIL.

Day & Son, Lith.rs to the Queen.

Henry Hansard, Printer.

(20-111) Ordered to be Printed, 18th August, 1853.

Appendix C.

LANGUAGES.

The Oriental languages taught at Haileybury are—
Persian,*
Oordoo, or Hindostanee,
Sanscrit, and
Teloogoo.

Instruction is also afforded, at the desire of the student, in—
Arabic,
Bengalee,
Hindee, and
Mahratta.

In India, civil servants are required to pass an examination in two languages; viz.—

Bengal:—
North-West Provinces—Persian and Hindee.
Lower Provinces—Bengalee, with either Persian or Hindostanee.

Madras:—
Tamil and Teloogoo.
Encouragement is held out to acquire a third language—
Canarese, Malayala, or Hindostanee.

Bombay:—
Hindostanee, with either Mahratta or Guzerattee.

Arabic is the key to Persian, Oordoo or Hindostanee, Pushtoo, and Sindhee. It is the repository of the Mahomedan faith, and of the laws and civil regulations of Mussulmen.

Sanscrit is the parent of the dialects of Upper India:—

Hindee,	Cutchee,
Bengalee,	Boondela,
Punjabee,	Brig Bhakhur,
Mahratta,	Ooriya, and
Guzerattee,	Assamese, are all its derivatives.

The dialects of Southern India; viz.—
Teloogoo,
Tamul,
Canarese,
Malayala, and
Cingalese, are also closely dependent upon it.

It is the storehouse of the religious ceremonies of the Brahmin, and the language of the laws of Menu, which may be regarded as the basis of the actual civil law of the Hindoo, and the mainspring of his daily avocations.

Oordoo or Hindostanee, the common language of Mahomedans throughout India, is the primitive † language of the Hindoos, modified by those ‡ of their Mahomedan conquerors. The account given of the Oordoo language is as follows:—

> "When Akbar succeeded to the throne of Delhi, A. D. 1555, various races, Hindoo and Mussulman, presented themselves in the royal city. They differed in language and dialect; but when they came to live and traffic together, one language, termed Oordoo, became definitively fixed."

The aborigines of India are found chiefly in the districts of the south-west frontier of Bengal. Little is known of their aboriginal tongue, designated the language of the "Coles." It is from the hill coolies of these tracts that the emigrants to the British colonies have been principally furnished.

The native languages into which the Legislative Acts of the Governor-general in Council are translated for the benefit of the community are—
Persian,
Bengalee,
Oordoo, or Hindostanee.

As a medium for affording useful information to the native officers of Government, *Gazettes* are published in the Bengalee and Hindostanee or Oordoo languages, for official notifications.

In

* Though the use of Persian has been abolished in the courts of the East India Company, a knowledge of that language is indispensable, inasmuch as Bengalee (as spoken by the lower orders), and Hindostanee or Oordoo, are both largely mixed up with Persian.

† Hindee.

‡ Arabic and Persian; thus, as the English language was formed from the union of Saxon and Norman French, so Oordoo or Hindostanee is the fusion of Persian and Arabic with Hindee.

Appendix C.

In 1837 the use of the Persian language in the judicial courts of the East India Company was abolished, and the vernacular of each district substituted. Judicial decrees, embracing the points to be decided, the decisions thereon, and the reasons for such decisions, are now required to be written, first in the language of the judge (European or native), and subsequently translated into the vernacular of the district in which the suit has been decided.

TRADE AND NAVIGATION.

WITHIN the last 20 years, several restrictions which impeded the growth of commerce have been removed, and India may now be said to enjoy free trade. This state of things has been brought about by—

1st. The abolition of transit or inland duties.*

2d. The removal of export † duties on the staple articles of sugar and cotton.

3d. The equalization ‡ of duties on the cargoes of British and foreign ships.

By the abolition of inland duties, the transit of produce for home consumption was rendered free, and a fresh impetus given to the internal trade of the country.

By the withdrawal of export duties on sugar and cotton, the staple produce of India is enabled to compete in foreign markets with the like productions of other countries.§

By abolishing the distinction between British and foreign ships, the latter, previously discouraged from resorting to India by the imposition of double duties, now enter the ports of India on the same terms as their British competitors, and thus afford a vast addition to the means of transport, and an incalculable increase of facilities for its commerce. The same Act (6 of 1848) removed the impediments which obstructed the coasting trade, by abolishing the levy of duty on goods conveyed from port to port.‖ Further,—Asiatic sailors or Lascars, being natives of India and under the government of the East India Company, are now deemed *British* seamen.¶

The degree of expansion resulting to the commerce of India from these measures may be seen from the following comparative statement:

IMPORTS INTO INDIA.**

	Merchandize.	Treasure.	TOTAL.
	£.	£.	£.
1834–35 -	4,261,106	1,893,023	6,154,129
1849–50 -	10,299,888	3,396,807	13,696,696

EXPORTS.

	Merchandize.	Treasure.	TOTAL.
	£.	£.	£.
1834–35 -	7,993,420	194,740	8,188,160
1849–50 -	17,312,299	971,244	18,283,543

Inland

* Transit or inland duties were abolished in—
Bengal by Act 14 of 1836.
Madras „ 6 of 1844.
Bombay „ 1 of 1838.

† The export of *Sugar* to British ports was rendered free of duty under the Tariff Act 14 of 1836. *Cotton* was exempted from export duty by a notification of the Indian Government, dated 31st December 1847.

‡ *Vide* Act of the Government of India, No. 6 of 1848.

§ The chief remaining *staple* products upon which export duties are now levied are Silk and Indigo; but in repect to Indigo it may be stated, that India produces about five-sixths of the total supply, and a considerable export duty may therefore be levied without affecting the demand, or interfering injuriously with the interests of the producer.

‖ *Vide*, also, Act of the Government of India, No. 5 of 1850.

¶ *Vide* 12 & 13 Vict. c. 29, s. 8.

** The import duty on British manufactures (except cotton thread) amounts to 5 per cent.; on cotton thread, 3½ per cent.; on foreign manufactures, 10 per cent.

Appendix C.

Inland customs lines have been established in the interior of the country, between British possessions and the territories of native chiefs. The rates of duty levied nearly correspond with the sea duties.

Although the exports and imports of India have been subject to fluctuation, it will be seen, upon reference to the annexed table, that upon the whole the increase is very considerable. The amount of both imports and exports in the last year of the series is more than double that of the first. Hence it is clear that while the Government revenue has benefited, the people have prospered. It is shown that there has been a greatly increased surplus produce for exportation; and that there is an increased power of consumption is indicated by the imports.

VALUE of the IMPORTS between the several Presidencies of BRITISH INDIA and the United Kingdom and other Countries, in each Year, from 1834–35 to 1849–50.

Note.—The Indian Port-to-Port Trade is not included in the foregoing statements.

Appendix C.

SALT.

BENGAL.

The supply of salt in Bengal is provided partly by manufacture, conducted on account of the Government,* partly by importation, and in one instance† by private manufacture, under a system of excise. The duty‡ on all imported salt is two-and-a-half rupees per maund of 82 lbs., or about three farthings per lb. The same rate of duty is levied as excise on salt manufactured by private individuals; and the Government salt may be purchased at all times in quantities of not less than 50 maunds, at a fixed price, which is composed of the cost price, with the addition of two-and-a-half rupees per maund, or three farthings per lb. The average cost price of production§ is about *Rs.* 80 per 100 maunds, or a trifle below one farthing per lb., thus making the Government selling price under a penny per lb. The supply of salt is no longer a monopoly; its manufacture and sale have not been relinquished by Government, but individuals participate in its provision, both by importation and manufacture, under a combined system of Customs and Excise.

The system of *fixed prices* and *open warehouses* commenced in 1836–37, when the previous system of *fixed quantities* and *periodical sales* was abolished.‖

	Maunds of 82 Pounds.
During the seven years commencing with 1837–38, and ending with 1843–44, the duty on salt was *Rs.* 3. 4 *a.* per maund. The annual average¶ quantity of salt sold and imported during that period was - - - - - - - -	4,627,030
In November 1844, the duty was reduced to *Rs.* 3 per maund, and the annual average sale increased to - - - -	4,966,917
In April 1847, the duty was further reduced to *Rs.* 2. 12 *a.* per maund, and the annual sale amounted to - - - -	5,452,909
In April 1849, the duty was again subjected to reduction, when it was fixed for five years at its present rate of *Rs.* 2. 8 *a.* per maund.	

It will thus be seen that in the five years above adverted to, the reduction effected in the salt-tax amounted to nearly 25 per cent.; but it would appear that no further reduction can for the present be expected, consistently with the maintenance of the revenue, the last reduction, in 1849, having led to no further increase of consumption.

NORTH-WESTERN PROVINCES.

The supply of salt to the North-West Provinces is furnished partly from the Lower Provinces of Bengal, and partly from the Sambhur Salt Lake,** in Rajpootana, and other localities on the western side of India. The salt of Bengal having paid the excise or import duty of *Rs.* 2. 8 *a.* per maund, passes free into the North-West Provinces. The Sambhur and other salt, on crossing the north-western frontier customs line, is subjected to a duty of two rupees per maund, and to a further duty of half a rupee†† per maund on transmission to the eastward of Allahabad, thus coming into competition with the salt of Bengal under an equal duty of *Rs.* 2. 8 *a.* per maund.

MADRAS.

At Madras salt is manufactured on account of Government, and sold for internal consumption at one rupee per maund, or under one farthing per lb.‡‡ The duty on imported foreign

---

* The manufacture is carried on, not by hired labour on the part of the Government, but by a system of pecuniary advances; the parties receiving them being bound to deliver, at a fixed price, all the salt manufactured. Probably 100,000 labourers (called molunghees) are engaged in the manufacture in the Sunderbunds.

† Mr. Prinsep's salt-works at Narrainpore.

‡ The duty is levied at the time of the clearance of the salt from the bonded warehouses.

§ The salt agencies are located along the head of the Bay of Bengal, viz. at Hidgelee, Tumlooke, Chittagong, Arracan, Cuttack, Balasore, Khoredah.

‖ As recommended by the Select Committee of the House of Commons in 1836. All the recommendations of that Committee have now been fully and fairly carried out; viz.—

1st. Open warehouses and fixed prices.

2d. Imported salt to be subjected to the same rate of duty as native manufactured salt.

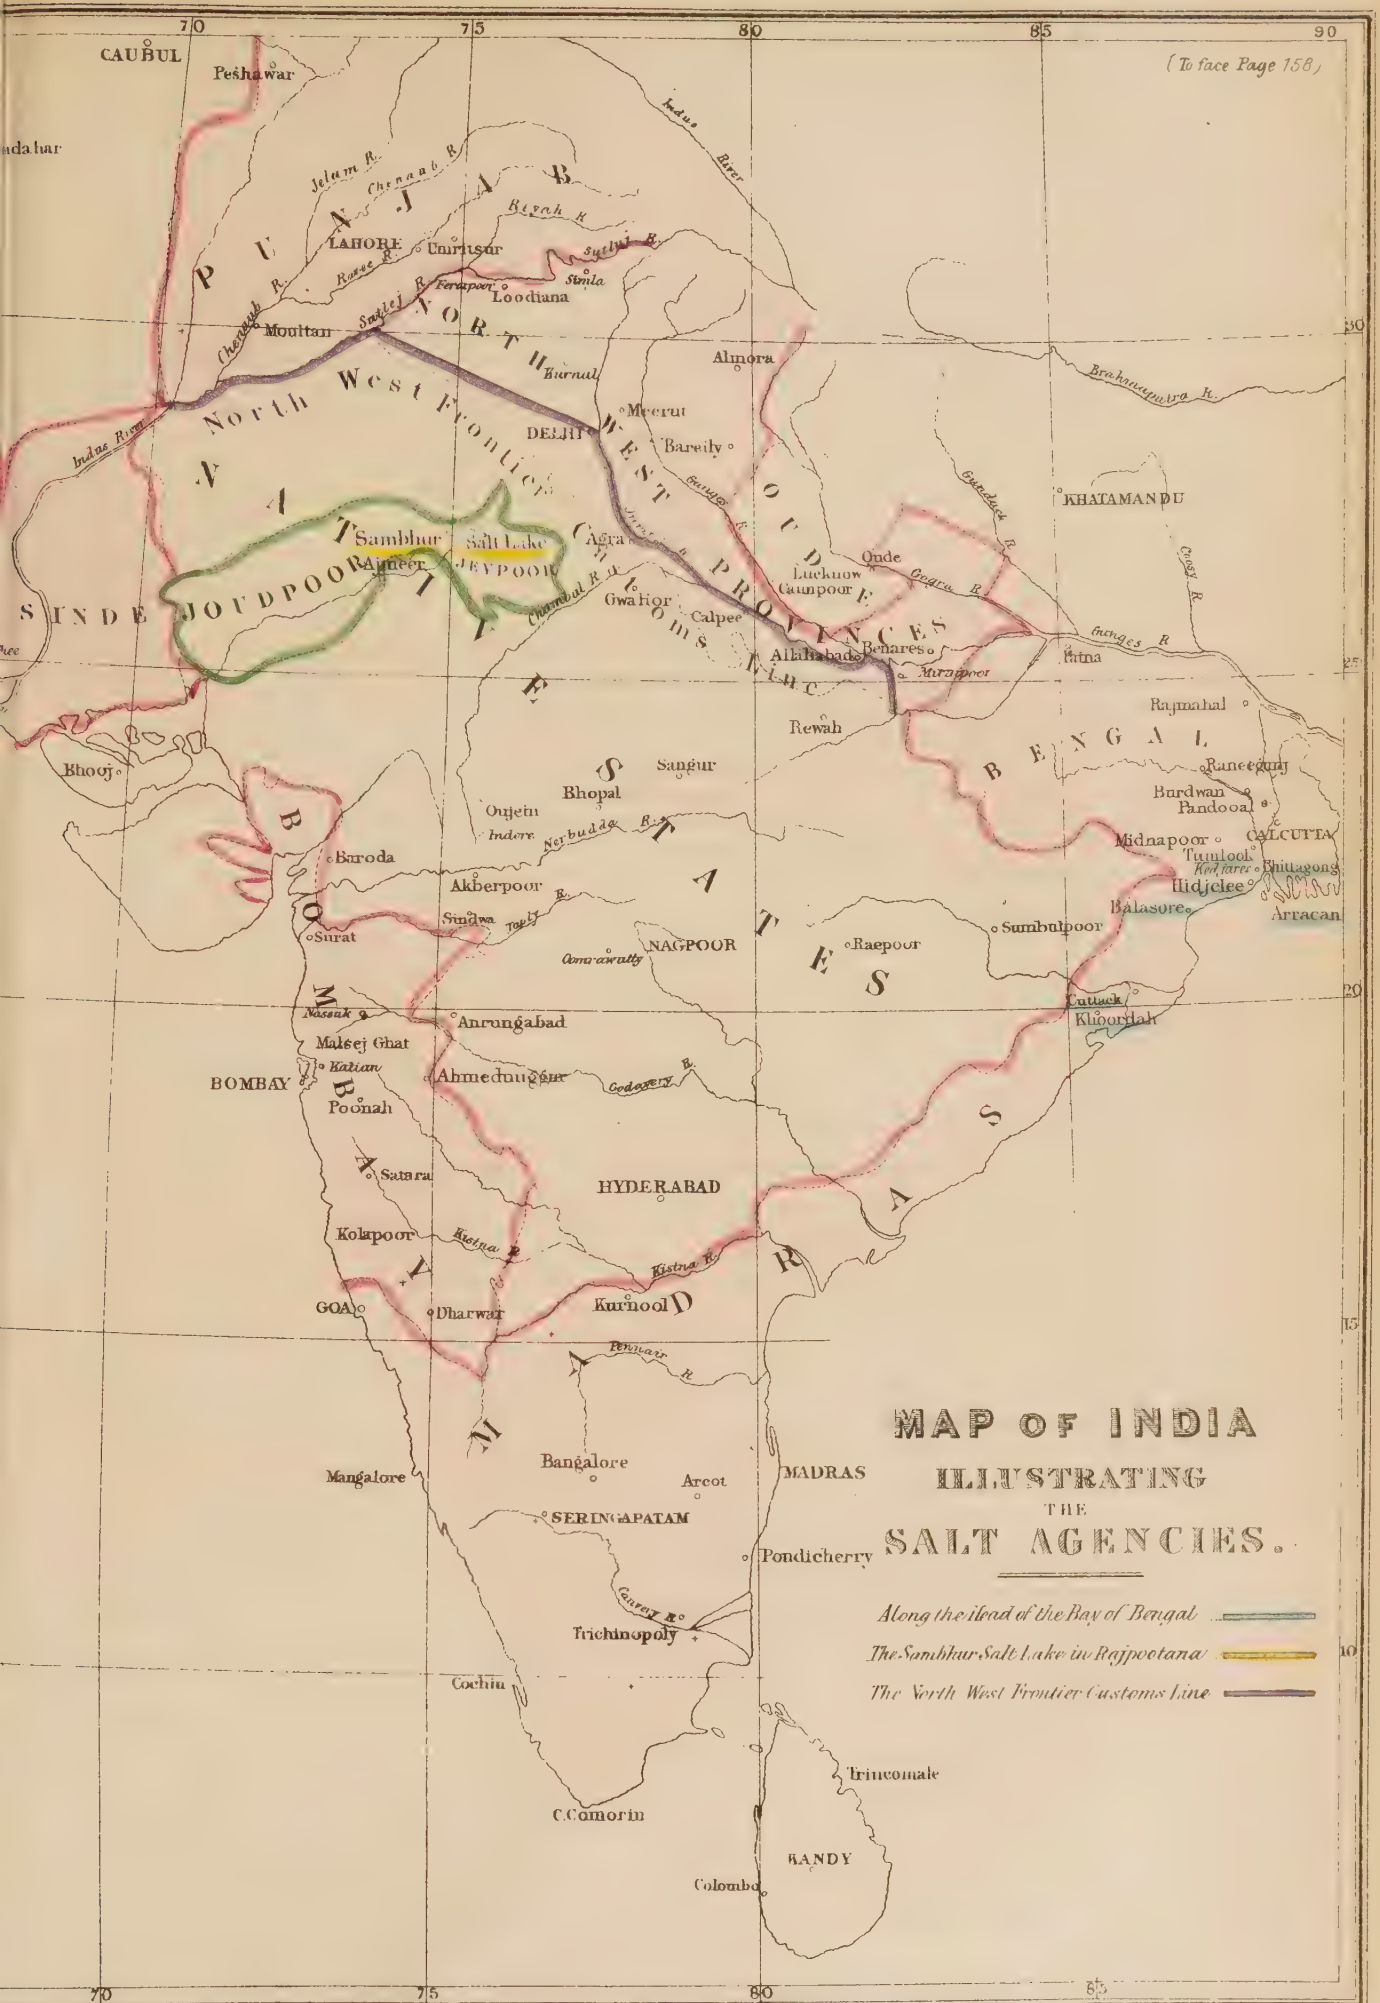
3d. The rate of duty to be fixed below the average of net profit for a series of 10 years (such average having been calculated at *Rs.* 3 per maund).

¶ These averages are exclusive of the quantities disposed of by retail sales, which cannot be given with perfect accuracy.

** The Sambhur Lake belongs to the native States of Joudpore and Jeypore.—*Vide* accompanying Map.

†† The Allahabad special duty was fixed by Act 14 of 1843 at one rupee per maund; but in 1847, and again in 1849, when reduction of duty on Bengal salt was effected, corresponding reductions were made in the Allahabad duty.

‡‡ By Act 6 of 1844, sect. 43, the selling price of the Government salt was fixed at *Rs.* 1½ per maund. It has subsequently been reduced to one rupee, by order of the Court.



Henry Hansard, Printer

(20-III) Ordered to be Printed, 18th August, 1853.

foreign salt was three rupees per maund; but it has been recommended by the home authorities that the import duty should (as in Bengal) be equal only to the difference between the selling price and the cost of manufacture: the difference between the cost price and the price at which the salt is given out for consumption being the duty to be realised.

BOMBAY.

In Bombay the manufacture of salt is carried on by individuals, but subject to an excise duty of 12 annas (1 *s.* 6 *d.*) per maund,* a similar duty being imposed on imported salt. Salt exported from this presidency to Calcutta is subject to the above excise duty, but credit for that amount is given at Calcutta in the adjustment of the local duty. Facilities are also afforded for the export of salt to Malabar, Travancore, Cochin, and other places.

PUNJAUB.

The excise duty on salt at the Punjaub Salt Mines has been fixed at two rupees per maund.

English salt, it is said, may be laid down at Calcutta at 44 *s.* per ton, or about *Rs.* 80 per 100 maunds.†

According to another authority,‡ *Rs.* 65 per 100 maunds is the lowest possible rate at which the transaction could be effected. But salt from the Persian Gulf and other Arab States is laid down at Calcutta at *Rs.* 40 per 100 maunds. It is, therefore, the high cost of producing Bengal salt (*Rs.* 80 per 100 maunds) which alone enables English salt to keep a footing in the Calcutta market.

In Bengal salt is obtained by boiling the sea-water.

In Bombay and Madras the process is that of solar evaporation.

In the Punjaub it is extracted in a pure state from the salt mines.

The Sambhur Salt Lake, in Rajpootana, overflows during the rains, and when the waters subside, a deep incrustation of salt is deposited on its shores for several miles round.

Salt purchased at Calcutta at 1 *d.* per lb., the Government price, is sold at Benares (400 miles from Calcutta, where it comes into competition with the salt from Rajpootana), at 12 lbs. the rupee, or 2 *d.* per lb.; and, moreover, it is stated to be then considerably adulterated. The consumption of salt in India has been usually estimated § at 12 lbs. per head per annum; and assuming the wages of agricultural labour ‖ at three rupees per mensem (the rate now paid on the Calcutta and Bombay mail-road, and also to village watchmen), it would, at Calcutta, absorb the income of five days' labour to provide the quantity required for a year. The salt duty thus operates as a tax of about 1½ per cent. upon the labourer's wages, if he have none but himself to provide for. If he have a wife or children, the per-centage will of course be increased by the amount of their consumption. It is to be observed, however, on the other side, that the wife and children would generally contribute something to the common fund by the earnings of their labour, and thus again reduce the per-centage.

At Benares, the purchase of the same quantity of salt (12 lbs.) would absorb 10 days' earnings, thus constituting a charge of three per cent. on the labourer's income. But for this additional charge the Government duty is in nowise accountable. The difference in price is occasioned by the cost of conveyance, profits of trade, wastage, &c., the ordinary charges of commerce.¶

The pressure of the salt tax on the labourer cannot be regarded as severe, inasmuch as it is the only way in which he contributes to the pecuniary necessities of the State; in all other respects he is not necessarily subject to taxation.

The preceding remarks apply to the Upper and Lower Provinces of Bengal. In the territories of Madras and Bombay, the duty on salt is only about one-third of that which prevails in Bengal; but from other causes the mass of the people are believed to be in inferior circumstances to those of Bengal. In Madras they are still subject to various taxes (moturpha tax, duty on tobacco, &c.), which have been abolished elsewhere.

A comparison of the amount of salt produced, with the numbers of the population consuming it, will show that the estimate which assigns 12 lbs. as the ordinary annual consumption

---

* The duty on salt on delivery from salt-works was fixed, by Act 27 of 1837, at half a rupee per maund. It was subsequently increased to one rupee per maund by Act 16 of 1844, and reduced to 12 annas, its present price, by order of the Court in the same year.

† Aylwyn on Salt Trade.

‡ Calcutta Review.

§ Report of Board of Customs, Salt and Opium: Calcutta, 1819. Also, Calcutta Review, 1847.

‖ In 1846, 2,000 labourers were engaged for employment on the Calcutta and Bombay mail-road, at *Rs.* 3 per head per mensem. *See* also, Regulation XXII. of 1816, sect. 4.

¶ Of these the principal item is cost of carriage; but on the completion of the railway now in progress, this will be greatly reduced in the districts which it traverses. It is computed that the expense of conveying a ton of merchandize will not exceed 2 ¾ *d.* per mile; consequently salt may be carried from Calcutta to Benares for one halfpenny per lb.

Appendix C.

tion of an individual is nearly in correspondence with fact. The quantity of salt sold wholesale and retail, or imported, was, in 1846–47, as under:—

	Maunds of 82 Pounds.
Bengal	6,166,258
North-West Provinces	2,670,943
Madras	4,587,720
Bombay	2,573,625
	15,998,546
	82
	31,997,092
	127,988,368
	1,311,880,772 lbs.

If the entire population of *British* India be assumed at 99,000,000, which, from the latest official information, may be considered as about its actual extent, the above-mentioned quantity of salt would afford to each individual about 13 lbs., the facts collected by statistical research thus corroborating an estimate founded on observation of the habits of the people.

The following Table exhibits the quantity of salt imported into Calcutta from all countries, and also from England, for the last seven years.*

	Imported from all Countries.	From England.
	Maunds.	*Maunds.*
1844–45	970,595	791
1845–46	1,581,968	502,616

Henry Hansard, Pr

COTTON.

THERE are two principal descriptions of cotton plant now cultivated in India, the indigenous and the American.

The indigenous plant of India is an annual, and succeeds best in the rich black soil found in various parts of the country. The American plant, though a perennial, is practically an annual in India.* In some parts of India it is grown successfully † on the black soil, but it thrives better on the light red lands. Each of these productions is possessed of some advantages not inherent in the other. The Indian cotton is capable of being manufactured into fabrics of extraordinary durability, and no less extraordinary fineness; its colour is superior, and on this account it is frequently used in this country in combination with American cotton, to improve the colour of the latter; but its staple is short. In addition to the greater length of staple, American cotton has further advantages over the indigenous production of India; the plant produces more flowers, and each flower a larger pod; while the quantity of seed contained in the pod is smaller and more readily separated from the fibre.

For a period of upwards of 60 years attempts have been made by the East India Company to extend the cultivation of cotton and to improve its staple, as well as the modes of cleaning and packing. Seeds from different cotton-growing countries have been procured; rewards offered to stimulate exertion; and instruments, both agricultural and mechanical, superior to those in native use, have been extensively introduced. The distribution of seed of superior quality commenced as early as 1788. In 1813 the services of an American were 1788.
obtained, with a view of furthering the desired improvement in cultivation and cleaning, and 1813.
American gins were then imported. In 1818, and again in 1831, renewed efforts were 1818.
made. At the latter period experimental farms were established in the southern Mahratta 1831.
country,‡ and in Guzerat;§ but these, after a considerable expenditure, having failed, were,
in 1836, abolished by the local government. In the despatch in which the approval and 1836.
confirmation of this step were conveyed, the Court expressed anxiety "that no means should 1838.
be left untried which might be likely to assist the desirable object of improving and extending the cotton cultivation on the Bombay side of India." And in the same despatch a qualified assent was given to a proposal made in general terms by the local government, for authorising collectors to grant farms of land on favourable terms to respectable persons desirous of cultivating cotton, and, when necessary, to make to such persons pecuniary advances on security. But previously to the receipt of this permission, the Bombay Government had determined upon giving a very large measure of encouragement to this cultivation by exempting from land revenue, for five years, all lands sown with cotton in the Poona and Ahmednuggur collectorates. This proceeding was greatly disapproved by the Government of India, and on the discussion which ensued coming before the Court, their decision was given in favour of the Supreme Government. The Government of India had desired that the effect of the notice to grant the proposed exemption should be limited as much as possible; but the Court directed its immediate formal revocation, respect being had to the rights of those who might previously have taken advantage of it.

In 1839 it was determined to seek information in the cotton-producing districts of the 1839.
United States, and, if practicable, to engage *there* duly qualified persons to proceed to India for the purpose of instructing the natives in improved modes of culture and a better system of cleaning. The design was carried into effect. Ten Americans, experienced in 1840.
the management of cotton plantations, were engaged, despatched to India, and their services distributed in the different presidencies. Government farms were again established in Broach, Dharwar and Candeish, as were also experimental cotton gardens in Rutnagherry. In the last-named collectorate the cultivation of cotton was not generally practised, and after a short unsuccessful trial the experiment terminated. In Broach the culture of 1844.
the New Orleans cotton was stated to have proved a complete failure, and, notwithstanding a large expenditure, no good effects were produced on the staple of the country, beyond the limits of the farm. At a subsequent period, the farms in Dharwar 1846.
were abolished, and the contract system ‖ of cotton culture introduced both there and in Candeish, in which collectorate the soil and climate are said to be well adapted to the culture of Bourbon, Egyptian, New Orleans, and other foreign varieties of cotton.

The results of American management in the Presidency of Bombay, up to the year 1844, are exhibited in the report ¶ from Mr. W. R. Mercer, one of the American cultivators, dated Dharwar, 12th October of that year. The writer of this paper, which is marked by great 1844.
clearness,

* Neither American nor Indian cotton is cultivated on the same ground in India more than once in three years, their properties being found to exhaust the productive powers of the soil.
Evidence before Cotton Committee in 1848, Question 2110, &c.

† Dr. Royle, in Evidence before Commons' Committee on Growth of Cotton in India, 1848, Question 481.

‡ The tract of country comprehending the British districts of Dharwar and Belgaum, and various native jaghires in their vicinity, is thus denominated.

§ Guzerat comprises, in addition to the territory of the Guicowar, the four British districts of Broach, Surat, Kaira, and Ahmedabad.

‖ That is, where cotton of a certain description is grown by the natives, without any interference on the part of the Government beyond an engagement to receive the produce at a fixed price.

¶ East India Company's Manuscript Documents.

Appendix C.

clearness, fairness and intelligence, affirms that Indian cotton has long been known to possess two very remarkable qualities: it "mills" or swells in bleaching, thereby yielding a more substantial fabric; it takes and retains colour better than American cotton; and it would command a good market, provided it were sent in regular supply and of uniform cleanness. Mr. Mercer further expresses his opinion, that the capability of furnishing an article suited to the manufactures of Great Britain is not limited to Broach and Surat, but extends to the whole of Candeish, the southern Mahratta country, and other parts of Western India; the capabilities of the North-Western Provinces, and large portions of the eastern and southern parts of the Madras territory being inferior. The difference of price between the cotton of Broach and Surat, being *sea-board* districts, and that of other more inland districts, he attributes to "difference of handling, and the distance and badness of the routes over which the latter travels." After discussing the comparative effects of soil, climate and culture (to the second of which he attributes great importance), Mr. Mercer comes to the conclusion that the natives of large tracts already employ a mode of cultivating the cotton plant in principle nearly the same as the American, but better suited in some respects to locality, &c.

The great inferiority of much of the Indian article, he says, is the result of what befalls it subsequent to its production in the fields, that is, in the way in which it is gathered and stored, and chiefly the way in which it is separated from the seed and prepared for market, as well as in its transmission to market. At the gathering, in his opinion, the effort for improvement should commence.

Various improvements having been made in the cotton saw-gin, with a view to render it
1846. more suitable to Indian use, the Court, in 1846, desirous of arriving at a just conclusion in regard to the results, as exemplified in Bombay saw-ginned cotton, directed consignments to be made annually of 6,000 bales, to be continued for a period of three years; and in the following year, with a view of testing the capabilities of the different districts, directions were given that the annual consignment should consist of equal quantities of New Orleans and indigenous cotton, and should be drawn from the four collectorates in which measures for the improvement of the article were in progress; viz., Dharwar, Belgaum, Broach and Candeish. It may here be mentioned, that in forwarding to Bombay the account sales of this cotton, the results were stated to be highly satisfactory. Very favourable opinions were pronounced on the article by spinners and other competent judges, and the prices realized were good, for some samples high. In fact, the question as to the capability of India to produce cotton suitable for the use of British manufactures might thenceforth be considered settled.

1848. In 1848, in adverting to the promised supply from the four collectorates, the Court intimated their desire that Government should abstain from entering the market as large purchasers of cotton from American seed, if it found a ready sale among local dealers. The superiority of that cotton being generally recognized in the South Mahratta country, they were of opinion that Government might confine their operations to the supply of seed, and the introduction of improved methods of cleaning by saw-gins, &c.

1849. In the Madras territories, cotton farms were established in the districts of Coimbatore, Tinnevelly and other localities. These farms have been recently discontinued, the object for which they were formed having been fully attained, by demonstrating that the soil and climate are capable of producing cotton suitable to the British market.

It thus appears that within the two subordinate Presidencies there is a considerable extent of country, the soil and climate of which are well adapted to the growth, not only of the indigenous cotton plant, but also of the American plant. The experiments have, moreover, brought to light a fact, which might have admitted of some doubt, viz. that for the most part the Natives are well acquainted with the proper modes of cultivation, and that little or no advantage is likely to be gained from further interference with the ordinary course of agriculture and trade. An ample provision of seed of the superior kinds of cotton for the use of the cultivators (till such time as, by its general diffusion, all interference, even in this way, on the part of the Government, shall become unnecessary) seems all, as far as cultivation is concerned, that can now be beneficial.

The cleaning and packing of the cotton seem, however, still to be very far from perfect, and the introduction of improved methods continues to engage the attention of the home authorities.*

The duty on the export of cotton, and the inland transit duty, having been abolished, all the encouragement that can properly be afforded by fiscal regulations has been extended to this production. There remains another mode in which Government can promote the extension of the growth of cotton and the improvement of its quality, viz. by facilitating the construction of tramways and railroads, where the anticipated amount of traffic would justify the outlay. In some districts the expenses of cultivation and assessment are not so heavy as the expense of carriage to market.

In competition with America for the British trade, India will always have to encounter the disadvantage of distance. But it is not too much to hope that this may be greatly moderated, especially as the cotton manufactures of Great Britain appear to require new and increased sources of supply. Indian cotton is adapted to varieties of goods amounting in weight to about 75† per cent. of the total cotton manufacture of Great Britain. The cultivation

* The services of some of the American planters, Mr. Blount, Mr. Frost, and others, have been re-engaged for the purpose of preparing machinery, superintending cotton experiments, &c. *Vide* Court's Correspondence, 1852.

† Chapman on Cotton and Commerce of India, page 4.

cultivation has to contend with sundry disadvantages,* but these are compensated by the cheapness † of the cost of production; this, in many parts of India, being only $1\frac{1}{2}$ *d.* per lb., while in America it is from 50 to 100 per cent. more,‡ ranging from $2\frac{1}{4}$ *d.* to 3 *d.*

The power of contributing to the required supply is, however, limited by circumstances, some of which only would appear to be under control. The cotton of the Lower Provinces of Bengal is said to be unsuitable to the British market. In the North-west the experimental culture was tried to a certain extent without success, but discouraging incidents appear to have led, in some degree at least, to its somewhat premature abandonment. At Madras, improvement in quality has been simultaneous with extended cultivation; but from the latest official information it would appear that even if the whole of the lands in that Presidency adapted for the production of cotton were so appropriated, the supply, after deducting the quantity required for local consumption and export to China, would bear a very small proportion to the wants of the British market.§ Looking to existing circumstances, it will be seen that if, instead of a part only, the present entire export of cotton from Madras found its way to Great Britain, it would not furnish 2 per cent. of the supply required by the British manufacturers.

For many years past the chief supply of *Indian* cotton, both to Great Britain and the world at large, has been furnished from the port of Bombay, the greater part being raised in Guzerat; ‖ but a just view of the extent and capabilities of the whole of the cotton land lying along the Gulf of Cambay ¶ would lead to the conclusion, that the present growth of Guzerat cotton cannot be materially increased.

Taking the last four years of the Tabular Statement at the end of this paper, the export of cotton from India may be regarded as having attained an amount of between 160,000,000 lbs. and 170,000,000 lbs. per annum;** and it would not appear that in the present condition of India this supply can be greatly exceeded; for though the export of cotton from India to Great Britain fluctuates from year to year (sometimes to the extent of 60 or 70 per cent.),†† yet

* The inferior productiveness of the Indian soil and inferior yield of the cotton plant, the combined operation of the *two* causes, restrict the average out-turn to 100 lbs. of clean cotton per acre, while in America the same area gives at least double the quantity.

† Evidence before Cotton Committee, 1848. Manufacturers of coarse goods in Manchester have a table, by which they see at a glance the respective prices at which American and Indian cotton are equivalent to each other.

§ *See* Note A. at the end of this Paper.

‖ The total export of cotton from India in 1849–50 was 165,655,220 lbs. The Bombay contribution to this total amounted to 150,754,963 lbs., of which 94,226,779 lbs. was the growth of Guzerat. (Report on Internal and External Commerce.)

Appendix C.

yet it will be seen, on reference to the Tabular Statement, that the increased or diminished amount is invariably attended by a corresponding diminution or increase in the supplies to other countries, and that the aggregate annual export from India remains without variation. It may therefore be fairly inferred that the quantity of cotton which, under current prices, India can export at a profit, does not greatly exceed 170,000,000 lbs. per annum.

The average yield of clean cotton in India being not more than 100 lbs. per acre, and cotton being cultivated on the same ground once only in three years, it follows, that to produce the quantity now exported annually, an area equal to upwards of 5,000,000 of acres, or nearly 8,000 square miles, must be appropriated to the purpose.

But if by means of railroads the great cotton * field of Berar, situate within the dominions of the Nizam or Rajah of Hyderabad, were placed nearly on an equality in point of facility of transport with the maritime cotton districts, then a breadth of land sufficient for the growth of a quantity equal to the full demand of Great Britain might at once be made available. It is, however, only by means of a railroad that the territory of Berar can be placed in a position to become a cotton-exporting country.†

Appendix C.

Note A.

The Board of Revenue at Madras have given the particulars of the extent of land actually producing cotton, and capable of producing it, founded on information furnished by the collectors in each district, in answer to queries transmitted by order of the Court of Directors. From the statement submitted, it appears that the present extent of cotton land annually cultivated does not exceed 676,006 acres, or 1,056 square miles. Adding that which is *said to be capable of producing cotton*, the result will be 1,010,852 acres, or 1,579 square miles. In regard to Coimbatore, the quantity of land capable of producing cotton is not specified; but making the most liberal allowance which the limits of probability will admit, and quadrupling the quantity now under such cultivation within that district, the cotton-producing land of the Madras Presidency will not in the whole exceed 1,304,340 acres, or 2,038 square miles; which, at the rate of 100 lbs. of clean cotton per acre, will yield an annual average of 130,434,000 lbs. Deducting from this amount the quantity now exported to China, and that required for local consumption, the residue would not exceed one-twelfth part of the annual requirements of Great Britain.

Note B.

Guzerat.—Extent of Cotton Land round the Gulf of Cambay.

	Miles.	
Length - - - -	220	
Breadth - - - -	30	
	6,600	
	640	
	¼)4,224,000	Acres; but part being unsuitable for cotton, 1–4th instead of 1-3d may be estimated as cultivated with cotton under rotation of crops.
	1,056,000	
	100	lbs. per acre.
	105,600,000	lbs. utmost yield of clean cotton in Guzerat.

Note C.

That cotton cannot be conveyed at a profit from Berar, except by railway, may be proved by the analogous case of salt.

Salt, having paid duty at 2½ rupees per maund, is sold at Benares (400 miles from Calcutta), according to the Government *Gazette*, at 12 lbs. the rupee, or 2*d.* per lb.

At Calcutta, the price of salt is 1 *d.* per lb., which is thus made up:—

Duty, at 2½ rupees per maund of 82 lbs. - - -	0¾ *d.*
Cost of manufacture - - - - - - - -	0¼
	1 *d.* per lb.

The cost of conveyance of salt for 400 miles, and other necessary charges, therefore, enhance the price 1 *d.* per lb., exclusive of the gain made by adulteration, which, it is said, takes place extensively. The cost of conveying cotton could not be less,* but by railway it might be carried for 2¾ *d.* per ton per mile. Cotton might, therefore, be conveyed from Oomrawuttee, and other cotton marts in Berar, to Bombay (400 miles), for 0½ *d.* per lb.; and thus brought to market at a price ranging from 15 to 20 per cent. cheaper than at present, it would be enabled to compete with cotton from America:—

1 ton = 2,240 lbs. 400 miles, at 2¾ *d.* per mile = 1,100 *d.* or 0 ½ *d.* per lb.

Price of cotton, Berar - - - - - - - -	1½ *d.* per lb.
Conveyance to Bombay per rail - - - - - -	0½ „
Freight to England at 3 *l.* per ton of 1,375 lbs. measurement -	0½ „
	2½ *d.* per lb.

---

* The wastage on cotton in transit appears to be equal to that on salt. In the Revenue Letter from Madras, dated 19th September 1848, the rate of loss on cotton in transit to the place of export is stated at from 2 to 8¼ per cent.

OPIUM.

BENGAL.

In Bengal, the revenue from opium is realised by means of a Government monopoly. No person within the Bengal territories is allowed to grow the poppy except on account of the Government.* Annual engagements are entered into by the cultivators, under a system of pecuniary advances, to sow a certain quantity of land with the poppy, and the whole produce in the form of opium is delivered to the Government at a fixed rate.† The engagements ‡ on the part of the cultivators are optional.

The ordinary consequences of monopoly, increase of price to the consumer, and restriction on the employment of capital and industry, are not wanting in the working of the opium revenue system. The free cultivation of the poppy would doubtless lead to the larger outlay of capital, and to greater economy in production. But the poppy requires the richest description of land, and its extended cultivation must therefore displace other products. The price, too, is almost wholly paid by foreign consumers, viz., Chinese, Malays, &c., § and in obtaining the largest returns with the smallest outlay, the best interests of India would appear to be consulted.

BOMBAY.

Opium grown and manufactured within the territories of Bombay is held to be subject to the duty of *Rs.* 12 per Surat seer, ‖ imposed by Bombay Regulation XXI. of 1827, upon opium "imported or brought into any harbour, or roads, or port, or place, either by land or sea, within the presidency of Bombay, or territories subordinate thereto;" and this duty must be paid before its removal. The object of this heavy duty is to discourage its production. The cultivation of the poppy is stated to have ceased in the district of Ahmedabad in 1839, and nearly so in those of Kaira and Candeish. In Scinde the production of opium has been prohibited. The Government purchase all that is produced in Bombay, and supply, through the licensed retailers, the quantity required for home consumption.

CENTRAL INDIA.

A large revenue is derived from the transit of the opium of Malwa through the British territories to Bombay for exportation to China. Previous to the year 1831 the British Government reserved to itself a monopoly ¶ of the article, which was purchased by the British resident at Indore, and sold by auction, either at Bombay or at Calcutta. But in that year it was deemed advisable, chiefly on account of the large quantity of opium smuggled to the Portuguese settlements of Demaun, &c., on the coast, to relinquish the monopoly, to open the trade to the operations of private enterprise, and to substitute, as a source of revenue, in place of the abandoned system, the grant, at a specified rate, of passes to cover the transit of opium through the Company's territories to Bombay. In determining the amount of transit duty, it was proposed to be guided by a comparison of the cost of transit direct to Bombay, with that of the transmission of the drug to the coast by the cheapest of the more circuitous routes through the territories of native states; and on the basis of such a comparison it was fixed at *Rs.* 175 per chest of 140 lbs. each. In 1835, the results of the preceding official year being unfavourable, the shipments of opium from Bombay having largely declined, while those from Demaun had greatly increased, the rate was reduced to *Rs.* 125 per chest.

The subjugation of Scinde afforded opportunity for the levy of a higher rate. Down to the period of that event, a large portion of the opium of Malwa had been conveyed through Scinde to Kurrachee, and thence onwards to the Portuguese ports of Diu and Demaun. That route was now closed, and it was reasonably expected that an advance might be made in the charge of passes, without risk of loss to the revenue from a diminished demand for them. The rate was accordingly increased, in October 1843, from *Rs.* 125 to *Rs.* 200 per chest.

---

* The cultivation of the poppy was prohibited in Bengal by Regulation VI. of 1799, sect. 3; and in the North-West Provinces by Regulation XLI. of 1803, sect 2.

The importation of opium into Bengal is virtually prohibited, the duty being fixed at *Rs.* 24 per seer of 2 lbs., or about double the amount of its present selling price at the Calcutta Government sales.

† *Rs.* 3½ per seer, or about 3*s.* 6*d.* per lb.

‡ In the month of August contracts are entered into with the ryots, and an advance without interest of *Rs.* 4 per beega (nearly two-thirds of an acre) granted by the Government. The sowings commence in November, when another advance is made of *Rs.* 3 per beega. Again, in January and February, when the crop arrives at maturity, a third advance of about *Rs.* 3 per beega takes place to assist the cultivator in gathering the produce. The crop is collected by the end of March.

§ Under the Convention of 1815, the French Government of Pondicherry are supplied with 300 chests of opium annually, at the average price obtained at the Calcutta sales.

‖ The Surat seer consists only of 35 tolahs; the duty on opium is, therefore, somewhat heavier than in Bengal.

¶ By separate treaties with the native princes of Central India, and which were subsequently cancelled.

Appendix C.

chest. Upon the principle that it was desirable to fix the price at the highest amount which could be levied without forcing the trade into other channels, a further increase was made in 1845, when it was determined that the charge should be *Rs.* 300 per chest. Under the like views it was, in 1847, raised to *Rs.* 400 per chest.

Poppy seed is sown in Malwa in November; the plants are in flower in the early part of March, and from that time till the end of April the extraction of the juice proceeds. During the hot weather in May, the extracted juice is allowed to settle, and in June and early in July the cakes are manufactured.

STATEMENT, showing the Receipts from the Opium Revenue, from the Year 1834–35.

Note.—A chest of Bengal opium, containing 164 lbs., or 80 seers, would cost the Government, at *Rs.* 3. 8 *a.* per seer, *Rs.* 280, and sell at Calcutta for upwards of *Rs.* 900, yielding a profit of about 7 *s.* 6 *d.* per lb.

A chest of Malwa opium, containing 140 lbs, upon which the transit duty of *Rs.* 400 had been paid, would afford a revenue to Government of about 5 *s.* 8 *d.* per lb.

STATEMENT, exhibiting the Number of Chests of Opium sold in Bengal, or exported from Bombay.

YEARS.	BENGAL.	BOMBAY.
	Number of Chests of 164 lbs. each.	Number of Chests of 140 lbs. each.
1840-41	17,858	16,773
1841-42	18,827	14,681
1842-43	18,362	24,337
1843-44	15,104	13,563
1844-45	18,350	20,660
1845-46	21,437	12,635
1846-47	21,648	18,602
1847-48	30,515	15,485
1848-49	36,000	16,509*

* It is stated, that neither the price of opium, nor the extent of cultivation in Malwa, has been affected by the great enhancement of the pass-duty which has taken place since 1845.

EDUCATION.

In 1813, Parliament directed that the sum of 10,000*l.* per annum should be set apart from the surplus revenues of India, and applied to the revival and improvement of literature.

Nothing, however, was done in consequence until 1823, when the Government of Bengal appointed a Committee of Public Instruction,* and placed at their disposal the arrears of the Parliamentary grant from the year 1821.

The sum now disbursed from the gross revenue for educational purposes amounts to between 70,000*l.* and 80,000*l.* per annum.

Previously to the date last mentioned, the only native educational establishments founded in India by the British Government were the Mahomedan College at Calcutta and the Sanscrit College at Benares, established respectively in 1781 and 1792.† The Hindoo College of Calcutta, though founded in 1816, was not transferred to Government superintendence until 1823. In 1835 the number of seminaries had increased to 14; there are now in Bengal and the North-Western Provinces upwards of 40.

In the earlier-founded colleges the studies were purely Oriental; in those subsequently established they are European. The preservation of native learning ‡ was the avowed object in the one case; the communication of useful knowledge, and the affording facilities for the study of elegant literature, were the ends sought in the other.

The instruction of the masses in this knowledge was avowedly the ultimate end to be attained; but several years were unfortunately lost, pending the result of the experiment resorted to in the first instance, of translating English literature into Arabic and Sanscrit, the classical languages of the East. Under this arrangement, before a Native student could become versed in European knowledge, it was indispensable that he should first become an accomplished Oriental scholar.§ The scheme ended in failure.

But immediately after the termination of the last Charter Act in 1834, the subject again came under consideration, and on the 7th March 1835, the Government of India passed a resolution, substituting the English for the Oriental scheme of education. ‖

The new plan offers to the Native student a complete education in European literature, philosophy

---

* Subsequently merged into a Council of Education, retained by Government for advice and reference, and acting ministerially.

† The motives to the establishment of these institutions were—

1st. To gratify national predilections, and thus to gain over the learned and influential classes; and,

2dly. To secure a regular supply of Hindoo and Mahomedan law officers for the courts of law.

‡ Speaking of native literature, Bishop Heber observes:—

"The Mussulman literature very nearly resembles what the literature of Europe was before the time of Copernicus, Galileo, and Bacon. The Mussulmans take their logic from Aristotle, filtered through many successive translations and commentaries; and their metaphysical system is professedly derived from Plato. Both Mahomedans and Hindoos have the same natural philosophy, which is also that of Aristotle in zoology and botany, and Ptolemy in astronomy, for which the Hindoos have forsaken their more ancient notions of the seven seas and the six earths."

Rammohun Roy, in reference to the Sanscrit College, says:—

"It can only load the minds of youth with grammatical niceties and metaphysical distinctions of no practical use. The pupils will acquire what was known 2,000 years ago, with the addition of vain and empty subtilties."

In a despatch written in 1821, the Court of Directors observe:—

"In teaching mere Hindoo or mere Mahomedan learning, you bind yourselves to teach a great deal of what is frivolous, not a little of what is purely mischievous, and a small remainder, indeed, in which utility is in any way concerned."

§ It was urged that native co-operation would be more readily afforded by giving the preference to the learned languages of the East. Sanscrit and Arabic were to be the keys of knowledge. Students thus educated to a high standard, in both Eastern and Western learning, were to issue forth among their countrymen as authors, translators and teachers; and, from their united efforts, a new knowledge and more enlarged ideas were to be more and more diffused, until, at length, all classes should participate in the advantages of education.

‖ "His Lordship in Council directs, that all the funds which these reforms will leave at the disposal of the committee be henceforth employed in imparting to the native population a knowledge of English literature and science, through the medium of the English language."

Five years before the adoption of the English scheme, the home authorities had indicated their sentiments on its merits as follows:

"We think it highly advisable to enable and encourage a large number of natives to acquire a thorough knowledge of English, being convinced, that the high tone and better spirit of European literature can produce their full effect only on those who become familiar with them in the original language. While, too, we agree that the higher branches of science may be more advantageously studied in the languages of Europe, than in translations into the Oriental tongues, it is also to be considered, that the fittest persons for translating English scientific books, or for putting their substance into a shape adapted to Asiatic students, are natives who have studied profoundly in the original works."—Despatch, 29th September 1830.

Appendix C.

philosophy and science, through the medium of the English language;* it introduces him to the entire range of science and literature, so far as he is able to receive it, the limit being that alone fixed by nature in regard to his own capacity. English is now the classical language of India. Colleges and schools have been established in the principal cities and towns, and the old Mahomedan and Hindoo institutions, though upheld as seminaries of Oriental learning, have had English classes attached to them. Stipends (formerly paid to pupils without reference to ability, diligence or acquirements) have been abolished, and in lieu thereof scholarships have been founded, which can be gained only by passing a satisfactory examination. Junior scholarships are also attached to the new schools, tenable at the central college, to which the school is subordinate, and where a higher course of instruction is available.

Ten years subsequently to the adoption of the new plan, another important step was taken by the Government. With a view of fostering a general desire for education, the resolution of the 10th October 1844 was passed, promising preference of selection for public employment to students of distinguished ability. So strong is the desire to enter into the service of Government, that one of the princes of Mysore availed himself of the Government resolution, passed the prescribed examination in 1850, and offered himself as a candidate for public employment.

In its attempts to introduce and extend the pursuit of the higher branches of sound and useful learning, the Government may be regarded as completely successful. Every year will add something to the evidence of its success. But though equally zealous to communicate to the masses that more limited measure of knowledge which they require, and which it is important they should possess, the efforts of the Government in the Lower Provinces of Bengal have not prospered in like manner. Scholars have been trained, from whom the gradual formation of a vernacular literature might have been expected; but the apathy of the people would render such literature useless and unavailing for their improvement, seeing that, being destitute of the first elements of education, they would be unable to profit by that which might be prepared for their instruction. That which is wanting was something to dispel this apathy, and this in the North-Western Provinces has happily been found.

Under the New Revenue Settlement there, the rights of every cultivator, whether landlord or tenant, had been ascertained and recorded; and for the protection of their rights, a system of registration of titles to land had been introduced. The registers are open to all who choose to inspect them. But of course none but those able to read and write can avail themselves of the advantages they offer to any extent, while to the full enjoyment of them, some knowledge of arithmetic and of the principles of land measurement is requisite. The utility of knowledge thereupon presented itself to the minds of the people, and a desire was consequently manifested for its acquisition—to a sufficient extent, at least, to ascertain their rights. This stimulus was wanting in the Lower Provinces of Bengal, where the rights of the cultivators had been swept away by the permanent settlement; but in the North-West Provinces the people were rousing themselves, and actually requiring education, while in other parts of India, all the influence of Government could not secure its acceptance. Here was an admirable opportunity, and it was well improved. During the last few years the Government has met the wishes and necessities of the people in this respect, and the people have zealously seconded its exertions. The latter have been aided by pecuniary grants. The Government has also established model schools, and caused to be prepared and printed a series of books, the want of which must have frustrated the success of the movement. Vernacular schools have sprung up in various parts of the country, and a vigilant and well-organized system of inspection is maintained, so as to secure their efficiency. The more indispensable objects of instruction—reading, writing, arithmetic and mensuration—enter into the course of all; and, where practicable, a few other studies, as geography, history, &c., are admitted. Under this system, a few years must effect a vast change in the North-Western Provinces in respect to education.

---

* In the Educational Report for 1849, Mr. Bethune, then filling the office of Legislative Member of the Supreme Council of India, observes:—

"There is no institution in England with which I am acquainted where the published answers of the students are subjected to so strict and severe a test. I have no hesitation in saying, that every succeeding examination which I witness increases my admiration of the acuteness and talent, literary and scientific, which are evinced by the educated young men of this country."

The subjects selected for the Scholarship examination of 1849, were—

Literature.—Addison, Goldsmith, Bacon, Campbell, Elphinstone. Hume and Arnold for prose and history.

Mathematics.—From Euclid to optics and astronomy.

Mental Philosophy.—Reid's Inquiry, Mill's Logic, Smith's Moral Sentiments.

Calcutta to Bombay

Bombay to Agra

Day & Son, Lith.rs to the Queen.

Henry Hansard, P.

(20-III.) Ordered to be Printed, 18th August 1853.

PUBLIC WORKS.

Among the works of public utility which have been undertaken, continued or completed by the Governments of India within the last 20 years, may be especially noticed, under—

TRUNK-ROADS.

1. The new trunk-road from Calcutta to Delhi, and thence to Lahore and Peshawur.
2. The Bombay and Agra Road.
3. The Calcutta and Bombay Mail-road.

The direction of these roads will be observed on reference to the following sketch-map:—

1st. The trunk-road from Calcutta to Delhi, and thence to Peshawur (commenced about 1836), is 1,423 miles in length, viz.:—

	Miles.
Calcutta to Delhi	887
Delhi to Kurnoul	78
Kurnoul to Loodiana	124
Loodiana to Ferozepore	74
Ferozepore to Lahore	50
Lahore to Peshawur	210
	1,423

The cost of constructing this road to Delhi, including bridges, amounted to *Rs.* 81,94,104, or nearly 1,000*l.* per mile, exclusive of the expense of convict labour: it has now been completed to Kurnoul. The road is what in India is termed metalled, or macadamized. The cost of maintaining it in repair, after completion, is estimated at *Rs.* 350 per mile, or for the whole distance about 50,000*l.* per annum.

2d. The Bombay and Agra road was commenced under Lord Auckland's administration, in 1840. The length of this road is 734 miles; viz.:—

	Miles.
Agra to Indore	370
Indore to Akberpore	51
Akberpore to Sindwa	43
Sindwa to Bombay	270
	734

This road is not macadamized, except in parts. The expense of construction amounted to 243,676*l.*, or about 330*l.* per mile. The cost of repair is calculated at *Rs.* 70 per mile, or for the whole distance about 5,000*l.* per annum.

3d. The formation of the Calcutta and Bombay mail-road was sanctioned by the home authorities in 1840. The length from Calcutta to Ahmednuggur is 1,002 miles. The cost of construction was estimated at 500*l.* per mile, or about half a million sterling for the whole. The continuation of the road from Ahmednuggur to Poona (74 miles) and thence to Bombay (94 miles) had been previously constructed.

	Miles.
Calcutta to Sumbulpore	307
Sumbulpore *viâ* Raepore to Nagpore	339
Nagpore to Ahmednuggur	356
	1,002
Ahmednuggur to Poona	74
Poona to Bombay	94
	1,170

In 1845 the Court directed that the expenditure on this line should be restricted to the formation of a road adapted to the transit of the mails. In 1846, 2,000 labourers were engaged for employment on the portion of the road between Calcutta and Nagpore; and it

Appendix C.

was then stated that the road would shortly be placed in a most effectual state for the transmission of the mails at all seasons. Should the ultimate cost of construction be equal to the estimate sanctioned in 1840, the expense of this road will, as above stated, amount to 500,000 *l.*, or 500 *l.* per mile.

SUMMARY:

	Length.	Cost.	Annual Repairs.
		£.	£.
Grand Trunk Road (when completed to Peshawur at the same rate of cost) - - -	1,423	1,423,000	50,000
Calcutta and Bombay Road, as per original estimate - - - - - - - -	1,002	500,000	35,000
Bombay and Agra Road - - - -	734	243,676	5,000
	3,159	2,166,676	90,000

The above have been selected only as illustrating the measures in progress for the advancement of India by means of extended and improved roads. Many similar works which, though of minor extent, are of equal utility, have been either completed or commenced.

CROSS-ROADS.

With regard to cross-roads, separate provision has been made for their improvement, and funds specially set apart for the purpose, consisting of—

1st. The net profits arising from the tolls on public ferries.

2d. (In the North-West Provinces.) The one per cent. fund paid by the landholders on the amount of the Government revenue.

The proceeds of these are carried to a general fund, and re-distributed among local committees, with the view to local improvements. The general results of the arrangement may be estimated from observing the effects in a particular district.

The amount allotted to Cawnpore, and placed at the disposal of the committee, averages *Rs.* 28,000 per annum. The grand trunk-road traverses this district, which is maintained solely at the expense of Government. But, in 1848, the committee had completed a new road from Cawnpore to Calpee. This road is 40 miles in length, and is macadamized throughout. The remaining cross-roads in this district, under the charge of the committee, measure about 300 miles, and are repaired annually upon the cessation of the rains.

Another measure recently adopted is calculated materially to improve the means of internal communication. An Act has been passed (No. 8 of 1851), empowering the several Governments to levy tolls (not exceeding the rates specified in the schedule) on roads and bridges, thereafter made or repaired at the expense of Government; the net proceeds to be appropriated to the construction of roads and bridges in the Presidency from which they are drawn. It may, therefore, be presumed, that wherever the traffic is calculated to pay for the maintenance of a road, every encouragement will be afforded for its construction.

CANALS.

The whole volume of water from the rivers of the Himalayas, available for irrigation, has been estimated at about 24,000 cubic feet per second in the dry season; viz.:—

Ganges - - - - - - - - - - -	6,750
Jumna - - - - - - - - - - -	2,870
Ravee - - - - - - - - - - -	3,000
Chenaub - - - - - - - - - -	5,000
Sutlej, at Rooper - - - - - - - - -	2,500
Jhelum - - - - - - - - - - -	4,000
	24,120

Each cubic foot per second has been found adequate for the annual irrigation of 218 acres of land; but as one-third only of a district is usually irrigated, the remainder bearing dry crops not requiring irrigation, a cubic foot of water per second would be sufficient for the irrigation of 654 acres, or about one British square mile; a surface of 24,000 square miles may, therefore, be ultimately irrigated by these rivers.

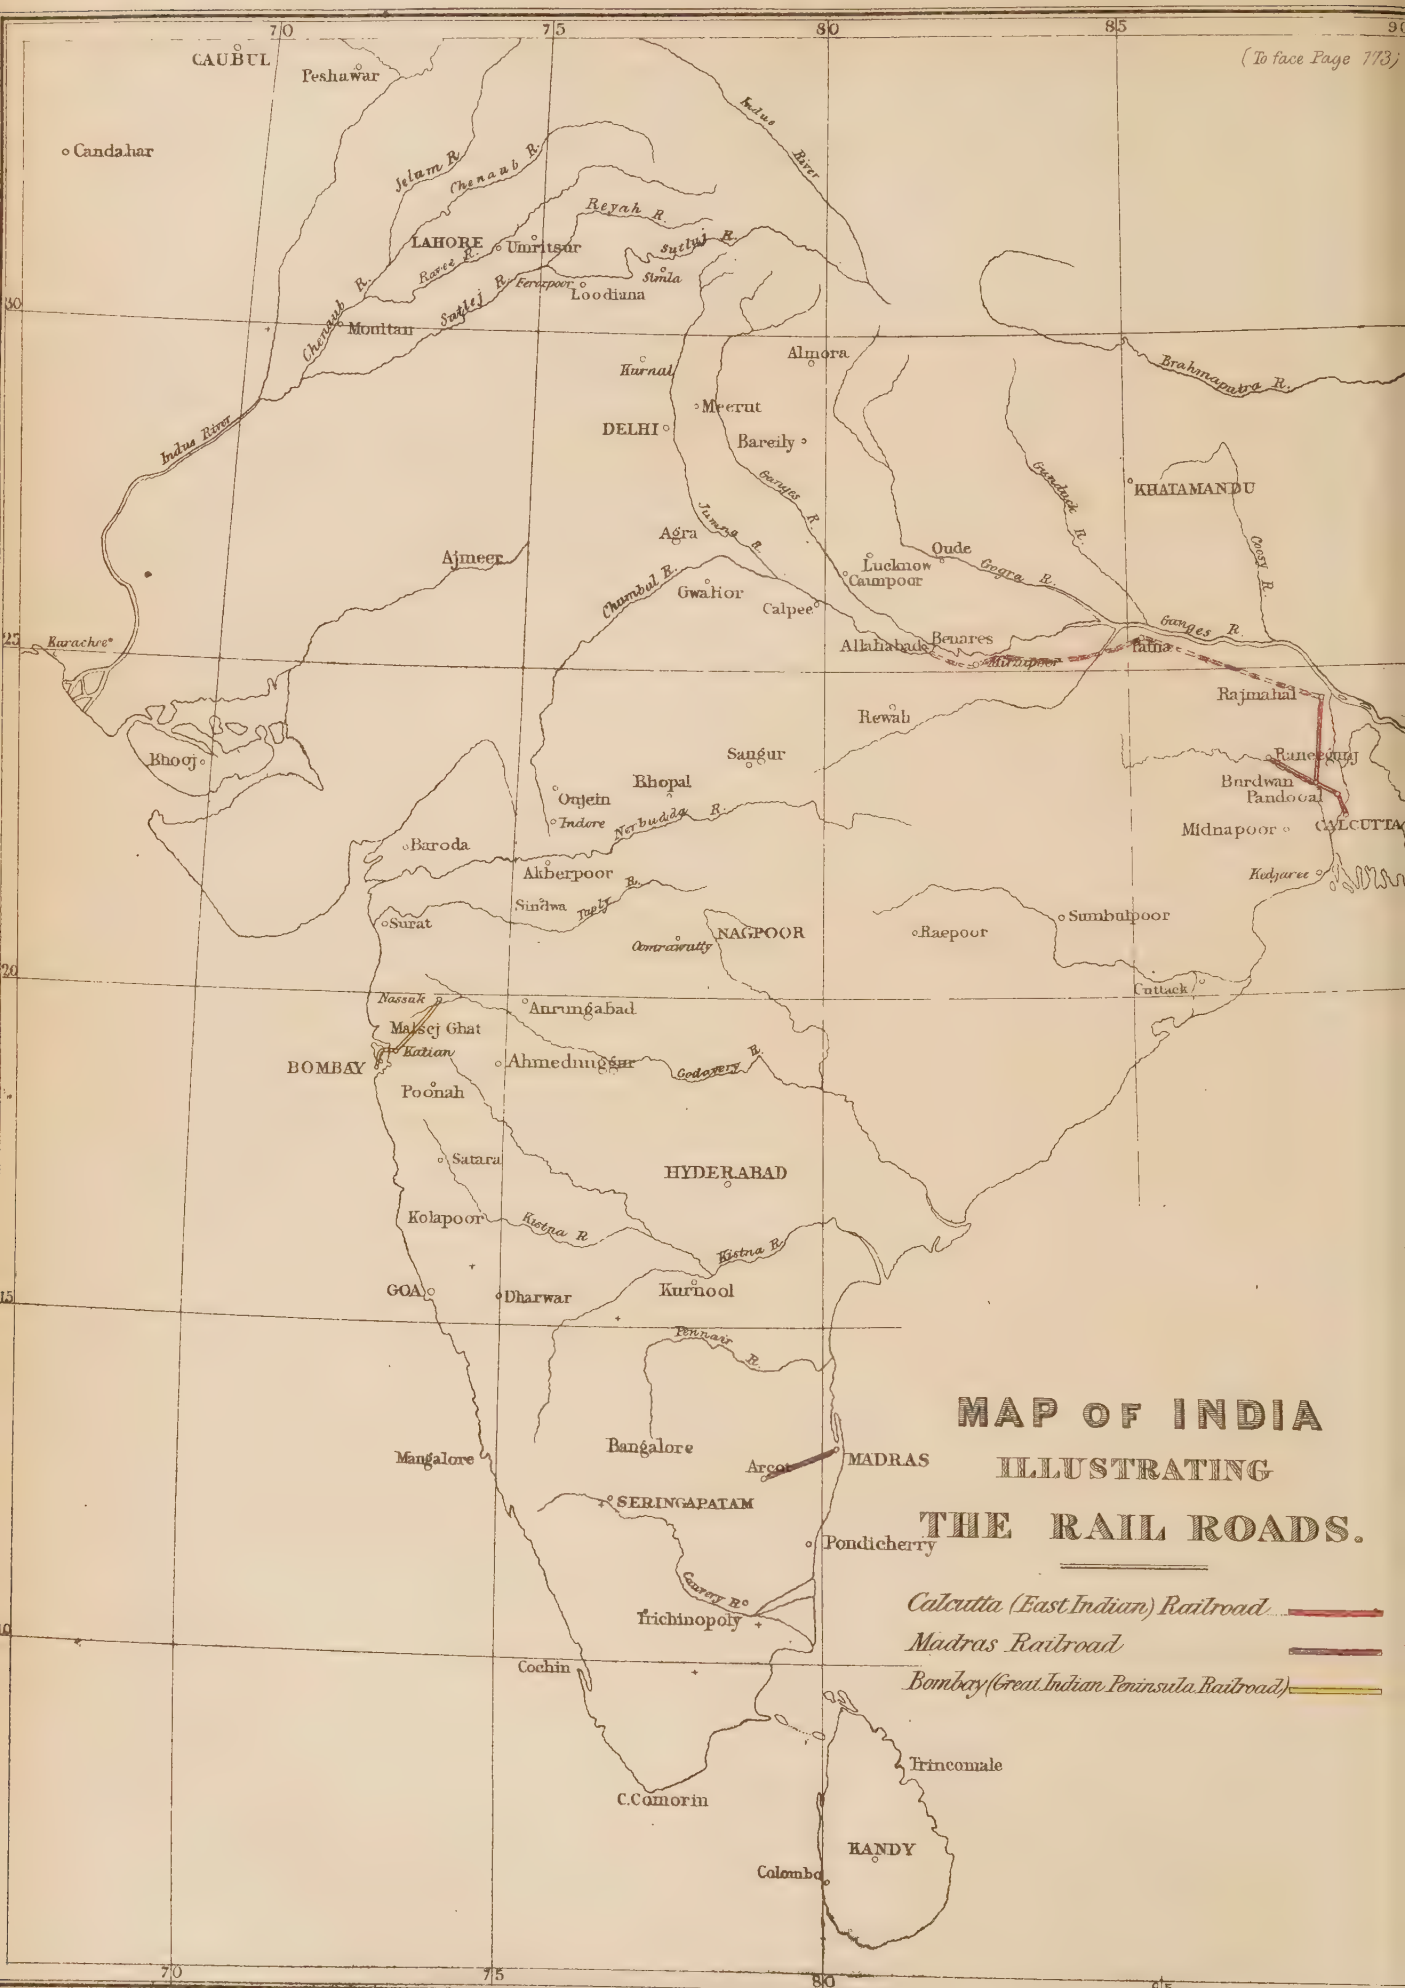
(To face Page 773)



MAP OF INDIA
ILLUSTRATING
THE RAIL ROADS.

Calcutta (East Indian) Railroad

Madras Railroad

Bombay (Great Indian Peninsula Railroad)

W. & Son Lith.rs to the Queen.

Henry Hansard, Printer.

(20-111) Ordered to be Printed, 18th August, 1853.

Of the entire volume of water hitherto running waste, one portion has already been applied to purposes of irrigation. The whole stream of the Jumna has been diverted from the main channel into two canals, called the Eastern and Western Jumna Canals.

	Miles.
The length of the Western Canal, with its branches, extends to -	425
That of the Eastern to - - - - - - - - - -	155
	580

The Ganges Canal is rapidly advancing to completion. Its main object is the irrigation of the North-Western Provinces. A ridge of land rises slightly above the level of the adjacent country, and runs along the centre of the Doab, sloping down on the one side to the Jumna, and on the other to the Ganges. The canal has been constructed on the top of this to the vicinity of Allyghur, whence it diverges in two channels, one to Cawnpore, and the other to Humeerpore *viâ* Etawa, with three offsets, termed the Futteghur, Bolundshuhur and Coel branches.

The total length of the canal, with its branches, will be 810 miles; viz.:

	Miles.
Hurdwar to Allyghur - - - - - - - - -	180
Allyghur to Cawnpore - - - - - - - - -	170
Allyghur to Humeerpore - - - - - - - -	180
Branch to Futteghur - - - - - - - - -	170
Ditto to Bolundshuhur - - - - - - - -	60
Ditto to Coel - - - - - - - - - -	50
	810

The total cost of the canal is estimated at 1,555,548 *l.*, of which 722,556 *l.* has been already expended. It is believed that water will be admitted in the main lines in the course of next year.

The Ravee Canal (Punjaub) is also in progress. The total length of this canal, with its branches, will be 450 miles; the cost to be defrayed from the sum of 500,000 *l.*, which has been sanctioned by the home authorities for the construction of canals in the Baree Dooab. The main channel proceeds from the canal head, on the Ravee River, to Dinanuggur, there throwing out a branch to the eastward; the main channel proceeds in a southward direction, throwing off another branch to the westward; the wants of Lahore and Amritser being supplied by minor channels.

MADRAS.

There are also some extensive systems of canal irrigation within the Madras Presidency; those, for instance, on the Godavery, Cauvery and Kistna Rivers.

In 1841, the estimated expenditure for completing the Cauvery annicut (dam thrown across the river, to bank up the waters) was 50,000 *l.*, of which sum 35,000 *l.* had then been disbursed.

In 1849, an outlay of 91,120 *l.* was sanctioned by the Court for the completion of a system of irrigation by the waters of the Godavery.

And in 1850, an estimate of 150,000 *l.* was sanctioned for a similar purpose in connexion with the Kistna River.

RAILROADS.

BENGAL.

The railroad from Calcutta to the North-Western Provinces was projected in 1844. The contract for its construction, between the East India Company and the Railway Company, was signed in August 1849. The expenditure of 1,000,000 *l.* was sanctioned for the first section; viz., from Howrah, opposite Calcutta, to Raneegung *viâ* Pundooah and Burdwan.

The line is to be continued from Burdwan, in a northerly direction, to Raj Mahal, and thence probably along the right bank of the Ganges to Patna, Mirzapore and Allahabad. A further sum of 1,000,000 *l.* has been sanctioned for the purpose of continuing the extended line

Appendix C.

line to Raj Mahal, the whole expense not having yet been estimated. The East India Company guarantee interest on the capital advanced for this purpose, at the rate of 5 per cent. per annum for the first million, and 4½ per cent. for the second.

MADRAS.

The sum of 500,000 *l.* has been sanctioned for a railway in this Presidency. The execution of the line has been undertaken by a company, under contract with the East India Company. It will commence at Madras, and take a westerly direction, probably to Arcot, the determination of its ultimate route being postponed till the surveys have been taken of the Eastern Ghats, in order to ascertain the most desirable point to cross. The interest to be paid on the above-mentioned sum is guaranteed at 4½ per cent. per annum.

BOMBAY.

An experimental line of railway from Bombay to or near Calian, with a view to its extension to the Malsej Ghat, was authorised in 1849. The capital of the Railway Company, 1,000,000 *l.*, is entitled to bear interest at 5 per cent. per annum.

ELECTRIC TELEGRAPH.

Between Calcutta and Kedjeree, a system of telegraphic communication has been established, measuring, with its ramifications, a distance of 82 miles, at a cost of 5,200 *l.*

It has now been determined to establish an entire line of telegraphic communication, measuring 3,150 miles, connecting Calcutta, Madras, Bombay, Agra, Simla and Lahore; the cost is estimated at 35 *l.* per mile, or 110,250 *l.* for the whole distance.

THE TRIGONOMETRICAL SURVEY.

This survey establishes data for delineating the geography and topography of India. An arc of the meridian has been measured with great care and precision, from Cape Comorin to the Sub-Himalaya Mountains, a distance of 1,460 miles. This important work was brought to a successful termination in 1840. A few years later (1847), the home authorities authorized the Indian Government to continue the survey operations in the north-west, and to extend them to the extreme limits of the empire (Peshawur).

Meanwhile, the great Atlas of India, upon a scale of four miles to the inch, and based upon triangulation, has been in course of preparation. This work has proceeded *pari passu* with the operations of the survey, and is now advancing to completion.

The area triangulated to the end of 1848 amounted to 477,044 square miles, at a cost of 341,278 *l.*, or about 14 *s.* per square mile. The completion of the survey may be looked for in three or four years.

The triangulation supplies an accurate basis upon which the revenue surveys are constructed.

The expense of the revenue survey and settlement of the North-Western Provinces, recently completed, was as under:—

Revenue survey - - - - - - - -	£. 235,655
Ditto settlement - - - - - - - -	337,069
	£. 572,724

Revenue surveys of the Lower Provinces of Bengal (that of the Upper Provinces being, as above noticed, complete), and also of the Bombay territories, are now in progress, and ultimately the plan will be extended to the whole of India.

KURRACHEE MOLE AND ROAD.

The attention of Government has been extended to the improvement of the newly-acquired Province of Scinde, and among the public works constructed in this territory may be mentioned Kurrachee mole and road, at an expense of 30,961 *l.*

SURVEY OF THE MANAAR GULF.

This survey was completed a few years since, at a cost of 24,625 *l.*; one of its immediate practical results was the formation of the

PAUMBUM PASSAGE.

By this passage, the obstructions to the sailing of vessels between the island of Ceylon and the main-land of India were removed, and a practicable channel opened at a cost of 16,394 *l.*

RIVER

RIVER COMMUNICATION.

The Indian Government have established steam-vessels for the conveyance of both goods and passengers on the Ganges, and very considerable sums have been expended on that river in the removal of obstacles to navigation below Allahabad.

On the Indus, also, the Government have established steam-vessels for the conveyance of both goods and passengers from Kurrachee to Mooltan, and purpose extending the line to Kalabagh on the Indus, and to Jhelum on the river of that name.

Many other undertakings (not intended for Government purposes) might be enumerated, such as plantations and farms for promoting the culture and improving the quality of important agricultural productions, as tea, cotton, &c.; establishments for improving the breeds of useful animals, the construction of docks and of various works for maritime and commercial advantages. The expenditure upon these and objects of similar character, where the public benefit and convenience were the purposes in view, has been very considerable.

The following STATEMENT exhibits the amount expended on account of public works in India, comprising roads, bridges, embankments, canals, tanks and wells, in each of the following years, being the latest period up to which the accounts have been received :—

STATEMENT, showing the Amount expended on account of Public Works in India, comprising Roads, Brid

It is necessary to state, that the above Return is strictly confined to public works of the nature and character referred to in the title of the Statement, and that all buildings, civil or military, except so far as they are connected with such works as bridges or roads, are excluded.

Further, the above amount of expenditure is exclusive of the salaries and allowances of civil and military servants, by whom the respective works have been designed, and under whose superintendence they have been carried into execution. These could be furnished for Bengal and Agra, but not for the whole of India.

Between 1833 and 1838, about 13,000 convicts were constantly employed on the great trunk and other roads. The expense of their ordinary maintenance does not appear in the above Return, nor the additional expense incurred by their employment on these works. The extra cost of a convict sent to one of the road gangs was estimated, in 1838, by the Prison Discipline Committee, of which Mr. Macaulay was a member, at *Rs.* 24 per annum, arising from the expense of guards, additional clothing, care during sickness, &c. The Government expenditure was consequently enhanced at the rate of 31,200 *l.* per annum, or 156,000 *l.* in the series of five years.

Under the permanent settlement of Lord Cornwallis, the zemindars of Bengal are under obligation to keep in repair the roads and river embankments within their respective estates. The funds for this purpose may be considered to be supplied by Government, as a proportionate deduction, probably 100,000 *l.* per annum, was made from the rent of the several estates.

There

mbankments, Canals, Tanks and Wells, in each of the following Years, being the latest Period up to which the een received.

																						Total - - - *Rs.*			4,49,59,921	9	9¼
																						Average of 15 Years - - - £.			299,732	–	–

There can be no doubt that the disbursements in the two or three years following 1850–51 will be greatly in excess of the expenditure of that year, inasmuch as, in addition to the ordinary outlay, they must include the larger proportion of the sum of two millions sterling, which has been specially sanctioned for the construction of the Ganges and Punjaub canals, the former of which is fast approaching to completion.

In 1847, sanction was given for an annual expenditure of 40,000 *l.* for a system of trunk-roads in Madras. No great progress appears to have been made by the local governments in this work; but, as a system of railroads is now about to be established in India, it appears most desirable to determine the direction in which these lines shall traverse the country before incurring any great outlay on ordinary roads, which, for the most part, must be altered in their directions, so as to become subsidiary to the great arteries of communication.

The guarantee of interest by the East India Company on Indian railway stock is also strictly a contribution to public works, having for their object the improvement of internal communication.

LIST of PETITIONS referred to the SELECT COMMITTEE on the GOVERNMENT of INDIAN TERRITORIES.

DATE OF PRESENTATION.	PETITIONERS.	PRAYER.
11 May - 1852 -	George James Gordon - - -	- - That certain Propositions mentioned in his Petition, connected with the Position and Political Rights of the Natives of India, may be taken into Consideration.
21 May „ -	- - Charles Hay Cameron, late Fourth Member of Council of India, President of the Indian Law Commission, and of the Council of Education for Bengal.	- - That One or more Universities may be established in British India, and that the Youth of India may receive such a Secular Education as may qualify them for Admission into the Civil and and Medical Services.
26 November „ -	- - Ministers and Missionaries resident in Calcutta.	- - For Inquiry into the Government, and Moral, Social and Religious Condition of the People of India.
2 December „ -	- - Madras Native Association, and other Native Inhabitants of the Presidency of Madras.	- - Complaining of the present Mode of raising the Revenue of the Government, and of the Salt Monopoly, and other Grievances.
24 February 1853 -	Rungo Bapojee - - - - -	- - For the Restoration of Shahoo Maharaj to his Rights and Property, or that the Petition may be referred to the Select Committee on the Government of Indian Territories.
25 February „ -	- - Proprietors of East India Stock, and other British Subjects interested in the Welfare and good Government of India.	- - For Inquiry into the present State of the Affairs of India.
25 February „ -	- - Madras Native Association and Others, Native Inhabitants of the Presidency of Madras.	- - For Redress of certain Grievances in connexion with the Expiration of the East India Company's Charter.
28 February „ -	- - Retired Servants of the East India Company, Merchants and Others.	- - That in case of any Alteration being made in the Government of India, the Right of Choosing the Persons to compose such Body may be granted, in such manner as may seem fit, amongst others, to the Holders resident in this Country of the Promissory Notes or Securities of the Government of India.
4 March „ -	- - Members of the Bombay Association, and other Native Inhabitants of the Presidency of Bombay.	- - For Inquiry into the Renewal of the Act for the Government of the Indian Territories, and that the Period of Existence for any future Government of India be limited to Ten Years.
11 March „ -	- - British and other Christian inhabitants of Calcutta, and the neighbouring parts in the Lower Provinces of Bengal.	- - For inquiry into the Renewal of the Act for the Government of Indian Territories, and for Ameliorations and Reforms.
4 April „ -	- - Armenian Inhabitants of the Bengal Presidency.	- - That in the event of the Renewal of the Act for the Government of the Indian Territories, provision may be made to secure to the Petitioners the full benefit of the Contract with the East India Company, by which they were induced to settle in the Company's Territories.
7 April „ -	- - British Indian Association and other Native Inhabitants of the Bengal Presidency.	- - Complaining of Grievances, and praying for Relief.

List of Petitions referred to the Select Committee, &c.—*continued.*

DATE OF PRESENTATION.	PETITIONERS.	PRAYER.
2 May - 1853 -	- - E. Wilson Challoner, Chairman (*who only has signed it*), of Newcastle and Gateshead Commercial Association.	- - Complaining of certain Grievances, and praying for the Improvement of the Government of India.
2 May - „ -	- - Master Cutler and Cutlers' Company of Sheffield, under their common seal.	- - That in any Legislation for the future Government of India, Provision may be made for its internal Improvement, and the carrying on of Public Works in that Country.
26 May - „ -	- - Hindoo Inhabitants of Bengal, Behar and Orissa.	- - For Repeal of the Act No. 21 of 1850, of the Legislative Council of India, and of certain Regulations which interfere with the enjoyment by the Hindoo Nation of their ancient Religion and Customs.
31 May - „ -	- - Liverpool East India and China Association.	- - For Amendment of the present Law for the Government of India.
27 June - „ -	- - Inhabitants of Northwich, in the County of Chester.	- - That in any Arrangements for the future Government of India, Provision may be made to permit English Salt to be imported into all parts of British India upon the same Terms and Conditions as other Goods and Manufactures.
15 July - „ -	- - Ministers of the Gospel resident in Calcutta.	- - For the discontinuance of all Government Grants of Money for the support of Idolatry.
18 July - „ -	Bristol Chamber of Commerce -	- - That the Monopoly of Salt exercised by the East India Company in India be abolished; that if it should be considered still expedient to levy a Tax on this necessary of life, that it should be in such a form as to press less heavily on the Poor of India than the present system of Taxation.
18 July - „ -	- - East Indians of the Presidencies of Calcutta, Madras and Bombay, at present residing in London, at a Meeting held at the Residence of John B. Pharoah, Esq., Ennore House, Lower Tulse Hill, Brixton.	- - Complaining of certain Grievances under which they and the Community to which they belong labour in the existing state of the Law, and praying for Relief.
12 August „ -	- - East Indians, Inhabitants of Calcutta and the Provinces, subject to the Presidency of Fort William in Bengal.	- - Complaining of certain Grievances, and praying for Relief.
12 August „ -	- - Members of the Bombay Association and other Native Inhabitants of the Presidency of Bombay.	- - Complaining of certain Grievances' and praying for Relief.
12 August „ -	- - Madras Native Association and others, Native Inhabitants of the Presidency of Madras.	- - Praying that a thorough Inquiry may be made into all points affecting the Welfare of India.
12 August „ -	- - Mr. George J. Waters, late a Justice of the Peace in India, and a Covenanted Civil Servant of the East India Company on the Madras Establishment, now of Clevedon, in the County of Somerset.	- - Complaining of his Removal without cause from certain Offices which he held in India.
12 August „ -	- - Dr. George Buist, Editor of the "Bombay Times."	- - Complaining of the Evidence given before the Select Committee of this House on the Government of Indian Territories, on the subject of Newspapers in India.
12 August „ -	- - Jevanjee Pestonjee and Rustomjee Viccajee, British Subjects and Parsee Inhabitants of Bombay.	- - Complaining of certain Acts of the Government of India, and praying for Redress.

Appendix D.

PETITION of George James Gordon, that certain Propositions mentioned in his Petition connected with the Position and Political Rights of the Natives of India may be taken into Consideration.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The humble Petition of George James Gordon,

Humbly showeth,

That your Petitioner, during a residence of upwards of 36 years in India, had opportunities of becoming well acquainted with the Natives of that country, of all ranks and classes, and of ascertaining their actual feelings and wishes regarding the British Government and its institutions, and that he is still in communication on those subjects with some of the most intelligent and influential of the inhabitants of Bengal.

He therefore knows that he is acting in accord with their wishes in praying that your Lordships will take into your consideration the following propositions:

1st. That measures be adopted for the relief of the revenues of India from some portion of the expenses of the Home Government, amounting to upwards of one million sterling per annum.

2d. That such a change of system be introduced with respect to the granting of pensions, that in future no person entering the service shall be entitled to a pension after he has ceased to reside in India: the payment of pensions in England causes, directly, a drain on India of upwards of a million sterling, and, indirectly, to one of probably four times that amount, by the inducement it gives to persons to retire from the service while in the prime of their faculties, and to withdraw themselves and their families from the country, with the means they have accumulated during their residence in it.

3d. That economy being urgently requisite, the salaries of the higher officers of Government in India be reduced, granting in compensation a much longer tenure of office than they have hitherto been accustomed to enjoy.

4th. That with the same view, useless offices be abolished, such as that of Councillors of subordinate Governments, substituting as advisers of the Governors one or more of the Secretaries at the head of departments, as is now the case in the Lieutenant-governorship of the North-west Provinces.

5th. That the Legislative Council should be a distinct body from the Executive Council or Cabinet of the Governor-General, and that it should include amongst its members a certain number of Natives selected from the most intelligent and influential inhabitants of the several provinces; the principal inducement to be held out for acceptance of such office being honorary distinction, rather than emolument in the shape of salary.

6th. That the distinctions hitherto existing between what are called the covenanted and uncovenanted servants of Government be abolished, and that all public servants be entitled alike to look forward to promotion, according to merit and qualification.

7th. That to make room for the more general employment of Natives, a moiety of the number annually required to supply vacancies in the Civil Service be selected by the Governors of the several Presidencies, from youths who have been found on examination qualified for the public service by their acquirements in such branches of knowledge as shall be prescribed by Government.

8th. That seminaries of education, on the principle of Universities, shall be established in various parts of the country, where general as well as professional knowledge may be acquired, and degrees granted in law, medicine and mechanical art and science.

9th. That one code of laws be applicable to all classes of the community, and that all inhabitants of the country shall be subject to the same Courts, both in civil and criminal cases.

10th. That the Supreme Courts of Appeal at all the seats of Government shall have one Judge appointed by the Crown, and that all applicants for judicial office shall be required to pass an examination in law.

11th. That laws passed by the Legislative Council and approved by the Governor-General in Council shall not be liable to be rescinded, unless found by Her Majesty's Privy Council to be repugnant to existing Statutes of Parliament.

12th. That Government should be prohibited from engaging in future directly in the manufacture of opium or of salt; that for the revenue now realized by the manufacture and sale of opium, licenses to manufacture the drug and a duty on its exportation be substituted; and that in the same way, with respect to salt, the right of manufacture in each district where salt can be produced be farmed, under the protection of a fixed duty on importation.

Beseeching the favourable attention of your Lordships to the foregoing propositions, your Petitioner, as in duty bound, will ever pray.

G. J. Gordon.

PETITION,

PETITION, praying that One or more Universities may be established in British India, and that the Youth of India may receive such a Secular Education as may qualify them for Admission into the Civil and Medical Services, of CHARLES HAY CAMERON, late Fourth Member of the Council of India, President of the Indian Law Commission, and of the Council of Education for Bengal.

To the Lords Spiritual and Temporal in Parliament assembled.

The humble Petition of CHARLES HAY CAMERON, late Fourth Member of the Council of India, President of the Indian Law Commission, and of the Council of Education for Bengal,

Humbly showeth,

That your Petitioner was appointed a Member of the Indian Law Commission in the year 1834, and continued in that body as Member or President, until the year 1848.

That in the course of the years intervening between 1834 and 1848, the Law Commission sketched out a system of Law and of Judicial Establishments and Procedure for British India, whereof the following parts have been fully elaborated and reduced into the form of Acts of the Indian Legislature:

A Penal Code.
A Plan of a Model Criminal Court.
A Plan of Criminal Procedure.
A Plan of a Model Civil Court and of Civil Procedure.
A Plan for the abolition of the Recorder's Court in the Straits of Malacca, and for the constitution of an improved Judicature there.
A Law of Prescription and Limitation.
A *Lex Loci* for British India.

That, so far as your Petitioner knows, the Home Authorities have not felt themselves in a condition to pronounce a decision upon any one of the above propositions, except the plan of a Model Civil Court and Civil Procedure.

That, so far as your Petitioner knows, the Legislature of India has not felt itself competent to pronounce a decision upon any one of the above propositions.

That in the reports by which the Law Commission explained and justified the propositions above enumerated, and in various other reports, they have discussed a great number of important questions of Jurisprudence:

The Fusion of Law and Equity.
Special Pleading.
Appellate Judicature.
Small Cause Judicature, and its fusion with General Judicature.
The Jury, or the association of the Public with the business of Judicature.
The training of Candidates for the Judicial Office.

That the labours of the Law Commission, which (whatever may be their intrinsic value) have cost a great deal of public money, will, as your Petitioner apprehends, be lost to the people of India; and that the similar labours of any persons who may be appointed to complete the task imposed upon the Law Commission by Parliament, in the Statute 3 & 4 Will. 4, c. 85, ss. 43 to 55, will in like manner be lost to the people of India.

Your Petitioner therefore prays that the above-mentioned propositions and discussions of the Law Commission may be submitted to the consideration of competent jurists, who may decide whether the recommendations of the said Commission are or are not fit to be adopted.

That, as President of the Council of Education for Bengal, your Petitioner had opportunities of observing the desire and the capacity of large numbers of the Native youth of India for the acquisition of European literature and science, as well as the capacity of the most distinguished amongst them for fitting themselves to enter the civil and medical covenanted services of the East India Company, and to practise in the learned professions.

That the said Native youth are hindered from making all the progress they are capable of in the acquisition of the said literature and science.

First, because there is not in British India any University with power to grant degrees, as is done by Universities in Europe.

Secondly, because the European instructors of the said Native youth do not belong to any of the covenanted services of the East India Company, and do not therefore (whatever may be their learning and talents) occupy a position in society which commands the respect of their pupils.

Thirdly, because no provision has been made for the education of any of the said youth in England, without prejudice to their caste or religious feelings.

Your Petitioner therefore prays that one or more Universities may be established in British India.

Appendix D.

That a covenanted Education Service may be created, analogous to the covenanted Civil and Medical Services.

That one or more establishments may be created at which the Native youth of India may receive in England, without prejudice to their caste or religious feelings, such a secular education as may qualify them for admission into the Civil and Medical Services.

And your Petitioner will ever pray.

C. H. Cameron.

Upper East Sheen Lodge, 13 May 1852.

PETITION for Inquiry into the Government, and Moral, Social and Religious Condition of the People of India, of Ministers and Missionaries resident in Calcutta.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The Petition of the undersigned Ministers and Missionaries Resident in Calcutta,

Humbly showeth,

That your Petitioners are deeply interested in the welfare of the people of India; that they have been attentive observers of their social condition; and that they have devoted much labour to the work of their conversion from the service of dumb idols to the worship of the one living and true God.

That your Petitioners observe with anxious attention the deliberations of the British Parliament on all subjects connected with India; and more especially now, when the Charter of the East India Company is under consideration, they await the result with the most earnest desire that your Lordships may be guided by wisdom from above, and may be led to the adoption of measures that will augment at once the power and the honour of the British nation, and the welfare and happiness of this great country.

That early in the present year some of your petitioners transmitted to both Houses of Parliament petitions, praying that measures might be taken to ascertain the exact nature and extent of the connexion still subsisting between the Government of India and the Hindu and Mahommedan religions, and to dissolve and extinguish that connexion completely and for ever.

That the Petitioners also, in the said petitions, called attention to a despatch of the Court of Directors in 1847, forbidding their servants to take part in missionary undertakings, and praying for a copy of that document.

That your Petitioners feel much anxiety on these points, and earnestly pray that your Lordships will direct your attention to them.

That some of your Petitioners have recently addressed a Memorial to the Governor-general of India in Council, praying that a certain Draft Act for the final discontinuance of the grant which hitherto has been made annually by the Government of India to the Temple of Jagannáth at Púri may be passed into a law, and declaring the conviction of the said Petitioners that no compensation whatever, in law or in equity, is due to that Temple, and praying, therefore, that none may be paid.

That your Petitioners await the result of that Memorial with anxious expectation, having long and deeply mourned over the support by the Government of India of a shrine, which, for many ages, has been the scene of gross idolatry and indescribable misery; and your Petitioners pray that no final measures may be adopted for the renewal of the powers of the East India Company till effectual steps have been taken to remove that scandal, as well as to secure the complete separation of the Company's Government from the Hindu and Mahommedan religions, in all the various circumstances wherein there still subsists any direct or indirect connexion between them.

That your Petitioners desire to call the attention of your Lordships to other points that affect the interests of India, especially in the Presidency of Bengal, wherein your Petitioners reside and labour.

That your Petitioners have reason to believe that there is a vast amount of social disorganization, and of consequent suffering, in the whole country. Much of this your Petitioners can trace to the fearful superstition of the people, to their ignorance, and to the debasing effects of a popular mythology, which presents as objects of worship deities who are examples of every vice, and which ascribes sanctity and divine honour to a priesthood which is the principal curse of India. But speaking particularly of this great Presidency of Bengal, your Petitioners would represent to your Lordships the existence of evils which it falls properly within the scope of Government to meet and to control. The evils resulting from the religions of the country your Petitioners believe to have been greatly diminished since the commencement of Christian missions; and they willingly accord to the Government of India the praise of having abolished satis, and checked infanticide, thuggism, and the once prevalent practice of self-immolation. Your Petitioners do not now hear of the terrible occurrences with which their predecessors were familiar; of women drowning themselves publicly at the junction of the Ganges and the Jumna; of others sitting in pits to

be

be smothered by heavy baskets of sand; and of devotees yielding themselves to death in the presence of multitudes, by means which require the active participation of heartless accessaries. A more just apprehension of their duty by the judicial officers of Government has restrained such suicides, by dealing with the accessaries as guilty of murder; and the enactment of several wise and salutary laws has restrained the other classes of crimes which your Petitioners have mentioned. Your Petitioners believe, however, that these results must in a large measure be ascribed to the growing influence of Christian missions, which have been blessed no less in raising the standard of piety and justice among the Europeans in India, than in the enlightenment of the consciences of the natives. But there are other evils with which the Government, as such, has to contend, and which your Petitioners regret to declare appear to be on the increase. Your Petitioners greatly fear that it will be found on inquiry that in many districts of Bengal neither life nor property are secure; that gang-robberies of the most daring character are perpetrated annually, in great numbers, with impunity; and that there are constant scenes of violence, in contentions respecting disputed boundaries, between the owners of landed estates.

That your Petitioners submit to your Lordships that the radical cause of both these evils is the inefficiency of the police, and the judicial system. Your Petitioners find that the sole protection of the public peace in many places is a body of policemen (called village chowkedars), who are in fact the ministers of the most powerful of their neighbours, rather than the protectors of the people. The body of peace-officers appointed and paid directly by the State will, on inquiry, be found to be entirely insufficient for the great districts for which they are provided; but few as they are, they also will be found to be oppressors of the people. The records of the criminal courts, and the experience of every resident in the districts of Bengal, will bear testimony to the facts, that no confidence can be placed in the police force (either the regular force or the village chowkedars); that it is their practice to extort confessions by torture; and that while they are powerless to resist the gangs of organized burglars or dacoits, they are corrupt enough to connive at their atrocities.

That your Petitioners believe that a strict and searching inquiry into the state of the rural population of Bengal would lead your Lordships to the conclusion, that they commonly live in a state of poverty and wretchedness, produced chiefly by the present system of landed tenures, and the extortion of the zemindars, aggravated by the inefficiency and the cruelties of the peace-officers, who are paid by the chowkedarry tax, or by the Government.

That your Petitioners believe that a well-organized police, with a more extensive and more effective judicial system, would do much to check the outrages that arise from disputes about land; but your Petitioners must also ascribe much of the evil which these outrages produce to the causes by which primarily such disputes are occasioned. Your Petitioners must declare, that from the want of a complete survey of the estates of the country, of a Registration Act to settle titles, and of laws to obviate the infinite mischief of the universal system of secret trusts, there is so much uncertainty about the landed tenures and boundaries in Bengal, that capitalists generally dread to purchase such property, and those who do, too frequently keep bodies of clubmen, to take and keep, by force, the extent of land to which they deem themselves entitled. Between contending proprietors, amidst scenes of constant conflict, and a prey to the corruption and the oppression of the police, the tenant is reduced, not merely to beggary, but also, in many cases, to a state of the most abject and pitiable servitude.

That your Petitioners attribute many of the evils that exist in this Presidency to the fact that (unlike the other Presidencies of India) it has no separate Governor. While the North-western Provinces during the past eight years have enjoyed the benefit of the rule of the same able and experienced Governor, the Presidency of Bengal, in the same period, has had eight successive changes of rulers; and in every case, whether the Governor-general or the Deputy-governor was for the time being ruler of the land, he has been encumbered also with other and weighty duties, as a member of the Supreme Council of India.

That your Petitioners attribute also to the want of a separate Governor for this Presidency the fact, that while much has been done in judicious and beneficial public works in the North-western Provinces and the Madras Presidency, and very recently also in the Punjaub, this great Presidency, which contains thirty-five millions of people, and yields nearly half of the entire revenue of India, has been very greatly neglected, and cannot be said now to have more than one good road of any considerable extent, while a vast portion of the country remains altogether untraversed and uninvestigated; and, in fact, never has been visited by any of the Governors of Bengal from the day when the Company first obtained the Dewanny.

That your Petitioners believe that justice calls for a separate Government for Bengal, and in order to render it as effective as possible, your Petitioners submit that the limits of the Presidency should be curtailed, and that Arracan and the Tenasserim Provinces, with Penang and Singapore, might be formed into a separate Presidency.

That there are many measures to which your Petitioners would desire the attention of your Lordships to be directed, in connexion with the Government of Bengal. The principal of these your Petitioners beg leave to submit as follows:

1. The appointment for the Presidency of Bengal of a separate Governor, who shall be relieved of all share in the general Government of India.

2. The entire and thorough reform of the police, by consolidating the village or zemindarry chowkedars and the Government police, and the placing all under active, trustworthy and efficient

Appendix D.

efficient superintendence. Your Petitioners believe that it is difficult to over-estimate the importance of a comprehensive, enlightened, and benevolent settlement of this subject, so that a police force, worthy of the British Government, and under the direct control of confidential and efficient officers, may at length be provided for this country.

3. The summary and severe punishment of perjury and forgery, immediately on their detection in judicial proceedings. Your Petitioners regard a measure of this kind as one of the chief wants of this country; for perjury has almost ceased to be regarded as morally wrong; it constitutes the stock in trade by which numerous witnesses for hire subsist; the impunity and success with which systematic perjury and the forgery of documents are commonly practised tend to encourage the already too prevalent habits of falsehood and deception among the great body of the people; and, as a necessary consequence, justice is now constantly mocked and defeated, or the powers of the law are used, without remorse, as engines of oppression and extortion, through the infamous arts of the traders in corrupt litigation.

4. The reduction of the size of the judicial districts, in which at present the chief station is commonly so far removed from the greater number of the towns and villages that justice, in many instances, is practically denied, and in a very large number of others is obtained under difficulties and discouragements, and at a loss of time and money, that render every connexion with judicial proceedings a heavy calamity alike to the suitors and the witnesses. Your Petitioners believe that careful inquiry would prove that many persons, of various ranks, throughout the country are enabled, by their distance from the seat of justice, to set the law at defiance; and that the great expense of carrying witnesses so far, and of supporting them while detained, is one of the chief temptations that lead to the employment of the mercenary perjurers who infest every court and judicial station.

5. The increase of the number of judicial officers, and their suitable and satisfactory preparation for the important task of administering justice; so that the law may be administered in every district on a uniform system, and on just, definite and intelligible principles.

6. The institution of all criminal suits on *vivâ voce* applications only, and the administration of justice on *vivâ voce* evidence only, to be taken by the judge or magistrate in person. Your Petitioners admit that to a certain extent justice is already thus administered; but, to a very great extent, written depositions, taken down and read to the officiating officer by venal men, are used in the Mofussil Courts; and this practice, your Petitioners submit, leads to much uncertainty, to constant misunderstandings, and great injustice; while, at the same time, it deprives the courts of the well-known advantages of personal conference with the witnesses in the presence of the parties.

7. A careful and complete survey of the country, to fix the boundaries of the villages and landed estates, and a renewal of the survey wherever the encroachments of the rivers, or other causes, render it desirable.

8. An Act for the registration of titles and deeds relating to land, carried out in a comprehensive and liberal spirit.

9. An Act to check the prevalent system of secret trusts, commonly called benamee transactions. The evils which a measure of this kind would meet are so extensive in this country as to become a marked peculiarity in its social system. Among these evils, the prevalence of litigation and frauds on creditors are notorious; but other evils, of a less obvious, though not less serious nature, will on inquiry be found to arise from the benamee system.

10. A measure to encourage capitalists of enterprise and public spirit to purchase land, and also to encourage smaller holders to raise themselves to the position of independent freeholders, by providing such means as shall be just and equitable alike to the State and to the purchasers, for the permanent redemption or commutation of the present land-tax.

11. A measure for the promotion throughout the whole country of a cheap elementary system of vernacular education, and the removal of all restriction on the Christian teachers in any of the Government schools and colleges affording instruction in Christianity, when it is sought by the pupils.

12. The periodical publication of full and clear statistical comparative returns of the population, resources and progress of this Presidency.

13. The prohibition, by law, of the public barbarities which accompany the Churruck Pujá; and also the prohibition of every other public exhibition of fanaticism, whereby the moral sense of the community is debased and ruined, and human life is endangered.

14. The regulation of the practice of carrying sick persons from their houses to the river's bank, with the view of preventing the abuse of the popular superstition into a means of hastening death in fatal diseases, and rendering it inevitable in the case of any whose diseases are not of that character.

15. The introduction of a system of general visitation of the Presidency by the Governor for the time being, so that he may become closely and intimately acquainted with the qualifications of the subordinate officers of Government; with the general administration of public

public affairs; with the local wants and feelings of the people; and with the progress of the public works.

16. The extension of the means of internal communication, by the increase and improvement of roads, and of the postal arrangements throughout the country. Your Petitioners believe that few things would tend more rapidly to the social improvement of the country than the increase of the means of intercourse and communication.

17. The liberal encouragement of all public works which are calculated to develope and improve the resources and trade of the country. Your Petitioners submit that such encouragement is very much needed; and as a proof, they beg to state that, even in the immediate vicinity of Calcutta, the two canals by which, during eight months of the year, the great majority of boats leave or approach the commercial capital of India, are utterly inadequate to the immense traffic of which they are the channels. Your Petitioners also apprehend, that inquiry will prove that the resources of some districts are at present almost entirely lost and wasted, through the want of public works that would give vent to the industry of the inhabitants and the products of the soil.

18. The complete and absolute severance of the Government of India from all connexion, direct or indirect, with the Hindu and Mahommedan religions.

That your Petitioners believe, that from these measures, together with the constant operation on the Government of India of public opinion, and of the vigilance of the Parliament in Great Britain, results the most important and desirable might speedily be secured.

That your Petitioners submit to your Lordships, that it is the paramount duty of the Government of India to promote the highest interests of the people committed to their care; and that all measures whereby revenue is raised to the detriment of the public morals, is a violation of this duty.

That your Petitioners fear that on inquiry it will be found that the abkaree system for the regulation of the sale of wines, spirits and drugs, has, in practical operation, tended to foster among a people, whose highest commendation was temperance, a ruinous taste for ardent spirits and destructive drugs, by the efforts made to establish licensed new depôts for them, in places where the use of such things was little or not at all known before; and your Petitioners, therefore, pray that your Lordships will inquire into this matter, with a view to the abkaree system proving a check, rather than an encouragement to the use of intoxicating drugs and spirits.

That your Petitioners observe with much regret the continuance of the East India Company's extensive trade in opium. Your Petitioners view the traffic carried on with China in this contraband drug as second only to the slave-trade in iniquity; and they regard the collection of a great revenue from the opium monopoly by the East India Company, under the sanction of the British Legislature, as a breach of faith with the Chinese Government, and as an odious participation in a guilty and ruinous trade, which they view with amazement and abhorrence.

That your Petitioners earnestly desire to see the Government of India relieved from the fearful responsibility of raising a revenue by providing annually an enormous quantity of a drug, which is notoriously purchased and shipped to China under British sanction, to gratify the morbid craving of multitudes of infatuated people for its enervating and fatal poison.

That your Petitioners submit, that good faith with the Government of China, and common humanity to the unhappy myriads who annually ruin their health and destroy their lives by opium in China, should lead the British Government in India, as well as in the China seas, to check and to repress the wicked traffic by which the drug is supplied for the market in Bombay and in Calcutta, and is then shipped to and clandestinely sold as contraband in China.

That your Petitioners are ready to acknowledge that there has been a great improvement in the spirit and measures of the Government of India since the Charter of 1813 was granted; but your Petitioners have felt it to be their duty to bear testimony to the existing state and wants of Bengal; and they submit to your Lordships, that to secure the continuance and the increase of the zeal of the East India Company for the improvement of this country, it would be better to limit the period of their powers to a shorter period than 20 years, so that the manner in which they have been exercised may again speedily come under review.

That your Petitioners fear that the present year has been marked by so many unexpected public events, and by so much political excitement respecting the state of parties and the future policy of Government in Great Britain, that the subject of the East India Company's Charter has not been investigated so deeply as it would have been by your Lordships in a period of greater public tranquillity; and your Petitioners submit that this is another reason, of much force and importance, for the limitation of the Charter now contemplated to a period less than 20 years.

That your Petitioners further submit to your Lordships, that it would be wise and expedient to make such changes in the Home Government of India as would tend to secure the services of persons who had gained local experience; and, further, to provide that, in the distribution of the valuable patronage of the East India Company, a large part should be reserved for the reward and encouragement of superior and eminent talent and industry, in the principal schools and colleges of Great Britain.

That your Petitioners thankfully assure your Lordships that they have been abundantly encouraged in their own efforts to improve the condition of India, and that the whole Protestant

Appendix D.

Protestant missions in the country have been favoured with many and remarkable tokens of the Divine blessing. Your Petitioners beg permission to inform your Lordships, that at the present time the number of ordained Protestant missionaries in India exceeds 400, and that they have gathered into the visible Church of Christ 103,000 converts; that they are receiving the aid of 551 Native preachers; have upwards of 300 Native churches; 1,340 vernacular day-schools, 73 boarding-schools, and 120 English day-schools, besides upwards of 440 day-schools for Native girls; that the complete Bible has been translated into 10 of the languages of India, and the New Testament into five more; that a very considerable vernacular Christian literature has already been provided for the people; and that a spirit of inquiry, a desire for education, and a general feeling of respect for Christianity and for Christian teachers, have been excited in all the spheres of the missions. Your Petitioners deeply deplore the inadequacy of their numbers, and the partial extent to which zeal for the conversion of the heathen is manifested in Great Britain; and they earnestly and constantly implore the Lord of the harvest to awaken a wider and more affecting sense of India's destitution among all who profess and call themselves Christians; but at the same time, they are bound to record, with devout thankfulness, the progress that has been made; and they anticipate with confidence increasing proofs that the ancient systems of superstition are fast crumbling away, and that the day is approaching when the light of the Gospel of Christ will bless all the families of this country. Your Petitioners gratefully record the passing of an Act by the Government of India in 1850, whereby the rights of Native Christians are secured; but they regret that this and other measures of equal simplicity and justice were obtained only after great and harassing delays; and they now have to lament over the continuance of other evils, which a more just, prompt and vigorous administration of public affairs might long since have removed, and the removal of which might have tended greatly to the improvement of the condition of the people, and their willingness to consider the Gospel, as well as to that independence and strength of mind and character which the profession of a new religion in scenes of ancient idolatry and superstition especially requires.

That your Petitioners are deeply impressed with a solemn conviction that this great and populous country has been entrusted as a sacred charge and stewardship to the Government of Great Britain; that the hand of God was never more visible in the history of nations than it has been in the progress of British power in India; and that every consideration of interest and duty should combine to secure from the British Legislature every measure that is calculated to elevate and improve the class of its rulers and its judicial and ministerial officers. The influence of India on the whole continent of Asia, your Petitioners believe has already been remarkably powerful and extensive; and that influence, if the country be governed in an enlarged spirit of wisdom and benevolence, and if the blessing of the God of nations rest on the efforts alike of the Government and of the preachers of the everlasting Gospel of peace, may ultimately prove the immediate cause of that great and universal change in the whole social and religious state of this continent, with its vast population of more than half mankind, which the Scriptures of truth lead the Church of Christ confidently to expect. Your Petitioners, therefore, regard the present time, when the subject of the Government of India is under the consideration of your Lordships, as a period of momentous importance; and they earnestly implore that your Lordships may be so guided by the Spirit of the Lord into wise and righteous conclusions, that generations yet unborn may celebrate with thankfulness and joy this era in the annals of the British empire.

Finally, your Petitioners earnestly pray, that your Lordships will be pleased to consider the premises; to apply to the subject of the Government, and to the moral, social and religious condition of India, and to her material resources and political difficulties, the most comprehensive, minute, and searching scrutiny; and, finally, to pass such measures as shall redound to the honour and glory of God, as well as to the happiness and prosperity of the people whom He has given to the dominion of Great Britain.

[And 25 others.]

PETITION

Appendix D.

PETITION of the MADRAS NATIVE ASSOCIATION, in behalf of themselves and other Native Inhabitants of the Presidency of Madras, complaining of the present Mode of raising the Revenue of the Government, and of the Salt Monopoly and other Grievances.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the MADRAS NATIVE ASSOCIATION, in behalf of themselves and other Native Inhabitants of the Presidency of Madras,

Showeth,

1. THAT your Petitioners, being desirous to avail themselves of the opportunity afforded by the approaching expiration of the Charter granted to the Honourable East India Company for going before Parliament with an exposition of various circumstances connected with the Government of this country, which, as acknowledged subjects of Her Majesty, they feel to be serious grievances urgently demanding redress, formed an association at Madras, on the 26th of February 1852, for the purpose of co-operating in this great object with a similar association established at Calcutta, under the name of the British Indian Association, with whom they immediately entered into correspondence, intending, as a branch society, to place themselves under the guidance of that body, to whose superintendence the work of petitioning the Imperial Parliament, on points involving the joint interests of both Presidencies, should be committed. That for this purpose they had previously been collecting the requisite information from various quarters, and collating a large amount of manuscript statements, together with printed documents, in order to ensure the utmost correctness regarding the subjects to be laid before your Right honourable House.

2. That in the course of the above-mentioned correspondence, the Calcutta Association transmitted to your Petitioners the sketch of a petition, to which the consent of your Petitioners, with such suggestions thereon as they might deem requisite, was requested; but that the said sketch related almost wholly to plans and recommendations of change in the Government of this country, for the exaltation of the highest classes of the Hindus, while it left almost untouched the pitiable condition of the middling and lower classes, and was in various respects unsuitable to the circumstances of the inhabitants of this Presidency; your Petitioners, thence perceiving that there were many important points in which a joint interest could not be taken, and others in which there could not be joint concurrence, deemed it expedient to withdraw from their connexion as a branch association, subordinate to that of the metropolis, and to constitute from among themselves an independent society, under the denomination of the Madras Native Association, with the view of bringing before Parliament the immediate grievances of their own Presidency.

3. That from the time of dissolving that connexion, your Petitioners have been engaged in condensing the mass of their information and researches into a petition, of which the succintness should not impair its perspicuity in detail and explanation of the evils that are felt by all, but of which the actual causes, your Petitioners submit, cannot be clearly traced and set forth without a large consumption of time and labour. This Petition they entertain the best hope of being able to bring to a successful completion in time for its presentation to your Right honourable House during the early part of the Session of 1853; but having received private intimation by the mail of the 8th of August that the discussion on the weighty question of the Charter will probably commence before the close of the present year, and that the destinies of this important and extensive portion of Her Majesty's dominions may be determined for another period of 20 years, before your Petitioners can have an opportunity of stating their grievances to your Right honourable House, in the full and explicit manner above alluded to, they humbly express their hopes that time will be graciously allowed them for the transmission of the said Petition, now in course of preparation, prior to the closing of the inquiry by the Committee of your Right honourable House.

4. That the grievances of your Petitioners embrace, principally, five points:

First. The present mode of raising the revenue of Government, particularly that part derived from agriculture, which, under the ryotwar system, is so oppressive to the vast mass of the population, that it has ground them down to the extremity of wretchedness and poverty.

Secondly. The salt monopoly, which is felt by the poor to be a burthen of the most painful and intolerable pressure.

Thirdly. The defects and evils attending the general administration of justice in the Honourable Company's Courts, which are presided over by judges not duly qualified by a course of legal education, who administer a system which does not secure to persons criminally arraigned that fair and open trial by their peers which obtains in the Queen's Court of Judicature, and which your Petitioners humbly think should be allowed to all subjects of the British Crown.

Appendix D.

Fourthly. The almost total neglect of national education, there not being a single provincial school established by Government throughout the entire Presidency, and only one at the capital.

Fifthly. The great deficiency and neglect of works of irrigation and public highways for the transport of produce.

5. That besides the above special points, there are many others connected with the general administration of the Government on which your Petitioners propose to dwell in their petition not yet completed, and which, therefore, they now forbear to specify.

6. That, finally, your Petitioners, feeling the grievances to which they are desirous of drawing the attention of your Right honourable House, with a view of procuring their redress, to be deeply subversive of the interests and happiness of the people of this Presidency, as well as the prosperity of the country, humbly pray that time may be granted them for the presentation of their petition to your Right honourable House.

And your Petitioners, as in duty bound, shall ever pray.

Madras, Native Association Office,
the 11th October 1852.

(Signed by 11 Natives.)

PETITION of Rungo Bapojee, the next Friend, and by Will one of the appointed Guardians of Shahoo Maharaj, an Infant and Minor, who is the sole Male next-of-kin, and also the lawfully adopted Son and Heir-at-Law of his late Highness Pertaub Shean, Rajah of Sattara, deceased, and also the nearest Male next-of-kin and Heir-at-Law of his late Highness Appa Sahib, also Rajah of the said State, deceased, praying for the Restoration of the said Shahoo Maharaj to his Rights and Property, or that the Petition may be referred to the Select Committee on the Government of Indian Territories.

To the Right Honourable the Lords Spiritual and Temporal in Parliament assembled.

The Petition of Rungo Bapojee, the next Friend, and by Will one of the appointed Guardians of Shahoo Maharaj, an Infant and Minor, who is the sole Male next-of-kin, and also the lawfully adopted Son and Heir-at-Law of his late Highness Pertaub Shean, Rajah of Sattara, deceased, and also the nearest Male next-of-kin and Heir-at-Law of his late Highness Appa Sahib, also Rajah of the said State, deceased,

Showeth unto your Right honourable House,

That his late Highness Pertaub Shean, above named, was the sixth Rajah of Sattara in descent from Sivajee Chuttraputtee, who founded the empire of the Mahrattas, and transmitted it to his descendants.

And your Petitioner further sheweth, that in the year 1817 the late Bajee Rao, being then the peishwa or prime minister of that empire, but who had usurped its government, and made the Rajah Pertaub Shean his captive, made war in the name, but contrary to the desire of his master the rajah, against the East India Company, and that, in consequence thereof, and by the advice of the Rajah Pertaub Shean, the Honourable Mountstuart Elphinstone, then being the British Commissioner at Poonah, duly appointed and acting under the authority of his Excellency Marquis Hastings, Governor-general of India, did, on the 11th day of February 1818, publish a proclamation, addressed by and in the name of the Rajah Pertaub Shean, to the Mahratta nation, warning all its princes, chiefs, nobles and people to refrain from hostilities against the East India Company, and commanding them to abandon the peishwa, under pain of treason in case of disobedience to him the rajah. The proclamation also stipulated, in the name of the Governor-general of India, that when and so soon as the rajah should be released from the peishwa's captivity, he should be "placed at the head of an independent sovereignty," adequate to his dignity and lineage.

And your Petitioner further sheweth, that on the 20th day of February 1818, at Ashtee, in India, the Rajah Pertaub Shean, being then detained against his will by the peishwa in the midst of the peishwa's forces, who were actually engaged in battle with the British forces, did leave and abandon the forces of the peishwa, and go over to the British, bringing with him his mother, his two brothers, and others his kindred, and that on arriving amongst the forces last mentioned, the rajah surrendered himself, family, and attendants to Captain Pringle Taylor, now a lieutenant-colonel in Her Majesty's service, and that thereupon, and in consequence of such abandonment, the peishwa and his forces left the field of battle, dispersed, and fled, whereupon the commander of the British forces, the late Lieutenant-general Sir L. Smith, in token of the manner in which the victory of Ashtee was gained, hoisted on the walls

walls of the fort of Sattara the royal standard of the rajah, and caused the same to be saluted by the whole of the British forces.

And your Petitioner further sheweth, that, in performance of the stipulation aforesaid, a solemn treaty, bearing date the 25th day of September 1819, was made and concluded between the East India Company, in the name of the English Government, of the one part, and the Rajah Pertaub Shean of the other part; by the first article of which treaty the territory constituting the state of Sattara was confirmed and guaranteed "to the Rajah of Sattara, his heirs and successors, in perpetual sovereignty," under the protection of the Crown of Great Britain, which treaty was duly acknowledged and ratified by the English Government.

And your Petitioner sheweth, that the Rajah Pertaub Shean was in the year 1836 accused upon certain secret and ex-parte charges by the East India Company, and was in the year 1839 declared by them, they being his accusers and judges, guilty of those charges, without having been heard in his defence; and was thereupon, and in consequence of such declaration, deposed from his sovereignty, forcibly deprived of his property and effects, real and personal, public or political, as well as personal or private, and he himself taken from Sattara, removed under the custody of a military guard to Benares in Bengal, and there kept a prisoner in such custody down to the 14th day of October 1847, when the rajah died, without having obtained any hearing of or reparation for his grievances, notwithstanding his many applications to the East India Company for such hearing and reparation, and notwithstanding his continued denials of the truth of the said accusations, and his offers to prove their falsehood before any British tribunal.

And your Petitioner further sheweth, that at the time the Rajah Pertaub Shean was removed captive from Sattara to Benares, the East India Company, by Sir James Rivett Carnac, Governor of Bombay, gave the rajah a written guarantee and pledge, dated 30th August 1839, in the words following; "An annual allowance will be assigned from the Sattara revenues for the support and respectability of himself and those members of his family who may choose to accompany him." "Further, that all property belonging to him *bonâ fide* private, and not appertaining to the state, will, on his peaceable submission, not be interfered with." Which written guarantee was three times repeated subsequent to such deposal.

And your Petitioner further sheweth, that immediately upon the deposal of the Rajah Pertaub Shean, the East India Company, recognising the validity and unbroken obligation of the treaty of 1819, acknowledged and declared his late Highness Appa Sahib, the surviving brother of the deposed rajah, to be his heir and successor in the principality, and did proclaim Appa Sahib to be the Rajah of Sattara accordingly; and did furthermore, in and by a second formal treaty, which was, at the dictation of the East India Company, made and concluded on the 4th day of September 1839, between the Rajah Appa Sahib of the one part and the East India Company of the other part, and was duly acknowledged and ratified, solemnly and for the second time assure and guarantee the state of Sattara to the rajah thereof, his heirs and successors, in perpetual sovereignty, and did also confirm the first treaty of the 25th September 1819.

And your Petitioner sheweth, that by a proclamation, bearing date the 5th day of September 1839, at Sattara, being the day after the date of the second treaty, the British Resident there, acting under the orders of Sir James Rivett Carnac, Baronet, Governor of Bombay, notified by proclamation to the people of Sattara that the East India Company, having no views of advantage and aggrandizement, had resolved to invest the brother and next in succession to the deposed rajah with the sovereignty of the state, according to the limits fixed by the first treaty, and all persons residing within his territory were required to render to him allegiance as Rajah of Sattara; which proclamation was afterwards duly recognised and approved by the British Government.

And your Petitioner further sheweth, that the Rajah Appa Sahib departed this life on the 5th day of April 1848, at Sattara, without issue.

And your Petitioner further showeth, that the Rajah Pertaub Shean did, according to Hindoo law, adopt as his son the infant Shahoo Maharaj, and by his will, dated 10th October 1845, which was executed and published by him at Benares according to the forms of that law, he declared and directed that Shahoo Maharaj should succeed him in his rights, property (private and public), titles, and in everything appertaining to his rank, station, and person; and that the rajah did immediately, publicly, and in a formal manner, notify this adoption to the East India Company through Lieutenant-colonel Carpenter, the officer then having the custody of the rajah at Benares; which adoption the East India Company at that time never questioned.

And your Petitioner sheweth, that Shahoo Maharaj is by birth the lawful and only son and heir of the late Bulwunt Rao, commonly called Balla Sahib Sennaputty, who, in his lifetime, was thus described by Sir Robert Grant, Governor of Bombay, in a minute dated 30th January 1837: "The question is as to Balla Sahib Sennaputty; he is the near relation of the rajah (Pertaub Shean), and supposing that the rajah and the rajah's brother (Appa Sahib) set aside, the proper representative of the family." Balla Sahib was carried away captive from Sattara with the Rajah Pertaub Shean, and expired of grief on the journey to Benares, leaving Shahoo Maharaj, born on that journey, a fatherless infant.

And your Petitioner sheweth, that, by the Hindoo law universally obtaining, it was absolutely obligatory upon the Rajah Pertaub Shean to adopt in his lifetime a son and heir according to that law; and that such obligation was not only a legal, but also of a highly solemn and religious character, and binding upon the conscience of Pertaub Shean, and not to be evaded

Appendix D.

evaded or dispensed with; and that the son so adopted according to Hindoo law acquires immediately, upon and by means of such adoption, the style, character, and capacity of a lawful son of the body, as well as of heir, of the prince or person so adopting him.

And your Petitioner further sheweth, that, according to the laws of nations, being part and parcel of the municipal law of the British realm, and also according to the laws and customs of the Mahratta state and the other native states of India, and likewise according to the law and practice of the British Indian dominions, the right of a rajah of any Mahratta or Hindoo principality to give succession to the same by means of male adoption is, and hath ever been, an indisputable and immemorial right, and your Petitioner humbly submits that the same cannot now be lawfully questioned by the East India Company, or by any person or persons whomsoever.

And your Petitioner further sheweth, that, upon the death of the Rajah Appa Sahib, the sovereignty of the state of Sattara and the public property, which by express letter and spirit of both treaties above mentioned descended of right to the next heir of the deceased rajah, were claimed and seized by the East India Company upon the pretence of a failure of male heirs to both rajahs.

And your Petitioner further sheweth, that the infant Shahoo Maharaj, being not only the adopted son of the Rajah Pertaub Shean, but also his male next of kin, and also the sole next of kin and heir of the Rajah Appa Sahib, even if the act of adoption had not taken place, he would according to law and to the second treaty have equally inherited upon the death of the Rajah Appa Sahib in such his character of male heir and next of kin, and that therefore, both by adoption and by blood, Shahoo Maharaj is now the undoubted lawful heir of the Rajah Pertaub Shean, as also of the Rajah Appa Sahib.

And your Petitioner sheweth, that Shahoo Maharaj also claims to be entitled as heir to the private property and effects, real as well as personal, of the Rajah Pertaub Shean, and which were taken possession of by the East India Company on the rajah's captivity and removal to Benares in September 1839, and which were guaranteed to him by the East India Company expressly in addition to the annual allowance settled upon him at that time.

And your Petitioner showeth, that the East India Company have hitherto wholly refused to accede to his applications made in this behalf, and have hitherto retained, and still do retain, possession of the state of Sattara and of the public and private property and effects belonging to Shahoo Maharaj, and claim in the name of the British nation the right to retain and appropriate the same, and that they have retained and appropriated the same accordingly; and that in particular, by a proclamation, dated the 12th day of May 1849, and published in India, the whole of the state of Sattara hath been, and is, in violation of the above treaties, and in confiscation of the rights of Shahoo Maharaj, annexed and declared to be annexed unto the Indian territories; and that the East India Company, in order to colour such unlawful appropriation and spoliation, pretend that the succession of the two rajahs, Pertaub Shean and Appa Sahib, has lapsed by failure of heirs, whereas your petitioner has shown, and does show, and is ready to verify the contrary of such pretence to be the truth; first, by the written testimony above cited of Sir Robert Grant, Governor of Bombay; secondly, by the evidence of H. B. E. Frere, esq., the Company's Resident at Sattara, affirming that no such failure hath occurred, the Resident having declared, in his letter to the Bombay Government, dated the 23d September 1848, "that there were numerous claimants to the throne (of Sattara), who would be able to establish a very good *primâ facie* case, in any court of justice in India, to be the rajah's heir by blood as against the British Government;" and having further written as follows: "I would take this opportunity of respectfully, but very earnestly, pressing on Government the risk of pronouncing any final decision, whether in favour of one adoption against another, or of the British Government against both, and against all other claimants, without allowing every party whose claim may be negatived the fullest possible opportunity, not only of himself stating the grounds of his own claim, but of answering all objections."

And your Petitioner further sheweth, that he hath repeatedly presented to the East India Company his complaints touching the grievances and wrongs done to Shahoo Maharaj, and sought reparation for the same, but that all his complaints have been unheeded, or rejected without examination or inquiry; and that, to add to these grievances, and also with the view of compelling Shahoo Maharaj to renounce and abandon the prosecution of his claims in that behalf, the East India Company did for several years deny to him and to the widow or ranee of the Rajah Pertaub Shean, both detained prisoners at Benares (where the infant has been kept since his birth), the means of subsistence for himself and the said ranee, and for their retainers, until such time as they should agree to such written renunciation or abandonment; and as evidence of this conduct, your Petitioner humbly begs to refer to the following papers: No. 669 of 1850, laid before the honourable The House of Commons, and ordered to be printed on the 5th day of August of that year; that is to say, a despatch bearing date "Fort William, Foreign Department, 6th April 1850, signed Dalhousie, J. H. Littler, F. Currie, J. Lowis," and "addressed to the Honourable the Court of Directors of the East India Company," and a despatch in reply thereto, bearing date, "Foreign Department, India House, 10th July (No. 19), 1850," signed "J. Shepherd, J. W. Hogg, &c. &c." and addressed to "our Governor-general of India in Council."

And your Petitioner further sheweth, that, in furtherance of their purpose of forcibly compelling this infant to agree to such renunciation and abandonment, the East India Company have, by withholding from the ranee for about four years the means of subsistence for herself and her household, procured from her some document whereby she hath (as they allege) debarred herself of her right to concur with your Petitioner in his present petition; but

but your Petitioner is advised and submits that, inasmuch as the ranee hath no jurisdiction over Shahoo Maharaj, nor power to sign away his rights, he being an infant and a minor, any such document, even if the same be genuine or valid as against the ranee, and even if not extorted from her under duress and starvation, must be and is, as against Shahoo Maharaj, wholly inoperative and void.

And your Petitioner lastly sheweth, that the amount of the annual revenues of the state of Sattara, so appropriated by the East India Company, is officially admitted now to be more than 142,000 *l.*, and prospectively to be from 400,000 *l.* to 500,000 *l.* per annum, and that the amount in value of the public property and effects belonging or incident to the state exclusive of the revenues, is more than 45,000 *l.*, and the amount in value of the private or personal property and effects appropriated exceeds 300,000 *l.* Further, that of the separate income derivable from real property, bought and left by the Rajah Pertaub Shean, and now appropriated by the East India Company, a portion is derived from lands situated in the territories of the East India Company, and is returned by Viscount Falkland, Governor of Bombay, as of the annual value of rupees 25,529, or 2,552 *l.*

That, by reason of Shahoo Maharaj being treated at Benares as a political prisoner, although denied to be a rajah either by birth or adoption, the local courts of the East India Company are prohibited from entertaining the matter of his complaint in the premises, while by reason of the forcible detention of his person by the same power which refuses to hear him, at the very same time that it degrades and beggars him, he is prevented from placing himself within the jurisdiction of Her Majesty's Supreme Courts in India, and seeking justice from them.

Your Petitioner has, therefore, no possible hope nor human means of obtaining inquiry and redress for Shahoo Maharaj, except from the justice of your Honourable House, and from the supremacy and impartiality of British law.

And therefore your Petitioner humbly prays that your Right honourable House will be pleased either to direct the restoration of Shahoo Maharaj to his rights and property in the premises, or else to refer the matter of this petition, and the case and circumstances as therein set forth, to the consideration of the Committee of your Right honourable House now appointed to review the conduct of the East India Company in India, with instructions to take all evidence which shall be deemed requisite, and to require the production of all proceedings, correspondence, and documents in the possession, or power, or under the control of the East India Company, or their servants, relating to the premises, or of true and exact copies of such particulars respectively, and to report thereon to your Right honourable House.

And your Petitioner will ever pray.

RUNGO BAPOJEE,
Vakeel of his Highness Shahoo Maharaj, Rajah of Sattara,
now at Benares.

PETITION for Inquiry into the present State of the Affairs of INDIA, of Proprietors of East India Stock, and British Subjects interested in the Welfare and Good Government of India.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The Petition of the undersigned Proprietors of East India Stock, and other Persons, British Subjects, interested in the welfare and good government of India.

Showeth,

That from the year 1765 to the year 1792, the limits of the British Territory in India remained almost stationary; that in the year 1793 the revenues of British India amounted to 8,276,770 *l.*, the charges to 6,633,95 *l.*, so that the territory then yielded a surplus revenue of 2,209,846 *l.*, whilst the territorial debt amounted to 7,129,934 *l.*

That between the years 1793 and 1813 large additions were made to that territory.

That in the latter year (1813) the gross revenues of India amounted to 16,764,700 *l.*, the charges to 16,899,362 *l.*, showing an excess of charges over revenue of 134,362 *l.*; that the debt in this period of 20 years had increased from 7,129,934 *l.* to 26,970,786 *l.*, or to nearly four times its original amount.

That the Committee of the House of Commons on Indian Affairs, which sat in 1832, reported to your Honourable House, that up to that period the gross charges of the Indian territory had augmented in a greater proportion than the receipts.

That in the year 1833, 20 years after 1813, the revenues amounted to 13,680,165 *l.*, the charges to 13,630,767 *l.*, showing a surplus of revenue of 49,398 *l.*, but which surplus was partly derived from the sale of the Company's commercial assets in India.

That on the 1st April 1834 the debt amounted to 29,832,299 *l.*

That on the 1st April 1849, 15 years after, when the whole of Hindostan had been brough under our sway, the revenues of India amounted to 18,227,350 *l.*, the charges to 19,700,465 *l.*, shewing an excess of charges over revenue of 1,473,115 *l.*, while the debt had swollen to 48,124,119 *l.*

That from the year 1839-40 to 1849-50, the total charges of India were 183,369,206 *l.*, the total receipts 168,622,144 *l.*, showing an excess of charges over receipts during these 10 years of 14,747,062 *l.*

Appendix D.

That in 1839 the debt of India amounted to 32,269,178 *l.*; in 1849, at the end of the next 10 years, it amounted to 48,124,119 *l.*, and that the debt has since increased, and is at this moment increasing.

That the revenues of India amounted, in 1839, to 14,549,262 *l.*; in 1849, to 18,227,350 *l.*, showing in this decennial period the debt has increased several times as fast as the revenue.

That this increase of revenue moreover arises mainly from a source over which the British Government has no control, viz., from the sales of monopoly opium; that as the receipts from this source were diminished by one-half upon the breaking out of the last Chinese war, the same or more aggravated results may be produced whenever the Chinese government may choose to legalize the cultivation of the drug in China, or whenever other nations, such as the United States, attracted by its monopoly price in that empire, and now possessing boundless land in the Pacific adapted by natural fertility and a congenial climate to the growth of the poppy, shall turn their energy and attention to the supplanting of the Company's opium in China as successfully as they have supplanted the Company's cotton in England.

That your Petitioners entertain a strong conviction that it would be impossible, at the present moment, to supply a deficiency in the opium revenue from any other source in India; that the solvency of India, therefore, now depends, and has for many years depended, upon the stability of that monopoly.

That up to the year 1834, the profits arising from the Company's exclusive trade were applied in aid of the Indian treasury; that from that date all the home expenses, including the interest upon the home debt and the dividends paid to the proprietors of India stock, have been charged upon the territorial revenues of India.

That the confident predictions, which had at all previous times been expressed, and which were again expressed by the Minister of India in 1832, of the competence of the revenues to bear all these additional charges, have not been realized; that, on the contrary, every increase of territory has been followed by a greater increase of debt, making it manifest, that if England possessed the whole world on the same terms, and followed by the same results, as she possesses India, her condition would be one of irretrievable ruin.

That such results prove that India regarded as a national acquisition, that is to say, as an acquisition made by British blood and British resources, and consequently as one in which every subject of the empire possesses a common right, and is entitled to claim an equal interest, was of far less real financial value in the year 1849 than it possessed in the year 1793, 56 years ago; for whereas the surplus revenue of 1793 amounted to 2,209,846 *l.*, and would at the same rate have amounted in the 56 years which have elapsed to the sum of 116,217,610 *l.*, after paying off the then existing debt of 7,129,934 *l.*, and exclusive of any accumulating interest during the period, the actual debt of India is shown to have amounted in 1849 to 48,124,119 *l.*, thus making the total national loss, exclusive of interest incurred in the course of half a century, no less a sum than 164,341,729 *l.* sterling.

That this sum, if it had accumulated at interest at 5 per cent. during 56 years, would have amounted to the sum of 625,290,172 *l.*, a sum which would more than have sufficed to pay off three-fourths of the National Debt of England, without the acquisition of another foot of territory in India, or the imposition of an additional rupee of taxes on the people of India.

That the financial state of India is, therefore, in the opinion of your Petitioners, such as to require a searching inquiry into all the departments of Government, both at home and abroad, in order that these may be placed upon a footing of the strictest economy consistent with efficiency; and in order that it may be determined by the light now afforded by nearly a century of experience, whether a country so acquired and so ruled as India has been by the East India Company, is a real element of national greatness and strength.

That as the Government of India has assumed and exercises the rights of a landlord over all the soil of India, the obvious remedy for the financial embarrassment of that country is the employment of adequate sums for the development of its great productive resources, which are now either lying dormant or are altogether crushed; that money raised by loan at low rates of interest, expended upon works of irrigation, in the formation of railroads, of common roads, and of bridges, and on the indispensable requirements of the rivers and harbours, almost wholly neglected, lying along a coast line of the length of 7,500 miles, a line equal to one diameter and one quarter of the globe, would, in the conviction of your Petitioners, at once lighten the taxation of the people, stimulate their industry, raise their condition, greatly augment the general commerce of the country, and consequently increase vastly the public revenues.

That there would be no difficulty in raising such loans in England to any prudent extent, if the Directors of the East India Company had publicly made known the small comparative cost at which the few public works they have attempted in India have been executed; if they had shewed the great and yearly increasing profitable returns which those works are everywhere yielding upon the capital expended; if all works to be executed, and their returns, were offered to capitalists as the security for the loans to be raised, and if the faith of the British Government were pledged to the money so raised being scrupulously expended upon their execution.

That your Petitioners beg to refer your Right honourable House to the evidence given in 1851 before the Committee upon official salaries for proof, that while the law professes to place the Government of India in the East India Company, it really lodges that authority in the Minister of the Crown, who exercises it without direct Parliamentary responsibility, and under the name of the Directors of that Company; and that whenever the Secret Department is brought into operation, that body, in which the law professes to place the Government of India, is entirely set aside.

That

That such a system is in principle unconstitutional, open to flagrant abuse, and inconvenient in practice, while it causes an enormous waste of public money and time.

Your Petitioners further desire to bring to the notice of your Right honourable House, that from the first formation of the Board of Control in 1784 up to the present time, the instances in which the members of that Board have been actually resident in India are rare; that at this moment there is not an individual belonging to it who has ever visited India; that the Board, therefore, in which the Legislature has vested plenary powers for the government of India is usually wholly ignorant of the character, the feelings, and the wants of the people of India.

That by Section 87th, 3 & 4 Will. 4 c. 85, it was enacted, that no native of India should be disqualified from holding office in India by reason of birth, caste or colour.

That the avowed intention of the Legislature in passing this enactment, was that the natives should be allowed to participate in offices which, up to that time, had been exclusively held by the covenanted servants of the Company.

That, in the opinion of your Petitioners, this enactment has been rendered inoperative by that part of the present system which places the patronage of India in the hands of the executive body of the East India Company; namely, the 24 Directors.

That it is the interest of this body to keep establishments in India at a maximum; their duty to reduce establishments to a minimum; it is their duty to give effect to the enactment above referred to; their interest to make it, as it has been made, a dead letter, because in proportion as natives are admitted to office in India is the initiatory patronage of the executive body diminished.

That to the same cause must be ascribed, in the opinion of your Petitioners, the entire failure of what was considered a most important feature in the plan that was ratified by Parliament in 1833; viz., the allotment of important powers and functions in the administration of Indian affairs to the Court of Proprietors of India stock; the immense patronage at the command of the Executive, enabling the latter, at all times, to command a majority in that Court upon any question.

Your Petitioners, therefore, earnestly solicit that those who may be hereafter entrusted with the Government of India, shall be adequately paid in money, and the patronage of India transferred to other hands.

That your Petitioners beg to remind your Right honourable House that Parliament has twice declared it to be "repugnant to the wish, the honour, and the policy of this country to pursue schemes of conquest and extension of territory in India;" that the Government of India has nevertheless recently expressed its determination to avail itself of every opportunity that may occur of extending that territory, by making forfeitures and escheats of native states; that your Petitioners, therefore, solicit that the law on this subject and the practice may be made to harmonize.

That, as stated by one of the directors of the East India Company in the Court of Proprietors, "Our incessant encroachments and sequestrations of native territories make every native sovereign fear that he will be the next victim, while our constant territorial appropriations and resumptions of rent-free lands, lead the people at large to fear that we are only anxious to make a government of officials on the one hand, and a nation of serfs on the other." That your Petitioners are prepared with evidence to prove that this system of encroachment upon sacred rights has tended to alienate the affections of the people of India from British rule.

That your Petitioners, therefore, request that a competent tribunal may be created in India for determining upon the pretensions of all persons who may claim to be heirs according to the law of India to any native state, principality, jagheer or estate, before the British Government deals with any such as an escheat or declares it to be forfeited and annexed to the British territories.

That a Commission was appointed in 1833 to frame and compile, as was stated, a code of laws for the people of India; that though a very heavy expense has been ever since annually incurred in maintaining that Commission, no such code has been framed. Your Petitioners, therefore, request your Honourable House to institute inquiries into the cause of this failure, and into the cost of this legislative experiment to the people of India.

That when, by the Act of 3 & 4 passed in the reign of the late King, the Supreme Government of India, seated in Calcutta, was invested with a strict control over the subordinate Presidencies, it was the intention of the Legislature that such Government should be partly composed of persons in the service of those Presidencies. That during the currency of the existing Charter, only one individual from the Presidency of Madras has been appointed to the Supreme Council, and not one from Bombay. That as the affairs of those Presidencies are neglected and damaged by the absence from the Supreme Council of persons acquainted with them, your Petitioners pray that inquiry may be made into the cause of this omission, and the manner in which it has affected the welfare of the subordinate presidencies.

Your Petitioners, therefore, humbly pray that your Right honourable House will refer the matter of this petition, and the facts and statements therein set forth, for the investigation and report of the Committee of your Right honourable House appointed to review the conduct and affairs of the East India Company.

And your Petitioners will ever pray.

(signed) Joseph Hume.
[And 9 others].

Appendix D.

PETITION, praying for Redress of certain Grievances in connexion with the Expiration of the East India Company's Charter, of the Madras Native Association, and others, Native Inhabitants of the Presidency of Madras.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the Madras Native Association, and others, Native Inhabitants of the Madras Presidency,

Showeth,

Madras Native Association.

1. That your Petitioners, availing themselves of the Parliamentary investigation into the condition and government of British India, under the charter of the East India Company, now near the term of its expiration, desire respectfully to place before your Right honourable House some few of the many grievances and wants belonging more immediately to the inhabitants of the Madras Presidency; claiming at the same time the indulgence of your Right honourable House, should their statements be found less explicit than diffuse, from the impossibility of obtaining access to official documents, capable of substantiating so fully as your Petitioners could wish the various complaints they have the honour to present: the local government having declined replying to a written application from the Association (dated 15th April 1852) for permission to have copies of necessary papers, and the officers of Government being prohibited from furnishing them.

2. That the grievances of your Petitioners arise principally from the excessive taxation, and the vexations which accompany its collection; and the insufficiency, delay and expense of the Company's courts of law; and their chief wants are, the construction of roads, bridges and works for the supply of irrigation; and a better provision for the education of the people. They also desire a reduction of the public expenditure, and a form of local government more generally conducive to the happiness of the subject and the prosperity of the country; and to these main points your Petitioners beg the consideration of your Right honourable House, respectfully applying in behalf of themselves and their countrymen for those remedies and reforms which, in the wisdom of your Right honourable House, may be deemed expedient and practicable. With this brief explanation, your Petitioners proceed to detail:

Revenue.

3. That, the Hindus being for the most part an agricultural people, the chief revenue of the state is derivable from its crops, which have been taxed or assessed under different modes by the Hindu, Mahomedan and English Governments respectively. With the Hindus, the revenue was collected from each village, through the medium of persons making over to the officers of government its division of the produce in kind, amounting from one-sixth in time of peace, and to one-fourth in times of war or state emergency, as laid down in the Institutes of Manu, translated by Sir William Jones, chapter vii. verse 127,—"Let the king oblige traders to pay taxes on their saleable commodities,—of grain an eighth part, a sixth, or a twelfth, according to the difference of the soil, and the labour necessary to cultivate it:" and in chap. 10. v. 118,—"A military king who takes even a fourth part of the crops of his realm at a time of urgent necessity, as of war or invasion, and protects his people to the utmost of his power, commits no sin:" and v. 120,—"The tax on the mercantile class, which in times of prosperity must only be a twelfth part of their crops, may be an eighth of their crops in a time of distress, or a sixth, which is a medium, or even a fourth, in great public adversity."

4. That this proportion continued to be exacted till the invasion of the Mahomedans, as is apparent from Ferishta, translated by Briggs, where it is found, page 453, vol iv.—"One of the earliest acts of the first King Cashmere in the year A.D. 1326 was to confirm for ever the ancient land-tax, which amounted to 17 per cent., or about one-sixth of the whole produce of the land;" and in the Ayeen Akbery, vol. i. part ii. p. 245, it is stated,—"In former times the monarchs or Rajahs of Hindosthan only exacted one-sixth of the produce from the cultivator." But in the early part of Mahomedan rule, according to Ferishta, the King of Delhi raised the tax to one-half the produce; that of the wet cultivation being delivered in kind, and of the dry, generally in money, at a fixed commutation; and the zamindary system having been then introduced, the payments were made to the zamindars, who were either farmers of the assessment, or persons to whom districts had been granted by the ruling power, in return for past, or the expectation of future services.

5. That when the British Government first assumed territorial property and rights in this part of India in 1759, they found the Northern Circars divided into zamindaries, pallams and ain-lands. In the last-mentioned the ryots paid government dues to the servants of the state, or to renters, who farmed the revenue: in the two former, the dues were paid to the zamindars

zamindars and poligars, who held their property hereditarily and disposably, so long as they paid the peishcush or tribute, in consideration of which, the management of the lands had been made over to them; and this practice was permitted to continue unaltered till the yea 1769, when three boards, or councils, were established, who managed the revenues, and ruled the country till the year 1789, when a fixed settlement was made with the zamindars, whose revenues were estimated, and they were made to pay one-third of their rental to the Government; and the lands hitherto managed by stipendiary officers, or farmers, being placed under the control of collectors, were parcelled out into divisions, called moottahs, and their tenures sold by public auction. The same plan was acted upon in the new acquisitions of the honourable Company, till the year 1799, when the permanent settlement of Lord Cornwallis was ordered to be introduced, although in the interim, on the occupation of Baramahal and Dindigul in 1793, Colonel Read had been making out a new plan, which, on the failure of that of Lord Cornwallis, after a trial of three years, 1803-4-5, eventuated in the ryotwar system, which, with very slight modification, is now prevalen in seventeen out of the twenty collectorates forming the Madras Presidency, under which the entire assessment is collected in money, and from each individual cultivator, directly by the deputed servants of the State.

6. That your Petitioners, as Hindus, and naturally attached to their national and ancestral customs, have had, and continue to have, the greatest repugnance to the innovations of both the zamindary and ryotwar systems; the more so, as they are both the instruments of injustice and oppression, but especially the ryotwar, the operation of which has reduced the agricultural classes to the deepest poverty and destitution. Ryotwar.

7. That this system was introduced for the double purpose of preventing the accumulation of landed property by the natives,—the zamindarships being hereditary,—regarding which, when recommending the ryotwar system, Sir Thomas Munro records in his Minute of the 15th August 1807, the following observation: "That the great zamindar defies all authority, and will keep the ryots as poor as they have always been, and the small one, or mootahdar, will endeavour to imitate him in his state and armed followers; that though most of the mootahs will finally resolve into ryotwar farms, many of the greater ones will assume the character of zamindaries or poligarships; that the country will be filled with petty armed chiefs, who may hereafter combine to disturb the public tranquillity; and that the system is, on the whole, detrimental to the country, and dangerous to Government." And the desire of rendering each individual cultivator immediately dependent on the authority of the State, while it was imagined that it would altogether exempt him from the vexatious intermeddling of the subordinate servants of the Government; consequently it involved the parcelling out of the whole country into innumerable small portions, varying from one to ten or more acres, or whatever standard of land-measure might happen to be that common in the district. This could not be effected without a complete measurement of each province into which the system had to be successively introduced, and of course the separate valuation of every minute portion, in order to fix the precise rate of its individual assessment.

8. That this most intricate and at the same time gigantic plan was commenced without the aid of a single surveying instrument, except a chain of 33 feet, or a glimpse of scientific knowledge beyond that of the native cutchery gomastahs or clerks, who, as a part of their duty, were to instruct others in the art of mensuration, an art in which, being completely untaught themselves, they had to acquire from no better education than the progress of their own survey. These clerk surveyors were paid *Rs.* 21 per month, and "were encouraged to be expeditious by the hope of gain, and deterred from being inaccurate by the fear of dismissal;" and when to the utter incompetency of these clerk measurers is added the fact that the fields of a village are often confusedly intermixed, not only among themselves, but with the fields of other villages, as, for instance, in a part of the Sheally Talook of the Tanjore collectorate, where, within the space of two-and-a-half square miles, there are parts of seventeen villages, and even these parts of villages are each not a single connected piece of land, but the combination of several detached fragments, while in some places two or more villages are composed of fields belonging to one and another village alternately, and others, where four-fifths of a single field belong to one village, and one-fifth to another, it will be manifest that anything like a correct survey, or even an approximation to it, must have been an absolute impossibility, and it is a well-known and positive fact that there is not, and never has been, any establishment whatever for land surveying, neither has a correct survey been made of any individual portion of the Madras territories up to this day.

9. That one of the immediate consequences of this gomastah measurement was a vast increase in the quantity of land over the ancient measurement by the curnums of villages, the persons who are stated by Sir T. V. Stonhouse, a revenue officer of acknowledged ability, in his "Observations on the Ryotwar of the Madras Presidency," "to have certainly the best knowledge of land measuring of any other class of persons in India." This increase in some districts was so great as 75 per cent., and, as it was impracticable to augment the revenue in the same proportion, the new measurement in these particular cases had to be adjusted by the old, a convincing proof that the attempt was a helpless failure.

10. That in proceeding from the survey to the classification of the land, the task was scarcely less formidable, and it was begun by sending two assessors to classify the space measured

Appendix D.

measured by ten surveyors; their business was to arrange it under the principal divisions of wet, dry and garden land, subdividing these again into various classes, according to the presumed quality, by a process so perfectly arbitrary, that in some districts the wet land had 12 classes, the dry 20, and the garden land as many; in others the wet had 4 classes, the dry 12, and the garden 4, while it was of continued occurrence that two fields adjoining each other would be entered in different classes, and even single fields were placed in the same improbable, if not impossible category. As might have been expected, these assessors, partly from ignorance, and partly from the persuasion of bribery, made a great many erroneous classifications, and accordingly it was thought advisable, for the sake of producing uniformity and checking abuses, to appoint five head assessors, selected from the body of subordinate ones; but even these could not be trusted for judgment and impartiality, and the whole of their revisions had to undergo a complete examination at the collector's cutchery.

11. That the classification having been thus settled, not by the returns of the assessors, but by the arbitrary opinion of the cutchery, the next step was to fix such a sum as it was thought would be the fair assessment for the district in its then present state, that furnished by the assessors being mistrusted equally with their classification, which operation immediately reduced the assessors' estimate from 5 to 15 per cent. on the aggregate; and the next step was to distribute the sum fixed as the aggregate of the district among the different villages it contained, thus causing a second alteration in the assessors' estimates, and by which, what was deducted from one set of villages, was added to another; after this a third alteration had to be made at the end of the year, causing a further reduction on fields asserted by the cultivators to have been over-assessed, and it usually amounted from 1 to 1½ per cent.

12. That, having thus briefly alluded to the utter futility of the measurement, and the fallacious classification of the land, your Petitioners would next call the attention of your Right honourable House to the amount of the assessment and its commutation into money. The amount exacted under the Hindu Princes never exceeded one quarter, or 25 per cent. on the gross produce; this the Mahomedans doubled, acting on the principle that the rights of a conquered country cease and determine by the act of conquest, the proprietary right of the land being transferred to the conquerors, and that, as it is lawful to take the whole of the persons and property of infidels, and to distribute them among the Musselmans, it follows that taking only half their incomes was an act of mercy.

13. That this amount of revenue, fixed by the principles of the Koran, has continued to be exacted by the East India Company, but your Petitioners apprehend without the same appearance of justice; for, to say nothing of the difference of creed, the way in which the Company obtained possession of the country is strikingly dissimilar. The Mahomedans conquered by and for themselves, but from the earliest date of the Company's acquisitions on the coast of Coromandel they have always had the assistance of the natives of the country; first as armed peons, and subsequently as trained soldiers, who have stood by them in all their battles, whether against other European powers, or the Mahomedan dynasties from whom the conquest was achieved, and who now form seven-eighths of the military force by which the British territories are defended; consequently the people claim to be regarded by the English as friendly allies, rather than infidels and vanquished enemies; and, as the Company profess to govern for the benefit of the country, as well as for their own, something more ought to be left to the cultivator than the miserable pittance required for the support of himself and family, and for seed; and yet even so much as this pittance is not left him under the operation of the ryotwar system.

14. That, adopting the amount of one-half as the revenue due to the State, the authorities of the day commuted this share into money, in what way your Petitioners cannot say, as Colonel Munro, the principal agent and authority, has not explained it in any of his reports, nor has he imparted any information as to the data and principles on which he formed his tables of rates for the different classes of lands, and even up to this date there is no fixed system of commutation; but different modes are practised, not only in different districts, but even in the various sub-divisions of each district. The immediate consequence of this commutation was a gradual and general fall in the price of all grains, which for a long series of years past has been so low as to reduce all but the most substantial ryots to a state of almost beggary; thus, for instance, as in the southern division of Arcot, where the price at the date of its survey was five cullums per pagoda, on a piece of land producing 100 cullums, the half share of 50 cullums being converted into money, paid the Government the sum of 10 pagodas; but as the present price is seven cullums per pagoda, the ryot must dispose of 70 in order to meet the assessment, retaining for his share only 30, which gives him 42-7ths pagodas in the place of 10, while the Government receives 10 pagodas as the half share of 142-7ths pagodas, the selling price of the 100 cullums; and a similar deterioration in the value of grain has taken place throughout the whole Presidency.

15. That the extent of this evil is shown in a voluminous Minute of the Board of Revenue, dated 5th January 1818, which acknowledges that, "while the ryotwar survey assessment professed to fix an equal and moderate tax in money on each field, in almost every instance it greatly increased the Government demand upon the country. In Dindigul it nearly doubled the public assessment: in Barahmahal it increased it 21 per cent. In the northern division

division of Arcot the additional imposts and illegal exactions of the renters under the [former] native governments were, by the ryotwar survey, incorporated with the land rent. In Nellore the highest rate of teerva [money payment] fixed on the finest land was alone declared to be the ultimate limit of the Government demand upon all land; and even in the ceded districts, where it was perhaps most moderate, the demand on the land was raised so high as to be in general greatly beyond the resources of the people."

16. That Sir Thomas Munro having returned to Europe in the year 1807, and these evils of the ryotwar exceeding all bounds, the Government of Madras had recourse in the year 1808 to the partial introduction of the village settlement; first, for three, and subsequently for ten years. Under the triennial settlement the lands were rented out to contractors, the average collection being taken into consideration, and the highest proposals accepted; and, this being found but little less objectionable than the ryotwar system, the next resource was the decennial settlement, on the principle of assessing for the said term of years a fixed sum as public revenue, and, in consideration of the payment of that sum, making over for that period the Government right to the public revenue from the entire land of the whole village, both arable and waste, to the village community, by a direct settlement with the whole body of ryots collectively, or with the heads of the village. When the village was not rented in this manner, the public revenue was collected, either by an intermediate renter, or by the officers of Government, and in kind or money, as might be the local custom.

17. That this system was progressing in a manner most favourable to the ryots and the public revenue, when in the year 1818, the Court of Directors having determined upon enforcing the ryotwar, ordered it to be resumed, and prosecuted under a modified form, called the field ryotwar; and when, in the year 1820, Sir Thomas Munro arrived in Madras as Governor of the Presidency, the exorbitant taxation of the old system was sought to be alleviated by a reduction of ths assessment, to the amount of 25 per cent. on dry and wet lands, and 33 per cent. on garden lands, in the ceded districts, where the Board of Revenue esteemed the assessment "most moderate." A reduction of 12½ per cent. was also made in the district of North Arcot, and similar reductions were directed to be made in other districts, conditionally. Remissions are likewise taking place on account of failure of crops from year to year; but these partial changes, forced upon the Government by necessity, have little or no effect on the evils inherent to the system, which press the more heavily on the ryots, because it is almost entirely under the management of the collector's deputy, the tehsildar, who, as his executive officer, possesses all the power of the collector, fiscal, police, judicial, and miscellaneous, and the control not only of his own immediate establishment, but over all the village officers within his district, which contains, on an average, from 100 to 300 villages, with a revenue from 1 lack to 2½ lacks of rupees.

18. That the tehsildar of each talook—such is the denomination given to his division—on the 12th day of July in every year, proceeds (in some places by himself, in others by his subordinates) to fix the quantity of land to be taken up collectively and individually for the year ensuing. By this settlement, called the dittum, or fixation, each ryot ought, by the 4th section of "Standard Manual of Rules," dated 10th January 1850—"occupants of land are at liberty to enlarge or contract their holdings in both cases (*i. e.* as to increase or decrease) by entire fields"—to have only such land as he chooses to accept; but really, owing to the tehsildar's authority, he is compelled to take such as this officer is pleased to appoint, and it is only by the force of bribes, smaller or larger, according to circumstances, that the ryot is permitted to escape from an oppressive allotment as regards its quality.

19. That at the time of this settlement all the poorer ryots, by far the more numerous of the entire body, stand in need of advances for the purchase of bullocks lost during the past year, as well as for seed, the repair of their own wells and implements, and in order to procure hired assistance from those who have not taken up any dittum; and the cirkar or government generally allows advances of money, called tuccavy, to be made on this account, security bonds being taken from the surety; but as the allowed sum is always far too little to meet the wants of all the applicants, there is necessarily a competition for the tehsildar's favour in its distribution, for which he obtains from the successful candidates a bonus or deduction from their respective advances, averaging 10 per cent. upon the whole tuccavy; and thus the ryotwar system, whilst it professes to raise the ryot from poverty to independence, by inducing him to cultivate on his own account, actually tends to saddle him with an annually augmenting load of debt, and converts him from a poor but free labourer into a beggar and a slave. On the general effects of this system of encouraging cultivation, your Petitioners quote the following remarks from the work of Sir T. V. Stonhouse, before quoted:—

"As regards tuccavy, or advances for cultivation, it was a principle of Sir T. Munro's ryotwar that tuccavy was to be gradually discontinued; and has it been so even in the ceded districts, although a period of nearly 40 years has elapsed since that rule was made? Are not tuccavy advances still made, year after year, to the ryots of Bellary and Cuddapah? The records of the Board of Revenue and of the Government can supply the answer. The tuccavy advances in Bellary are so large as very recently, I believe, to have attracted the notice of Government, and to a call for explanation; and it is only in consequence of the stringent orders from the Court of Directors, four or five years back, that the annual advances for tuccavy, in the several districts, have been considerably reduced. The average

Report, 15th August 1807.

Appendix D.

advances of the last five years have been only *Rs.* 3,52,872,* while that of the preceding five years was *Rs.* 6,73,579,† and in previous years still larger; and the discontinuance of tuccavy, in the course of time, like the rest of the advantages expected from the introduction of the ryotwar system, has proved a mere illusion, and one of the many fanciful theories of the system doomed to end in no practical result."

It often happens, when impoverished ryots absent themselves on the day of dittum, to avoid having again forced upon them the occupancy of lands by which they incurred loss at the previous jummabundy, that these lands are forced by the tehsildar on one or other of the ryots who are present; and when there is a failure of rain for the cultivation of the dry lands, which pay a lighter assessment than the wet, if the ryot should have recourse to the water of the tanks or reservoirs, instead of being charged the fixed water-fee levied on wet lands, he is compelled to pay the full assessment for a wet crop.

20. That the aforesaid water-fee is levied for the declared purpose of repairing the tanks, and keeping up the usual means of irrigation; but, notwithstanding the tax is levied for this purpose, the ryots are compelled to make all the repairs required within a certain amount; and whenever the means of irrigation is impeded, as it always is when in the monsoon rains the water-floods fill up the channels with sand, the ryots are forced, under penalty of heavy fines, to quit their agriculture, in order to clear out the channels, although many miles distant from their habitations, hiring labourers to do their work in their absence, and without receiving any remuneration for their labour; and the overseers of this business being the Government servants, they have thus a perpetual occasion for the exercise of oppression and injustice; for the tehsildar, being invested with magisterial powers, can and does confine, at his own cutcherry, all ryots who resist his demands, and whom he carries in custody along with him from place to place, as he shifts his cutcherry, until he coerces them to obedience.

21. That these are a few of the many grievances endured under the ryotwar, between the settlement of the dittum, on the 12th July, and the fixation of the kist or money amount of the assessment, called jummabundy, which takes place from the month of December to that of March following, when another officer of the collector, called the sheristadar, or head revenue officer, aided by his subordinates, proceeds to examine the dittum, and to declare the amount payable by each individual ryot, according to the previous settlement of the tehsildar, after having deducted the Government remissions, on account of crops that have fallen short, owing to damage from the weather or drought, from an insufficiency of irrigation.

22. That it is an easy thing to make this jummabundy an instrument of the grossest tyranny, the single word of the sheristadar being that which determines whether there shall be any remission, and how much, or none. On the wet lands, or those cultivated by irrigation, no remission is permitted, unless the produce has fallen short of the average to the amount of 10 per cent.; the ryot may then apply for a remission; but, as by the Government regulations the verification of the sheristadar is indispensable, in order to render the application successful in the ear of the collector, the sheristadar has every applicant at his mercy; besides which, during the whole time of this settlement, the collector's establishment has to be supplied with provisions by the ryots gratis.

23. That the only check upon these multitudinous and never-ceasing oppressions, viz. an appeal to the superior officer, is the addition of mockery to misery. The tehsildar will receive no complaint against his inferiors, and when the ryot would approach the collector, his petition will be stopped, if possible, in its way by the jewabnevis, or interpreter; or should the petition reach its destination, it is read to the collector by this officer, who having generally the opportunity of a previous perusal, and taking advantage of the collector's imperfect acquaintance with the vernacular, adroitly omits the most important parts, and foists in qualifying language of his own; but should a hearing be eventually granted, in spite of all obstacles and trickeries (if the ryot can produce no witness, every ryot being more or less afraid to come forward from dread of future injury), his complaint is rejected, as unworthy of credence; and if he produces several witnesses, it shares the same fate, on the plea that he has hatched a conspiracy in support of a falsehood. Should the ryot then carry his appeal to the Board of Revenue, the complaint is transmitted to the collector, who, in reply, gives the wrong to the ryot and the right to the Government servants; and, in virtue of this reply, the ryot is denied further inquiry. Sometimes, indeed, the appeal is carried as far as the Governor in Council, and even, though very seldom, to the Court of Directors; but as the court sees through the eyes of Government, the Government through those

those of the Board of Revenue, the Revenue Board through those of the collector, and the collector through those of his sheristadars and tehsildars, the ryot is in every case handed over to his original tyrants and tormentors, to whom he must make pecuniary amends for his fruitless attempt to obtain redress, or stand the consequences at the next arrangement of the dittum and jummabundy, by the very Government officers from whose vexatious exactions it was pretended to set him free, by the introduction of the ryotwar system.

24. That the jummabundy having thus finally determined by the end of March the amount payable by each ryot, he is bound to liquidate it prior to the ensuing month of July, the period for the settlement of the next dittum; and as the three intervening months are precisely those in which the price of grain is at the lowest, in consequence of the recent harvest, he has to undergo a third series of losses and misfortunes, from the circumstance of his being compelled within that time to turn so much of his crop into ready money as will suffice to realize the sum specified for the Government kist.

25. That although this space of three months is nominally allowed for the realization of the kist, still the tehsildar, with whom the collection rests, is very anxious to obtain the instalments as early as possible, in order that he may at once preserve the good opinion of the collector, and avoid the fine to which he is liable, should not the whole or the greater part be liquidated before the period of limitation has expired; and accordingly he is constantly urging the ryot to dispose of his crop, which he has been permitted to reap, on giving security to the village officer that the money shall be paid, and liquidate, if not the whole, at least a part of the amount; this urging comprehending the sending for the ryot, and confining him in the cutcherry, until he shall have undertaken, in presence of witnesses, to pay a stipulated instalment on a certain day; by which the ryot, in addition to the loss he sustains by being detained from his labour, perhaps a week or 10 days at a time, is forced to part with so much of his crop, whether cut or standing, for any price which the nearest grain merchant, taking advantage of his pressing necessity, chooses to offer; and this process of urging on the part of the tehsildar, and of sacrificing his property on the part of the ryot, continues till, perhaps—for the occurrence is not unfrequent—the disposal of the entire crop failing to raise the money-payment of the amount due to the State, the poor ryot has to sell his bullocks, his farming utensils, and the little rest of his property in order to make up the deficiency.

26. That, in order to possess your Right honourable House with some idea of the cruelties under which the ryotwar system can be, and actually is, exercised by the Government servants, your Petitioners will quote an instance occurring in the year 1851, when certain ryots in the zillah or collectorate of Guntoor, unable to obtain redress from the collector, the commissioner, and the Board of Revenue, presented a petition to the Governor in Council, to the following effect:—That at the dittum settlement of the previous year, on their refusal to accept the dittum offered to them by the tehsildars of six different talooks, because it included lands that had been relinquished, and others which were not liable to assessment, and because the lands bearing assessment were then re-measured with new ropes, shorter by one cubit than the legal measure, some of them were compelled, by imprisonment and corporal punishment of various kinds, to put their names to the dittums; and when others ran away from their talooks, to avoid the like treatment, the curnums of the villages forged the names of those who had absconded to the dittums that were assigned to them; they who remained complained to the collector, who said the dittums should not be altered, and refused redress; and when the jummabundy came round, on their refusal to pay the excess of the assessment, the houses of the ryots were stripped of their roofs; their ploughs, ploughing cattle, grain seed, and forage for their grazing cattle, were seized by attachment, and sold by auction; some ryots were arrested as security for the balance still unpaid from the proceeds of the auction; the houses of others were broken into and plundered by the peons, who were paid batta from the proceeds of the sales; their herd cattle were not permitted to graze, and their families prohibited taking water from the tanks and wells for domestic purposes. Their petition to the Governor in Council was transmitted to the collector in the usual way, when that officer applied for two years' leave of absence; and there the matter rests to this day; and, although your Petitioners confine themselves to a single and recent example, they do not scruple to assert that, in a greater or less degree, these practices are prevalent throughout every division of the Presidency.

27. That while such are the evils of the ryotwar, as respects the state and condition of the people, it entails no small share of evil upon the Government, from the large establishment which has to be entertained for the collection of the revenue; on which point your Petitioners beg to solicit the notice of your Right honourable House to the description given by Sir T. V. Stonhouse, in the work to which they have already referred:

"The cause of the heavy charges of management under the ryotwar system is its endless and varied details, requiring a multiplicity of revenue officers in the talooks to keep the accounts, and so on, through every gradation of office, from the tahsildar to the Board of Revenue. I do not hesitate to say that at the very lowest, one-third of the public expenditure now incurred in maintaining the ryotwar system would be saved under a village lease or aumany settlement, and more especially the establishment of a native board of revenue would be saved. I do not mean to affirm that this establishment is necessary even for ryotwar management, for I do not believe it to be so, and the Board of Revenue conducted its duties as efficiently before its creation. With practical revenue officers as members of the Board of Revenue, it cannot be required, and its expense is not confined to itself, as the

Appendix D.

the sheristadar cannot be supposed to know the language of all district servants who are entertained in the several collectorates, to render the accounts into Mahratta, that they may be intelligible to the Board's sheristadar, his deputy and establishment. The formation of this unhealthy excrescence on the charges collection of this Presidency by Sir T. Munro, would have looked better had not his old and favourite ceded district servants been selected by him to fill the principal offices created by it. The charges collection of this Presidency have increased on an average from 12 to 15 lakhs of rupees per annum since the introduction of the ryotwar system, and the difference would have been still larger but for the abolition of the principal collectorships, and other reductions made in late years in the salaries of collectors, and of their establishments, the effect of which has been to leave the latter inefficient, and insufficient to carry on satisfactorily a system of revenue management so complicated and detailed as that of the ryotwar."

"During the decennial rents, or from 1809–10 to 1819–20, the charges collection for the year amounted on an average, in round numbers, to *Rs.* 25,76,000. The charges for each year are exhibited in the margin.* The charges collection since that period, or from 1820–21 to 1843–44, a period of 24 years, have averaged 38,49,000, exhibiting an average excess of annual charge, compared with the former period, of *Rs.* 12,73,000; but the average of a similar period of 11 years, or from 1830–34 to 1843–44, is 40,74,000, and gives an excess annual charge of *Rs.* 14,98,000, or nearly 15 lakhs of rupees—the charges collection in each year exhibited in the margin."†

"If there are advantages, therefore, in the ryotwar system, the Government pays dearly for them. It might be fitting a great and enlightened Government to make such sacrifices for real and admitted benefits; but, so far from being admitted, they have from first to last been questioned, the system denounced as vicious by many of the ablest revenue officers of the Government, and their existence in no way substantiated even by the advocates of ryotwar, or by practical results."

"It is not on the score merely of an expensive establishment that the ryotwar system proves so heavy a drag on the finances of the Government. There is a further expense inherent in it, from which other systems are comparatively free, viz., charges for the repairs of tanks and other sources of irrigation. This is a heavy annual drain upon the revenue of the country, and much of it, owing to the defectiveness of local check and supervision, unprofitably spent, or rather not spent at all, but which finds its way into the pockets of the public servants. Even so far back as 1828, the Court of Directors noticed the heavy charge it occasioned on the finances of the country, and observed that, although they were far from entertaining a wish that anything necessary for so desirable an object as the irrigation of the country should be withheld, it was of high importance that these charges should be under the strictest control, and be distinctly brought to their notice at the periods of their necessary occurrence. The amount expended on this account, from 1805–6 to 1843–44, has been upwards of 243 lakhs of rupees, and the average expenditure of the last five years has been upwards of six lakhs.‡

"Under a zemindary settlement the Government is relieved from this heavy annual expense, and under a village settlement is relieved of a great portion of it; for, under a village rent, fixed on the low scale adopted for a ryotwar settlement, there would be no necessity for the Government to undertake, or be responsible for, repairs beyond those of masonry works. All earthwork to bunds of tanks, and the clearing of channels, should devolve upon the villagers, who would do it much more effectually in their own way, and at not a third of the amount disbursed by Government on such works. Such a measure would only be a return to the usage of the country. Another disadvantage of this system, of throwing the whole expense of tank, &c., repairs on the Government is, that it forces cultivation, and militates against that principle of the ryotwar system which leaves the cultivator at liberty to cultivate as much or as little as he pleases. This is a fundamental rule of the ryotwar system. 'It must be clearly understood,' say the Board, 'that the revenue is to continue as at present, subordinate to justice; that freedom of labour to the ryots is, by the Court of Directors themselves, declared to be the basis of the new settlement, and that, therefore, no restraint whatever inconsistent with it can be imposed upon them.' The same principle was also clearly prescribed by Sir T. Munro himself during his government. 'The ryots should be allowed to cultivate as much or as little as they please; they will always occupy as much land as they can cultivate profitably, and it is not the interest of Government that they should cultivate more.'

Minute, 5th January 1818.

From Government, 8th September 1820, to Board of Revenue.

"Every revenue officer knows that if this rule were observed, the Government would scarcely receive half of the revenue it now does. If ryots were allowed to cultivate as much or as little as they please, or, to use the language of Government, those lands only which they could

could cultivate profitably, a very large portion of the land now under the plough would be thrown up. In practice it is altogether different; and, whatever impressions may be entertained by the Board of Revenue, the Government, or the home authorities, the truth is, that cultivation is forced all over the country. The tahsildars, in spite of rules and regulations, will not allow of the relinquishment of lands, for this reason, that as tahsildar, it is his endeavour, for his own credit and character, to bolster up the revenue of his talook. I say, that cultivation is forced all over the country, and it is right that it should be so to a certain extent, with reference to lands dependent on sources of irrigation, for the preservation of which the Government incurs an annual heavy expense. It was a principle laid down by Sir T. Munro himself, and how he reconciled it in his own mind with his principle of an entire freedom of occupancy, and with the privilege he accorded to the ryot of cultivating as much or as little as he pleased, I am unable to discover. In his Minute of the 31st December 1824, Sir T. Munro declares, that 'Government, by the construction of tanks and watercourses, supplies the water, which is the chief article of expense in wet cultivation, and has a right to see that the lands on account of which it has incurred so heavy a charge, are not, without necessity, left uncultivated or exempted from their share of the public burthens.'"

28. That at the same time the system can boast no superior excellence as affecting the improvement of the revenue, as is apparent from the annexed quotation, taken from the same work:

"The marginal statement * exhibits the land revenue of Madras from 1820, from which time the ryotwar has been generally the mode of settlement up to 1844. The average of the first six years is, *Rs.* 331,98,788; of the next six years, *Rs.* 311,53,725; of the next six years, *Rs.* 304,24,093; and of the last six years, *Rs.* 330,51,584. During the second six years the average fell below the preceding six about 20 lakhs of rupees; during the next six it experienced a further fall of about seven lakhs, and though the average revenue of the last six shows an increase of about 26 lakhs over the preceding six years, it is still below the average of the first six years. During the last six years there has been a succession of most favourable seasons and abundant produce, and hence the exceeding low price of grain which has been so much felt all over the country for the last four or five years. These results, however, go to prove conclusively that the ryotwar system is not calculated to improve the revenue. The land revenue of Bellary and Cuddapah since 1820, is exhibited in the margin, and it will be seen if there has been much improvement even there."

"Sir T. Munro has stated, that under a ryotwar settlement, the annual fluctuations in the amount of revenue will never be so great as to cause any serious inconvenience. It would never in any one year exceed 10 per cent. in an aggregate of six or eight collectorates, though it might be more in a single one. It would gradually diminish as the ryots became proprietors, and would in 10 or 12 years scarcely ever be above 5 per cent." Report, 15th August 1807.

"Now, a glance at the marginal statement will demonstrate whether Sir T. Munro's expectations can in any degree be considered to have been realised, even with his low assessment of the government tax, being only, as in the zamindary settlement, one-third of the gross produce. In Bellary we find the revenue in 1827 falling nearly four lakhs of rupees below the preceding year; in 1833 we find it falling three lakhs below that of the preceding year; and even as recently as 1838, falling nearly 4½ lakhs of rupees below the revenue of the preceding year, or from 20 to 25 per cent. In Cuddapah we find it in 1832 falling five lakhs, or to *Rs.* 13½ lakhs, from 18,80,000 which it had been in the previous year. The total revenue of Bellary, for the first 12 years of the period embraced in the marginal statement given

Years.	Company's Rupees.	Years.	Bellary.	Cuddapah.
*1820	328,63,353	1820	22,78,817	23,62,350

Appendix D.

23d May 1827.

given above, was, in round numbers, 257,83,000; in the last 12 years, 255,01,000, or a diminution of 2,82,000; so much for improvement and an augmented revenue from the waste lands! In Cuddapah the results have been still more unfavourable. The total land revenue received from that district during the first 12 years of the period indicated was, in round numbers, 236,71,000; in the last 12 years, 230,68,000, or a diminished amount of six lakhs. View the ryotwar in any way we please, either in regard to its principles or to its fiscal results, I can discover nothing to recommend it but the statements of Sir T. Munro; I cannot discover any of those beneficial results which he expected would flow from its adoption, but, on the contrary, much evil, and not the least, the destruction of the village constitutions; but the Court of Directors seem to think that it has been successful in Coimbatore. 'As we entertain a high opinion,' the Court say, in a revenue despatch to the Bombay Government, 'of the ryotwar settlement which has been successfully introduced into the Province of Coimbatore, we desire that you will obtain from the Government of Fort St. George information respecting the nature and principles of that settlement, with the view of introducing similar arrangements in all practicable cases into the provinces under your Presidency.' Even in Coimbatore it would be seen from the marginal statement,* that there has been retrogression, not improvement, in the land revenue. The aggregate revenue for the first 12 years was, *Rs.* 267,96,000; for the last 12 years, *Rs.* 241,81,000, or a diminished amount of revenue in the latter period of 26 lakhs of rupees. The advocates of ryotwar can hardly, therefore, I think, ground their predilections in favour of the system on the score of its tendency to augment and improve the revenue when such have been the results in the most favoured districts; and, as regards fluctuations, I find that even in Coimbatore the revenue fell in one year nearly six lakhs of rupees; namely, from *Rs.* 20,97,000, which it was in 1835, to *Rs.* 15,11,000, the amount of the land revenue of 1836." And again, "Let us look now to the revenue of those districts where there has been little or no ryotwar, Tanjore, for instance, which has been under the wolungoo or village settlement of Mr. Cotton.

"In the margin† is exhibited the land revenue collections of this district in each year. The total amount for the first 12 years was *Rs.* 395,43,524, while for the last 12 years it was *Rs.* 413,76,385, or an increased receipt of upwards of 18 lakhs in the latter period. So far, therefore, as improved revenue is a consideration, the comparison, it must be confessed, is in favour of the village settlement.

"It may be said that, although the revenue has not improved under ryotwar, the circumstances of the ryots have. I have always been led to suppose that improvement in the revenue went hand in hand with improvement in the circumstances of the ryots, but here we find increase of substance in the cultivating community coupled with diminished revenue. If the ryots of Bellary and Cuddapah had really improved in their circumstances, how could the great fluctuations which it has been shown have occurred in the annual revenue, take place? Whence the necessity of the large advances of tuccavy, which are now annually made in those districts? These are fair deductions from general principles. There is, however, more positive testimony as to the real state of some of the districts. In Salem, where the ryotwar was first introduced, we find the collector stating in 1833, that the ryots were so poor as to be living from hand to mouth. We find the collector of Trichinopoly, in 1831, stating, that in a district so long under Company's management as Trichinopoly, with a very extensive market in the neighbourhood, it would have been natural to suppose that a large portion of the soil would be under tillage, but that the reverse was the fact, and that of the dry lands in three out of the four dry talooks, not more than one acre in 10 was cultivated. We find even Mr. Sullivan, on quitting Coimbatore, in his report of the 20th January 1830,

1830, stating, that at the time of the survey, a tract of country which yielded an annual revenue of nearly a lakh of rupees, was then (when he wrote) in the possession of elephants.

" The only province which may, perhaps, be taken as the most successful application of the ryotwar settlement, and of field assessments, is Travancore. The land-tax is there fixed, and is based upon a revenue survey; but a fresh survey is made every 10 or 12 years, in which alterations are inserted according to the lands brought into cultivation, or those thrown up. The periodical surveys are stated to have been the established habit of the native government. The original survey comprehended the whole country, waste and cultivated. The occasional surveys included the cultivated lands only. Every field, with its rent, was inserted in the survey, with its proprietor, and it was entirely a ryotwar settlement. The mode of determining the field assessment seems to have been, to fix it at certain ratios of produce to the quantity of seeds sowable, which were determined by the quality of the soil.

" The partial success, however, of the ryotwar system in Travancore may be accounted for; it has existed from ancient times, and is the established usage of the province; the land assessment is extremely low; the district has many valuable productions, as pepper, betel, cardamums and teak wood, and I believe the real cause of its success is the revision of the survey, which takes place every 10 or 12 years, in direct opposition to Sir T. Munro's principle of declaring the survey assessment permanent. But even in Travancore it did not afford that protection to the ryot which is stated to be one of its chief advantages."

On which your Petitioners beg to remark, that Travancore is not a collectorate under the Company, but a tributary state, having a maharajah, and its own government, to which an English Resident is attached.

Zamindary.

29. That having thus explained the operations of the ryotwar, your Petitioners proceed to the zamindary system, which still obtains to a great extent in the three districts of Ganjam, Vizagapatam, and Masulipatam, and in some few parts of the 17 ryotwar collectorates, where it places the cultivators in a condition not materially better than the ryotwar. A few of these zamindaries existed prior to the occupation of the districts by the British; but the larger part are of more recent creation, in which their possessors occupy the position of farmers of the revenue; of which they are to pay a sum nominally estimated at 35 per cent. to the Government, take 15 per cent. as their own share, and leave the remaining 50 per cent. to the cultivator; the estimated 35 per cent. is, however, fixed at a certain permanent sum, the amount of which can never be varied by either the Government or the zamindar; it must be paid in money, without remission of any kind, to the zamindar for bad seasons, and without any demand upon him for an increase in the cultivation; the cultivators, on the other hand, are to pay the zamindar in kind, and he is to grant them the same remissions which are granted to the ryots of the Government.

30. That the half share of produce due to the zamindar is subject to no charges for cultivation, the whole of which fall upon the cultivator, who has likewise to pay durbary and other expenses, best explained by the following statement, adapted to the collectorate of Masulipatam, and extracted from a Report by Mr. Russell, the collector of the district, dated the 20th March 1819, and to be found in the Appendix to the Report from the Select Committee, in the year 1832:

" A ryot who has two ploughs will cultivate one cutty of mettah, or dry land; and that extent of ordinary soil in a favourable year will produce 4 p. 10 t. of jonnaloo, and other grains and pulse.

				M. Rs.	*a.*	*p.*
" Value of 4 p. 10 t. at 22 Madras rupees per pooty, which is a high computation, since it is reckoning the whole produce at the same rate as jonnaloo*					99	– –
Deduct Circar share					49	8 –
" Deduct durbary charges on 4 pootties 10 tooms, at 2 Madras rupees per pootty		*M. Rs.*	9	– –		
Ditto Nuzzer cuttoy, &c., at 3 Madras rupees per cent.			1	8 –		
Batta to Mahasooldars, Anchanadars, &c., at 16 per cent.			8	– –		
					18	8 –
Remains to the Ryot					31	– –
" Deduct charges of cultivation:—						
Value of 2½ tooms of seed grain		*M. Rs.*	3	– –		
Subsistence to two slaves for six months, at 1 seer of jonnaloo per diem			10	12 –		
Two cumbalies			1	– –		
Charges incidental to the replacing of cattle, one year with another			6	– –		
Wear and tear of ploughs, &c.			–	8 –		
					21	4 –
Balance in favour of the Ryot		*M. Rs.*			9	12 –

" In

* This is the average price of jonnaloo.

Appendix D.

" In paddy lands two ploughs are not equal to the culture of more than 10½ veesums, and 8 pootties are a good crop for that extent of land in a favourable season.

	M.Rs.	a.	p.
" Crop 8 pootties, value at 20 Madras rupees per pootty	160	–	–
Deduct Circar portion	80	–	–
Ryot's share	80	–	–
Deduct durbary charges, at 1½ rupee per pootty — M. Rs. 12 – –			
Nuzzar cuttoy, &c., at 3 per cent. 2 6 6			
Mahasooldars, &c., charges, at 16 per cent. 12 12 6			
Total deductions	27	3	
Remains to the Ryot	52	12	–
" Deduct charges of cultivation :—			
Four tooms of seed grain, at 20 Madras rupees per pootty, M. Rs. 4 – –			
Subsistence of two slaves for six months, at 2 seers of paddy each per diem, 18 ts. value thereof, at 20 Madras rupees per pootty 18 – –			
Two cambalies 1 – –			
One hundred and twenty-seven planters, at the average rate of 30 men for every toom sown 10 8 –			
Charges incidental to the replacing of buffaloes,* one year with another 8 – –			
Wear and tear of ploughs, &c. 1 – –			
	42	8	–
Remains to the Ryot — M. Rs.	10	5	–

" 34. As the fees which the ryot receives at the threshing-floor are given to his slaves, and constitute their means of support during a part of the year, I have calculated their subsistence for six months only, and for the same reason I have omitted to include those items among the receipts of the ryot.

" 35. The principles by which I have been guided in estimating the charges incidental to cultivation were not dictated by any speculative opinions of my own, but were deduced from a careful examination of original accounts, obtained from various sources, where I have no reason to suspect deceit, because there could be no motive for deceiving me. It may, however, be satisfactory to inquire how far the results regarding the charges for bullocks, &c., may tally with others prepared according to the plan observed in Mr. Colebrook's Husbandry of Bengal. That gentleman calculates interest at two per cent. per mensem on the money laid out in the purchase of cattle and ploughs, and considers that allowance to cover the expense of replacing casualties.

" 36. In the foregoing accounts I have reckoned the ryot to have two ploughs and four oxen in a dry-grain village, or four buffaloes in one where paddy is cultivated.

" Mettah Land.

" The price of a bullock, at a low computation, must be taken at 12 Madras rupees, and of a plough and other implements of husbandry at 1 Madras rupee 1 anna.

	M.Rs.	a.	p.
" Four bullocks, therefore, must be considered to cost the Ryot	48	–	–
And two ploughs, &c.	2	2	–
The value of his stock then is — M.Rs.	50	2	–

" And the interest on that sum for 12 months, at the rate of two per cent. per mensem, Madras rupees 12, or nearly double my former calculation.

" Low Land.

" Eight Madras rupees is the usual price for a ploughing buffalo.

	M.Rs.	a.	p.
" Four, therefore, must be reckoned to cost	32	–	–
And two ploughs, &c.	2	–	–
Total amount of stock — M.Rs.	34	–	–

" Interest on 34 Madras rupees, at two per cent. per month, 8 rupees 3 annas, or 13 annas less than my estimate.

" If it be admitted that those statements are correct, it follows that the mere profits of husbandry must, under this system, be inadequate to the maintenance of the ryot's family.

" 37. We will suppose, for example, that the family consists of five persons, which I take it

* Buffaloes are much shorter-lived animals than bullocks, and in the end more expensive; but they do their work better in this sort of cultivation.

it is the usual average, and that it is composed of the ryot, his wife, two children, and a female relation.

"The daily consumption of grain cannot be estimated at less than four seers. One pootty and a half, therefore, must be allowed for the expenditure of the year; and, as that quantity of jonnaloo even will cost 33 Madras rupees, it is obvious that the mere article of grain alone will amount to more than the surplus which now remains to the ryot. Such is, in fact, the real result of the system. The plough itself affords little towards his support, and were it not that it gives him the valuable right of pasture for his cattle and ground for his pumpkins, he could not subsist. A single she buffalo will yield him eight rupees per annum in ghee alone, and the profit he derives from this source, added to the labours of his women, enable him to procure the necessaries of life; but even these aids will not always afford him the means of subsistence, and for two or three months of the year the fruit from his pumpkin garden, mixed up with buttermilk or a very small proportion of meat, is the daily diet of his family.

"38. Under these circumstances, the indigence we find so prevalent among the agricultural classes, and the distrust which exists between them and the zamindars, cannot be a matter of surprise. Deprived as they are of the fair return of their industry, it cannot be expected that they will omit to avail themselves of any opportunity that may offer to pilfer the grain while it remains on the ground, and hence arises the necessity for the precautions which the landlord is obliged to resort to.

"39. It may perhaps be said that the introduction of village rents would improve the condition of the peasantry, by relieving them from the ruinous expenses attending the present system of espionage; and so, in fact, it would, if the zamindars would found their assessments on a moderate scale, and the distrust which has for ages existed between them and the ryots could be converted into mutual confidence: but as long as the demand of the circar shall remain at its present standard, as long as the 'durbary kurchooloo' shall be considered to be the lawful branch of revenue; as long as the collections actually realised under the several heads which have heretofore been customary shall be looked upon as the proper basis for future assessment; as long, in fact, as the demand of the landlord shall absorb the just profits of the cultivator, so long will it be in vain to expect any confidence between them; so long will the demand of the year depend on the actual harvest, and all engagements continue nominal; and so long will there be a positive necessity for the zamindar to guard against the clandestine removal of his crops.

"40. At present all engagements are nugatory. The rents are so high that it is impossible to realise them, unless the crops prove more than usually favourable. The annual demand of the zamindar, therefore, still fluctuates with the seasons; and as he knows the ryots will do all in their power to deceive him, he is obliged to ascertain their actual resources by means of appraisers, and the settlement is in effect concluded in the same way as if no agreements existed."

31. That without dilating upon the vexations innumerable occurring under the zamindary system, complaints of which are referable to the collector, your Petitioners will merely point out that by it the ryot's nominal share of one-half the produce is actually reduced to one-fifth of the half on dry lands, and to one-eighth on wet or paddy lands; yielding as the annual return for his agricultural labour twenty rupees and one anna, an amount quite insufficient to procure grain for himself and family, putting aside clothing, salt and vegetables, and the expenses of religious ceremonies at births, marriages and deaths; all which he has to procure as best he may from the milk of his herd cows or buffaloes, and the labours of the female members of his family.

32. That although the Minute of the Board of Revenue, to which your Petitioners have referred, states that "the situation of a zamindary ryot is considered by many as superior to most of those placed immediately under collectors and their native officers," it is still more miserable at this time than it was at the date of Mr. Russell's Report; and as the zamindarships are hereditary, and cannot lapse to Government except for failure in the payment of the peishcush, or permanent rent, your Petitioners represent the imperative necessity for definite and effective regulations to restrain the zamindar from the continual practice of oppressive extortions, in taking away the best lands from their original holders, for the purpose of bestowing them on his own relations and favourites, compelling the ryots to cultivate such lands without payment, and obliging the ryots to buy the zamindar's grain at prices far above the market value; as likewise for granting greater facilities to the ryots for preferring their grievances, and for the due and early inquiry into, and settlement of, them by the collectors, instead of their being, as they are now, obliged to enter into an expensive litigation in the civil courts of the Government, notwithstanding the existing regulations that summary justice shall be afforded them by the collector.

33. That as the ryotwar system prevailing in seventeen-twentieths of the whole Presidency is always the substitution for the zamindary when lapses occur by the failure of peishcush, your Petitioners earnestly pray that, as there can be no obstacle either of hereditary right, vested interests, or any other, to prevent its summary and total abolition, the ancient system which obtained in the country prior to its subjugation by the Mahomedans, may be again reverted to; viz. the village system, or the collection of the revenue from the land by means of villages, instead of individuals, without the interference of zamindars or middlemen on one hand, and free from the harassing oppressions of Government servants on the other. This system your Petitioners beg to state has been tried by the Madras Government, in what was called the Triennial and Decennial Settlements, alluded to in the former

Village system.

Appendix D.

former part of this Petition, regarding which the Minute of the Board of Revenue beforementioned states :—

* * * * *

" 280. It differed from the ryotwar chiefly in the assessment being fixed on the entire aggregate lands of the village, not on each distinct and separate field ; in its being concluded with all the ryots collectively, not with each individually; and in its giving up to the ryots not only the revenue to be derived from the arable lands, but that also to be obtained by after-exertion from the waste also. In fact, in leaving, in consideration of a contract to pay a given sum as public revenue, the entire internal administration of the affairs to the village community.

" 281. The object in view was to adapt the revenue administration to the ancient institutions and ancient usages of the country, to which the Hindoos are proverbially attached ; to suit the system to the people, and not to attempt to bend the people to the system. Mr. Place, quoted by some mistake in England as an advocate for ryotwar, has well described the village settlement, and it is curious to observe the accuracy with which he predicted the consequences resulting from an attempt at the introduction of ryotwar in the Tamil country.

" ' It would,' says he, ' be superfluous, impracticable and impolitic, to ascertain with greater precision than has already been done, the measured extent of each share, or of each man's proportion of meerassay; because, in the first place, it would strengthen those suspicions which have arisen, and in the next, it could only be done by personal survey, and the most unremitting attention, which I think hardly any one man can give to the completion of such a work, independent of innumerable variations that would take place while it was in hand ; and it would be unwise, because not only it will be ever the most beneficial mode to let the lands of every village jointly to the inhabitants at large, both with a view to security and to good cultivation ; but to let them separately, would tend to create divisions and dissensions, to the undoubted embarrassment of themselves as well as of the public. No difficulty occurs in fixing the value of all the lands together of one village, but it would be nearly impossible to assign to every small allotment its portion so exactly, and with such due regard to fertility of soil and other circumstances, that some should not benefit and others suffer ; yet the latter would not receive the assistance of the former in case of failure in their engagements.

" ' At present every village considers itself a distinct society, and its general concerns the sole object of the inhabitants at large ; a practice, surely, which redounds as much to the public good as to theirs ; each having, in some way or other, the assistance of the rest. The labours of all yield the rent ; they enjoy the profit proportionate to the original interest, and the loss falls light. It consists exactly with the principles upon which the advantages are derived by a division of labour ; one man goes to market, whilst the rest attend to the cultivation and harvest ; each has his particular occupation assigned to him, and insensibly labours for all ; but if each had these several duties to attend to, it is obvious that all the inhabitants must be absent together at those times that are most critical, both to them and to the State, and that many must want those abilities necessary to the performance of the various employments that would arise.

* * * * *

" ' On the whole, I cannot but consider that any reform tending to do away the union, or, if I may be allowed the expression, the unity of the inhabitants, and to fix each exclusively to his property, will be attended with danger.' "

" 285. It was apprehended by some, that where the collective body of the ryots would not consent to the assessment fixed by the collector on the village, and it became, consequently, requisite to enter into a settlement with the head only of the village, he would exercise over the inferior ryots all sorts of oppression, but it was conceived that his petty tyrannies could never equal those to which the ryot was liable from the more powerful tehsildar. On the contrary, it was thought that his more intimate acquaintance with the affairs of the village, his superior knowledge of all its localities, his fellow feeling for his unfortunate brethren, the assistance and forbearance which he knew when and how to afford to each ryot much better than the tehsildar, the interest he possessed in supporting his popularity among the village community by a system of conciliation, and, above all, his entire dependence on the ryots themselves to enable him to fulfil his engagements, would render him a much more acceptable superior to them than the collector's severe and authoritative deputy, connected with the ryot by no ties of dependence, friendship or fellow feeling, and dependent for all his prospects in life chiefly on the state of his treasury and the precision of his collections."

34. That the objection referred to in the above quotation from the Board of Revenue's Minute is, as far as your Petitioners are acquainted, the principal, if not the only one, that has been urged against the village system ; and the Court of Directors have adopted it in their Revenue Letter to the Government of this Presidency, dated the 12th December 1821 ; when alluding to the propriety of assessing the lands of a village in common, they observe, it " appears, according to all the information before us, liable to this conclusive objection, that the principal ryots are enabled in villages of this description to relieve themselves at the expense of the inferior ;" but your Petitioners submit that, with only common and proper regulations for the guidance of the managing ryots, equal justice could be easily distributed ; there is no record that the contrary has at any time been the case, under the short operation of the decennial settlement ; while there is abundant testimony to the beneficial effects it is capable of producing towards the entire village community. As, for instance, the Honourable Mountstuart Elphinstone, when Governor of Bombay, recorded his

his opinion that the system was less objectionable, " because there are many ties on the potail (or head ryot of the village), to prevent his oppressing the people with whom he has been brought up, and among whom he is to pass the remainder of his days. It is not by any means so unpopular among the people. It gives to the person whose business it is to direct and encourage the labours of the ryots, an interest in their success; it strengthens the influence of the potail, so much required in revenue, police, and in settling disputes, and so likely to be undermined by the introduction of an officer of Government." Mr. Martin, Resident and Chief Commissioner at Delhi, speaking of the same class of persons in the Upper Provinces of Bengal,—letter to Government, 31st May 1831,—observes, " Independently of the numerous ties by which they are connected with several subdivisions of the village, and which constrain them to the observance of an equitable regard to the right and interests of all, the process of internal distribution among themselves of the share which each of the subordinate proprietors shall contribute to the payment of the Government demand, regulated as that process is by principles and usages which are familiar to all, constitutes, in my opinion, a sufficient safeguard against the undue preponderance of sinister interest in the engaging partner, and produces that harmonious regulation of the village economy, which results from the free co-operation of its members in the settlement of their affairs, and which appears to be no less conservative of the moral interests of the community, than conducive to an equitable assessment upon each proprietor, according to the extent and value of his share in the aggregate demand of Government."

35. That your Petitioners will adduce further testimonies to the excellence of the village system, when preserved in its integrity. The first being that of the influential personage who has been the main introducer of the ryotwar system: Sir Thomas Munro, in his Report of the 15th May 1806, states, " Every village is a little republic, with the potail at the head of it, and India a mass of such republics. The inhabitants, during war, look chiefly to their own potail. They give themselves no trouble about the breaking up and division of kingdoms; while the village remains entire, they care not to what power it is transferred. Wherever it goes, the internal management remains unaltered. The potail is still the collector, magistrate and head farmer." And the second is derived from the authority of the late Lord Metcalfe,—" The village communities are little republics, having everything they want within themselves, and almost independent of any foreign relations. They seem to last where nothing else lasts. Dynasty after dynasty tumbles down, revolution succeeds revolution, Hindu, Pattan, Mogul, Mahratta, Sikh, English, all are masters in turn; but the village communities remain the same. This union of village communities, each one forming a separate state in itself, has, I conceive, contributed more than any other to the preservation of the people of India throughout all the revolutions and changes which they have suffered, and is in a high degree conducive to their happiness and to the enjoyment of a great portion of freedom and independence."

36. That both the Madras Government and the Board of Revenue, who witnessed the effects of the decennial assessment, were highly satisfied with the result, and recommended its general adoption; combating the objections against its introduction in the following language, copied from the Minute on which your Petitioners have already drawn so largely:—

" 287. The judgment which has been pronounced in England against the village system, of which the outline is given above, is founded on a very partial and unfavourable view of its results; for it does not appear that the authorities at home had, at the time when that judgment was passed, any information before them respecting any other portion of it than its commencement, the triennial settlement. It is hoped that the reports which have since been forwarded, in elucidation of the effects of the decennial settlement, will enable them to form a more correct opinion of the tendency of the village system.

" 288. Nothing, however, that has been urged at home, appears to contravene any of the fundamental principles of the village system. The whole of the evils arising from the triennial settlement, or which have been attributed to it, may distinctly be traced, not to its intrinsic principles, but to its over assessment, which it must be allowed has been justly condemned; for it was nearly every where a mere rack-rent. Under the pressing orders received from England, about that period, requiring from this country a surplus revenue of a million sterling, accompanied by a threat from the honourable Court of Directors to take the revision of the establishments into their own hands, not only was the most rigid economy enforced in all departments of the State, but the triennial settlement of each village where the ryotwar system had existed was too generally determined with 'reference to the payments under the survey rent,' in other words, with reference to the collections under the ryotwar system, when all was taken from the people that they were able to pay.* The over assessment during this period, therefore, arose from the triennial settlement having in a great degree been founded upon the fallacious data of the ryotwar collections; and if any inference is to be drawn from this circumstance, it is one against the ryotwar, not against the village settlement.

" 289. This practical error, with some others of a similar nature which had inadvertently crept into the triennial settlement, and are attributable entirely to a deviation from its principles, was in general avoided in the decennial settlement, which, as embracing a longer period

* *See* Report of the Board of Revenue to Government, dated 25 April 1808.

Appendix D.

period and a greater vicissitude of seasons, is a standard by which a fair judgment may be formed of the result of the village system.

* * * * *

"290. That although this system has not been equally successful in every district, yet even where (as in Bellary) it has been the least so, the collectors are unanimous in opinion that it has most materially improved the condition of the great agricultural population of the country, and that it is the great body of the ryots, and not the mere parties with whom the settlement was concluded, who have chiefly benefited by the village settlement. The ryotwar teerwas have nearly everywhere been greatly reduced; and instead of the head ryots oppressing their inferiors, most of the collectors have been obliged to prop their weakened authority by that of their tehsildars. This, without any material exception, is the universal language of all their reports, and it is a result which may be confidently offered as conclusive evidence that the system has generally answered the expectations of those by whom it was introduced; but where the settlement has been best conducted, as in Cuddapah and the northern division of Arcot, a picture of prosperity is drawn, of which the parallel may in vain be 'sought for throughout the revenue records of this Presidency.'"

37. That, notwithstanding this decided testimony to the superiority of the village system as regards the prosperity both of the revenue and the cultivator, the Court of Directors ordered the village system to be superseded by the ryotwar, as before stated by your Petitioners; and, with a professed view to remedy the evils attending it, issued orders which declared that the labour of the ryot should be henceforward free from compulsion; that private property in lands on this side of the Peninsula should be acknowledged, and that the over-assessment should be reduced; but, however well-intentioned those orders may have been, ryotwar is still the curse of the country, the over-assessment continues unaltered, the ryots are compelled to cultivate at the pleasure of the tehsildar, and the acknowledged right of private property in no way prevents the oppression of the owner, nor his gradual and sure depauperation. That while your Petitioners apply to your Right honourable House for a return to their old revenue system on the broad ground of justice to the cultivators, they beg to point out a few particulars in which the change will be advantageous to the Government:—1. It will be relieved from the loss and corruption entailed by the ryotwar system; 2. It is secured from all loss arising from unequal land tax; 3. The rent will not depend upon the correct assessment of the cultivation; and, 4. The charge of collection will be considerably decreased; yet even were there no immediate advantages likely to accrue to the Government, your Petitioners would represent that a lighter and more reasonable assessment, coupled with the removal of the vexations and oppressions accompanying the present mode of collection, would ensure a much larger cultivation, and thereby the revenues of the State would be improved; and that the people of India are therefore entitled to seek and to obtain from the paramount authority of the Imperial Parliament the necessary and equitable redress of the weighty and multiform grievances brought upon them by the introduction of the system under which they groan; and their claims to the mode of redress they have pointed out are rendered still stronger by the fact, that a settlement by villages nearly resembling that which your Petitioners seek for themselves, is actually now in full operation in the north-western provinces under the Bengal Presidency, where the leases are held on a term of thirty years' duration.

Moturpha.

38. That the next grievance regarding which your Petitioners appeal to your Right honourable House, is the moturpha, or tax upon trades and occupation, embracing weavers, carpenters, all workers in metals, all salesmen, whether possessing shops which are also taxed separately, or vending by the road-side, &c. &c., some paying impost on their tools, others for permission to sell, extending to the most trifling articles of trade and the cheapest tools the mechanic can employ, the cost of which is frequently exceeded six times over by the moturpha under which the use of them is permitted.

39. That this tax, although of Mahomedan origin, as might well be supposed only from its oppressiveness, without the proof that it was so, contained in the Arabic word "moturpha," was never universal at this Presidency, and was declared to be general only 20 years ago by Reg. V. of 1832, whereby it was enacted, that "the not having been actually charged with the said tax for any length of time, or residing at a place where it has not been actually levied, shall not entitle any person to exemption from it;" while such is the extreme irregularity of its collection, that whereas in the district of Tanjore it does not exceed the average of a farthing per head, in Kurmool, where the land assessment is much greater than in Tanjore, it amounts to no less than 9*s.* 4*d.* per head; while in the district of Canara it has been remitted since the year 1842, and in that of Madura it remains unenforced to this day.

40. That the last place to which it has been extended is a part of the district of Chingleput, and its introduction there in 1843 was attended with a serious disturbance; so great is the aversion of the people to this obnoxious impost, which compels them to go to the collector for their pullahs, and often to be away from their occupation three or four days at a time, costing them as much for their own expenses, and frequently more than the amount of the tax they have to pay; in many parts the poor are taxed, while the more affluent are exempted; and in all instances it falls more heavily upon the indigent than upon the wealthy; while the discretionary power under which it is collected, affords a wide field for the perpetual practice of inquisitorial visits, extortion and oppression, as suits the pleasure or the cupidity

cupidity of the irresponsible collectors, with whom it is no unusual thing to resort to imprisonment and fetters, in order to compel their exactions. That the whole sum raised by this impost is but little above 100,000 *l.* sterling; and, as it has already been entirely abolished at Bengal and Bombay, your Petitioners request that the same advantages may be extended to Madras.

Small Farms and Licenses.

41. That closely allied to the moturpha impost is the grievance of small farms and licenses, intended for raising what is called "extra revenue," and which consists in the annual leasing out to individuals of certain privileges, such as the right of measuring grain and other articles; the right to the sweepings of the goldsmiths' workshops; the right of dying betel nut; of cutting jungle wood; of grazing cattle; of gathering wild fruit and wild honey; of catching wild fowl; of cutting grasses used in thatching, basket rushes and cow-dung; and innumerable other such rights of levying taxes from the poorest of the poor, who feel them to be a most intolerable burthen, not only in the amount, but in the vexations attendant on the collection of the money. Your Petitioners therefore pray that these grinding imposts, the moturpha and the small farms and the licenses, may no longer be permitted to oppress the suffering people of this Presidency.

Salt Monopoly.

42. That the next grievance to which your Petitioners would draw the attention of your Right honourable House is the salt monopoly, a source of revenue introduced into this Presidency by the East India Company; the manufacture of this article under the former governments having been subjected to no other restriction than that of a trifling duty; but under the British Government the right of manufacture began to be farmed or rented by individuals upon such terms as enabled the manufacturers to sell it on the coast at the price of 10 pagodas or *Rs.* 35 per garce of 3,200 measures; and up to the year 1805, the revenue derived from that source did not exceed 80,000 pagodas, or *Rs.* 280,000 per annum.

43. That in the year 1806, the Government established an agency for the control and management of the salt department, the first consequence of which was the doubling of the price of the article, which was then fixed at *Rs.* 70 the garce, when the annual average consumption for the space of three years amounted to 31,685 garces, at the end of which time, in the year 1809, the price was again raised from *Rs.* 70 to *Rs.* 105 the garce, being three times as much as it had been prior to the Government monopoly; but as the enhanced price naturally decreased the consumption, the price in 1820 was again fixed at *Rs.* 70; but after a course of eight years, the price was again fixed at *Rs.* 105, which was still further raised to 180 in the year 1844; but in the same year it was reduced to *Rs.* 120, at which price it has ever since continued; that this being the wholesale price, it is of course sold to the retail dealer at an advance, who, as necessarily, adds his profit, to be paid by the consumer; and while the poorer classes are able to purchase a much smaller quantity than they could consume when living nearest to the salt-pans, those who reside at a distance have to pay the expenses of the carriage, at the average rate of a rupee on each garce for every mile; so that it comes to them, according to the distance, 50, 100 and 200 per cent. dearer than at the coast; and the consequence is, that either the people go without salt altogether, or substitute an unwholesome article obtained from common earth impregnated with saline particles, which they manufacture at the risk of punishment, the procurement of salt other than that of the monopoly being prohibited under penalty of fine and corporal punishment, inflicted at the discretion of the collector, or his tehsildar.

44. That your Petitioners submit the great probability, amounting almost to a certainty, that the revenue derivable from this article might be obtained, if not even exceeded, were the monopoly reduced to the original price of *Rs.* 70 the garce, as may be intelligible from the calculations following. By the revenue accounts for this Presidency during the four years commencing with 1846-47, and ending 1849-50, printed by order of the Honourable the House of Commons in May 1851, and which are the latest accessible to your Petitioners, it appears that the annual average gross revenue is *Rs.* 46,41,868, the actual amount for the last year, 1849-50, being *Rs.* 46,45,946; and the sale price being *Rs.* 120 per garce, the quantity consumed will amount to not more than 38,716 garces, or enough to supply the wants of 6,882,844 individuals, 18 measures per annum being the average quantity consumed by each individual who can afford to purchase; but the population of the 20 collectorates, including that of the city of Madras, amounted in 1850-51, as per Return of Census published by the Board of Revenue of Fort St. George, to 22,301,697; to which, if there be added the population of Mysore, Travancore, and the recently-acquired province of Coorg, which in the year 1839 was estimated at 3,419,754, there will be found a total of 25,721,451, out of which there may be calculated that 20,000,000 are, or would be if they could procure it, consumers of salt, allowing 5,721,451 for infants under five years of age who do not use the article; and these 20,000,000 consuming, as they would do, on an average, 18 Madras measures per annum each, would require a supply of 112,500 garces, or nearly thrice the quantity of the present actual consumption, without including the salt required for the cattle, which is a large quantity, and would be increased materially by the diminution of the price.

45. That, according to the published accounts above quoted, it will be found that the cost and charges of the manufacture is something under *Rs.* 21 the garce; and, consequently, if from these 38,716 garces, sold for *Rs.* 46,45,926, there be deducted the actual cost and charges of *Rs.* 8,12,614, the net profit to the Government will be *Rs.* 33,33,312; but the sale price of 112,500 garces, at *Rs.* 70 per garce, is *Rs.* 78,75,000; and deducting for cost and charges

Appendix D.

charges the sum of *Rs.* 25 the garce, amounting to 2,812,500, the net profit to Government will be *Rs.* 50,62,500, or *Rs.* 16,29,188 in excess of the revenue now obtained at the sale price of *Rs.* 120 per garce; that the excess of revenue just quoted is equal to 23,274 garces, sufficient for 4,137,600 people; so that should the consumers be no more than 16,000,000, instead of 20,000,000, the present net revenue will suffer no deterioration, and the Government will still have a gain upon the article of more than 180 per cent.; your Petitioners therefore pray your Right honourable House that, as the lowering of the price will do no harm to the Government, while it will relieve so large a portion of the people from a most oppressive and injurious tax, affecting not only their comfort, but their health likewise, that the Government charge for the article may return to the rate first introduced by the monopoly.

Abkary.

46. That another serious evil, of which your Petitioners have to complain, is the increased and increasing consumption of spirituous liquors at this Presidency, owing, as your Petitioners are compelled to state, to the encouragement given to their use by the local government, and from which, in the capital alone, it now derives a gross revenue of 60,000 *l.* per annum. The liquor generally known by the name of arrack is made at the government distilleries, and thence supplied to licensed venders to the number of 150, by whom it is sold, in small quantities, in every direction. In the interior, the manufacture and sale of the article is committed to contractors or farmers, who compete for the privilege annually at public auction, the sales realizing, on the average, 250,000 *l.* a year; and as the sale price is extremely low, the quantity consumed and the number of consumers is immense. Drunkenness, with all its miseries, is consequently common throughout the land, and its baneful effects are a full counterpoise for whatever real or imaginary benefits have been derived by the lower orders of India from her connexion with Great Britain. Your Petitioners have not memorialized Government in order to obtain the repression of this evil, not only because memorials to the Bombay authorities have totally failed, but because the amount of revenue thus derived from native demoralization is too great for your Petitioners to indulge the slightest hope of procuring even a diminution of so profitable a vice, forbidden by Hindu and Mahomedan law, and comparatively unknown before the ascendancy of European dominion. But your Petitioners venture to indulge an expectation, that your Right honourable House will view the pestilence in its true light, and provide the remedy which so widespread and ruinous a calamity imperatively demands.

Post Office.

47. That your Petitioners will now advert to some other subjects requiring redress, such as the Post-office, which, besides being very tardily and slovenly conducted, acts, by the exorbitance of its charges, like a dead weight upon commercial correspondence and the circulation of knowledge; and which weight would be considerably lightened, were the conveyance of official papers, which form three-fourths of the mail conveyed by tappal, placed to the expense of the Government: this would make this Post-office revenue four times the amount now credited, and of course would permit of a corresponding reduction in the cost for carriage: a letter or package which now is taxed at 1 *s.* might then reach its destination for the cost of 3 *d.*, and still the returns of the department would more than cover the expenditure, even without an increase of correspondence, which, however, would certainly take place to a considerable extent, as a consequence of a diminution in the rates of postage.

48. That a necessary auxiliary to the increase of correspondence is a thorough reform in the management of the Post-office departments, beginning at the capital, and extending to the remotest boundaries of the Presidency, which, although containing an area of upwards of 140,000 square miles, has no more than 130 Post-offices, controlled by 30 postmasters, a number totally inadequate to the wants of the public, to meet which efficiently, your Petitioners suggest that there should be at least one or more officers in every talook, according to its size, so that no inhabited part of the country should be more than 10 miles from a Post-office. At present, the arrangements for distributing the letters among the native population, even at the stations where the offices are situated, are most defective and imperfect; the agents employed are of an inferior description, who frequently defer the delivery for days, till the parties to whom the letters are addressed submit to some unauthorized demand; while, as regards places at a distance from the post stations, the evil is much greater; enormous delay, extending not unfrequently to weeks, is incurred, and a heavy charge besides; while, after all, the delivery of letters is uncertain, and wrong parties are sometimes permitted to obtain their possession.

49. That these combined circumstances, the paucity of offices and their inefficient supervision, the delays, exactions and uncertainties, cause the Post-office to be greatly less trusted than it would otherwise be by the native public, who, in very many instances, have established dawk transits at their own expense, thereby depriving the State of a part of its income, to an extent necessarily unknown, but as necessarily of no trivial importance; and your Petitioners therefore request that there may be a thorough reform in this department, reaching to the whole of its branches; and that every paper or package passing through it shall be made subject to the same uniform rate of charge.

Maharatta Dufter.

50. That another office, constituting useless expense to the Government, is that of the Mahratta Dufter, or native revenue establishment, by which all revenue accounts have to be translated from the Telugu, Canarese, Malayalum and Tamul languages, in which they are originally kept and furnished, into the Maharatta; from which they are again rendered into English:

English: this plan has been pursued at this Presidency since the year 1824, and up to the present year has cost little short of 90,000 *l.*; the money being absolutely thrown away, besides increasing the amount of public business, together with a proportionate amount of official perplexity and confusion.

Irrigation.

51. That your Petitioners now proceed to direct the attention of your Right honourable House to the Maramut department, by which is intended the construction and preservation of reservoirs and channels for the purposes of irrigation, upon which not merely the fertility of the soil, but the practicability of its cultivation is mainly dependent on the eastern side of India. Both the reservoirs and the channels are of the remotest antiquity, and were in former times extremely numerous; but at the present period, not more than four-fifths of those still existing are kept in repair, while others have altogether disappeared, causing a decline in the agriculture of the Presidency, equally hurtful to the ryot and the revenue; and this evil is occasioned partly from the unwillingness of the Government to disburse a sufficiency of funds, partly from what it does disburse being unsystematically applied, and partly because the execution of the works is entrusted chiefly to the tehsildar, to whom are committed the purchase of materials, the engagement of the labourers, and the payments due for each, he being held responsible both for the manner and time in which the work is completed; and the powers of this officer being almost unlimited, as he possesses, with very little abatement, the authority of the collector, he is able to compel the supply of materials and labour below the market price, to diminish the quantity of that actually furnished by short measurement of the work performed, and to delay the settlement of accounts almost indefinitely at his pleasure.

52. That although an impost is annually levied upon the ryots for the repair of the reservoirs and channels, there being a distinct charge consolidated in the land assessment for the use of the water, and although the construction of new reservoirs, where they are needed for an increased cultivation, will always give a return from 50 to 60 per cent. on the capital laid out; yet, in the province of Tanjore, whose general fertility entitles it to be called the granary of the Madras Presidency, it appears, by the latest published report of CaptainA. Cotton on that district, the annual expenditure for repairs and other purposes connected with irrigation amounts to no more than about 2 per cent. upon the gross produce; and he remarks, "There are at this moment passing to the sea by the Colleroon at least 100 million of cubic yards of water per day, sufficient for a crop of paddy in 8,000 cawnies; in a good fresh, sufficient water for a crop on 30,000 cawnies run to waste daily. In a moderate season enough is lost to water, certainly at least a million cawnies, or a tract double the extent of Tanjore, which would provide grain for about 2½ millions of people." And if such is the slender disbursement upon irrigation in the best watered province of the Presidency, it must be trifling indeed in those districts which are more neglected, and, as a natural consequence, contribute to the revenue in a far smaller proportion; the results of this negligence being, that immense tracts of land lie everywhere uncultivated, simply for want of requisite irrigation, while numerous large rivers are hourly rolling their surplus waters into the ocean, along a coast extending from 800 to 1,000 miles along the eastern side of the peninsula, dooming reclaimable and virgin lands to sterility, and causing, in great part, the periodical famines, which, with their concomitant, the pestilence, sweep away the wretched inhabitants by myriads at each time of their dreadful visitation. "Had a hundredth part," observes Captain Cotton, "of the time, labour and money that has been lost by droughts, or expended in trying to obviate the effects of scarcities, been expended in providing against them, very much might have been effected; it is undoubted, that in the worst year that ever occurred, enough water has been allowed to flow into the sea to have irrigated 10 times as much grain as would have supplied the whole population." And the indifference of the Government on this head is the more remarkable, from its being a known fact, that proper irrigation is computed to increase fivefold the produce and the value of the land watered.

Roads.

53. That closely connected with the irrigation of the country is the construction of roads, to enable the cultivator and the manufacturer to contribute to the wants of each other, and thereby increase the prosperity of the inhabitants in general, and in regard to which your Petitioners have the greatest causes for complaint, it being a melancholy fact that the sum expended for this purpose at the Madras Presidency is scarcely above one-half per cent. on her revenue, in the North-west provinces it is two-and-a-half, and in Bengal more than one and three quarters; while Bombay, with a far smaller revenue, and half the number of inhabitants, has more than 37,000 *l.* expended upon her roads and canals, while Madras has only 30,000 *l.*

54. That the condition of the roads at Madras, however bad, is just what could be expected under such circumstances; but as it is impossible for your Petitioners to get at official documents on this head, the Government having declined complying with the request of the Association, and all public officers, civil and military, being prohibited to communicate official information, they will draw upon an article contributed to the "Calcutta Review," No. XXXII. for a few facts by way of elucidation. The number of principal or trunk roads as set down in the Return of public works, printed by order of the Honourable the House of Commons in 1851, is only 11; but very few of these are finished, and not one of them is kept in a state of sufficient repair; the only road that is always in good order is that leading from Fort St. George to the head quarters of the artillery at St. Thomas's Mount, a distance of about eight miles; the longest road is that from Madras to Calcutta, 900 miles estimated length, but it has never been completed, and although it is called the Great North Road, and is used by all travellers proceeding to the northern parts of the Presidency,

Appendix D.

Presidency, yet even a few miles from Madras it is not distinguishable from paddy fields, and piece goods have to be brought on the heads of coolies from Nellore, 110 miles distant, and situated on this very road; 50 miles farther it passes over a wide swamp, causing carts and travellers to skirt its edge in mud and water, as well as they can, during six months of the year; on another part of the same line, near Rajahmundry, a gentleman was lately four hours in travelling seven miles on horseback: parts of this road have been at various times repaired, but these portions have afterwards been totally neglected and allowed to fall again into ruin; for the most part the line is unbridged, and in the places where bridges have been constructed, they have been neglected, till the approaches have been wholly cut away by the rains, leaving the bridges inaccessible, and consequently useless. From this road another branches off towards Hydrabad and Nagpore, but, though it is only 22 miles in length, the money expended upon it has been thrown away, and it is never in a fit state for traffic; and such is the general condition of all the rest of the trunk roads, with the exception of that leading to Bangalore, which, and which alone, is practicable, and that only latterly for post carriages and horses, proceeding at the rate of four or five miles per hour.

55. That the country is in an equally desperate condition as regards district roads. The district of Cuddapah, measuring 13,000 square miles, has nothing that deserves the name of road; there are tracks, impassable after a little rain, and everywhere carts, when used, carry half their proper load, and proceed by stages of half the usual length; while the trunk road from this district is so notoriously bad, that the Military Board use it as a trial-ground to test the powers of new gun carriages, which are pronounced safe if they pass over this severe ordeal. This district is one of the finest cotton-fields in South India, but has its prosperity impeded and kept down by the wretched state of its internal roads, and of its communication with the coast, the natural outlet for its commerce. Other districts might be named only second to this in extent, and hardly inferior in capabilities, in which the internal communications are no better; and there are few districts in which country roads, as distinguished from the chief trunk roads, have received any attention whatever, and to all but those few the description of Cuddapah is applicable; the principal exception being the collectorate of Salem, which, as it is a level country, without any large rivers, has, under Mr. Orr, received considerable improvement at a trifling expense of about 4,000 *l.*, and the forced labour of the district; but it is still without main routes of communication with the surrounding districts.

56. That the entire extent of road practicable for bullock carts scarcely exceeds 3,000 miles for the entire Presidency; mostly without bridges, impracticable in wet weather, tedious and dangerous in the dry season; not an individual talook possesses roads correspondent to the number of its population, and where there is the greatest improvement, as at Salem, it is of no benefit to the other parts of the country, and to them is all the same as if it had no existence.

57. That the unwillingness of the Company and the local government to expend money on the construction of roads requisite for the interchange of traffic from province to province, and from the interior to the shipping ports along the coast, would be incredible if it were not a notorious and substantiable fact; and it is still worse that they should pretend the ryots ought to make them at their own expense; for pressed down, as they are, by a heavy load of taxes, which renders them too poor to purchase Company's salt for their miserable food of boiled rice and vegetable, the latter too frequently wild herbs, the spontaneous produce of the uncultivated earth; unable to supply themselves with clothes, beyond a piece of coarse cotton fabric, worth 2*s.*, once in a twelvemonth, it is impossible for them to find the means or time for road-making gratis, even if they possessed the skill requisite for the purpose; and your Petitioners submit that it is the bounden duty of the State, which reduces them to their miserable condition, and keeps them in it from charter to charter, to spend a far larger portion of the revenues upon the improvement of the country whence they are derived than it does at present. It can find money to carry on wars for self-aggrandizement, to allow immoderate salaries to its civil service, to pension off the whole of its members on 500*l.* a year each, and to pay interest at 10 per cent. to the proprietors of East India stock, all from the labour of the ryot; and when he requires roads by which he might find the means of bettering his condition, and that of the revenue, he is told that he must make them for himself.

58. That the refusal of the local government to effect the necessary improvements, on the ground of financial incapacity, has indeed much appearance of truth, owing to the circumstance that the Supreme Government of India will not allow any money to be assigned to the purpose of improvements at this Presidency, unless she contributes to the general revenue of the Company the quota of 50 lacs of rupees over and above her own expenditure; and as the surplus revenue for the year 1849-50 was only *Rs.* 43,16,761, and all preceding years very much less, Madras on these terms can hope for but a small allowance; but the fact is that she is dealt by most unjustly in being compelled to furnish military protection to various districts, the revenues of which are paid into the treasuries of Bengal and Bombay; the cost to her of the troops thus supplied amounts to *Rs.* 79,83,000, making, with the surplus already quoted, the sum of *Rs.* 122,99,761, nearly 73 lacs above her assigned quota, and, were she to be allowed to spend her own surplus, there would be ample funds both for public works and for relief from injurious and impolitic taxation; while the construction of

good

good roads throughout the Presidency would go far to abate the severity of periodical famines, by permitting the easy transport of grain from one province to another, which is absolutely impossible under present circumstances, when a journey of any length would occasion the consumption of the grain for the support of the drivers and their cattle long before they could reach their destination. Your Petitioners, therefore, beg for that portion of redress which your Right honourable House shall judge due to the necessities of the people and the prosperity of the Presidency.

Company's Courts of Law.

59. That your Petitioners now come to the representation of the grievances under which they labour, in connexion with the administration of civil law in the courts of the East India Company, the process of which, besides involving large unnecessary expense, is slow, complicated and imperfect. These courts comprise those of the moonsiffs, with a jurisdiction in suits under *Rs.*1,000; of the sudr ameens, with a jurisdiction below *Rs.*2,500; of the principal sudr ameens, or subordinate judges, within *Rs.*10,000; and of the zillah, or civil judges, with jurisdiction unlimited; finally, the Court of Sudr Adawlut, the highest court of appeal in the country, having also discretionary power to call up certain suits from the civil courts for original investigation.

60. That from the decisions of the moonsiffs, sudr ameens, principal sudr ameens, or subordinate judges, an appeal lies to the civil courts; decrees of these latter are similarly appealable to the Sudr Adawlut, and in suits involving *Rs.*10,000 and upwards a further appeal to the Privy Council is open; also cases appealed to the civil courts can have a special appeal to the Sudr Court, should there be any inconsistency with some law or usage in respect of which there may exist reasonable doubt. The moonsifs, sudr ameens and principal sudr ameens, are either Europeans, East Indians or natives, but the subordinate, civil and sudr adawlut judges are covenanted civil servants.

61. That in all suits, whether in courts of the First Instance or in Appeal, every paper presented to the court, the power of attorney to the vakeel, the pleadings, the exhibits of whatever kind must be on stamped paper of a certain value, varying in an ascending scale with the jurisdiction of the courts, from 4 annas (sixpence) to 4 rupees (8 shillings) per sheet of 30 lines, independently of an institution fee, payable in every court through which a suit may be carried, according to the following scale:—In suits for sums not exceeding 16 rupees, one rupee; above 16 and not exceeding 32, two rupees; from 32 to 64, four rupees; from 64 to 150, eight rupees; from 150 to 300, sixteen; from 300 to 800, thirty-two; from 800 to 1,600, fifty; 1,600 to 3,000, one hundred; 3,000 to 5,000, one hundred and fifty; 5,000 to 10,000, two hundred and fifty; 10,000 to 15,000, three hundred and fifty; 15,000 to 25,000, five hundred; 25,000 to 50,000, seven hundred and fifty; 50,000 to 100,000, one thousand; above 100,000, two thousand; this fee is to be the stamp on the first sheet of the plaint or petition of appeal; and all further sheets to complete the pleading must have each a stamp, varying, according to the court of jurisdiction, from 4 annas to 4 rupees. All proceedings in every suit are matter of record to meet the privilege of appeal.

62. That the vexatious delays arising out of the present judicial system, and the injury thereby inflicted on the suitors, attracted the notice of the Court of Directors so long ago as the year 1814, as will be apparent from the following extract from a despatch to the government of this Presidency, dated the 29th April in that year, and printed by order of the Honourable the House of Commons, on the 1st July 1819:—

"17. What also occasions the great arrears of suits in all our tribunals, both European and native, is the process and forms by which justice is administered. This process and these forms are substantially the same as those of the superior tribunals in England, and even pass under the same names. The pleadings of the court are, almost in every case, written (as well as the evidence of witnesses), and they proceed by petition or declaration, replication and rejoinder, supplemental answer and reply.

"18. Such a minute and tedious mode of proceeding, in a country where the courts are so few, compared with the vast extent and population of it, must be quite incompatible with promptitude and despatch. Causes must be long pending, and slowly got over off the file; and the tardiness with which they are brought to a settlement must, in innumerable instances, be a greater evil than the original injury sought to be redressed, to say nothing of the frequent visits which the litigant parties are under the necessity of making, for the purpose of filing their pleadings in the progress of the cause, according to the turn which the proceedings may take. This grievance is one of no ordinary magnitude to the suitors, as well as to those who may be summoned to give evidence. On one description of persons it must, according to the information we have received from Colonel Munro, operate with peculiar severity: we here refer to the heads of villages. 'They are (he observes) 'subject to great inconvenience and distress, being summoned as witnesses in every trifling litigation that goes before the judge from their respective villages. They are supposed to know the state of the matter better than anybody else, and are therefore always summoned. They are detained weeks and months from the management of their farms, and are frequently no sooner at home than they are called away 50 or 100 miles by a fresh summons about some petty suit which they could have settled much better on the spot; and crowds of them, as well as of the principal ryots, are always lying about the courts, and very often without its being known to the judge that they are there.'"

63. That,

Appendix D.

63. That, in order to exemplify the tediousness of the protractions to which suits are liable, your petitioners will select a few cases from "Decisions of the Sudr Adawlut," published by that court, embracing the last half-year of 1849:—

Date of Proceedings of Sudr Adawlut.	Nature of Decision.	Year of Original Suit.	Time occupied.
2 July 1849 -	Special appeal suit decided - - -	1840	9 years.
„ „ -	Suit remanded to Civil Court - -	1845	4 „
„ „ -	Ditto - to ditto - - -	1843	6 „
„ „ -	Ditto - to ditto - - -	1846	3 „
20 Aug. „ -	Suit remanded to Original Court - -	1846	3 „
„ „ -	Suit remanded to Civil Court - -	1847	2 „
23 „ „ -	Decrees of Lower Courts reversed -	1841	8 „
22 Oct. „ -	Suit remanded to Civil Court - -	1846	3 „
12 Nov. „ -	Ditto - to ditto - - -	1845	4 „
24 Dec. „ -	Decree of courts below reversed after two remands in 1840 and 1844 - -	Uncertain	Above 15 „

64. That the above extracts are from cases first exhibiting the dates of the original suits; and they disclose a principal feature of the progress of civil suits, viz. a remand to the inferior courts for re-investigation and decision *de novo*, sometimes causing the litigation to be re-opened *ab initio*, and involving a second course of appeal; and although, in these cases, a portion of the stamp dues is remitted, still the pleaders must be paid, and other disbursements incurred, besides the fatigue and waste of time in journeying between the several courts, which, added to the uncertain and distant prospective of the final issue, are so harassing to body, mind, and pocket, that it would frequently be preferable to the successful party to have abandoned his rights, rather than to have exposed himself to the annoyance, expense and interminable troubles of the Company's courts of law. And, under all these considerations, it will be obvious to your Right honourable House, that, where the value of the property in dispute is trifling, the lawful claimant would choose rather to forfeit his claim than prosecute it at an expense beyond its worth; and when the property is large, the heavy institution fee must act as a bar to the man of small means seeking the recovery of his rights by the appalling process of the courts of the Company: your Petitioners consequently pray that trial at bar may be granted on a fixed day, with immediate decision, instead of an examination of witnesses from day to day, as they may delay their appearance; and shorter modes of executing the decrees.

65. That great as are the evils of delay and expenditure, another, scarcely less formidable, is to be found in the imperfectness of the machinery, to which, in point of fact, the two first-mentioned evils principally owe their origin; and consisting in the absence of sound judicial capacity in the presiding officers, especially those of the lower tribunals, scarcely one of whom has even a moderate acquaintance with the vernacular language of the district in which he exercises his functions, has previously devoted any portion of his time to the study of jurisprudence, or experienced even a limited training in a judicial court; and this evil is further aggravated by the injudicious manner in which they are appointed or removed. The heads of the judicial courts are in a state of perpetual transition; when one of them goes away from his post, he is generally replaced, *ad interim*, by the judge of another court, whose post also receives a temporary incumbent from a third court; and so on in a greater or less ramification of changes; all leaving many suits pending which have been partially heard by each of the judges prior to his temporary transition. Where these are intricate, the *locum tenens* usually allows them to lie over till the return of his predecessor; or, if the current business cannot be delayed, they are imperfectly investigated and hurriedly disposed of, manifestly to the prejudice of the suitor in either case.

66. That the indifference of the local government to the interests of the suitors in their courts is further apparent, from the circumstance that a party acquainted with the native language of one district is appointed to another with the vernacular of which he is wholly unacquainted; and one instance has lately occurred where Mr. A. Robertson, who is acquainted with Tamil only, was appointed to the Telugu district of Vizagapatam, where the administration, as Governor's agent, of both civil and criminal justice devolves on him; while Mr. W. A. D. Inglis, acquainted with Telugu, was transferred from Cuddapah, a district in which that language is spoken, to Chingleput, with the vernacular of which district he is totally unacquainted. The consequence of such appointments and exchange is, that the judge is necessarily thrown into the hands of the subordinates of his new court, at whose mercy the suitors find themselves almost entirely placed, with all the pernicious effects resulting from such an anomalous position.

67. That in connexion with the injudicious appointments to which your Petitioners have referred in the preceding paragraph, they beg leave to exemplify to your Right honourable House a few recent and striking instances. In 1847 Mr. E. P. Thompson was appointed a judge of the Sudr Adawlut, the highest court of appeal at this Presidency, when the whole of his experience in the judicial line—and that nine years previously—amounted to no more than

than five years and three months. In 1847 Mr. H. D. Phillips, who had been 8 years, 9 months, and 20 days in the same line, his whole period of civil service being only 17 years, was sent as commissioner to Kurnool, such being chiefly a revenue appointment; and subsequently, in 1850, as collector of Salem; while Mr. S. Scott, only 11 months in the judicial line, saving a little experience while commissioner in Kurnool, was nominated civil judge of Combaconum, one of the most frequented courts in this Presidency. In 1850 Mr. Roupell, who had never done a day's duty as a judicial officer, was made civil judge (an appellate office, and with unlimited jurisdiction as a court of the First Instance) of the important district of Coimbatore.

68. That as regards removals, your Petitioners will instance the case of Mr. Morehead, judge of the Sudr Adawlut, who, in 1850, was ordered to proceed as a commissioner to Ceylon, to investigate some matter concerning a military officer (in which the people of this Presidency had no interest whatever), and during whose absence suits, partially investigated by him, could not be disposed of, to the injury of the suitors therein, and in one case to a suitor's utter ruin from the delay; on which occasion Mr. Freese, who, out of a civil service of 22 years, had passed less than two years in the judicial line, and that also very long ago, was temporarily appointed to the place of Mr. Morehead; and they will also quote that of Mr. Strange, who was taken from his seat on the Sudr bench in this year to proceed on a Government mission into Malabar, on which he has now been absent nine months, and with the usual consequence of all suits examined or acted on by himself being suspended until his (uncertain) return; while, to conclude the general character of the Company's judicial service with its common appellation in this country, it is a "refuge for the destitute," all those persons who are too incompetent for the revenue department being transformed into judges and dispensers of the criminal and civil law of the Mofussil.

69. Your Petitioners, when thus submitting to your Right honourable House the grievances endured by the people of this Presidency in the administration amongst them of civil law, are unable to lay down what might be deemed a fitting remedy; but they may respectfully, yet earnestly, press upon the consideration of your Right honourable House, that the evil of delay acknowledged to exist in 1814 is still unremedied, and that a more summary adjudication of civil suits than can now be obtained is essential for the welfare, comfort and happiness of the people; that this cannot be obtained without altering the present system of appeal; that in doing away with much of these appeals it is indispensable that the courts having summary and final jurisdiction should be presided over by two or more trained, experienced and legally qualified judges; and that experience shows such heads of courts are not to be found in the civil servants of the East India Company, while, as at present, untrained and not specially educated for such responsible situations. Your Petitioners would also suggest the propriety, amounting almost to necessity, of the class of superior judges being rendered incapable of displacement at the mere pleasure of the local government, in order to insure impartiality and justice in their decisions, especially in cases where the East India Company or the local government are parties to the causes to be adjudicated.

70. That besides the better training and more thorough education of the judges in a course of legal knowledge, your Petitioners beg for a complete reformation in the practice of pleading, so that vakeels and pleaders may likewise be previously subjected to a course of sound and thorough instruction, and obtain license to plead only upon regular certificates granted by the Sudr Adawlut, in regard to the necessity of which your Petitioners beg to quote the language of the despatch already referred to, in para. 62:—

"The defective and superficial acquaintance of the vakeels themselves with the regulations, their general inaptitude for the discharge of their duties, has long been the theme of complaint on the part of our servants under the Bengal Presidency, as well as by Colonel Leith, who was employed under your Government in framing the original code of laws and regulations, and who has, in his letter to the Chairman to the Court of Directors, of the 25th January 1808, of which we formerly transmitted you a copy, expressed his opinion on the subject of the vakeels, in terms which have particularly attracted our attention. 'There is, perhaps,' he says, 'no part of the judicial system which has been attended with worse consequences than the vakeel branch of it; they are in general extremely illiterate, and their situation gives them various opportunities of committing abuses which are not easily detected; in particular, they have been accused of promoting litigation, by holding forth false promises of success to their clients; their habits of intercourse with the natives, and their being, in a manner, the only persons who are acquainted with the regulations, makes it easy for them to do so. I do not hesitate in saying, that one great cause of the litigation and delay in law-suits has arisen from the native pleaders.'

"23. Your Board of Revenue also, in the Report to which we have already referred, have distinctly averred that 'the licensing of pleaders in vakeels had led to a series of fraud and corruption in the zillah and provincial courts,' and they therefore recommend that in the revenue courts which it was then in contemplation to establish at the Presidency, 'pleading *ore tenus* should be adopted, instead of petitions, replications, and rejoinders.' We therefore direct you to instruct the courts of Sudder Dewanny and Nezamut Adawlut, and the inferior courts, to communicate their ideas on this subject, and that you do thereupon revise the respective powers, together with the forms of process in both departments, with the view of rendering the proceedings in civil cases as summary as may be compatible with the ends of substantial justice;" and to inform your Right honourable House that all things above noticed as injurious

Appendix D.

injurious to suitors, arising from the ignorance and dishonesty of the vakeels, are as bad and common now as they were when Colonel Leith recorded his opinion.

71. That should it seem good to your Right honourable House to do away with the oppressive system of ryotwar, and substitute in its place the ancient village system of the country referred to in a former part of this Petition, your Petitioners pray that it may be restored in its integrity; the potail or head of the village, and his village servants, being invested with the superintendence of the local police, an appeal against his proceedings to the courts of justice being allowed; the institution of the village punchayet, which is now only optional, being rendered imperative, and composed of respectable ryots, to be selected by the villagers in monthly rotation, the punchayet to take cognizance of civil causes for simple debt up to *Rs.* 100, with the power of passing a final decision when the amount does not exceed *Rs.* 20.

72. That a district punchayet be formed for a certain number of villages, the members being elected annually by rotation, having jurisdiction in suits to the extent of *Rs.* 500, to which appeals may be carried from the village punchayets in all cases within their cognizance above *Rs.* 20, and that an office of registry be established in each village in communication with the collector's cutcherry for the prevention of frauds. And your Petitioners beg to refer your Right honourable House to the 48th and following paragraphs of the same judicial letter from the Court of Directors to this Government, for a full and favourable account of the punchayet system, to which they have adverted, the paragraphs being too many to be quoted at length within the compass of this Petition.

73. That the criminal courts of the Company are on a par with the civil courts, the judges being without any distinct legal training, excepting what is to be obtained in the revenue department, where they have all previously held the appointment of magistrate and justice of the peace; and although they have regulations furnished for their guidance, framed by the Sudr Adawlut, the members of which are persons selected from their own body, and whose whole stock of judicial information is derived from their experience in more subordinate situations, their proceedings are too frequently heterogeneous, and based upon misapprehension of the regulations; and their inefficiency may be inferred from the facts that, in the year 1850, the latest date to which your Petitioners have access, in one district, that of Rajahmundry, the disproportion of the persons punished to the number summoned was nine per cent. of the former to 91 per cent. of the latter, 100 men having been brought up for every nine that were convicted; in other districts the ratio has been in some 17 per cent., and in others 10 per cent., while the average ratio in all the districts throughout the Presidency showed that the number brought up to the magistrate was twice that of the convicted parties; and these inconveniences, amounting very generally to injuries, are chiefly occasioned by the European magistrates giving their principal attention to their revenue duties, leaving those of the magistracy to be performed by their subordinates. That in two districts alone, those of Cambaconum and Tinnevelly, the number of individuals against whom the charges were declared to be wilfully false and malicious was 2,064; while the number of persons punished for bringing those charges was no more than 136. In the whole Presidency, for petty offences before the police, 51,602 persons were detained for periods running from three days to 60 and upwards, of whom 11,823 were detained above 30 days; and as the number punished altogether was only 45,829, it follows that many were detained who were not offenders. Again, it is to be remarked, that 12,543 persons were detained from three to upwards of 30 days for crimes and misdemeanors, while the provisions of clause 4, section 27, Regulation XI. of 1816, limit the time for inquiry to 48 hours.

74. That these few facts taken from the Report of the Foujdaree Adawlut, sufficiently demonstrate the ill-working of that part of the administration of criminal justice which is entrusted to the police; much of which might be remedied if the magisterial power were taken away from the collectors and their subordinates, who have full employment for all their time and talents, in the performance of their duties connected with the collection of the revenue, and on account of which, as above remarked, they depute so much of their functions connected with the police to the tehsildars; that, although your Petitioners cannot distinctly discover, from the Report of the Foujdaree Adawlut, the individual crimes of the accused parties in the police cases, they are yet perfectly sure that the far greater portion have been made to arise from the demands for the revenue; the tehsildars being able, in their magisterial capacity, to trump up false accusations, and to involve any number of persons in their charges; this circumstance accounts for the number of parties brought up to the police, who were ultimately discharged; for the admitted number of false and malicious charges, for the paucity of punishments affecting the authors of the charges, and for the numerous detentions in violation of the regulations; besides this, the police being all under the collector, and always more attentive to the exaction of the revenue than to the preservation of the lives and property of the people, the natural consequence is, that burglaries, highway and gang robberies, are more or less prevalent in every district, which could not be the case if the police were efficient, and performed its proper duty. Your Petitioners pray, therefore, that this anomalous state of things may be rectified; that the police may be made a separate department, as it was before the regulation of 1816; and that it may be enlarged to the extent necessary for the effective protection of the country.

75. That the "Select Reports of Criminal Cases," determined by the same court, afford abundant instances of the ill-working of that part of the administration which is committed

to

to the higher class of criminal judges, of which your Petitioners will briefly quote a few cases. At Masulipatam, at the 3d quarterly session of 1838, a person named Kota Ramudu and fifteen others, were tried for gang robbery and murder, in an attack on the Talook treasury at Ellore, two of whom were convicted and sentenced to 14 years' hard labour in irons; on the case coming before the Foujdaree Adawlut the sentence was changed into transportation for life; subsequently to which further evidence was produced, which the said court considered conclusive as to the innocence of the condemned parties, and orders were given for their release; but in the interval one had died at the place of his transportation, the other was brought back, and, to quote the language of the reports, "a present of money was bestowed upon him by Government by way of compensation for the hardships he had undergone." At Coimbatore, in October 1845, Ramadattan and four others were tried for murder, when the session judge convicted them all, and recommended that they should be severally sentenced to death. In this recommendation the first and third puisne judges of the Foujdaree Adawlut, Mr. Waters and Mr. Boileau, coincided; but the second judge, Mr. Lewin, expressed his conviction that the murder had been perpetrated by two of the witnesses, and proposed that the trial should be laid before the chief judge, Mr. Dickinson, who concurred with Mr. Lewin; when an additional judge, Mr. Thomas, was appointed to go into the case, and he concurring with Mr. Dickinson and Mr. Lewin, the prisoners were acquitted, and the session judge was reproved for not having properly attended to the regulations. In June 1848, Madiga Poturaza Karra Tippadu and two others were tried in Kurnool, before the agent to the Governor of Fort St. George, on the charge of murder. The agent convicted Madiga, and recommended that he should be hanged, and that the second prisoner should give security. The Court of Foujdaree Adawlut considered "the evidence too weak and inconclusive for the conviction of, or even for a requisition of security from, any of the prisoners charged;" acquitted Madiga, directing his unconditional release, and issued orders for the annulment of the requisition of security under which the second prisoner had been placed. After this sentence of acquittal had been passed by the Foujdaree Adawlut, the agent received information that the commission of the murder had been perpetrated by an unsuspected person named Sanjivigadu, who had confessed his guilt, and surrendered himself to the police. The agent of the Governor at this period was Mr. H. D. Phillips, whose eleven years of judicial experience would have hanged three innocent persons, upon evidence insufficient to demand a requisition of security from any one of them. In August 1850, Govind Row was tried at Combatore for murder and robbery. "The session judge, Mr. Roupell, in concurrence with the Mahomedan law officer, considered the evidence to be conclusive as to the prisoner's guilt, and referred the trial for the final judgment of the Foujdaree Adawlut, with a recommendation that he should be sentenced to suffer death." The Court observed that the examination was defective, and that there were discrepancies and omissions in the evidence for the prosecution, which vitiated the proof of several circumstances. They accordingly acquitted the prisoner of the crime charged, but ordered that he should find two securities in 50 rupees (5 *l.*) each, for good behaviour and appearance when required within three years.

76. That your Petitioners restrict themselves to these four cases, because they are desirous not to lengthen their Petition unnecessarily; but they would request the attention of your Right honourable House to the last instance quoted, it having come under the cognizance of Mr. Roupell, the officer whom your Petitioners have mentioned in an earlier paragraph as having been appointed judge at Coimbatore, without having ever done a day's duty as a judicial officer. It is not, therefore, surprising, that his examinations should exhibit discrepancies, defects and omissions, nor that he should be obliged to lean on the Mahomedan law officer for support and guidance, which would have cost the prisoner his life except for the interference of the superior court; when Mr. Phillips could go as far wrong as he, after a duty of eleven years in the judicial department.

77. That these four instances are enough to show the absolute necessity for a change in the judicial system, as regards the appointment of judges holding jurisdiction over the lives and persons of Her Majesty's subjects in this Presidency; and your Petitioners may desire a change in the laws or regulations also, by the introduction of a better code than that of the Mahomedans; by which, to name only one particular, adultery is made a criminal offence, whereas by English and Hindu law it is one of civil action for pecuniary damages. A comprehensive code, published in English, and translated for the information of the public, would do away with the necessity of Muftees or Mahomedan law officers; while the restriction of judicial employment to a separate class of persons, trained to an acquaintance with it, both by theory and practice, would render the judges at home in their own courts, and instil a confidence among the people which is, and must ever be, wanting in the regulations and judges of the Company as at present constituted.

Public Records.

78. That great inconvenience is continually resulting to the people from the impossibility of getting access to the public records and documents of the various offices, of which your Petitioners will give two or three instances: in the year 1846, the Hindu community forwarded to the Court of Directors, through the local government, a memorial, the receipt of which was acknowledged by the Chief Secretary, with the remark, that the memorialists ought to "refrain from representations touching the proceedings of Government, whilst the facts and official documents which alone contain the true record of these facts are unknown to them;" and when on this intimation an application was made for certain information connected with a second memorial then in course of preparation, the same Chief Secretary replied

 that

Appendix D.

that the application was irregular, and, instead of supplying the information, referred them to the former letter. In the present year the Madras Native Association applied for access to official data, necessary to enable them to draw up this Petition to your Right honourable House, when no notice was vouchsafed to their application; and, lastly, about five months ago, on the 9th July, application was made on behalf of the Memorialists for the second time, requesting to be informed if the orders of the Court of Directors, which the Government had stated, in reply to a previous application, it was then awaiting, in consequence of the Court's despatch not being sufficiently explicit, had been received; and if so, that they might be communicated to the Memorialists: the Chief Secretary ordered it to be recorded, but has given no answer up to the present date. There are also innumerable instances in which natives accused to their superiors of misconduct, are constantly refused copies of office documents by which to establish their defence, and free themselves from false accusations. Your Petitioners therefore request, that parties on making application may be entitled to take or to receive copies of such papers as they may wish to possess for such purposes; as well as that all official papers of general interest may be printed for sale at cost price; by this practice the Government would be considerable gainers, as its acts, and the reasons of them, would thereby be rendered public, together with their attendant circumstances; and they would no longer be subject to misrepresentation and misconstruction, as they are and must continue to be under the operation of the present system of official secrecy.

Education.

79. That your Petitioners will next advert to the state of national education in this Presidency, in the hope that your Right honourable House will take measures for enforcing the obedience of the local government to such future regulations as the wisdom of your Right honourable House may lay down for its guidance in the time to come. Your Petitioners will trace the subject no further backwards than to the year 1826, when Sir Thomas Munro, being Governor, proposed in a Minute, dated 10th March, that the system of native education should receive assistance from the State, which should be small at first, but increasing gradually till it extended to the formation of 40 collectorate schools, and 300 tehsildary schools for the entire Presidency, the estimated expense, when in complete operation, being calculated at *Rs.* 48,000. The Court of Directors, in a despatch dated the 16th April 1828, sanctioned the annual appropriation of *Rs.* 50,000 for this purpose; and immediately on the receipt of this sanction, the proposed plan was put into partial operation, and continued till the year 1834, when the College Board for native instruction declared it a great failure. On this, the Government proposed a modification of the plan, extending the expenditure to *Rs.* 90,000, which, on being referred to the Supreme Government, was disapproved of by that authority, which recommended an effective seminary at Madras, for instruction in English, and provincial English schools, as far as the allowed funds should be available. From this time projects were formed, but not carried into effect, till on the 12th December 1839, the Government deemed it expedient to establish a central collegiate institution at Madras, which was to be self-supporting, by means of public donations and the exaction of fees from the pupils. The institution was opened on the 14th April 1841, when it was publicly stated, that should it "appear to answer its design, and require in its early existence some small pecuniary help at the hands of Government, the School Board would recommend with confidence its interests to the Government;" but no donations being forthcoming, and the number of pupils few, from that period to the present the annual sum of from *Rs.* 25,000 to *Rs.* 30,000, has been regularly granted to the institution.

80. That it will thus be apparent, that, instead of education being shared equally among all the districts of the Presidency, it is confined altogether to the town of Madras, in which a single school, attended by 160 pupils, on the average of its ten years' existence, absorbs more than one-half of the grant awarded for the entire population of 22,000,000, while the other half of the grant has lain useless in the Government treasury ever since the grant was in existence.

81. That while the Presidency of Bombay, with a population of 10,000,000, and instead of yielding a surplus revenue, has a deficiency of 50 lacs of rupees annually, enjoys a grant of a lac and a quarter of rupees, and communicates instruction at 185 schools, frequented by 12,712 pupils, Madras, with her actual surplus revenue of 73 lacs of rupees, and more than twice the population, is stinted to two-fifths of the amount, and by the parsimony and indecision of her local government has been deprived of one-half of even this small allowance, ever since the grant was made by the Court of Directors.

82. That your Petitioners desire from your Right honourable House the increase of this grant proportionately to the number of the population, and the establishment of efficient schools throughout all the districts of the Presidency, their number and location to be totally irrespective of the schools established by the various missionary societies for the purposes of conversion; and, as the English language is at present but very little known in the interior, they desire that the teaching of the vernaculars, instead of being neglected as at the Presidency, shall meet with the attention they so greatly need; and to that end that provision be made for the translation of useful and scientific works from the English, for which special purpose there could be appropriated the eight lacs of rupees now lying in the Government treasury, and being the remaining surplus of the pagoda funds or revenues accruing to the Hindu temples whilst under the management of Government officers.

83. That with reference to the subject of national education, your Petitioners are anxious to bring to the notice of your Right honourable House certain proceedings which are now in train,

train, in order to appropriate part of the educational grant towards the assistance of missionary or convertising operations, as they exist at various stations throughout this Presidency, under the name of a "Grant-in-Aid System," by which it is proposed to extend the pecuniary assistance of Government "to other institutions which are now or can be made the instruments of imparting a sound and liberal education," "whether conducted by missionary bodies or others;" with which view the Government has issued a circular in the public department to the different collectors, in which each is directed to "furnish the Government with the best and fullest information in your power regarding the educational institutions within your district, whether conducted by private parties, or missionary or other public bodies;" and has further recorded in Minutes of Consultation, dated 1st November 1852, "The Governor in Council is not of opinion that any Government schools should be set up at stations in the provinces where private missionary or other public seminaries have already been established, and have been found adequate to the instruction of the people. To that opinion he will now add, that he considers it very desirable to extend moderate pecuniary assistance to such schools, as a means of diffusing education on sound and unexceptionable principles, and he proposes that the honourable Court be solicited to entrust the Government with a discretionary power on this point."

84. That your Petitioners would point out for the consideration of your Right honourable House, that this proposed appropriation of the education funds to the support of Christian institutions was rejected by the Court of Directors in a despatch to this Government, dated 24th August 1844, in reply to an official application in behalf of an institution at the Presidency, called "Bishop Corrie's Grammar School," on the ground that it did not come "within the object of the funds set apart for the promotion of native education." There is also on record a letter of the Court of Directors with reference to the introduction of the Bible as a class-book into the schools to be established from those funds, which says, "The provincial schools and the Madras University are intended for the special instruction of Hindoos and Mahomedans in the English language and the sciences of Europe; we cannot consider it either expedient or prudent to introduce any branch of study which can in any way interfere with the religious feelings and opinions of the people; all such tendency has been carefully avoided at both the other Presidencies, where native education has been successfully prosecuted. We direct you, therefore, to refrain from any departure from the practice hitherto pursued."

85. That your Petitioners hereupon represent to your Right honourable House, if it be contrary to the intentions for which the educational grant was bestowed, to devote any portion of it in aid of an institution where convertism is neither professed nor practised, as at Bishop Corrie's Grammar School, or to permit the establishment of a Bible class in any of the Government schools, although the attendance at such class was to be left entirely optional with the pupils, it would be a much wider divergence from the object, and a much greater "interference with the religious feelings and opinion of the people," to apply the funds—especially at the discretion of the Madras Government, at all times notorious for its proselyting propensities—in support of missionary institutions, wherein the study of the Bible is not optional, but compulsory, and which are avowedly set on foot and maintained for the single object of convertising the pupils, to whom on that account education is imparted free of charge; and your Petitioners conceive that the support of such institutions by the Government would be productive of the worst consequences, as it would distinctly identify the ruling authorities with the one grand object of such schools, the proselytism of the natives; the only difference between which and the undisguised practice of convertism in the schools supported solely by the State would amount to this: Government would pay twice the price for a convert of its own direct making, which it would have to pay under the "Grant-in-Aid," to the seminaries of the missionaries; at the same time it would place itself at the head of all the missionary societies in the Presidency, doubling their pecuniary resources, enabling them to increase the number of their agents, and to extend their convertising operations exactly in proportion to the "discretionary power" with which this Government, in the Minutes above quoted, desires to be entrusted.

86. That your Petitioners cannot avoid remarking, that the desire of the Madras Government with regard to rendering the educational funds committed to its trust subservient to the purposes of proselytism, is of some standing. The Marquess of Tweeddale, while entertaining the proposition of the Council of Education, to adopt the Bible as a class-book, recorded his approbation of the measure, observing, in a Minute dated the 24th August 1846,—"The value of a religious and practical education to fit our countrymen for the various duties of life has been established beyond all doubt;" and again,—"The reports and complaints so constantly made to Government against the integrity of the native servants are sufficient evidence that something is wanting to ensure a faithful service from them;" and again,—it "requires a more solid foundation than is to be found in the Hindu or Mahomedan faiths to bear the change which learning operates on the mind of those who are placed by their superior abilities in responsible situations in the employ of Government." And the present Governor in Council, in his Minute approving of the "Grant-in-Aid" to the missionaries, has deemed it expedient to record,—"Although it is perhaps not immediately relevant to the subject of these proceedings, yet, as it is a momentous point in looking at the general question of education to the natives, the Governor in Council is compelled to state, both from observation and sedulous inquiry, that he has arrived at the conclusion that the people of this part of India, at least, have neither by any means had their minds expanded and enlarged

Appendix D.

enlarged to the degree that might have been anticipated through the instruction and care that has been bestowed upon them, nor has he seen any sufficient reason to indulge a belief that their innate prejudices have been removed, or even lessened, or their moral character and sense of veracity, integrity, and proper principle improved. He does not deny but that there may be occasional bright exceptions; but he is of opinion that, whatever system of education may be enforced hereafter, its chief aim ought to be directed to moral improvement, combined with extirpating the foul vices of untruthfulness and dishonesty, which are hardly now held by the great masses to be a reflection, unless discovered."

87. That your Petitioners do not consider this the proper place to remark upon the gratuitous insult offered to their whole community by the Government, in recording such an opinion for the sole purpose of transmission to the governors of the Madras University, one-half of whom, to the number of seven, are natives, under its constitution; but they beg to observe, that it ill becomes the Government to taunt the natives with "the instruction and care that has been bestowed on them," whilst it has for so many years declined disbursing one-half of the educational grant, and contented itself with keeping up a school of 160 pupils, established so far from the town of Madras as to make it inconvenient for persons to send their children, besides charging a school fee beyond the means of payment by the masses; and when, besides this ill-located and over-charging institution, there is not a government school over all the 140,000 square miles comprising the Madras territories.

88. That this sweeping condemnation, if it be justly founded, which your Petitioners are rather loath to believe, seeing that Sir Henry Pottinger has never been known to mix with the natives, except now and then when he may have presided at the annual university examinations, and other such meetings, and with the servants of his household,—exhibit the fallacy of both the past and present Governments, in imagining the study of the Bible to be a panacea for the "vices of untruthfulness and dishonesty;" for, as the whole of the instruction and care bestowed on the natives, beyond that bestowed upon the 160 pupils of the university, has been missionary care and instruction, devoted to the study of the Bible, and that in the proportion of thousands to tens, it must be apparent that the "sound and unexceptionable principles" adverted to in the Minute, have done literally nothing for the "moral improvement" of the pupils into whose minds they have been so sedulously instilled, and therefore there can be no valid reason for extending a "Grant-in-Aid" to institutions which have thus essentially failed; but there is a very strong reason against such aid being given, in order to assist in the conversion of the people, with whose religious feelings and opinions the Court of Directors has so frequently pledged itself not to interfere, and with regard to which the present Charter Act, passed by the Imperial Parliament, enacts and requires, that the Governor-General in Council shall by laws and regulations provide for the protection of the natives within the British territories from insult and outrage in their persons, religions or opinions.

Church Establishment.

89. That your Petitioners, being aware, from several sources, that both the Anglican and Scottish State churches are making great efforts, both in this country and in England, for an increase of clergymen upon their respective establishments in India, respectfully, but most determinately, remonstrate against any increase to either. They admit the propriety of military chaplains for the European troops, but repudiate the injustice of the people of this country being compelled to support a couple of State establishments for a mere handful of foreigners, professors of a foreign creed; and, while they will not object to the number of clergy already in the country, they desire to see them appropriated entirely to the military service, and that whatever augmentation be needed, the requisite funds shall be provided by the individuals by whom such services may be requested. The community to which your Petitioners belong supports its own religion; so do the Mahomedans and the various dissenters from the Church of England at this Presidency; even the Anglicans have commenced to do the same, and justice demands that they should be left as much to themselves as all other sects are; and your Petitioners earnestly pray your Right honourable House that the people of this country may be no further taxed for the maintenance of a number of individuals who are of no earthly use to them; but that their expenses may be borne wholly and solely by those persons to whom their ministrations are necessary and acceptable.

Exorbitant and ill-used Power of the Legislative Council.

90. That your Petitioners would be wanting in their duty towards the entire Hindu community, from one end of India to the other, if they omitted to complain to your Right honourable House respecting the enormous power granted to the Governor-General in Council, and the unjust partiality with which that power has been exercised, in what it has been pleased to term the *Lex Loci*, by which is meant an enactment subverting in one of its most essential and venerated points the Hindu law of inheritance, guaranteed to them on various occasions by the local government and the Court of Directors, and further sanctioned and secured to them by special Act of Parliament, 21 Geo. 3, c. 70, which provides that the "inheritance and succession to lands, rents, goods, &c., shall be determined, in the case of Mahomedans, by the laws and usages of the Mahomedans; and in the case of Gentus, by the laws and usages of Gentus; and where only one of the parties shall be a Mahomedan or Gentu, by the laws and usages of the defendant;" and again, "that all the rights and authorities of fathers of families, and masters of families, according as the same might have been exercised by the Gentu or Mahomedan law, shall be preserved to them respectively within their said families."

91. That

91. That the subversion of the rights thus guaranteed by the Indian and Home authorities, as well as by the Imperial Parliament, was first openly attempted in the year 1845, when an Act, intituled the *Lex Loci*, was drafted, and the draft published for general information on the 25th January; immediately consequent upon which publication, remonstrances from the majority of the three Presidencies were sent up to the Supreme Government, and the Act did not pass into law; between that date and the year 1849, it was discovered that, so far back as the year 1832, there had appeared in the middle of a Bengal Regulation about revenue matters, zillah judges, moonsiffs, ameens, &c., &c., and consisting of 18 sections, a few lines, forming section 9, directing that "in civil suits wherein the parties are of different religious persuasions, the Mahomedan and Hindoo laws shall not be permitted to operate to deprive of property to which, but for the operation of those laws, the parties would be entitled."

92. That this section, with whatever intentions it may have been originally framed, never had more than one instance of practical application during the thirteen years subsequent to the Regulation, viz. in May 1849, after the correspondence on the *Lex Loci* had occasioned the discovery that these sections were in existence; and it was during all the previous time unknown to the bulk of the population, whose attention was first attracted to it by its reproduction in 1849, in order to render it applicable to the whole of India. That in rendering it so applicable, the law member of the legislative council, Mr. Bethune, recorded the following observations: "I have prepared an Act for this purpose, though with some lingering doubt of the justice of the measure. According to Hindoo notions, the right which a son has to succeed to his father's property is commensurate with his obligation to perform his funeral obsequies, from which the outcaste is necessarily excluded. Put the case of property bequeathed in England to a man on certain conditions, which conditions he by his own voluntary act renders himself incapable of performing: what should we say to a law which nevertheless secures the property to him?" Mr. Dick, a Judge of the Sudr Dewany Adawlut, also recorded,—"This Act differs essentially in principle from Regulation VII., 1832, section 9: that did not in any way interfere with the religion of the Hindoos; this does. The law of inheritance of Hindoos is founded on their religion."

93. That, notwithstanding Mr. Bethune's confession of its injustice, and Mr. Dick's remark that the Act proposed was so "essentially" different from the Regulation, the Act was determined upon by the four members of council, Messrs. Bethune, Littler, Currie and Lowis, and passed into law under the declaration that it was merely the extension of the principle of the Regulation from the Presidency of Bengal to all the territories subject to the government of the East India Company, with the concurrence of the Governor-General, Lord Dalhousie, who recorded that he could "see no semblance of interference with the religion of the Hindoos, nor any unauthorized interference with rights secured to them."

94. That the Act thus passed in 1850 has been stretched, even beyond the principle on which it was professedly framed, by Sir William Burton, puisne judge of the Supreme Court of Judicature at this Presidency, in the following instance: a married Hindoo, named Valungypaukum Streenevasa, became the convert of a missionary agent named Symonds, by which act the convert renounced his caste, and thereby forfeited all claim to his former relationship, including that to his wife, to whom by the Hindu law he became virtually dead, and she herself bound to perform his funeral obsequies. The wife, adhering to the faith of her country, refused to associate with him in his new condition, and remained with her own relations for some time, until she was ordered to appear in court under a writ of Habeas Corpus, granted on the application of the said Streenevasa, and served upon the woman's father, by whom the affidavit of the convert stated that she was against her will detained.

95. That the return to this writ was a denial by the father that his daughter was or had been in his custody, and it was supported by an affidavit, that "neither he, nor any one by his order, had ever exercised any constraint over Lutchmee," his daughter. In the meantime, however, Lutchmee had been inveigled to come into court at the persuasion of her father's legal adviser, upon the false assurance that she would be permitted her free option of going to her husband or returning to her relations. She accordingly came forward on being called for, and after counsel had been heard on both sides, Sir William Burton,—having first refused the request of the father's counsel "to ascertain the wishes of the girl,"—proceeded to give an elaborate opinion, concluding with the assertion, that "the Act passed in 1850, in this country has swept away, as to all force in courts of law, that system in India which was equally tyrannical and oppressive," and with this declaration he ordered Lutchmee to be delivered over to the custody of her husband. "This order for the delivery of Lutchmee to her husband,"—your Petitioners quote the words from a printed pamphlet, entitled, "The Case of Lutchmee Ummall," edited and prefaced by Rev. —— Symonds,—"was no sooner made known to her, than she manifested a decided unwillingness to be given over, and on the approach of Streenevasa to take her by the hand, she sharply repulsed him, saying, 'You have nothing to do with me.' At the same time, also, her aunt, by whom she was accompanied, began to utter loud wailing and lamentations, and clung to her niece with a view to prevent her being taken away. Eventually the judge was compelled to direct one of the officers of the court to separate Kunnamal from Lutchmee, and to remove the latter to one of the rooms in the court, where Streenevasa joined her. The scene was altogether most exciting. The wailing of the aunt and the screaming of Lutchmee, as she was being carried out of court, caused painful sensations; added to this, the Brahmins and others present, by their vociferations and gestures, exhibited the rage and displeasure they felt at the

Appendix D.

the decision. For a time the tumult was so great as to wear a threatening aspect; but through the excellent management of the magistrate, Mr. Clarke, and his police, the place was cleared, and Lutchmee was conveyed to Sullivan's Gardens in safety." Sullivan's Gardens, your Petitioners beg to state, are the residence of the converting missionary, into whose carriage, and with whose assistance, she was violently thrust by the officers of the court, and whose prisoner Lutchmee remained till he had converted her, and procured a government situation for her husband, which, being a very common mode of enticement practised by certain of the Company's covenanted officials, was no doubt, among others, an inducement that led Streenevasa to apostatise from the faith of his forefathers.

96. That this compulsory conversion of Lutchmee Ummall, under the auspices of a judge already notorious for carrying his proselyting inclinations to the bench of the Supreme Court, and there acting upon them, proves that, although Lord Dalhousie could see "no semblance of interference with the religion of the Hindoo," when he concurred in passing the Act of 1850, it is, in point of fact, a ready and most powerful instrument of such interference, in the hands of such judges as Sir William Burton, under whose judicial opinion respecting its interpretation, with regard to "rights and property," the convert cannot only claim and seize upon property to which he has no title, except under the law which declares his forfeiture of it; but in all cases of coparceny—cases that more or less exist in every Hindoo family—he can violate and trample upon the rights of his relations, by intruding himself into the pagodas, choultrees and houses, which are family property, claiming the full right to their ingress, occupancy, and the share of their management, and the direct and perpetual interference with all the social and religious privileges of the Hindus, from which he is shut out by the law, under which he obtained them, and to the enjoyment of which, to the annihilation of that law, he is restored by the Act of 1850, as interpreted, laid down, and put in operation by Sir William Burton.

97. That your Petitioners cannot but consider the decision of Sir William as erroneous as it is tyrannical and oppressive; for in a more recent instance at Bombay, wherein a Hindu convert sought to recover his wife by means of a Habeas Corpus, the Chief Justice, Sir Erskine Perry, refused to let it issue, and delivered his reasons in open court, referring at the same time to the decision of the Madras Puisne Judge, as reported in the following sentence: "With reference to the case decided at Madras, his Lordship admitted that it militated very strongly against the principle he had laid down; but, bound as he was to pay every respect to the opinion of Sir William Burton, he (Sir E. Perry) felt it his duty to say that he differed from it entirely. His Lordship had, therefore, no hesitation in refusing the present application."

98. That your Petitioners, feeling themselves highly aggrieved by the practice of Sir William Burton in deciding cases in which missionaries and Hindus are the opposing parties, by his religious feelings, rather than the principle of justice, beg to advert to two of his former decisions; the first of which was passed in the year 1846, in which a Hindu boy, named Ragavaloo, was produced in court, his father asserting that he was not of age according to Hindu law, the missionaries, on the contrary, asserting that he was of age, when the Puisne Justice, not being otherwise able to favour the missionaries, said he should decline resting what was his view of the case upon the mere point of age, and that it was not years, but discretion that was to guide the Court in this matter. He accordingly put a few questions to the lad, one of which was, "Does Christ forgive sins as God or Mediator?" To which the reply was, "As Mediator." After which he observed, "He is choosing good for himself; he is choosing that which he believes will be for his salvation;" and, making his good choice the evidence that he was of age to choose, he delivered the lad into the hands of the missionaries.

99. That the second instance happened in 1847, the child in dispute being a female, named Mooneatha, upon which occasion Sir William Burton, alluding to his former decision in the case of Ragavaloo, acknowledged, that, "had the object of his choice been bad, I should have come to another decision." There was, however, no occasion this time to substitute discretion and a good choice in the place of age, as an affidavit was put into court from two doctors in the Company's service, to this effect,—"We, upon our oaths, say, that we did, at the request and in the presence of the Reverend John Anderson, on the 19th April 1847, examine and inspect the person of Mooneatha, and that we are of opinion that the said Mooneatha is of the age of 12 years, or thereabouts;" with reference to which the Puisne Judge remarked, "We know that there is no circumstance, no temptation, no consideration, no interest, that would lead these gentlemen to deceive this Court. We know what they state, they have seen and do believe;" and accordingly the Court adjudged the possession of the girl,—thus shamelessly and insultingly submitted to examination and inspection by three men, one of them a Christian minister,—to the missionaries, although the fact that she was not of the age of puberty was incontestably proved, from the very circumstance of her being allowed to attend Mr. Anderson's school, Hindu females, after that period, not being permitted to go abroad, unless they are married women.

100. That from these circumstances, as well as others wherein Sir William Burton has expressed himself inimical to the Hindu community, in open court upon the bench, your Petitioners earnestly beg that no more judges affected by a religious bias, which induces them to carry their peculiar creed to the bench of justice, and there to follow its impulses in their decisions of cases brought up for their adjudication, may be appointed, either to

the

the Puisne or Chief Justiceship in the Supreme Court at this Presidency; conduct like that to which your Petitioners have been referring being calculated to inflict great misery upon the Hindu community in their social relations, and to create public disturbances, leading to the most mischievous consequences, among a people patient and submissive under every change of government, and roused to the open expression of their feelings only by what they consider to be grossly insulting and cruelly oppressive towards a religion of some thousand years' establishment, and which has been handed down to them as the most sacred deposit from their ancestors.

Subordinate Presidencies.

101. That your Petitioners, as subjects of the Madras Presidency, beg to represent to your Right honourable House the injustice and injury they suffer from the system which places the whole of its resources at the disposal of the Supreme Government, by which the improvement of this portion of India is retarded, and the poverty of the population impoliticly augmented. Not only is the local Government prohibited from disbursing the public revenue raised within it to local purposes, but a large portion of it is so brought upon the general books of the Supreme Government as to depreciate the value of the Presidency as a distinct portion of British India, and to make other portions of it appear more valuable than they really are; and this factitious system of accounts is made a reason with the paramount authority for denying the improvements of which Madras is so deplorably in need, and to which she is most undoubtedly entitled.

102. That, as an instance of this injustice, your Petitioners will explain, that many years ago the sum of 50 lacs of rupees, or 500,000 *l.*, was fixed as the amount which Madras ought to contribute to the general expenses of the Indian empire, over and above her own charges; and from 1821 to the present time it has been the constant practice with the Supreme Government to press retrenchment and economy on this Presidency, and to refuse sanction to expenditure or improvements essential to her advancement, on the plea that her surplus fell short of that required amount; and thus Madras is screwed down to the lowest point, on the false ground that she does not pay her fair quota of revenue, while Bengal, on the reputation of an enormous surplus, is allowed to make disbursements too frequently bordering upon wasteful extravagance.

103. That this different treatment observed towards two component parts of the same empire, even if the case stood as is fallaciously pretended, would be scarcely just, most certainly ungenerous, and singularly impolitic; but if the case be otherwise, the treatment of Madras is not simply unjust and impolitic, but becomes an act of tyrannous oppression; and that the case is otherwise your Petitioners proceed to show. The surplus is counted over the 50 lacs settled as the amount of her own expenditure, which includes the military charges incurred on her own account only; but for a series of years past a large part of these charges has been incurred on account of troops garrisoning countries, the entire revenues of which are paid into the treasuries of Bengal and Bombay, viz., the Sauger and Nurbudda country, Mhow, Nagpore—the subsidiary force, Cuttack and Balasore, Tenasserim coast, the Straits settlements, and Aden, belonging to Bengal; and the southern Maharatta country, belonging to Bombay: the Madras force in all these several districts or stations amounts to four regiments of native cavalry and 16 of infantry, together with one troop of horse artillery and 10½ companies of foot artillery, the charges for which are within a fraction of 80 lacs of rupees, or 800,000 *l.* per annum, which, though defrayed by her, are no part of "her own charges," and amount to 30 lacs over and above the surplus at which her revenue was rated, in order to entitle her to draw upon her own treasury for local "expenditure and improvement;" but, besides this, the official statements, published by order of the Honourable the House of Commons, have given her a credited surplus for several years past, the latest your Petitioners have access to being that of 1849-50, in which it is set down at 43 lacs and upwards, which, added to the 30 lacs arising out of the military expenses incurred on account of Bengal and Bombay, give her for that year no less than 73 lacs beyond her quota towards the general expenditure of the empire, and which, as such, ought to have been at her disposal.

104. That besides this giant injury, there are many others occasioned by the centralization of authority in the Supreme Government. No alteration of salaries, no revision of office establishments, can be made without the previous concurrence of the controlling power, and the difficulties and delays in the way of obtaining this concurrence are such, that the heads of offices will put up with experienced inconveniences, both temporary and permanent, rather than seek so laborious and troublesome a remedy. Instances have been known in which such applications received no notice for nearly two years, and when a reply was again solicited, the answer was a request that copies of the papers might be sent, as the originals were lost. Sometimes it has been proposed by the Madras Government to modify establishments by reduction in one quarter, in order to strengthen another, and the result of the application has been, that the reductions have been sanctioned, and the additions refused. Very recently the engineering officer of the 1st division, Colonel Arthur Cotton, having satisfied himself by local inquiries that reasonable ground existed for believing that the River Godavery might be rendered navigable for 400 miles inland from the sea, applied to the Madras Government for a small sum of money to enable him personally to explore the river in a small steamer he had himself built for the service of the Godavery annicut; but on the sanction of the Supreme Government being requested to an outlay for this purpose, not exceeding 1,000 *l.*, it was refused, because the President in Council did not see what advantage could be gained by this project, although by its accomplishment the culture of cotton in the province of Berar would have been indefinitely extended for the consumption of the Manchester manufacturers, and the grain-producing districts in the delta

Appendix D.

delta of the river would have found access to markets from which they are now permanently excluded.

Modification of the Councils.

105. That this utter preclusion of all improvement to this Presidency, from the systematic obstructiveness of the Supreme Government, compels your Petitioners to request that in the arrangements of your Right honourable House for the future government of India, the Governor in Council at Madras may be allowed the free use of its functions, necessary for providing for the welfare and prosperity of the people entrusted to its care; and that its construction be modified after the precedent of the neighbouring Crown settlement of Ceylon, where the council is composed of official and non-official members, and, among the latter, natives of this country are included. That your Petitioners would suggest that this council be composed of officials and non-officials in equal number, six or seven of each; the former to be nominated by the Government, on taking their place at the council board in virtue of their office, the Advocate-general being one; and the latter to be selected by the Governor, out of a list of 18 or 21 persons, chosen by the votes of the ratepayers in Madras, and of persons eligible to serve on the grand and petty juries, or in such other manner as your Right honourable House may deem preferable: that as the official members, in conjunction with the casting vote of the Governor when requisite, could always carry any point of absolute importance, there could be no hindrance to the safe working of the suggested plan, while a sufficiency of information on all subjects would be afforded; which, together with the discussions being carried on, as at Ceylon, with open doors, could not fail to be of the utmost utility to the advancement and prosperity of the people and the Presidency.

106. That all minor subjects should be definitively determined by the Governor in Council; but, on all questions of importance, their decisions should be transmitted to the Government of India, there to be again publicly discussed, prior to sanction or rejection; and also that on any minor subject, determined by the casting vote of the Governor, there should be an appeal from the minority to the Supreme Council; and, as your Petitioners are aware that a more economical public expenditure is imperatively necessary, they would propose that the salary of the Governor be fixed at *Rs.*7,000 per mensem, and that the salaries of all persons composing what is now termed the covenanted service be reduced prospectively, in similar proportion; that the members of council shall draw no salary for that appointment, and that, as is now the case in Ceylon, the holders of official situations shall constitute the service, instead of an appointment by covenant, conveying a claim to be employed by the State exclusively to all others.

107. That, in the deliberate opinion of your Petitioners, legislative councils thus or similarly constituted, and entirely distinct from the executive, are as feasible on this continent as in the neighbouring island of Ceylon; and that their constitution is the great desideratum for the just and efficient government of each presidential division of the vast empire of British India; all general questions of political importance, involving peace and war, and the movements of the military and marine forces consequent thereon, together with the requisite but salutary control of the subordinate councils, being vested in the Supreme Government for all India. That a single council for the whole of India, although constituted on the same popular principle, would never be able to distribute justice and effective government to a hundred and twenty millions of people, spread over an area of upwards of a million and a quarter of square miles, and comprising so great a variety of races and languages; the more distant provinces, as is the case at present, would be neglected and oppressed; while the nearer ones would absorb all its attention, and engross the whole of its indulgence; whereas by granting to each Presidency a local government for the management of its internal affairs, the members of it would watch over the interests of the whole circuit committed to their charge; of which, from their local knowledge, they would be enabled, and from their sympathy would be induced, to seek and pursue the welfare and progressive improvement.

108. That with respect to the Supreme Council, your Petitioners suggest that it should, in some degree at least, partake of the popular element recommended to be embodied in the councils of the Presidencies, which should have their respective interests equally represented by a like number of members, the whole of whom should be allowed a reasonable and respectable salary, they being prohibited from holding any other office in conjunction with that of councillor; and that, besides the presidential representatives, there should be three others appointed from England, who, besides being members of the legislative council, should constitute the executive council, the Governor-General being the president of both; the executive of the subordinate Presidencies consisting of the Governor and the members *ex-officio* to the number of three, in addition to the president.

109. That your Petitioners, knowing from experience the inexpediency of the home administration by a Board of Control and a Court of Directors, from neither of which can the people obtain any redress, nor even the slightest notice of their petitions and memorials, would suggest the desirableness of fusing these two bodies into one, or of substituting another in their place, presided over by a Secretary of State for the Affairs of India, and having its chief secretary appointed by the Crown, so that it may be amenable to Parliament, as any other board or office, its president being a member of the Cabinet, and receiving the same salary as the Chief Secretaries of State in the other departments. That, as regards the members of this council, their qualifications and the mode of their appointments, your Petitioners have no suggestions to offer, beyond that of their having, at least one-half of them, some tangible interest connected with this country, as well as a general knowledge of its condition and requirements, obtained by a personal residence in the country during a specified

specified term of years; the remainder, who have neither of these qualifications, to be recommended by intellectual ability and habits of business.

Employment of the Natives by the State.

110. That, in whatever manner the superior branches of the administration, both at home and abroad, may be modified,—and modified your Petitioners presume they must be, to suit the altered condition of men and things which has taken place in the lapse of the last 20 years,—justice to the masses of the people in general, and towards the more intelligent of them in particular, requires that the hitherto prevalent system of governing the country through the exclusive medium of a covenanted civil service should be, if not wholly, at least partially, abandoned, for the following reasons:

111. That young men under this privilege are sent to India, fresh from school, and without any knowledge of the world, without habits of business, or even the desire and intention to acquire them. Ignorant of the customs and language of the people, they are placed almost immediately on their arrival in India upon large allowances, in the position of assistant collectors and magistrates, and, being on a level with their superiors in office, as component parts of the same exclusive service, they consider their own ease and pleasure as the first advantage to be derived from their new situation, and look upon the zealous and proper discharge of their official functions, in promoting the benefit of the people, with the natural indifference of persons sure of their salaries and immunities by the simple fact of their first appointment from home.

112. That an assistant collector has generally placed under his immediate authority one or more divisions of the collectorate, termed talooks, within which he represents his superior, both as regards the collection of the revenue and the performance of magisterial duties; and, as a matter of unavoidable necessity, he is able to execute his functions solely by the instructions and assistance of the native moonshee or interpreter, without whom he would be utterly incapable of doing any business at all, as the said moonshee is obliged to advise and guide him on every point and occasion, his own functions being confined to deciding according to the dictates of the moonshee, and putting his signature to the different papers prepared by the latter; while, so well is it understood by the superior authority that the assistant is incapable of self-guidance, that his mistakes, when considered important enough for visitation, are furnished by the collector with the dismissal of the moonshee. The lamentable consequences of this ignorance, incapacity and negligence, on the part of each assistant collector, to some 150,000 of the native population, in the delay and denial of justice, and in the commission of injustice and oppression, are too numerous for detail by your Petitioners, and will be readily apprehended by the wisdom of your Right honourable House.

113. That the inefficiency and evils of this system would be most materially remedied if the educated and trained natives, now acting as proxies in the performance of the functions nominally assigned to these young and incompetent civilians, were placed, under their own personal responsibility, according to their fitness and qualifications, in all the subordinate branches of the revenue and judicial lines; and that very many are sufficiently qualified is proved from the facts, that they already perform the duties of such situations in the revenue department; and that in the judicial department, according to the trust reposed in them, they have been found, to say the least, fully equal to their superior European officers, as evidenced in the public testimony borne to their worth and ability by Sir Erskine Perry, late Chief Justice of Bombay, in his address at the Elphinstone Institution in the month of February, in the present year, in the following language: "All the civil business in the Company's courts is conducted, generally speaking, by native judges; they are what the French would call judges of the First Instance, and from their decisions appeals lie to the European judges, from whose judgments again an appeal lies to the Sudr Adawlut. It naturally follows that on these latter appeals a close comparison is made between the decision of the native and European functionary; and I learn from the judges of the Sudr Adawlut that it was publicly stated in open court by the two leading members of the Bombay bar, that, with a few distinguished exceptions, the decisions of the native judges were in every respect superior to those of the Europeans."

114. That the statistics of judicial business conducted in the Bengal Presidency, and printed for public information, also show that in the quantity and quality of the work performed the natives are on a par with the Europeans, and, could the statistics of Madras be come at by your Petitioners, they feel confident that the case would be the same; but, not being able to obtain access to these documents, they will quote the opinion of Mr. John Shepherd, Chairman of the honourable Court of Directors, delivered in a speech to the students at Haileybury, on the 15th of December, last year, as to the general capacity and competency of the natives: "Let me call your attention to the exertions making by the natives of India in the present day. European science and European literature are now studied in India, not only with diligence, but with success. The examinations on those subjects passed by native students show little, if any, inferiority in comparison with Europeans. They have become competitors on our own field of action, and on ground hitherto untrodden by them, and unless you sustain the race with additional zeal and energy, they may pass you. Should this occur—should the natives of India surpass us in intellectual vigour and qualifications, can we hope to remain long in possession of the powers and the privileges we now enjoy?—Certainly not."

115. That on the basis of these facts, and of the twofold admission of Sir Erskine Perry and Mr. John Shepherd, your Petitioners would represent that the natives, having already equalled the Europeans in the race of intellectual attainments, deserve, on the admission of the Chairman of the Court of Directors, to be admitted to some portion, at least, of "the powers and privileges" enjoyed by the young men educated at Haileybury; and upon the same

Appendix D.

same admission they desire the abolition of the college of Haileybury as a useless expense, and an unjust incubus on the finances of India; and that in its place the means of better education may be extended to this country, by the establishment of more complete and more useful institutions, including a fuller course of instruction, open to the natives of the soil, as well as to all who seek employment under Government, or to qualify themselves for the general pursuits of practical life.

116. That Haileybury either imparts a better education than can or would be given in this country, or it does not. If it does not, and it certainly cannot impart the same knowledge of the vernacular languages, the manners and the customs of the people, then the money required for its support is mispent, and thrown away. If it does, then it is manifestly unjust to confine that better education to as mall number of privileged persons, while it is invidiously withheld from the many, equally desirous, equally capable, and equally entitled to its participation, as the necessary means to enable them to avail themselves of section 87 of the Charter Act, which enacts that no native, or natural-born subject of Her Majesty, residing in British India, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the Government of the country. And your Petitioners therefore pray, that, whatever institutions shall be deemed requisite to educate persons for accession to Government employ may be established and maintained in India, so that the money derived from the revenues of the country, by which they are supported, may be spent within it; and that those who contribute to the revenue may in this instance enjoy the benefit of its expenditure, together with that advancement in the public service which the Chairman of the Court has pronounced to be the equitable reward of individual merit and acquirements.

Power of the Supreme Courts injuriously controlled by the Acts of the Legislative Council.

117. That your Petitioners would feel the present representation to your Right honourable House essentially deficient, were they to omit all notice of the inefficient condition in which Her Majesty's Supreme Courts of Judicature have been placed by a recent Act of the Legislative Council, styled "An Act for the Protection of Judicial Officers;" by which it is enacted, that no action for wrong or injury shall lie in the supreme court against any person whatsoever exercising a judicial office in the country courts, for any judgment, decree or order of the said courts, nor against any person for any act done by or in virtue of the order of the said courts; and that no judge, magistrate, justice of the peace, collector or other person acting judicially, shall be liable to be sued in any civil court for any act done or ordered to be done by him in the discharge of his judicial duty, whether or not within the limits of his jurisdiction; provided that he at the time, in good faith, believe himself to have jurisdiction to do the act complained of.

118. That your Petitioners have always understood that the establishment of Crown courts was intended the more effectually to secure the administration of justice, by checking the irregularities of frequent occurrence in the courts of the Company—an end that was attained so long as the misdoings of the Company's judges were amenable to the supreme courts of judicature at each Presidency; but this Legislative Act, by depriving those courts of the power entrusted to them by the Crown, operates as an encouragement and reward to malpractices and oppression, which are becoming numerous, especially in Bengal, since it passed into Indian law; the only punishment for which, when the wrong-doing is too flagrantly notorious to be openly tolerated, is the removal of the delinquent to a more lucrative situation.

119. That your Petitioners, under these unjust and oppressive circumstances, solicit the protection of your Right honourable House in the revision of this Act of protection for judicial delinquents, and the restoration of their original power to the courts of the Crown; as also that, for the better security of wise and impartial administration in the highest appellate court of the Company, one or other of Her Majesty's Judges may be President or Chief Judge in the court of Sudr Adawlut, in the room of a Company's servant, as is at present the case in the person of the senior member of council.

120. That your Petitioners likewise pray for redress against another enactment of the legislative council, which vests in a single magistrate the powers, formerly shared by two or more, to fine, imprison, and flagellate, at his discretion, as they consider the authority summarily to inflict these punishments is too great to be safely entrusted to one individual, especially as by the Protection Act all redress for injury or wrong inflicted is denied to the sufferer; but even if redress were attainable by instituting a suit in the Supreme Court, as was formerly the case, your Petitioners conceive that a check to the commission of evil is far preferable to the exaction of inadequate retribution after the evil has been perpetrated.

Nominal continuation of the present Charter.

121. That while your Petitioners extremely regret that, owing to want of sufficient time, and to the insufferable difficulty of obtaining access to official documents, they have been unable to exhibit so amply and definitely as they could desire, the vast number of major and minor grievances to which they are subject under the operation of the existing system of government, they earnestly entreat that those which they have thus imperfectly touched upon may meet with the patient consideration of your Right honourable House, as well as that the opportunity may be afforded of substantiating the facts they have submitted before an impartial commission of investigation and inquiry, assembled in India, composed of persons both in and out of public employ, and of Europeans and natives conjointly, chosen partly in Europe and partly in this country, as the sole means by which the real state of these territories, and the true condition of their population can be elicited; and that for the accomplishment of this object, the present Charter of the East India Company may be annually renewed till the investigation is completed.

122. That,

Periodical Discussion of Indian Affairs.

122. That, in conclusion, your Petitioners would respectfully suggest that, whether the government of India be continued in the hands of the East India Company, or otherwise provided for, the new system, whatever it may be, shall be open to alteration and improvement from time to time, as the well-being of the country may require; and that the working of its internal administration may undergo at stated intervals—if practicable, triennially, but quinquennially at the latest—public inquiry and discussion in the Imperial Parliament, in order that the people of this vast and distant empire may have more frequent opportunities of representing whatever grievances they seek to have redressed, and that the local governments may be stimulated to the diligent execution of their functions, under the influence of a constant and efficient supervision of their conduct by the higher authorities at home.

And your Petitioners, as in duty bound, shall ever pray.

&c. &c. &c.

Madras,
10th December 1852.

PETITION, praying that in case of any Alteration being made in the Government of India, the Right of Choosing the Persons to compose such Body may be granted in such manner as may seem fit, amongst others, to the Holders resident in this Country of the Promissory Notes or Securities of the Government of India, of Retired Servants of the Honourable East India Company, Merchants and others.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The humble Petition of the undersigned, Retired Servants of the Honourable the East India Company, Merchants and others,

Showeth,

That your Petitioners are severally holders of promissory notes of the East India Company, granted from time to time by successive Governments of India, on occasion of raising money on loan for its service.

That your Petitioners have, for the most part, become possessed of such Government promissory notes during the course of a long residence in India, and while such residence has made your Petitioners practically acquainted with its affairs, and has given them a deep interest therein, your Petitioners show that the fact that they are creditors to a large amount of the Government of India, necessarily gives them a great stake in its financial prosperity and in its general well-being.

That much the greater part of the proprietors of East India stock have never resided in India, and are, therefore, for the most part less acquainted with Indian affairs than your Petitioners; and inasmuch as by the last Charter Act the dividends on East India stock are made the first charge on the revenues of India, the proprietors of such stock have by reason thereof only a nominal interest in its government.

That if it be the wisdom of Parliament to commit the Government of India to a body (more or less numerous) having the same or similar functions to those of the present Court of Directors of the East India Company, it is expedient that such body should be chosen by a constituency more extended in its character than the present proprietors of stock of the East India Company, and having a real instead of a nominal stake in the welfare of India, and especially by a constituency more qualified than the present to judge of the qualifications of the candidates.

That your Petitioners further believe that the granting to the holders of promissory notes of the Government of India the right of voting in the choice of Directors, will improve the value of the securities of the Indian Government, and will enable it to borrow money at a more easy rate.

Your Petitioners therefore humbly pray your Right honourable House, that should it be deemed expedient in any future arrangements to be made for the Government of India that such Government should be vested wholly or partially in a body constituted like the present Court of Directors of the East India Company, the right of choosing the persons to compose such body may be granted, in such manner as to the wisdom of Parliament may seem fit, amongst others, to the holders resident in this country of the promissory notes or securities of the Government of India.

(signed) John Morgan, Col. C. B., Madras Establishment.
[And 25 others.]

Appendix D.

PETITION, that the Period of Existence for any future Government of India be limited to Ten Years, of Members of the Bombay Association, and other Native Inhabitants of the Presidency of Bombay.

To the Right Honourable the Lords Spiritual and Temporal of Great Britain and Ireland, in Parliament assembled;

The humble Petition of the Members of the Bombay Association, and other Native Inhabitants of the Presidency of Bombay.

Showeth,

That the nature, constitution, and practical working of the Indian Government being now under the consideration of Parliament, your Petitioners beg respectfully to lay before your Honourable House the views which your Petitioners have formed with respect to the existing system of government, and some of the improvements of which it is susceptible.

2. Your Petitioners are fully sensible of, and are glad to acknowledge, the many blessings they enjoy under the British rule; but these they attribute to the British character rather than to the plan of government which it has hitherto been deemed expedient to provide for India, and which, being the result of circumstances and not of design, is but little suited to the present state of the country, and to the fair demands of the people of India.

3. Even the 3d & 4th Will. 4, c. 85, under which India is now governed, intituled, "An Act for effecting an Arrangement with the East India Company, and for the better "Government of His Majesty's Indian Territories, till the 30th day of April 1854," was confessedly a concession of principles, in order thereby to effect the final settlement of complicated questions of property, and to obtain the relinquishment, by the East India Company, of certain exclusive rights of trading secured by Royal Charter; and the correspondence between the Board of Control and the Directors of the East India Company, contained in the 17th volume of the "Papers" (printed in 1833 by order of the Court of Directors) "respecting the negotiation with His Majesty's Ministers on the subject of the East India "Company's Charter," clearly establishes that it was fully understood at that time on both sides that the nature of the arrangements for the future government of India was to remain an open question.

4. The formation, therefore, of a good system of government for the millions of peaceful and loyal British Indian subjects, being now for the first time freed from all antecedent difficulties connected with the acquisitions, rights and position of the East India Company, and resolving itself, as it now does, simply into a question, how can India best be governed? your Petitioners believe that it will be found easy by your honourable House to devise a constitution for India, which, while it shall contain all the good elements of the existing system, shall be less cumbersome, less exclusive, less secret, more directly responsible, and infinitely more efficient and more acceptable to the governed.

5. Your Petitioners need not point out to your honourable House the nature of the Home Government under the present arrangement; but whilst in theory, and doubtless to a very great extent in practice, it consists of a Minister of the Crown, aided by a Court of twenty-four persons, many, though not all, of whom have passed through an Indian career, yet, according to very high authority, the views of the Court of Directors can be put aside by the Minister at pleasure, and the former be forced, in their own names, and as their own act, to issue orders to the local Government to which they are entirely opposed.

6. The Right honourable the Earl of Ellenborough, in the evidence recently given by him before a Committee appointed by the late Parliament to inquire into East Indian affairs, is represented to have stated that he did not know by whom India was in general governed; that it seemed to be so in general by a parcel of clever clerks; that when he, Lord Ellenborough, was chairman, he governed the country himself, and on his own responsibility; and that he did not think of taking counsel with his brother Ministers, or advising with any member of the Court of Directors as to the course to be pursued. The following question was put to Mr. Courtenay, Secretary to the Board of Control from 1812 to 1830, by the Select Committee appointed by Parliament in 1832:—

"Has the existence of these co-ordinate authorities, in their several relations to each "other, tended, in your opinion, to promote the despatch of public business, or otherwise?" His answer was, "To retard it in a most extraordinary degree; and, in retarding it, to "make the whole more unsatisfactory. The length of time that elapses between an "occurrence in India which is the subject of a despatch, and the receipt in India of the "opinions of the home authorities thereupon, is necessarily very considerable under any "circumstances; some not inconsiderable time must be taken up in England in preparing

"an

" an answer to the despatches; but the time is increased in an immense proportion by the " necessity of every despatch going through the two establishments, being in many cases " the subject of lengthened controversy between them."

The inutility and inefficiency of two such clashing authorities as the Court of Directors and the Board of Control, are thus described by Mill in his " History of India:"—

" If the whole power of Government is necessary for the Board of Control, what use is " there for another governing body, without powers? This is to have two governing bodies, " the one real, the other only in show. Of this species of duplication, the effect is to lessen " the chances for good government, increase the chance for bad; to weaken all the motives " for application, honesty and zeal in the body vested with power, and to furnish it with an " ample screen, behind which its love of ease, power, lucre and vengeance may be gratified " more safely at the expense of its trust."

7. It is, moreover, commonly asserted and believed that some of the most important events which have occurred during the existing Government of India, attended with an enormous drain on the revenues of the country, have been ordered by the Board of Control, in opposition to the express wishes of the Court of Directors.

8. Your Petitioners therefore submit that an Indian Council, not placed under a Minister of the Crown, but of which the latter should form the President, and be directly responsible to Parliament, would form a more simple, efficient and responsible Home Government than that now existing.

9. Whether the members of this Board should consist of 12 or 24 persons, by what title they should be designated, how many of them should be nominated by the Crown, and how many elected, and by whom elected, how they should be remunerated, and how and when displaced, are details on which it is quite unnecessary for your Petitioners to offer an opinion to your Honourable House, beyond this, that your Petitioners would suggest that the remuneration attached to a seat at the Board should be such as to secure the services of the most able men of the day; and that, with the exception of the Minister of the Crown, a previous residence in India should be an indispensable qualification for office.

10. Your Petitioners would further suggest, that the elective body should be composed of persons having a real and substantial interest in the good government of the country.

11. With reference to the local Governments, your Petitioners conceive that they are conducted, under the existing system, with a secrecy which, however justifiable and necessary in the early days of the British rule, is not at all called for in the present day; and, on the contrary, is most injurious to the character and best interests of the Government itself, and most unsatisfactory to the governed.

12. Your Petitioners would also point out that the efficiency of the local Governments of Madras and Bombay, under the existing law, is very much impaired, and the despatch of public business considerably retarded, by the necessity for continual reference to the Supreme Government at Calcutta, for its sanction for the most trifling matters; and changes recommended by the local Government, and supported by the authority of its experience, are frequently rejected by the supreme power, with no local knowledge to guide its decisions.

13. That this would be the effect of centralizing all legislative and so much executive power in the Governor-General of India in Council, was foreseen and expressed by the East India Company in a Petition presented by them to your Honourable House in the course of the discussions on the present Charter Act. Their words are as follows: " Your " Petitioners further humbly represent, that the said Bill proposes to effect a serious change " in the constitution of the local Governments in India, which, in the judgment of your " Petitioners, will, if adopted, place an excessive power in the hands of the Governor-" General, and prejudicially diminish the power and influence of the Governments of Madras " and Bombay." The experience of the last 18 years has completely verified the truth of the above prediction.

14. Your Petitioners submit that the cost of administration in India is unnecessarily great, and considerable reductions might be made, without the slightest detriment or injury to any one, save the patrons or expectants of office, by abolishing sinecure offices, and retrenching the exorbitant salaries of many highly-paid offices, whose duties are so trifling, or involve, comparatively, so little labour or responsibility, that they might with advantage be amalgamated with other offices, or remunerated in a manner commensurate with the nature of the duties to be performed.

15. Your Petitioners respectfully submit that the time has arrived when the Natives of India are entitled to a much larger share than they have hitherto had in the administration of the affairs of their country, and that the councils of the local Governments should, in matters of general policy and legislation, be opened, so as to admit of respectable and intelligent natives taking a part in the discussion of matters of general interest to the country, as suggested by Lords Ellenborough, Elphinstone and others.

16. It is often alleged that the Natives are incompetent to fill high situations. Similar objections were raised by the Court of Directors, in 1832, to the appointment of Natives to the offices of Justice of the Peace and Grand Juror, when a Bill relative to such appointments was proposed to be submitted to Parliament by the Right honourable Charles Grant,

Appendix D.

Grant, M. P., then President of the Board of Control, and now Lord Glenelg. That eminent statesman, in his correspondence with the Chairman and Deputy Chairman of the East India Company on the above subject, bears the following testimony to the qualifications of Natives for service under Government, in a letter dated 6 March 1832 :—"In the pursuits "of private life, as well as in those branches of the public service in which they have "hitherto been permitted to engage, the Natives of India have evinced no deficiency, either "in habits of application to business, or in the skill and acuteness required for its success-"ful prosecution; nor can it be maintained that they are insensible to that stimulus to "exertion which arises from the hope of honourable distinction. Those Natives who are "entrusted with the administration of justice, and the collection of the revenue in the interior, "qualify themselves for those duties by studying the Regulations of the Government under "which they are to act. Why, then, should we anticipate a different result in the case "now under consideration?" The result of the appointment of Natives to the distinction of Justices of the Peace and Grand Jurors, your Petitioners believe they may safely assert, has fully realised the expectations which seem to have been formed regarding the measure by the distinguished statesman from whom it emanated; they have honourably filled their offices, and performed their duties, equally with their European colleagues, with much advantage to the public interests concerned. Sir Erskine Perry also, the Chief Justice of Bombay, when presiding in his capacity of President of the Board of Education, at a public meeting held in the Town-hall of Bombay, on the 9th February 1852, expressed himself as follows, in respect to the administration of justice, as exercised by Native functionaries in the interior of this Presidency :—

"All the civil business in the Company's Courts is in the first stage conducted, speaking "generally, by Native judges; they are what the French would call Judges of the First "Instance, and from their decisions appeals lie to European judges, from whose judgments, "again, an appeal lies to the Sudder Adawlut. It naturally follows that on these latter "appeals a close comparison is made between the decisions of the Native and European "functionary. Now I learn from the Judges of the Sudder Adawlut that it was publicly "stated in open Court by two leading members of the Bombay Bar, that, with a few distin-"guished exceptions, the decisions of the Native judges were in every respect superior to "those of the Europeans."

The above testimony of distinguished individuals, to which might be added many others of a similar character, will, your Petitioners hope, remove any impression which may exist as to the sometimes alleged unfitness of Natives for situations of trust and responsibility in the service of the State. Experience hitherto has shown a result directly opposed to such impressions: and in the present advanced state of the Native mind, compared with what it was when the last discussions on the Charter of the East India Company took place 20 years ago, it is not too much to presume, judging from the past, that the further advancement of Natives to more important offices will be followed by equally favourable results.

A Native judge in the Small Cause Court at Calcutta, and a Native magistrate in the same city, are admitted on all hands to conduct their duties most satisfactorily; but no such appointments have been made in this Presidency, nor, as your Petitioners believe, in Madras.

17. Your Petitioners would further observe, that the 87th section of the 4th & 5th Will. 4, c. 85, which declares that no Native of India or natural-born subject therein, shall be disqualified from office by reason only of religion, place of birth, descent, or colour, has hitherto remained nearly a dead letter; and it is for your Honourable House to make due provisions for the more extensive employment of Natives of India suitably qualified for the Government service, and for their elevation to the highest offices of the State.

18. With respect to the administration of the Government itself, it is, perhaps, unnecessary to remind your Honourable House, that every civil post, of any value or importance, throughout the territories, is filled by a privileged and exclusive service, called the Covenanted Civil Service of the East India Company.

19. Your Petitioners admit that the 103d and five following sections of the 4th & 5th Will. 4, c. 85, contain the outline of provisions adapted to secure an honourable, and, on the whole, efficient body of servants for very many offices under the Indian Government; but although the students of Haileybury College are, by virtue of the above clauses, to undergo examination, the incompetent, as well as the competent, have equally the Parliamentary right "to supply the vacancies in the civil establishments in India."

20. It must be apparent to your honourable House, that the education given at Haileybury College does not, and cannot, qualify a young man to administer the law, civil and criminal, Hindoo and Mahomedan, to a whole district; and yet no provisions exist, either in England or in India, for carrying on the education of the civil servants intended for judicial employment, nor are they required or expected to prepare themselves for the judicial office by any previous study.

21. Once admitted to the service, they rise by seniority, whether industrious or idle, competent or incompetent; and they are transferred from one department to another, without due consideration of their aptitude or previous experience; the Judicial sends its members to the Revenue department, and the Revenue to the Judicial. Unlike the officers of the army, they are practically exempt, except in cases of extreme delinquency, from all fear of punishment for incompetence or misconduct. Regarded as the privileged governors of the country,

country, and claiming all the important offices under Government as of right, the gravest errors are only visited with expostulation, or at most with a removal from one office to another, whilst the local Governments are debarred from availing themselves of European and native talent at hand, simply because the possessor is not one of the privileged order.

22. So long as the present exclusive system of employ shall continue to exist, it is manifest that it will be impossible to secure the greatest efficiency in any one department of the Government; whilst the courts of justice will, as a general rule, be handed over, as at present, to those who have shown themselves the least qualified to collect the revenue of the State. The result of placing judicial power in the hands of those not trained, or by nature qualified to exercise it, is, that in order, as far as possible, to prevent injustice, it is necessary to allow a number of appeals and reviews; and thus, under the system of Mofussil judicature, a final decision in civil suits is often not obtained under ten years, and rarely before three years. Then the litigation in the Company's courts, where a large amount is in dispute, is of the most expensive character, owing to the heavy stamps to which all law proceedings in the Mofussil are subject; and thus, from delay, expense and inefficient judges, the administration of the law in the Company's Courts is altogether of a most unsatisfactory nature; and no department of the Indian Government calls more loudly for reform.

23. Your Petitioners would respectfully suggest, that if a Parliamentary service having a right to exclusive civil employ is to be retained for India, its sphere of office should be confined to the discharge of strictly revenue, financial and political duties; and that the system of seniority and right of promotion, involving, as now in operation, frequent and most inconvenient transfers of officers from one department to another, should be abolished, and that public merit should be the only avowed principle of promotion; and further, that a high standard of qualification should be exacted from all who are appointed to judicial offices in India.

24. Your Petitioners would moreover add, that the Indian Civil Service now costs the Government 3,500,000*l.* sterling, each officer receiving on an average 1,750*l.* per annum, from youths just arrived in India to the highest grade. These salaries are adequate to command the very highest political, financial and judicial talent, and impose on the Government the moral obligation of providing the best servants for the Indian Government.

25. But your Petitioners submit that the salaries paid to the Indian Civil servants are excessive. Your Petitioners see it stated before the Select Committee of the House of Commons, that the public service is most ably conducted by members of the Native Uncovenanted Branch, at a mere fraction of the charge of Covenanted servants; that a much greater number of Natives ought to be employed than at present, the general conduct of Native officials being most exemplary.

26. There are numerous offices under the Government, the Post-office for example, in which the head of the department must necessarily be to a great extent inefficient, from want of training for the discharge of his duties, and dependent therefore on his subordinates. They are held for some transient period, so that there is little inducement for the most conscientious men to study the duties of the office. Within the last ten years there have been eight different Postmasters at this Presidency, drawing between 2,000*l.* and 3,000*l.* a year, while the work has been chiefly performed by a deputy receiving 700*l.* per annum; and the Post-office as a system is believed to be infinitely below what it would have been had a qualified person been sent out from England to take permanent charge of it.

27. Your Petitioners, whilst on this subject, cannot forbear calling the attention of your Honourable House to the opinions of the East Indian Company on the best means of providing good servants for the Indian Government, as expressed in the Petition presented by them to Parliament in 1833, and which, your Petitioners submit, deserve great consideration:—

"Throughout the correspondence which has passed with His Majesty's Ministers, your "Petitioners have declared upon this point that the arrangement which shall not effectually "provide the means of giving Government servants to the Indian Empire, is that which shall "assuredly meet the views of the Court, whatever its effects may be on their patronage: and "it is because your Petitioners are deliberately convinced that efficiency will be more likely "to be obtained in a general system of education, brought to the standard of a high test "of examination, than in any exclusive system, that the Court confidently ask your Honour-"able House to abolish the College."

28. Your Petitioners now beg to represent to your Honourable House, the extreme deficiency of the means of internal communication in this Presidency; that this want discourages increase of production, by shutting out the producers from any remunerative market, and prevents, in periods of distress, the scarcity of one district being mitigated by the plenty in another. Instances are recorded wherein the supplies designed to relieve famine in a district were, in the course of transit, consumed before they reached their destination. Were this obstruction to the industry and resources of the country taken off, by the construction of railways, roads, piers, wharves and other useful works, large tracts of land now lying waste, more particularly in the cotton districts, would be put under cultivation, and the supply of this most important article of export to Great Britain would be increased at least tenfold. Your Petitioners beg leave to quote, in corroboration, a passage from a Memorial

Appendix D.

Memorial addressed by the leading Merchants and Bankers of Bombay to the present Governor-General of India in 1850 :—

" So miserably inadequate are the means of communication in the interior, that many " valuable articles of produce are, for want of carriage and a market, often left to perish " in the field, while the cost of those which do find their way to this port is enormously " enhanced, to the extent, sometimes, of 200 per cent.; considerable quantities never " reach their destination at all, and the quality of the remainder is almost universally " deteriorated."

Several able letters, addressed to the Editor of the London " Times," in November and December 1850, and again in September 1851, by a distinguished Engineer Officer of the Bombay army, clearly point out the deficiency of the present means of communication in the interior, and particularly in Gujarat, and to which your Petitioners would solicit the earnest consideration of your Honourable House.

29. Your Petitioners suggest that five per cent. of the amount of land revenue should be annually expended in the district whence it is levied, in making roads, bridges, tanks and other works of similar utility. All such expenditure would be speedily repaid in the increased revenue arising from the impulse given to production, by opening up new markets for the sale of produce. Your Petitioners observe that this most important recommendation has been made repeatedly to the local and Supreme Governments here by some of its most eminent and experienced officers, but they have learnt, with deep regret, that it has been as frequently set aside by the Home Authorities.

30. Your Petitioners would further observe, that the Government grant of 12,500 *l.* for educational purposes, is quite inadequate to the wants of this Presidency, with its population of upwards of 10,000,000, and yielding a net land revenue of 1,028,285 *l.* Your Petitioners beg to draw the special attention of your Honourable House to this subject, and believe that all the reforms and all the improvements sought for, or in the power of your Honourable House to make, are but secondary in importance compared with the necessity of introducing a complete system of education for the masses of the people. That such expenditure would eventually increase the revenues of the country, both by teaching the people new and better modes of production, as well as habits of economy and prudence, cannot be doubted; and your Petitioners would suggest the propriety of establishing in each Presidency an University, after Mr. Cameron's plan, for the purpose of qualifying persons to practise in the various professions, and rendering them eligible for Government employment.

31. Your Petitioners, therefore, humbly pray your Honourable House to embody in any measure of legislation which may come before you for the future government of India, the principles hereinbefore set forth; and that your Honourable House will not rest content, but adjourn the final settlement of the plan of the Indian Government until all available information from trustworthy, competent, and disinterested sources has been laid before you; and your Petitioners venture to hope that your Honourable House will limit the period of existence for any future Government of India to 10 years, in order that the interests of so many millions of British subjects may be more frequently brought under the consideration of Parliament.

And your Petitioners, as in duty bound, will ever pray.

Bombay,
28th October 1852.

(Signed by 106 Natives.)

PETITION, praying for Inquiry into the Renewal of the Act for the Government of Indian Territories, and for Ameliorations and Reforms, of British and other Christian Inhabitants of Calcutta, and the neighbouring Parts, in the Lower Provinces of Bengal.

To the Right Honourable the Lords Spiritual and Temporal, of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the undersigned British and other Christian Inhabitants of Calcutta, and the neighbouring Parts, in the Lower Provinces of Bengal;

Humbly showeth,

1. That your Petitioners feel themselves called upon, by the approaching period for the renewal of arrangements for the future government of India, to convey to your Honourable House some expression of their opinion with reference to those arrangements.

OBJECTS OF THE LAST CHARTER ACT NOT CARRIED OUT.

That your Petitioners advert with satisfaction to the provisions of the last Charter Act, especially when read in connexion with the historical evidence of the intentions and objects of Parliament; that reading the Charter Act by this light, a distinction palpably arises between those objects which were completely established by the Act of Parliament, such, for example, as the abolition of the trading powers of the East India Company, and those which, for any reason, were left to the good faith of the Government to realize. With respect to the latter class, your Petitioners beg to express very great disappointment, for although the Government was furnished by the Charter Act with new powers and machinery to accomplish what then appeared, and whatever in future might appear desirable, many of the intentions of Parliament remain neglected: thus, for example, no means have been taken to form for India a properly qualified body of judges, or to open the judicial service to qualified persons, though the want was demonstrated by a large body of evidence before Committees of the Houses of Parliament. The criminal laws of the East India Company's courts, in their application to natives, were condemned fifteen years ago by the Indian Law Commission, which was appointed, under a direction in the Charter Act, to inquire into the state of the laws; but the criminal laws remain for the most part unchanged. In a spirit generally deemed as impolitic as illiberal, the Government has repeatedly proposed to bring British people under these laws, though so declared unjust towards the natives who were accustomed to them. The want, in the East India Company's courts of law, adapted to the requirements of trade and commerce is well known; the English law could furnish an equitable commercial code; but English law is excluded from these courts, and no other rational system has been enjoined upon or adopted by them, although the Charter Act expressly directs the preparation of laws adapted to all classes of the public. The great want in the courts of the East India Company of a body of laws, both civil and criminal, for the East Indians, to whom as Christians the native laws were not justly applicable, was specially brought under the consideration of Parliament, and the peculiar hardship of the case drew forth the sympathy of several eminent men. Practical relief has been proposed to Government by the Indian Law Commission, under the name of a Lex Loci Act, but relief has not been given. Parliament abolished all disabilities for office or public employment by reason of race, creed, colour or origin; but distinctions are maintained in administration between previously excluded classes and the privileged classes, which place the former in a state of official and social degradation. The state of the police is as bad as before the last Charter Act, and it is no protection to the people: other instances might be given, and hence your Petitioners express their disappointment, and have again to bring these subjects, together with others, under the consideration of Parliament.

STATE OF THE LAW AND COURTS; SUBJECT DIVIDED.

2. That your Petitioners first beg to bring under the consideration of your Honourable House the state of the law; and in connexion with this, the state of the courts of justice, as respects both their executive and judicial functions. On a moment's reflection the close connexion of these subjects is apparent: if a bad state of the law be supposed, it is impossible to conclude otherwise than that ill effects must result, though the judiciary body were meritorious; and equally clear is it that good laws must in a degree fail, if the judges are deficient in knowledge, skill, honesty or other proper judiciary qualifications; and good

Appendix D.

laws and good judges together must always depend, in a considerable degree, for practical success on the character of the executive officers and establishments; the necessity therefore is apparent of keeping all these subjects in view together, or as parts of one whole.

LAW OF THE SUPREME COURT.

With respect to the law, it will be necessary to distinguish what it is in Calcutta and the Supreme Court, from what it is in the country beyond, and courts of the East India Company. In the Supreme Court, three different codes of law are established, English law for British subjects, and Hindoo and Mahometan law for Hindoos and Mahometans on civil matters; but English criminal law for all classes, natives, British and foreigners, who are inhabitants of Calcutta; and for nearly 80 years these different codes have been administered by this one court, generally with satisfaction to these different races, thereby establishing the important fact, that judges practically qualified in English law become qualified for the native system of law, to which they are originally strangers, and presenting, as will hereafter appear, a striking contrast to the East India Company's judges; and although it may be admitted that the Supreme Court has an extent of jurisdiction geographically inconvenient, the remark has no application to the law of the court; but the blame rests with the Government, which has done nothing towards supplying other courts, or making the East India Company's courts competent to take part of the jurisdiction of the Supreme Court as respects British subjects.

LAW OF THE EAST INDIA COMPANY'S COURTS.

That the law in the East India Company's courts is on matters of succession, inheritance, marriage, caste, and religious usages and institutions, the Hindoo and Mahometan law for Hindoos and Mahometans respectively, with the addition of a body of regulations and acts chiefly relating to procedure and revenue, and in which is prescribed this general rule as to all other matters, namely, that the courts shall decide according to justice, equity and good conscience, in cases not provided for by the said regulations and acts; but the regulation which prescribes this rule is not accompanied by a code of equity, nor any maxims or principles, but has left it to the courts to work out a system of equitable jurisprudence, which, after 60 years, they have not done, nor begun to do; and to the present day, the supplementary provision for equity remains a barren verbal rule, which may confidently be described as having no effect beyond that of giving the judges of all degrees and castes, Hindoos, Mahometans and English, a discretion which they are incapable of wisely exercising, and thereby rendering all rights and the result of all litigation in these courts extremely uncertain. The cases to which this remark applies are all cases on contracts of all kinds, including sale, hiring, partnership, and in short all business arising out of commerce and dealing in which British people and interests are concerned. That the laws above mentioned are the only civil laws administered in the courts of the East India Company, and thus it clearly appears that the civil law administered in those courts is most defective.

PROCEDURE OF THE EAST INDIA COMPANY'S COURTS.

That the law of procedure is in as unsatisfactory a state as the other parts of the law. From repeated and numberless alterations, and the peculiar form of many of them, the code itself is obscure, confused, and of uncertain meaning. That by practice and construction it has acquired a highly technical character, as is evident from the printed decisions of the courts, and the very large proportion of cases on questions of form. In the courts of every degree, suits of all kinds, and all amounts (except where the revenue is directly or indirectly concerned), are conducted by means of written pleadings, consisting of a plaint, answer, replication and rejoinder, and no security is taken for truth in pleading. At each step time is necessarily given to the adverse party, and a decision may be followed by two, and in some cases by three appeals. The procedure, therefore, is slow and dilatory. That your Petitioners, having now experience of both systems, can confidently state that the reformed procedure of English law is more simple and expeditious, and more conducive, by its greater variety of resources, to the ends of substantive justice.

That the appeals (already alluded to) are permitted to an extent unparalleled in any other system of law, on the ground avowedly of distrust of the courts. That formerly the petty courts of moonsiffs and sudder ameens were partially excepted from this system; but by a recent Act it has been extended to them, and, consequently, the petty dealer who may have to sue a poor ryot for 5 *s.* must not only sue by a written petition or plaint, but may have his suit dismissed, after two months, for want of a replication; and a decision, either for plaintiff or defendant, may be followed by two appeals; and thus it appears that the East India Company have no courts analogous to the Court of Small Causes in Calcutta, or to the County Courts in England, with a partial exception as above, where the revenue is supposed to be concerned.

That evidence in all the courts is required to be taken in writing, which leads to the practice of its being taken by a native clerk often out of hearing of the judge, who may be engaged in other business, and decides on the evidence thus taken on reading it, or its being read to him; but the officers are notorious for tampering with the evidence; and those

who

who are personally acquainted with the country very generally complain of abuses, and condemn this mode of taking evidence.

That, in connexion with this subject, the legal agency established in the courts should be mentioned, as aggravating all the faults of the system. It is carried on by means of persons called, according to their different branches of the business, mooktears (managers), vakeels (attorneys), and pleaders; a body of men generally (in the Inferior Courts) belonging to the dregs of native society, who are notorious for the most wicked practices which can be used in their business, a pest to the courts, and a cause of the corruption of the people to whom they minister.

STAMP DUTIES.

That, to the evils already enumerated, your Petitioners have to add a heavy taxation on all law proceedings by means of the obligation of using stamped paper, which rises, in a series of duties, in all regular actions, from 2 *s.* to 200 *l.* on plaints or petitions alone, and admits of no exceptions, even for the smallest debt or demand, and waylays the suitors at every subsequent step, and obliges the judge to stop his speech, or that of his pleader, with the question, "Where is your stamped paper?" and will not permit the reception of the evidence of a witness until after an application on stamped paper of 2 *s.* or 4 *s.* each; and, if the proof consists of a series of letters, imposes on each letter a stamp of 2 *s.*; and an error in a stamp is often irremediable, and the constant cause of nonsuits and other failures of justice. That the stamp duties are still more vexatious and impolitic in criminal proceedings. That your Petitioners represent these details to show that the system is not less oppressive than that of the taxes on law abolished in England at the united call of justice, humanity, and all general reasons.

COURTS OF THE EAST INDIA COMPANY'S NATIVE JUDGES.

As respects the courts of the East India Company, the Civil Courts, having an original jurisdiction, differ so widely from those having only an appellate jurisdiction, that it is necessary to premise this distinction between them.

That before the last Charter Act, the natives had been entirely removed from civil judicature (except as to debts of 5 *l.*), on account of their universal corruption. Since the last Charter Act, they have been restored to, and are almost in exclusive possession of all original jurisdiction. The judges having original jurisdiction are of three grades: (1.) Moonsiffs (dispensers of justice); (2.) Sudder Ameens (chief commissioners); and, (3.) Principal Sudder Ameens. The jurisdiction of the first class extending to 30 *l.*, of the second to 100 *l.*, and of the third to all amounts beyond; and, in amount, many suits are not surpassed in the Courts of Equity or Law in Westminster Hall. The moonsiffs, sudder ameens and principal sudder ameens, in the Lower Provinces, consist of about 320 persons, of whom there are, at present, not more than one-fifteenth of Christian denomination. That the natives first appointed to those offices on the change of system were, for the most part, the officers (amlahs) of the existing courts, a body of persons notorious for corruption; and, their salary being small, the practice of corruption for several years, if not to the present time, prevailed probably to nearly an equal extent, though in a different form, as in Mahometan times, when the salary was a mere honorarium or retaining fee, and the real reward was in the wages of corruption. It is notorious that, after holding office for a few years, large estates or fortunes were amassed by many of them, and others lived in the display of affluence.

That the salaries of these classes, though slightly raised, are in no fair proportion to the importance of their offices and jurisdiction. The moonsiffs receive 120 *l.*, and a few 180 *l.* per annum; the sudder ameens 250 *l.* per annum, and the principal sudder ameens 480 *l.*, and a few, after long service, 700 *l.* per annum. Such salaries indicate a low appreciation on the part of the Government of the judicial office, as well as of the personal status of the officials themselves; and in fact they do generally belong to an inferior grade of native society, and are without any proper legal knowledge or professional training, for it is impossible to regard as such the little knowledge requisite to pass an examination.

That your Petitioners are fully sensible of the difficulty of establishing charges of corruption, and they make them with reluctance; but the proof, recognition or acknowledgment of the fact must precede an attempt to remove or correct the evil. As some corroboration, your Petitioners beg to state, that corrupt practices were charged against these courts in a memorial to the Bengal Government within the last eighteen months, which was signed by a very respectable body of British and other Christian inhabitants of different parts of the Lower Provinces, including some Calcutta firms largely interested in silk and indigo, and other mofussil concerns; that the means taken by the Government to ascertain the truth of the complaint were, as your Petitioners are informed, the requisition of a report on the subject from the civil service judges, and the conclusion was, not the exculpation of the courts, but a general report that they were improved.

That the Government has ever lent an unwilling ear to representations of this kind, and has taken utterly futile means of effecting a reformation. Small remedies of a topical kind manifestly must fail. One of the latest may be cited as an example of the spirit in which the Government has dealt with the enormous evil. As an inducement to merit, and to counteract the force of temptation, Government has within a few years made it a rule to fill up the higher grade of principal sudder ameen from the lower grades by promotion. The bright motive and reward thus held out to purity is just one chance for one out of from six to eight

Appendix D.

persons, and of promotion from 180*l.* or 300*l.* to 480*l.* per annum, and which chance can occur only once in 10 or 12 years, there being but one principal sudder ameen in each zillah, and from six to eight moonsiffs and one sudder ameen; and it may be added, that if this could possibly avail in a small degree, it has a counterbalancing evil, namely, of confining the important office of principal sudder ameen to the class of persons who can accept, in the first instance, a very inferior office, and a salary of 120*l.* per annum, and, presumably, therefore, the rule of promotion excludes all persons qualified by legal and general education. It is obvious, also, that it leaves the principal sudder ameen without any inducement, although the higher office of a judge of appeal might have been opened to this class, and, presumably, it is better qualified for an appellate jurisdiction than the class of civil service judges, who, under existing arrangements, have no original jurisdiction, and whose training and experience do not qualify them to correct the inferior civil tribunals.

That your Petitioners deprecate being supposed to impute to natives any want of capacity to acquire the proper legal qualifications, or to rise to a proper standard of morals, but they describe what they believe to be the state of facts at present.

CIVIL SERVICE JUDGES.

The appellate jurisdiction in civil cases has next to be described. It is almost exclusively exercised by the civil service judges, of whom there is one in each zillah, who is chiefly a criminal judge (called, in the latter capacity, sessions judge), but also a civil judge for appeals up to 500 *l.*, beyond which sum the appeal lies to a court (the Sudder Dewanny Adawlut), composed of five civil service judges. These five judges together receive in salary a sum exceeding the aggregate salaries of all the moonsiffs in the Lower Provinces; and, added to the zillah judges, the entire body consists of 37 persons, who received 120,000 *l.* in the year in which the salaries of moonsiffs, sudder ameens and principal sudder ameens amounted only to 55,000 *l.*, a striking contrast of the care with which this class has been guarded at one of the avenues of temptation; and your Petitioners readily admit their general abstinence from the practice of corruption of every kind, but more than this negative praise cannot be awarded to them; and your Petitioners confidently represent, that their administration of justice is the subject of universal complaint and dissatisfaction, and which are founded, as your Petitioners believe, on experience of their want of proper qualifications, and the bad quality of their decisions. And although it would be impossible to justify this opinion in detail in a petition, the few following facts may be mentioned; namely, that they come to India and are appointed to the judicial office without professional qualifications; that, for 60 years, they have been in exclusive possession of the whole, or some important part, of the administration of justice, and yet have furnished the inferior courts with no body of general rules or principles; that, though required to follow equity, they have built up no system of equitable jurisprudence, but the inferior courts still possess only the barren verbal rule expressed in the regulations; that, by "Circular Orders" and "Constructions" the sudder courts have prescribed rules, and legislated somewhat as the Emperors did by their rescripts, but these "Orders" and "Constructions" are among the worst parts of the law, and have increased its uncertainty and the difficulties of all the inferior judges; and lastly, that for some years the decisions of these courts have been printed, and form a considerable body, but they are obscure and uninstructive: by all these circumstances (and others might be adduced) may be proved, that the civil service judges want the proper qualifications for judges, and the public dissatisfaction be justified.

OPINIONS OF BRITISH INHABITANTS.

That, in consequence of this state of the law in the courts of the East India Company, and of the courts themselves, the British inhabitants offered a strong opposition to the Act passed in 1836, and which has been followed by others, for bringing them under the civil jurisdiction of those courts; but, to reconcile them to it, the public was assured by the organs of Government that the law and courts would be improved, if from no other cause, from the necessity of conforming to a more certain and higher standard of right, in order to satisfy British suitors; but this assurance has not been fulfilled, and the bad state of the law and the courts of the East India Company forms one great disadvantage, against which British enterprise and character has to struggle in India.

THE CRIMINAL LAW.

That the criminal law of the East India Company's courts is fundamentally Mahometan, as much a foreign law, therefore, as the English in relation to the Hindu part, which is a great majority of the population: that, with respect to Hindus, and others not of the Mahometan faith, the opinion (futwa) of the Mahometan law officer, who is in the nature of an assessor attached to every criminal court, may be dispensed with, and some difference may, on the requisition of the parties accused, be made in the mode of trial of persons not Mahometans, all which are equitable modifications of pure Mahometan law, so far as they go; but they leave the foundations of the system Mahometan; and the chief effect, as your Petitioners believe, of permitting the judge to decide without the Mahometan law officer is not to introduce a different system of law, but to place persons accused (when they avail of the privilege) more at the judge's discretion: that such a state of the criminal law would be intolerable

intolerable to British people, and therefore they have always resisted, and still protest against, its extension to them; that, accordingly, your Petitioners pray your Honourable House to take their case in this respect into special consideration, and to provide that English criminal law, divested in a great degree as it is now of technicalities of procedure, shall be universally administered to them, and to all persons of Christian denomination or faith, whether British, East Indian or foreign, with such modifications only of procedure as may be passed by the Governor-general of India in Council, with the previous assent of Her Majesty in Council.

THE POLICE.

That the police of the Lower Provinces totally fails as respects its proper purposes, the prevention of crime, apprehension of offenders, and protection of life and property; but it is become an engine of oppression, and a great cause of the corruption of the people. That your Petitioners desire to state a few facts in connexion with these propositions. The Lower Provinces, concerning whose police your Petitioners are now speaking, are divided into 32 counties (zillahs), and contain an estimated population of 30,000,000, and comprise an area larger than France. The proper police force in these counties consist of superintendents (darogahs); serjeants (jemadars), and constables (burkendauzes), amounting in the whole to 10,000 or 11,000 persons, and to these have to be added the village watchmen, who are paid by the villages, and not by the Government, and are so rarely known to prevent a theft or other crime, or to apprehend the criminal, that they must count for very little in an honest appreciation of the general system. That these numbers are insufficient with reference to the existing state of the population of Bengal, and that in the present state of crime, an exclusively native police, however numerous, can hardly be made sufficient.

That a native police, as this exclusively is, requires constant and close superintendence, and power of superintendence is given to the magistrates, but, from a variety of causes, no effective superintendence is or can be exercised by them; among these causes may be mentioned: (1.) The paucity of magistrates, for which no remedy appears practicable so long as the exclusive privileges of the civil service are upheld; (2.) The size of their districts; there is one magistrate and an "assistant," or pupil of the civil service, and a deputy magistrate to a zillah, the zillah being, perhaps, as large as Yorkshire, or of an area of 6,000 or 7,000 square miles, and containing a population of 1,000,000; and, (3.) The judicial duties of the magistrate, which are alone sufficient to occupy all his time, are, by their nature, incompatible with the activity and locomotion required for superintendence. It may, therefore, safely be affirmed, that effective superintendence over the native police there is and can be none, under the existing institutions.

That your Petitioners will make a brief statement in illustration of the practical bearing of the existing system on the condition of the people: that in case of the apprehension of an offender, and in order to prosecute him, it is necessary for the injured party, and his witnesses, to go before the magistrate, but this may be a journey of from 15 or less, to 50 miles or more, in consequence of the extent of his district, and when arrived at the magistrate's office, he may be detained days or weeks, from a variety of causes; that, in fact, a magistrate's compound in the Lower Provinces often presents the spectacle of hundreds of persons thus kept in detention for weeks, and if the offence is of a grave character, or beyond the jurisdiction of a magistrate, he and his witnesses may be required to take a second journey of the same distance to the sessions, and be there detained days or weeks waiting for a trial at the sessions; also hundreds of persons are constantly detained at great distances from their homes. That, to avoid these inconveniences, the population render little or no aid to the police for the enforcement of the law, but, on the contrary, they are generally averse to do so, and hence has arisen a practice which is a great reproach to the police system, namely, that witnesses generally, and prosecutors often, are made prisoners, kept under arrest, and sent to the magistrate, and afterwards to the sessions, in actual custody. That from this state of the law and police result the following among other evils: persons robbed deny the fact of a robbery, or if they complain, the persons who could be witnesses deny all knowledge of it, the immediate interests of these classes being arrayed, by reason of the state of the law and jurisdictions, against the objects of law and justice. Often, under these circumstances, the native policeman, to do his duty, employs the means of terror; and torture is believed to be extensively practised on persons under accusation, and the injured party, for not assisting him, becomes an offender. All the evil passions are thus brought into play, and ingenuities of all kinds, both by people and police, are resorted to. Another result is the constant device of proving a true case by witnesses who know nothing about the matter. Justice is supposed thus to be satisfied, but convenient perjury becomes familiar, and perjury loses its criminal character among the people. Thus, and in a thousand other ways, the law and police operate to corrupt the people, and spread corruption. Moreover, the very circumstances which repel the honest attract those who have revenge to gratify, rivals to injure, enemies to destroy, and for these and other dishonest purposes the police and criminal courts are resorted to; and police and law, under the present system, are terrible evils.

That a further aggravation of evil results from some powers possessed by the native police, which practically are magisterial, such as the power of receiving confessions, and in all cases of taking (though not on oath) the deposition of witnesses, which powers are exercised by the serjeant (jemadar) in the absence of his immediate superior (the darogah), and thereby practically the course of criminal justice takes its direction from them, and thus the police control the magistrate's functions, instead of his superintending and controlling the police.

Appendix D.

THE CIVIL SERVICE.

That among the subjects on which evidence was taken by the Committee of the House of Commons previously to the renewal of the last Charter Act, one was the education given at Haileybury, and the means existing in India of completing it before the cadets of the Civil Service chiefly appointed from that institution entered on their public duties. That a deficiency of qualifications was proved, and a plan was adopted by Parliament and embodied in the Charter Act which preserved Haileybury, but according to which only one-fourth of the candidates in the Haileybury college were to receive appointments, which plan would probably, as intended, have secured the following objects; (1.) The suppression of what was proved to be an abuse, of making every nomination of Haileybury virtually an appointment to a highly privileged and important branch of the Indian service: (2.) The exclusion of the unworthy, for which, as proved particularly by the learned professor, Mr. Empson, some provision was necessary; and, (3.) Competition among the candidates under such conditions as should secure the eventual preference to merit, and raise the average and standard of it. That this plan incidentally reduced the value of the nominations to Haileybury, and before it could come into practical operation it was repealed by statute, and with it all security ceased for the desired objects, no other plan having been substituted. That the qualifications of the cadets of the Civil Service are no better in the present day, and there is reason to believe, from historical evidence, that the service produces a smaller proportion of distinguished excellence than formerly; that in every kind of office superiority is given indiscriminately to this portion of the service, and virtually it has the unity, strength and narrow interests of a close corporation, though not legally constituted as such; for example, two, and sometimes three members of the Supreme Council, all the secretaries and under secretaries of the Supreme and Local Governments in the civil departments, all the members of all the civil boards, and their secretaries and under secretaries, all the judges of appeal, both in the metropolitan and zillah courts, all the commissioners of revenue, all the collectors, all the magistrates, and (everywhere) all the heads of office, as at the Treasury and in various miscellaneous offices, are exclusively of the so-called Civil Service. That this monopoly of high office is highly prejudicial to the public interests, and exceedingly unjust towards other public servants who are universally subordinated to this privileged service, and who, by no recommendation of qualification, or merit, or length of service, can rise from official insignificance to the privileged order, though their duties and offices are often the same, only with different names, and usually of equal importance. The principal sudder ameen, for example, whose duties have been already described, can never rise to the grade of a (so-called) civil or sessions judge, nor the deputy magistrate to be a magistrate, though he may have the full powers of the latter; nor the deputy collector to be a collector; nor is this the only injustice. The salaries of the Uncovenanted Service are in no fair proportion to those of the Civil Service, as is exemplified by the comparison already made between the salaries of the covenanted and uncovenanted judges; and, as it must be added, is the fact as respects all other offices; a deputy magistrate, for example, of the first grade, one who has been vested with the full powers of a magistrate by special order of Government, and, therefore, after long trial and experience of his merit, has about the same salary as the inexperienced and untried civilian when first posted and placed really in pupillage as an "assistant" to a magistrate, or as the civilian suspended for misconduct. In the matter of pensions the injustice is of the same glaring kind, as well in respect of comparative amount, as of the different conditions on which they are granted to the two classes; and the same complaint applies to the furlough and other leave of absence rules, and to many occasional advantages, such as deputation allowances, extra pay and duplication of offices, which are exclusively possessed by the Civil Service. That in the matter of punishments, trials and complaints the same disparity exists. That, allowing the necessity for a severe control, it ought to be exercised in the same manner, but is not over all public servants; it is a common remark, and in a great degree true, that official negligence, unfitness, abuse even of authority and other faults on the part of the civilian are generally visited only by removal to another appointment of the same rank and emolument; even when under suspension for some grave offence the civilian has a very considerable allowance, and he cannot be dismissed from the service even by the Governor-general in Council; suspension is his worst punishment, and, upon being suspended, he becomes entitled to a certain fixed and considerable allowance. That there appears to be a striking deficiency of principle in the appropriation of offices to the privileged service; many of these offices have duties simply of clerks and accountants, and which would be better performed by persons brought up for such employments, or without high pretensions; that the only special qualifications which the Civil Service ever generally has are gained, not by study or professional training, but by actual practice and experience at the public expense, and which never or rarely rests on a basis of education and science, and consequently they are not intrinsically superior to the qualifications of other classes of public servants; that the practice of promotion by seniority appears to set aside all consideration of qualification; the magistrate or collector is raised to be an appellate judge in civil causes, having previously been employed in the active business of police, and chiefly criminal law and miscellaneous business or revenue, and from being a judge he is made a commissioner of revenue, as far as appears, only because the salary of a judge is a few peppercorns less than that of a commissioner; in short, changes of employment take place in rapid succession, apparently without reference to aptitude, general or special, or to any consideration but the tastes, interests or connexions of the individual, or his length of standing; and one consequence is, that civilians are constantly found at the head of departments, offices and courts about which and their business they know little or nothing.

The

The East India Company's system was founded on the supposition that the Hindu and Mussulman population on the one side, and on the other the Company and its servants, were the only persons who had a right in the country, and could have a legitimate part in the government: the civil service is a remnant of this system, is constituted on this supposition, and is in fact a monopoly of the best employments. The institution, in this respect, is unjust both to the native and Christian population; and in the former class a considerable part of the latter class may properly be included, for great numbers of pure European as well as mixed blood have been born in the country, therefore are natives of it, and have no other home. That the East India Company's commercial interests depended on its civil service system may be true, but the ascendancy of the Crown can better be promoted by a liberal policy in all respects to the Christian inhabitants. Your Petitioners beg your Honourable House to take a survey of the general character and condition of the classes to which your Petitioners belong in Lower Bengal: first, in Calcutta, they have increased in numbers as the foreign commerce of India has increased, and they are essential as its instruments; they are the security on which the British capitalist relies for his information and returns; they are essential also as aids to the natives in their commercial relations. In Calcutta, also, are established a large body of British-born and country-born tradesmen, who carry on many of the trades of Great Britain which were formerly unknown in India; by these classes is diffused among the natives a practical taste for a thousand new means of enjoyment supplied by the manufacturers of England. To these two classes must be added the legal profession in both its branches, and the medical; and if they are only found in Calcutta, the cause is that the rest of the country is practically closed to them, not by any deficiencies or want of enterprise of their own, but by the East India Company's system. If a Sir William Jones, for example, were to desire to be a Company's judge, he could only become a moonsiff at 120 *l.* per annum in the first instance; and the English Bar could find no scope in courts whose judges are not jurists, nor brought up in habits of discussion. Secondly, out of Calcutta, the Christian inhabitants are connected with capitalists and merchants in different parts of the world, and they are engaged in superintending and urging production of indigo, silk, and other things which form the exchanges of Great Britain; as a whole, therefore, these classes may be described as comprising men of all ages and occupations—the mercantile, agricultural, professional, scientific and mechanical,—they present a fair image and representation of British capital, enterprise, acquirement, ingenuity and talent, and of the middle classes of England. It is by these, also, that the British people become known, and their character understood by the native population; yet the East India Company's system in a great degree ignores these classes, refuses to them proper laws, and offends them, for the sake of its civil service, by one general exclusion from public employment, on every fair principle, and leaves it to be supposed that British ascendancy depends on their exclusion; as if cadets, who come out at the age of twenty-two, and whose life is passed in narrow official trammels, could alone be loyal. That the privileges of the civil service are not only unjust in these respects, but they are direct obstacles to the most necessary reforms; but this topic, leading as it does to questions of administration, cannot be satisfactorily treated of in a petition. Your Petitioners, therefore, pray for such a change in the arrangements for supplying the public service in the civil departments, as to your Honourable House may, under the circumstances stated above, appear desirable; and particularly they submit to your Honourable House the expediency and necessity of inquiring into the nature and number of public employments in India, the salaries and emoluments attached to them, and the principles on which, if at all, the public service ought to be supplied from England.

THE EAST INDIANS.

That your Petitioners also beg to bring under the consideration of your Honourable House the case of the East Indians, a class all of whom are of Christian denomination, and though of mixed blood, British in education, habit and family, ties and connexions, but not British subjects within the technical signification of the term, and, consequently, they have no proper legal status, but are subject to the same criminal law as the natives, and they have no civil law out of Calcutta; this state of the law in relation to them is an admitted grievance, and the same grievance exists in the case of all foreigners, not being Hindus or Mahometans, such as French, Germans and other foreign people, and to whom also may be added the class of natives become Christian. That to provide an equitable status for all classes, not being British subjects nor Hindus or Mahometans, a law, known generally by the name of the Lex Loci, was prepared by the Indian Law Commission, and it would have relieved the East Indians, but it has not been passed; and, therefore, your Petitioners press on your Honourable House the said case of the East Indians and other said classes of persons.

EDUCATION.

That your Petitioners desire to represent, on behalf of the East Indians and others of Christian denomination, who, by circumstances, are permanent residents in India, the want of collegiate institutions for the higher branches of education, and a university to grant diplomas of qualification. That, in the former especially, law should be taught as a science, and a class of persons might thus be formed, qualified, in the first instance, for professional employment in the courts, and eventually for judicial office; and a very considerable body of

Appendix D.

of permanent Christian inhabitants desire that their claims and interests should be considered in all arrangements for the education of the people.

PUBLIC WORKS.

That there appears to be, on the part of Government, a lamentably defective appreciation of the importance of roads and other public facilities of intercommunication. There is only one metalled road in the Lower Provinces, the grand trunk road, and it is the only road supported at the expense of Government. The other roads are made by the landholders, on the requisition of the magistrate, or with local funds, and generally they are designed to connect the different police stations, and not to open traffic or benefit the country people; and from the nature of their materials, most of them, during the rains, are nearly impassable; other roads there are none; and the grand trunk road itself, for want of bridges and sufficient repairs, is usually impassable for carriage traffic during a part of the rainy season. It is a striking proof of the little regard paid to the public convenience, so far as this great highway is concerned, that of two small bridges which were carried away by floods in 1847, neither is yet rebuilt, though the situation is in one of the most populous and highly cultivated districts, where the traffic is great, and within 35 miles from Calcutta; but in the place of one only a ferry was for some years established, though both these bridges appeared in the Report published by the House of Commons as public works, which had been sanctioned, and to the present day they are replaced only with temporary erections insufficient for the traffic, and on one of them tolls are established where there were none before.

Of course a Government which makes no roads, builds no bridges across the great rivers, much though they be needed. Public ferries there are, but many more there ought to be, and their management is much complained of, for delays and want of safety. On some rivers tolls are taken for keeping open their navigation; but the navigation derives little benefit, and appears to be left to nature. The country offers singular facilities for canals for shortening the lines of communication from various districts to Calcutta and other places, and opening the country generally; but they are not constructed. A canal which terminates in Calcutta is allowed to remain so narrow as to be constantly choked up with traffic boats, though it produces a large profit, and admits of enlargement. A large surplus is derived from ferry tolls and similar local sources, and is appropriated by promises and law, but not applied to public improvements, except that in the year 1850-51, a few hundreds of pounds were so applied from the ferry funds, and distributed among several zillahs, each containing an area of several thousand square miles.

Your Petitioners cannot pass unnoticed the subject of the railway: its construction appears to be proceeding with slowness, which no company of capitalists unguaranteed would or could afford to tolerate, and which, therefore, must be ascribed to the influence of checks applied by Government to secure economy, and prevent fraud, but which usually do neither, as experience has proved, but are mere impediments, and have the sole merit of giving to Government an amount of patronage.

That the Government has not at its disposal the variety or amount of scientific and engineering skill requisite for the proper prosecution of public works of utility; to the Military Board, which has their superintendence, they are secondary objects; and works are constantly stopped from officers being called away to their military duties, and therefore your Petitioners think new provisions necessary for the prosecution of such works.

THE COURSE OF LEGISLATION.

That your Petitioners beg to represent to your Honourable House a few traits of the course of legislation. The early legislation presents some great measures, which are clearly referable to the impulse temporarily given by the discussions in Parliament. Among these the establishment of the liberty of the press deserves the first and most grateful mention; it has been justified by its fruits; the press has proved its worth by what is a great merit in a community so much under official influences—its general independence; and it is equal to any colonial press in activity, in diffusing information, in intelligent discussion, in assisting the formation of public or political opinion, and in enlightened criticism on, and appreciation of, the conduct of Government. The attacks industriously made upon it of late from official quarters give your Petitioners much concern; and if its merits should come under the consideration of Parliament, your Petitioners trust your Honourable House will rather take your appreciation of it from your Petitioners, and the classes to which your Petitioners belong, than from the official classes, many of whom appear to desire to restrain and abridge its freedom.

Your Petitioners also refer with unqualified satisfaction to the abolition of town and transit duties, another very early measure of the new Legislative Council: so long as the East India Company's monopoly lasted, these duties were maintained; their repeal was the inevitable consequence of commercial emancipation, and therefore really of Parliamentary origin. The new customs duties on exports and imports also deserve a favourable mention, as being moderate, but they were not established in Madras until some years later than in Bombay and Bengal; and their uniformity has been again broken by a recent Act, which raises the customs duties at Bombay alone, and therefore the sincere gratulations of the public are given, but with some doubt of the integrity of the fiscal principles of Government.

An

An uniform coinage for India also was early established, and more recently a ship registration, and other beneficial and similar commercial regulations.

In the department of English Law there is much ground for grateful remembrance. The Wills Act has brought to India the recent statutory Law of Wills, and the law of Dower and Inheritance has been altered as in England; but these changes, and others of the same kind, are due to the influence of the legal profession. In the Supreme Court, the modes of procedure have rapidly followed the reforms of procedure in England, not through legislation, but mainly in consequence of a wise provision in the constitution of the court itself, that its practice shall conform to the courts of Westminster Hall. It would be praise undeserved to ascribe this large branch of legislation and reform to the spirit or judgment of the Indian Government; the praise is due to those who have no place in the East India Company's system. On the other hand, on matters over which British people have little or no influence, legislation is much less commendable as a whole.

That when the civil jurisdiction of the East India Company's courts was universally extended over British subjects, it would have been fair to have enlarged the appellate jurisdiction, which the Supreme Court already possessed under statute 55 Geo. 3, c. 155, s. 107, but instead of this being done, the same Act, which extended the jurisdiction of the Company's courts, repealed the appellate jurisdiction of the Supreme Court: the preservation of the appellate jurisdiction of this court would have been some protection against bad procedure and misdecision.

That recent legislation is distinguished by a great number of enactments, creating powers of an extraordinary kind unnecessarily, or conferring powers on persons not fit to exercise them: of the former kind, in Calcutta for example, where all legal authority reasonably exercised is respected, to an officer called the Collector of Calcutta (not the collector of customs or of municipal taxes, but of the land rents of the East India Company in its ancient right of a zemindar or landholder) has been given by a recent Act, power to punish for a contempt to himself, with a fine of 20*l.*, and in default of payment to one month's imprisonment, thereby creating (1.) a new offence; and (2.) denying the ordinary redress for wrong, inasmuch as the Act referred to obliges any one who may be wronged to seek redress out of Calcutta, in a court of the East India Company in the country; while, (3.) at the same time it empowers the officer himself to avail himself, in addition to the usual powers of distress, of the Calcutta courts and magistrates. The collector, in this case, belongs to the privileged service, and it is impossible not to surmise that the offence would not have been created in favour of a common tax or rent collector. As an instance of powers conferred on improper persons may be mentioned an Act, authorising native police officers to fine for an infraction of the salt laws, and to imprison for a fortnight. The Act book abounds in legislation of this character.

That the legislation respecting crime is equally unsatisfactory; by reason of the state of the police, every landholder, planter, banker, considerable trader and storekeeper is obliged to keep men, often in very considerable numbers, armed according to the custom of the country, to defend his property against midnight gangs called "dacoits," and other robbers; such irregular forces, though necessary for self-protection, are of course liable to be employed by neighbours at enmity against one another, and by circumstances to become aggressive, and hence the frequency of affrays, which are to be deplored; but the primary evil in the whole set of circumstances is the state of the police, and its reform is the proper and essential remedy, instead of which, mere legislation against crime is resorted to; ingenuities are exerted to bring the propertied classes within the criminal categories; the laws on paper are made more severe; increased judiciary powers are given to the magistracy, but the real evil remains unabated. It is obvious that legislation of this kind is only acceleration on the road to ruin.

Act for relieving Magistrates from responsibility.—That in 1850 an Act was passed for the protection of magistrates, and others acting judicially, from responsibility to law. That the said Act, in the obvious meaning of its terms, protects them in any illegality not clearly referable to a malicious object or intent; it protects ignorance, negligence and incapacity, and is inconsistent with a Government according to law, and with justice to the community; that if inferior judicial officers are thus protected, the Government will be called on, and ought to give redress to parties illegally injured; and that thus indirectly, but inevitably, the said Act also places the entire magistracy and inferior judicial officers in a state of responsibility for their law to the Executive Government, and destroys their judicial independence, and therefore the said Act is also contrary to all sound principles of public policy.

Postage.—That your Petitioners have still to desire the recognition, on the part of the Indian Government, of the principle on which postage rates in England have recently been reduced by Parliament, and a general reduction of postage rates in conformity with this principle. That your Petitioners believe that, on inquiry, your Honourable House would find that the existing inland postage rates defray the cost of the carriage, not only of all private letters and heavy Post-office establishments, but also of all the correspondence of the Government of India, Presidency Governments, and their numerous military and civil departments.

Tolls on Roads and Bridges.—That your Petitioners deprecate the establishment of tolls on any of the great highways made or kept up at the expense of Government, and for which an authority has recently been given to the Presidency governments by an Act of the Legislative Council passed in 1851; and the said Act extends to bridges also. The only previous Acts of the kind were two Acts passed in 1837 and 1838, for local tolls at the Bhore Ghaut,

Appendix D.

in or near the town of Bombay, and which tolls had long before existed under local regulations. Under the new Act, a toll has been established on a bridge which is not strong enough to bear an elephant; and an elephant, which for want of a proper bridge is obliged to ford the river, still pays a new toll of two shillings.

The East India Company's Spirit License.—That your Petitioners cannot pass unnoticed one cause of great injury to the poorer classes of people. Temperate, as has always been supposed, by nature, their temperance as a habit is fortified in the case of the Hindus by the rules of caste and the Hindu religion, and, in the case of the Mahometans, by the commands of their prophet and all the principles of the Koran, and in the case of both by native public opinion. That indulgence in spirituous liquors, consequently, was discountenanced by the people in general, and was confined to the very lowest classes, or the two lowest classes, in the long settled parts of Bengal, and the united action of religion and public opinion, probably, would have prevented its spreading. That within a few years, Government has extended to large villages the licensing system for the sake of revenue, and its effect has been to lead to the establishment all over the country of shops for the sale of spirits. The license of Government is found to discountenance the public opinion of the native community, and in every considerable village there is a licensed shop, where, until the license was established, there was no such shop at all. Religion, caste and public opinion are ineffectual against the license, and the whole agricultural and labouring population is thus being corrupted, and falling into habits of indulgence in a new form of intoxication.

That this is a great evil to the employers as well as to the people; and British residents in the country universally attest its progressive increase, and generally ascribe it to the East India Company's licensing system. That there is no hope of the abolition of this system without the interference of Parliament, and your Petitioners pray for an immediate inquiry, under the direct authority of Parliament, into the extent and cause of the alleged evil.

Salt Duties.—That the salt duties appear to your Petitioners deserving the consideration of Parliament, as pressing with considerable severity on a very poor population, and the occasion of numerous small oppressions, and some other evils. It is true that the duty is no longer founded in a monopoly; but its amount is upwards of 400 per cent. on the natural cost of the article, and its cost to the consumers is still further enhanced by the means necessarily used for the protection of the revenue. Many proofs that the duty presses with very great severity might be given, but one must here be sufficient, namely, that out of Calcutta, as far as the North-west Provinces, pure salt, as sold by the Government or imported, is almost unknown to the mass of the people. Adulterations of all kinds are resorted to, to reduce its price to their means of purchasing; a wholesome condiment is thus often rendered unwholesome; and as to all purposes for which pure salt is necessary, the duty is a prohibition. Moreover, the revenue can be protected only by a severe system of fines, penalties and confiscations, and a very inconvenient interference with general traffic. On the banks of all the great rivers within the tidal limits, salt guards are stationed to prevent smuggling, and all traffic boats are subject to molestation from native officers, who levy small contributions on them. In the interior, and on different parts of the frontier in the North-west Provinces, there is a jealous excise system; and in the Punjab, the means employed to prevent smuggling are a source of great irritation. It should further be mentioned, that the manufacture of saltpetre was very recently proposed to be put under new regulations of a most injurious kind to the saltpetre trade, for no purpose but to prevent the production of an article for the adulteration of salt, which the saltpetre works are supposed to supply to the dealer in that article. And to protect the inferior salt of Lower Bengal, that of the North-west Provinces is subject to a differential customs duty.

That under two sections of the Charter Act, viz. the 81st and 82d, British-born subjects are restricted to provinces acquired before the year 1800, except with license. The restriction probably has remained, to a great degree, inoperative, but it is a stigma derived from the policy of former days, when all except the servants of the East India Company were regarded as interlopers and oppressors. In the opinion of your Petitioners, every British subject ought to have free access to every British province, except, perhaps, in time of actual war (flagrante bello). Your Petitioners, therefore, desire the abolition of the said restrictions.

In adverting to the course of legislation, your Petitioners must also deplore the little use made of the Indian Law Commission, which was appointed, under the authority of the Charter Act, to prepare laws for all classes of people.

THE SUPREME GOVERNMENT.

That the above facts and circumstances press on all rational men the consideration of the constitution of the supreme authorities.

With respect to the Supreme Government of India, your Petitioners beg to point out the paucity of its members, at no time exceeding six, and usually only five persons, and its necessary consequence, that the same persons, with the exception of one from the Executive Government and the Legislative Council, including in both the Governor-general, and that, therefore, practically, the only real distinction is between the Governor-general, in his separate official capacity, and the rest of the Council, and that the distinction between the Executive Government and Legislative Council is a nominal one. When, therefore, it is considered that the political and legislative authority of the Supreme Government extends over all India, and to many foreign Oriental relations; that it has exclusive authority to act or decide on some subjects of the greatest difficulty and importance; that the local Governments

ments are entitled to resort to it for advice and direction, and in many matters are not qualified to act without its concurrence; that its authority is embarrassed by subordination to greater powers at home, whom, as their agent, it has to keep informed, and to receive instructions from them, and that, in this respect, it has to keep up a certain harmony of ideas and operations; it may well be believed that five persons or six are insufficient for such extensive complicated and diversified functions.

That your Petitioners also beg to point out how the paucity of the members operates on the choice of persons, and, consequently, affects the quality and composition of the Government. The Governor-general is always one of necessity; one is a military man; one is a lawyer for legislation; the remaining two must be selected for their Indian experience; but Indian experience, though essential, is narrow, being gained usually in one department of civil duties, and in only one Presidency, namely, in Bengal, in Madras, in Bombay, in the North-west Provinces, or in the Punjaub (may now be added), and the population, institutions, revenue and judicial systems of the different Presidencies widely differ. And, therefore, your Petitioners, without even questioning the fitness of any individual, may still regard the Council as very deficient, and especially as wanting in variety of composition, and as of too limited attainments and experience; deficiencies which would account, in some degree, for the little progress made in all great improvements, and the retrograde tendency of Government.

That, by the facts above stated, and these reflections, your Petitioners are inevitably led to recommend a considerable addition to the Legislative Council, and especially the admission to it of non-official persons from the commercial and professional classes.

That the office of Governor-general requires adaptation to the empire, as it exists at the present day; that your Petitioners believe there is not to be found any exact account or definition of the separate powers of the Governor-general; that, for the last 20 years, the Governor-general has been more than half the time away from the seat of government, and your Petitioners believe that the ordinary affairs of the Government are occasionally put to much inconvenience by his absence; that it is obvious that the emergencies which require his absence would generally leave him little leisure for distant concerns; that the most eminent capacity for deciding in a Council is often a very insufficient qualification for deciding alone; that the Governor-general is obliged to delegate to the Council, under a temporary President, the decision of matters on which his personal advice and orders must be desirable; and when, as may and has happened, either the Governor-general or the Council declines, or is legally incompetent to act without the concurrence of the other, the public business stands still, arrears accumulate (of which some are swallowed up by mere lapse of time), private interests suffer, public interests suffer, and Government falls, first into disorder, then into apathy, and much which requires to be done is finally left undone.

That your Petitioners also beg your Honourable House to reflect on the prejudicial influence which the absence of the sole representative of the Crown must have on the spirit of the administration, he being also the sole British statesman by profession in the Government, the only member of it who has been brought up among the public men of England, who knows their mode of thinking, and understands the Parliamentary system, and can appreciate the importance of non-official and public opinion.

The Home Authorities.—That your Petitioners also submit that the present opportunity should not be lost of revising the manner in which the home authorities are constituted, and their functions are arranged; that, since the last Charter Act, the Court and Board have been opposite litigant parties in the Court of Queen's Bench, apparently in consequence of a mutual misunderstanding as to their respective powers; that a contest also arose between the same authorities, respecting the recall of a Governor-general, the two cases together presenting the following anomaly; namely, that the Court is bound to transmit to India, for the Governor-general, the mandate of a particular policy, without exercising any discretion; but, on the other hand, has the power to recall a Governor-general who may be specially charged with the execution of that policy, and may have done his duty satisfactorily to the Queen's Government; and hence their respective powers appear not well arranged nor well understood; that of these bodies, one appears deficient in that knowledge of the country and people which the other body possesses, while the latter appears deficient in the higher qualities required in the governors of a great country; and hence the laws, the courts of justice, the police, and other institutions, remain in the state already described, so unworthy of the British authority and the British name.

That your Petitioners consequently feel themselves bound to declare their opinion, and as they believe the opinion of the public of India generally, to be unfavourable to the present double government of a Board of Control and Court of Directors.

That the manner in which the Directors of the East India Company are appointed is most objectionable in the following and some other respects; namely, (1.) That although their functions are politically of the highest order, and affect the well-being of India, they are self-proposed in the first instance, and without any security for their being qualified or proper persons to be entrusted. (2.) That they are elected by a proprietary body, whose capital is now guaranteed by Parliament, and which therefore has lost that interest in the Government of India which formed the basis of their elective privilege; and, (3.) Which body requires to be canvassed, and gives its votes on a well-grounded calculation of a return of benefit in the distribution of patronage; and, (4.) That such a system has the effect of preventing highly qualified persons from ever becoming Directors.

State of the Country.—That from what is above stated respecting the law, the law courts

Appendix D.

and the police, your Lordships will be able to draw, with the fullest assurance of truth, many conclusions respecting the condition of the country. It might appear paradoxical to deny its prosperity in the face of the vast increase which has taken place in the foreign commerce; but it is undeniable that, contemporaneously with this increase, crimes of a violent character have increased, and law and police are also regarded as affording little security either for rights of persons or property. Hence the limited application of British capital to agriculture and mines, and the limited employment of British skill in India (the former being confined to a few valuable articles, such as indigo, for the cultivation of which the soil and climate are so superior as to afford the profits almost of a monopoly, silk, and a few others); and hence, also, small capitals can rarely be employed in India. The planter or capitalist in the interior never or rarely leaves his capital when he himself quits the country, in consequence of its insecurity; and from this cause results the high rate of interest of money: landholders pay 25 and 30 per cent.; and the ryot or cultivator is in a worse relation than of servitude to the money lender. Your Petitioners, therefore, think that inquiry ought to be instituted by Parliament into the state of the country, in order to provide some probable remedy for the evils adverted to.

That, adverting to the inadequate manner in which the objects of the last Charter Act have been carried out, and to the several facts above stated, your Petitioners suggest the expediency of making the new arrangements of the Government for a shorter term of years, and at first only for one year; and, in conclusion,

Your Petitioners pray your Lordships to take the several matters aforesaid into your fullest and most serious consideration, and to take such measures as to your Lordships may appear necessary to establish the several ameliorations and reforms desired by your Petitioners.

And your Petitioners shall ever pray.

P. Clarkson Reed,
Zemindar, of Purneah and Calcutta.

Hirdsey Reed,
Barrister-at-law, of Calcutta.

PETITION, praying that in the event of the Renewal of the Act for the Government of the Indian Territories, Provision may be made to secure to the Petitioners the full Benefit of the Contract with the East India Company, by which they were induced to Settle in the Company's Territories; of Armenian Inhabitants of the Bengal Presidency.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition and Memorial of the Armenian Inhabitants of the Bengal Presidency.

Respectfully showeth,

That the Memorialists of your Honourable House are of the ancient Armenian race, the national existence of which has long been extinct, but of which individual members were the foremost to appreciate the benefits of British government in the East.

2. That the resort of Armenians to the British settlements, in this and other parts of India, was coeval with the establishment of those settlements. That the first important firman of the Imperial Court of Delhi, in favour of the English East India Company, while it was still in its very infancy, was procured by the agency of Khojah Serhad, an Armenian of great enterprise and influence in those days. It is now a matter of history, and the connexion thus begun, with a sense of mutual obligation, was cemented by an instrument of solemn compact in the nature of a treaty between Coja Phanoos Calendar, an eminent individual of the Armenian race, and the then Governor and Company of Merchants of England trading to the East Indies, bearing date the 22d June 1688, and ratified under the hands of the Governor and Directors, and by the common seal of the Company; the actual execution of the above instrument, a copy of which is appended for the sake of reference, has never been questioned.

3. That although the above compact may not possess all the binding force of an international act, in so much as it was made with a mere individual of a race, which had then no existence as a political community, yet did it continue for nearly a century to regulate the scale of duties levied on the trade of Armenian merchants at the Company's settlements and dependencies. Whether binding as a treaty or not, it must, at all events, be admitted to contain the terms publicly held out by the Company to encourage the resort and settlements of Armenians into the factories and places held by the East India Company.

4. Your

4. Your Memorialists beg to draw the attention of your Honourable House to the third article, which is as follows:—

> "That they (the Armenian nation) shall have liberty to live in any of the Company's cities, garrisons, or towns in India; and to buy, sell, purchase land and houses, and be capable of all civil offices and preferments, in the same manner as if they were Englishmen born; and shall always have the free and undisturbed liberty of the exercise of their own religion; and we hereby declare, that we will not continue any governor in our service that shall in any kind disturb or discountenance them in the full enjoyment of all the privileges hereby granted to them; neither shall they pay any other greater duty in India than the Company's factors or any other Englishmen born, do, or ought to do."

5. That upon such invitation and solemn guarantee, the Armenians began, and have since continued to flow in from various parts of Asia, to the haven of protection and favour thus opened to them. They have traded and tilled the earth; have become builders and proprietors, and acknowledge with gratitude the uniform protection and kindness they have received under the Company's rule. Your Petitioners confidently trust, that they, and those who have preceded them, have shown themselves neither unworthy of this favour, nor ungrateful towards their benefactors; and that, of the numberless tribes and races that have successively placed themselves within the pale of British dominion, none has evinced more loyal attachment, or given less occasion for the exercise of either coercive or penal measures.

6. That of the Armenians now settled within this Presidency, the smallest section is that of such as are the issue of forefathers already settled in it before the coming of the English; a large section is composed of such as are of foreign birth, and are themselves original settlers; but the far greater proportion are those born in this Presidency, the issue of fathers or forefathers who became settlers upon the inducement above mentioned.

7. That many of your Petitioners are possessed of large personal property, and also of large property in houses and lands, within the limits of Calcutta itself, and also of talooks and zemindaries in several of the zillahs and districts of this Presidency; and that of their real property, a part is the fruit of personal acquisition, but the greater part has been derived to them from fathers or forefathers, by whose industry it was acquired.

8. That notwithstanding the existence of the above compact or treaty with the East India Company of the year 1688, and, moreover, notwithstanding the assurance given by the Supreme Government, in the reply of Lord Auckland, Governor-general, to their memorial presented in 1836, to take the subject of their petition into due consideration, the condition of the Armenian inhabitants, in respect to civil rights and privileges, or the position of the Memorialists of your Honourable House has not yet been, in the least degree, altered. That your Memorialists unfortunately still labour under the disadvantage of being regarded in the courts of the Company, more especially of criminal judicature, in the same light as Hindus and Mahomedans, and subject to a system of law, if system it can be called, based upon the Mahomedan code, and modified by Regulations and Acts of the local Legislature, but so crude and undefined, as to leave nearly everything at the discretion of those who are entrusted with its interpretation, who are so often destitute of experience or sound judgment, and which is held in detestation by their more favoured fellow-subjects of British birth, who are, for the most part, exempt from its application, and who have, on all occasions, expressed the greatest disgust at every attempt to bring them within its operation.

9. Finally, your Memorialists, although so warmly and gratefully attached to the British rule, under which they have prospered now for upwards of a century and a half, and utterly unconscious of having done anything to forfeit the good opinion that prompted the flattering terms of invitation upon which Armenians became settlers in the territories of the East India Company, and have continued for upwards of a century to enjoy within the local limits of the several Presidencies all the consideration that a parity of civil rights with natives of Great Britain was calculated to give, find themselves deprived of these advantages, when beyond the limits of those Presidencies, and subjected to a different system of law. Your Memorialists have no hope of remedy for this, which they cannot but consider as a serious grievance, but from the wisdom and justice of your Honourable House, to which they present their earnest prayer—

> That the inequality and grievance above stated may be taken into the serious consideration of your Honourable House, on the occasion of the expected renewal of the privileges of the East India Company, and that provision may be then made to secure to your Memorialists, and generally to the Armenian settlers within the territories entrusted to the government of the Honourable East India Company in British India, the full benefit of the contract made with one of their nation, on behalf of himself and those of his nation, on which they and their forefathers were induced to become settlers within the Company's territories.

And the Memorialists of your Honourable House, as in duty bound, will ever pray.

Calcutta,
10th day of January 1853.

(signed) A. Apear.
[And 213 others.]

Appendix D.

PETITION of Members of the British Indian Association and other Native Inhabitants of the Bengal Presidency, complaining of Grievances, and praying for Relief.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the Members of the British Indian Association and other Native Inhabitants of the Bengal Presidency,

Sheweth,

That your Petitioners are desirous of bringing to the notice of your Right honourable House the sentiments entertained by themselves and the most intelligent part of their native fellow-subjects all over the country, on those points which, in their humble opinion, ought to be taken into consideration at the period of the termination of the Charter, granted to the East India Company by the Act passed in the reign of His late Majesty King William the Fourth, intituled, "An Act for effecting an Arrangement with the East India Company, and for the better Government of His Majesty's Indian Territories, till the 30th day of April 1854." As subjects of the Crown of Great Britain, the natives of this country entertain the deepest sentiments of loyalty and fidelity to Her Majesty, and sincerely desire the permanence of the British supremacy in India, which has ensured to them freedom from foreign incursions and intestine dissensions, and security from spoliation by lawless power. Placed by the wisdom of Parliament, for a limited time and on certain conditions, under the administration of the East India Company, they have enjoyed the blessings of an improved form of government, and received many of the advantages incidental to their connexion with one of the greatest and most prosperous nations. They are impressed with a sense of the value and importance of these and similar benefits, and of their obligations to the nation from which they have, under Providence, derived them. They cannot but feel, however, that they have not profited by their connexion with Great Britain, to the extent which they had a right to look for. Under the influence of such a feeling, they regarded with deep interest the inquiries conducted by Committees of both Houses of Parliament, between the years 1831 and 1833, preparatory to the passing of the last Charter Act. The fact of such inquiries being on foot, suggestive as it was of great administrative reforms, induced the people, who were unaccustomed to make any demonstration of their sentiments respecting the acts and measures of their rulers, to wait the result of the deliberations of the Imperial Parliament.

Loyalty.

2. That the principal changes made by the above-mentioned enactment, consisted in the increase of the powers of the Crown and the Board of Control over the Court of Directors, and those of the Supreme Government over the subordinate governments; in the power of legislating for all classes which was conferred on the Supreme Government, and, as auxiliary thereto, the appointment of a law commission, and of one member not of the Civil Service to the Supreme Council; in the extension of the powers of the Governor-general when absent from the Council; in the admission of British subjects to trade in China, and to hold lands in India; and in the increase of the ecclesiastical establishment, for the benefit of professors of the Christian religion, at the expense of the general revenue of the country. But no provision was made for introducing those benefits which the circumstances of India notoriously required; such as the relaxation of the pressure of the revenue system by lightening the land tax where it was variable, or erecting public works of utility, calculated to develop the resources of the country, and promote the growth and increase of commerce and manufactures; the improvement of the system of judicial administration, by the selection of qualified officers, the appointment of proper ministerial officers, the abolition of stamps on law proceedings, and other salutary measures; the protection of life and property by the employment of a police adequate to the purpose in point of numbers and discipline, under the control of a proper number of experienced magistrates; relief from the gigantic monopolies which the East India Company maintained very inconsistently with their position as rulers; the encouragement of the manufactures and commerce of the country, which had been greatly depressed in consequence of throwing open the trade with India; the education of the people on an adequate scale, for which the grant of a lac of rupees, authorised by Parliament in 1813, was manifestly insufficient; arrangements for the appointment to the higher offices of persons better qualified, by their experience, capacity and knowledge of the languages and laws of the country, than those who were heretofore sent out, usually before they had emerged from the state of adolescence; and the admission of the Natives to a participation in those rights which are conceded by all constitutional governments, and which would qualify them to enjoy the benefit of free institutions at a future period. The only privilege conferred on the Natives was the declaration in Section 87 of the above-mentioned Act, "that no native of the said territories, nor any natural born subject of His Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the said Company."

Judicial system.

Stamp duties.

Police.

Dacoits.

Education; insufficiency of grant.

Natives.

3. That the natives of this country were disappointed in the expectation they had formed, that the Charter of the Company, if renewed, would be so modified as to provide for some of

of those administrative reforms which were called for, and also to secure to them some of those civil and political rights which they considered themselves entitled to, even without reference to their position as subjects of the British Crown. That feeling of dissappointment has been, if possible, deepened by their perceiving that, notwithstanding the declaration just recited, the natives of India, with one or two exceptions of very recent date, have not been appointed to any but subordinate offices under the Company, such as were very inferior in point of respectability and emolument to the posts held by the youngest of their civil servants.

4. That after being in much uncertainty as to the intentions of Her Majesty's Government to make inquiries into the affairs of India, with reference to the approaching termination of the Company's Charter, your petitioners have learnt, with satisfaction, of the appointment of Committees of both Houses of Parliament, to take into consideration the mode in which the government of the British possessions in India is in future to be conducted. They cannot disguise from themselves the difficulties which those Committees will experience in endeavouring to ascertain the nature and results of the administration of the East India Company. The evidence accessible to them will be chiefly of parties, who are more or less interested in the maintenance of the present system of the British Indian administration, and who cannot be expected, even were some of them free from a natural bias, to enter into the feelings and wants of a people widely differing from them in religion, manners and habits. But your petitioners rely on the wisdom and justice of your Right honourable House, to give due consideration to the representations which they are emboldened to submit, by the consciousness that, though differing in religion and colour, they are your fellow-subjects, and that their claims as such will not be disallowed.

Committees.

5. That your Petitioners submit that it is for many reasons fit and proper that the period of such arrangements should be shortened, in order to bring the merits and working of them sooner under the review of Parliament. The governments of remote dependencies of the empire are generally liable to be ill-conducted, particularly when those dependencies are of the magnitude to which Her Majesty's dominions in India have at this day attained, and when there are various and dependent Boards, and the grounds of their proceedings cannot be scrutinized by the public, except by the publication of correspondence by order of Parliament. It seems of paramount importance, therefore, that the administration of India should be more frequently brought under the revision of the supreme authority. An appeal to facts will corroborate this argument. By the last three Charters, the Government of the British Indian territories was continued to the East India Company for terms of 20 years; but however urgently reforms and improvements in the system of government might seem to be required, none could virtually be introduced till the expiration of that long period. Accordingly, it required that period before British subjects were permitted to exercise their natural right of residing in, or even of trading with this part of their Sovereign's dominions, and another like period before they were permitted to enter into the trade with China, which was open to all other nations. If British subjects had to wait such protracted periods in breaking through a monopoly, the natives of India cannot have a better prospect of obtaining reforms which they may pray for, or rights which may be admitted to be unjustly withheld from them. Your Petitioners are therefore most anxious that the term of the arrangements which may be next entered upon for the government of this country should not be extended beyond 10 years.

Shortened period of renewal.

British subjects.

6. That your Petitioners submit, that the existing system for the management of the affairs of India by the Court of Directors and the Board of Control is objectionable, on account of its complexity and expensiveness, as well as on other grounds. The Court is composed of 24 Directors, elected for five years each, who receive each a salary of 300 *l.*, a sum which is manifestly inadequate to secure the services of persons qualified to assist in the government of a vast territory, and willing, conscientiously, to devote their time and attention to that great undertaking. But in reality the services of the Directors are compensated by the extensive patronage which each of them enjoys, consisting in the right to dispose of certain lucrative, civil and military, and other offices in India. For the manner in which that extensive patronage is used by them, they are under no sort of responsibility. Being originally a body of merchants, delegated by their fellow-merchants to carry on the trade with India for their mutual benefit, they received a suitable salary for the extra attention they gave to their joint concern; and it was a part of their functions to select the men whom they sent out to India, as merchants, factors or writers, to look after their enterprises, prepare investments of goods for the English market, and assist in the performance of other details of their commercial speculations. The salaries and emoluments given to their servants in India being small, in proportion to the extent of their business, the selection of proper employées was a responsible duty, and not a source of extensively coveted patronage. The Directors themselves were chosen for their knowledge of commercial transactions and capacity for commercial pursuits, without reference to administrative qualities. But since, in consequence of the change in the character of the East India Company, the Directors are required to be qualified not as merchants, but as Indian statesmen, it is obvious that the principle on which, and the persons by whom they are selected, should undergo a corresponding alteration. The Board of Control was appointed with reference to the inconsistency of placing under a body of merchants the government of extensive territorial possessions, and with a view to the political acts of that body being under the actual direction of Her Majesty's Government. Accordingly, it was and is composed of a portion of Cabinet Ministers, but the chief responsibility is commonly understood to

Court of Directors.

Salary, 300 *l.*

Patronage.

Appendix D.

to be left with the President of the Board, who holds no other appointment in the Ministry, and alone receives a salary as a member of the Board. The control of the Board extends to a part only of the acts of the Directors. The latter, therefore, are in many respects, particularly in the disposal of their patronage, without any check or responsibility. In those matters in which the responsibility of the Directors to the Board has been provided for, the control exercised is either indirect or liable to be resisted. The Directors may be compelled to issue orders affecting great political interests, without knowing, or, at least, without approving their tenor. The same Directors may recall a Governor-general who is in the confidence of the Ministry, but is adverse to the objects of the Directors' patronage, and thus defy the powers of the Board set over them. They have the power of instructing the Legislative Council of India to enact what laws they please, and abrogating any laws that have been passed by that Council; and it will be in vain for the people of India to offer any remonstrances to a body so constituted and vested with such powers. The people of India too are often at a loss to comprehend from whom certain measures emanate, whether from the local Government, by whom they are promulgated, or from the Directors, under whose instructions the Government act, or from the Board of Control, who have the right to prescribe the instructions which shall be sent to the Government for their guidance. Hence, they are precluded from offering remonstrances, not knowing but that the authority remonstrated with may have been acting entirely under dictation. Although it is fit that the general direction of the affairs of India should rest with Her Majesty's Ministers, subject to the controlling authority of Parliament, yet it seems obvious that the persons who have to deliberate on the questions which arise relative to the good government of the country, should be men not only of great abilities, but sufficiently acquainted with the country whose destinies are to be placed in their hands, and, at the same time, taken from such different classes as to ensure a freedom from all class and other sinister influences. Your Petitioners therefore submit that, on the grounds set forth, the future management of the affairs of British India should be vested in one body, consisting of not more than 12 members, half of whom may be nominated by the Crown, and the other half elected by a popular body, but all of them holding the appointment for five years, and going out of office by rotation; that a suitable salary should be attached to the office, not only to secure men of the best abilities, and to ensure their giving a sufficient portion of their time to their duty, but also to serve as a compensation for the loss of patronage which may ensue from any arrangements which Parliament may see fit to make. In the formation of a Board for the management of the affairs of India, on the principle above adverted to, your Petitioners submit, that the preference ought to be given to those candidates who have resided in India for a certain number of years, whether in or out of the service of the East India Company; and a method may be easily devised by which such candidates may be returned before those who do not possess that advantage. While, on the one hand, a Board so constituted will be more directly under the control of Parliament than two distinct Boards, with differing powers and divided responsibility, it will, on the other, be maintained at a less cost, and the government of the country will be carried on without those dissensions and other consequences which must arise from an opposition of interests.

Irresponsibility.

7. That your Petitioners submit that the election of the members of the Board should not be wholly confided to the proprietors of East India Stock, who are a body comparatively small in number, and therefore easily liable to be brought under improper influence, and without sufficient motives to seek for the good government of the country. When the proprietors carried on their exclusive trade, they had the right to elect the directors by whom it was to be managed. At the present day they have no concern with India, beyond receiving the dividends, which have been guaranteed to them by the British nation, as the condition of throwing open that trade. It is proper, therefore, that other parties should be associated with them as an elective body, who have a deeper and more direct interest in the welfare of the country and the improvement of the administration Your petitioners accordingly submit that Native and European British subjects resident in India or in England, who are holders of the East India Company's promissory notes of four or five per cent., to the value of 25,000 or 20,000 rupees respectively, should be allowed to vote in the election of members of the Board of Management for the affairs of India, and with that view should be allowed to transfer the same to a local India stock, at the rate of interest they now receive; and that after 12 months' registry *bonâ fide* in their names, they should be allowed to vote in person or by proxy, under the same rules which govern the votes of the present proprietors. Your petitioners also submit, that the privilege enjoyed, under Section 26 of the Charter Act, by proprietors of East India stock, resident in England, to vote by attorney, should be extended to proprietors resident in India, and that these should have power to send their letters of attorney to England, within six months of the date fixed for the election of members of the Board for the management of the affairs of India. It should, however, your Petitioners think, be made a rule, that proprietors of stock of either description, who hold office under Government, should not be allowed to vote during their incumbency.

No tie with India.
Stock guaranteed.

8. That the constitution of the Government of India is calculated to prevent due attention being given to the internal administration. It is at present employed about the political and military concerns of a vast empire, in legislating for the several presidencies, and making arrangements for, and governing, the newly acquired territories, and in exercising a general supervision over the acts and proceedings of the several subordinate governors and other authorities. The Governor-general, or, in his absence from the seat of Government, one of the members of Council, has also the immediate charge of the Government of Bengal.

The Government of India.

Bengal. Duties so multifarious cannot be satisfactorily performed; and as political and military matters claim primary consideration, all that concerns legislation and the civil administration is treated as matter of very secondary importance. Your Petitioners are therefore of opinion that, to ensure the well-being and good government of these extensive territories, the functions of the Supreme Government should be limited to the objects which more appropriately belong to it, namely, the disposal of political and military affairs, a control over the governors of the several presidencies, and a veto on the laws proposed by a Legislative Council specially appointed. The Supreme Council may consist of three members, immediately appointed by the Board of Management from among persons who have been employed in the civil departments, or otherwise have had local experience; and the Commander-in-Chief may be an extraordinary member thereof, but having a voice only as to military and political questions.

Relations of the Governor-General with the Council.

9. That your Petitioners are humbly of opinion that both experience and expediency require a modification of sections 49 and 70 of the Charter Act. The former, by authorising the Governor-general to act on his own responsibility, contrary to the opinions of the Council, practically invests him with absolute power. Such power, if given at all to an individual, should be confined to extreme cases, and the occasions on which it may be exercised should be accurately defined. The authority conveyed by the latter section to the Governor-general to go to any part of the country without the Council, in effect nullifies the design of appointing such a body, and at the same time furnishes him with a motive for leaving the seat of Government, to the detriment of public business.

Legislative Council.

10. That the union of political or executive power with the legislative, is not only anomalous in itself, but pregnant with injury to the interests of the people. It prevents sufficient attention being paid to the internal administration, so that the most important measures which are pressed on the attention of the Government, either receive a superficial consideration or are postponed for indefinite periods. On the other hand, the interests of the Government, or considerations connected with the Court of Directors or the objects of their patronage, are attended to as matters of primary importance, to the neglect or prejudice of the interests of the people, who have no direct mode of representing their sentiments to their rulers, and no reason to be satisfied that their representations will produce their due effect. Your Petitioners therefore submit that the Legislature of India should be a body not only distinct from the persons in whom the political and executive powers are vested, but also possessing a popular character, so as in some respects to represent the sentiments of the people and to be so looked upon by them.

Laws are now made by the Executive.

11. That it is a most unprecedented circumstance that, though the natives of India have, for the best part of a century, been subjects of the Crown of Great Britain, they have not, to this day, been admitted to the smallest share in the administration of the affairs of their country, but have continued under a Government that unites in itself the legislative and executive functions, and avails itself of those powers to make such laws as may subserve its own financial purposes, often without reference to the interests and wishes of the people. It is known to your Right honourable House that, from the commencement of that Government, the power of making laws and raising taxes has been exclusively in the hands of the Governor-general in Council, appointed by the Court of Directors, and that, till within a few years, the people knew nothing of the intention to pass laws till after they had been passed and translations sent to the courts in the interior; and that though at present it is the practice to publish drafts of intended laws, yet as there are no organized bodies to take their provisions into consideration, such publication is in almost all cases wholly insufficient. Moreover, the deliberations of the Legislature are carried on with closed doors, and the people have no opportunity, either of learning the grounds on which the laws are enacted, or of being heard by counsel when desirous of submitting their remonstrances.

No attention paid to remonstrances.

12. That not only are laws enacted without reference to the people, but they are enforced against the strongest complaints and remonstrances. Thus in violation of the pledge given by the Regulation XIX. of 1793, "That the claims of the public (meaning the Government) on their lands, provided they register the grants as required, shall be tried in the courts of judicature, that no such exempted lands may be adjudged to the payment of revenue until the titles of the proprietor shall have been adjudged invalid by a final judicial decree," a new species of court was created by the Regulation III. of 1828, which was presided over by the collectors of revenue, officers who were in every respect unqualified for the judicial office, but whose orders, when confirmed by one or more of the special commissioners, another special tribunal at the same time erected, were declared to be final, contrary to the meaning and intent of the 21st section of 21st Geo. 3, c. 70. But though several petitions were at the time presented to the Government from several parts of the country, complaining of the innovation, as well as of the hardship of the resumption proceedings which were carried on under the orders of the Government, no attention was paid to them, nor was any explanation vouchsafed as to the grounds of the law or the justice of the proceedings. From the Appendix to the Report from the Select Committee of the House of Commons on the Affairs of the East India Company, printed in 1832, your petitioners find that the Government, in reporting on the subject on the 23d February 1830 to the Court of Directors, "to whom alone," as they state, "they felt it incumbent on them fully to explain the grounds of their proceedings," remarked, "that to object to the inquiry and award of a collector on the ground that he is a Government officer, and must therefore be a partial judge, was a mere prejudice." The Court of Directors, in their reply of the 28th September 1831, your petitioners

Appendix D.

petitioners find, informed the Government that, after full consideration, they had "come to the conclusion that collectors should not be the judges in resumption questions;" but they gave no orders to rescind the objectionable law. From these facts, which are especially alluded to, because the proceedings of the authorities therein have been published, it will be apparent to your Right honourable House that even the power given to the Court of Directors to disallow laws passed by the Government, is inefficacious even as regards such laws as are contrary to all sound rules of policy.

13. That as a further example of the inattention of the Government to remonstrances, even when violating (to use the terms of the Charter Act of 1813,) "the principles of the British Government on which the natives of India have hitherto relied for the free exercise of their religion," your petitioners refer to the Act XXI. of 1850, which, under the guise of extending the principle of section 9, Regulation VII. of 1832 of the Bengal Code to the other presidencies, the provisions of which had never come into operation, alters the rules of inheritance of the people of this country, which are well known to be based upon their religious tenets, by allowing persons excluded from caste, whether on account of immoral or infamous conduct, or of change of religion, to inherit, contrary to the express rules of the Hindoo law. On learning the intentions of the Government, many of the people of Bengal and Madras united to remonstrate against it, on the ground of the guarantee given them that their laws and customs should be respected, and of its being the tendency if not the design of the intended law to facilitate proselytism to other religions. But these remonstrances were not even noticed by the Government, although sound policy and the pledges given to the people required that no alteration should be made in the rules of inheritance without their consent, especially when it could not be asserted that any public inconvenience had attended the operation of those rules.

Plan of a Legislative Council.

Board of Control.

14. That for these and other reasons, too numerous to be detailed, your petitioners consider the power of making laws and raising taxes conferred exclusively on the Governor-general in Council, to be impolitic as well as unjust to the native subjects of the British Crown, even with the reservation of the power of disallowing laws made by them, which has been vested by the Charter Act in the Court of Directors. Hence they are desirous that the legislature of British India be placed on the footing of those enjoyed by most of the colonies of Her Majesty, and that legislation be carried on with open doors, so that the people may have full knowledge of the proceedings, and an assurance that their wants and interests will not fail to be cared for. They accordingly submit, for the consideration of your Right honourable House, the propriety of constituting a Legislative Council at Calcutta, composed of 17 members, three selected from among the most respectable and qualified native inhabitants of each presidency, to represent the natives thereof; one member appointed by the Governor of each presidency from among the senior civil officers on its establishment, to represent the interests of the Government; and one member appointed by the Crown, in the same manner as the fourth ordinary member of Council is now appointed, who shall be a man of legal education, and preside over the Council. The members of the Council should continue in office for five years, during which time they should hold no other office under Government. To ensure their acting independently of the influence of the Government, they should not be removable even by the Crown, as under section 74 of the Charter Act, the servants of the Company are removable at will by the Crown; but any member who may be accused of misconduct, may be liable to prosecution in the criminal court. The members should receive, during their continuance in office, honorary distinctions, such as are given to members of legislative bodies in Great Britain and the colonies, besides a reasonable salary. Until the people are considered qualified to exercise the right of electing their own delegates to the Legislative Council, the native members may be nominated by the Governor-general, in communication with the Governors of the several presidencies; but certain rules may, at the same time be framed, by which the people of any presidency or province may have the power of objecting on specified grounds to any appointment so made, for which purpose the appointments should be notified in the English and vernacular gazettes of the presidencies. The law commission, which was established by sections 53, 54 and 55 of the Charter Act should be abolished, as the purposes for which it was appointed will be fulfilled by a Legislative Council formed on the comprehensive basis herein suggested.

Abolition of Law Commission.

Powers of the Legislative Council and the Supreme Council.

15. That in the event of the formation of a Legislative Council, distinct from and independent of the executive, being approved of by your Right honourable House, your petitioners submit that that body should have the same powers in regard to the proposing, making and cancelling of laws, as are now vested in the Governor-general and the four ordinary members of Council, but that the laws framed by them should be submitted to the Supreme Government for confirmation. The Governor-general in Council and the Governors of the presidencies, as well as any portion of the people by petition, should have the power of proposing drafts of laws to the Legislative Council, in the manner and on the conditions prescribed with respect to Governors, by section 66 of the Charter Act, that is to say, that the authorities named may propose drafts or projects of laws, with their reasons for proposing the same, and that the Legislative Council shall take the same and such reasons into consideration, and communicate their resolutions thereon to the authorities by whom the same shall have been proposed. The laws which may be framed by the Legislative Council should be submitted to the Supreme Council, with all the documents on which they may be based, or which may elucidate their object and tendency, and should receive the early attention of that Council; and as all the preliminary inquiries will have been made by the Legislative Council, and great

great weight will be due to their opinions as representing the interests of the whole community, it will not be improper to require that the Governor-general in Council should communicate his sentiments thereon, within three months from the time they are submitted to him, or that on the lapse of that period his concurrence should be implied, except in the case of his previously informing the Legislative Council of his inability to come to a conclusion within that period. Whenever the laws so framed and submitted are disallowed by the Governor-general in Council, the grounds of disallowance are to be communicated to the Legislative Council, and that body are to have liberty to move the Imperial Parliament to pass the laws in question.

Control of Parliament.

16. That the power conferred on the Court of Directors by section 44 of the Charter Act, to rescind any laws passed by the present Legislative Council, is inconsistent with the independence and dignity of a legislative body. Your Petitioners submit that such power should in any case be taken away, and that the laws framed by the Legislative Council and approved by the Supreme Council on the plan above suggested, should not be liable to repeal or alteration, save by the paramount authority of Parliament. But if any Bill be brought in Parliament to repeal any act of the Legislature of India, or make a new law on any point affecting the inhabitants of India, 12 months' notice thereof should be given, to allow the Legislative Council, or any portion of the people, to take measures for being heard by counsel, at the bar of both Houses, on the subject of the Bill.

Declaration of non-interference with religion of the natives.

17. That your Petitioners take this opportunity to submit to the consideration of your Right honourable House, the propriety of embodying in the Act which may be passed for the regulation of the affairs of India, a declaration that the use of their religious laws and institutions is guaranteed to the natives; and that no laws subversive thereof shall at any time be passed by the local legislature or the Imperial Parliament, unless they be in consonance with the general feelings of the natives themselves. Your Petitioners have had reason hitherto to be satisfied as to the consideration entertained by Parliament towards the religion of the natives, an instance of which is to be found in the instruction contained in the 85th Section of the Charter Act, to provide with all convenient speed for the protection of the natives of the territories thrown open to Europeans, "from insult and outrage in their persons, religions or opinions." But so far from that instruction being complied with, the local legislature have, as already set forth, endeavoured to set aside laws founded on the sacred books, both of Hindoos and Mahomedans, and turned a deaf ear to the remonstrances which have been offered by large bodies of the former religious persuasion. Your Petitioners are aware that a declaration made in the present day will not hinder a subsequent Parliament, if so minded, from passing a law contrary thereto; but they are also aware that when the rights of the people of England have been endangered, declaratory statutes (of which the petition of right is a signal instance) have over and over been had recourse to, and have been found to be highly valuable for the assertion and maintenance of those rights.

Local Governors.

18. That the appointment of the Governor-general to be also Governor of Bengal, and in his absence a member of council to be Deputy-governor thereof, is very disadvantageous to the public interests. The Governor-general being usually a person without any Indian experience, and the Deputy-governor having, in more than one instance, been a military officer, without experience in civil business and the peculiar revenue and judicial systems of the country, and having no councillors to supply their deficiencies as to local matters, have necessarily been dependent to a certain extent upon the secretaries. On the other hand, the administration of the Government of Agra has in more than one instance been conducted in a satisfactory manner, in consequence to a certain extent of their Indian experience, by governors without a council; while the affairs of the Presidencies of Madras and Bombay, under governors who generally come to their governments unacquainted with the state of the country and the institutions of the people, and are compelled to rely on the aid of highly paid councillors, are not more satisfactorily conducted than those of Agra. Your Petitioners, with reference to these facts, submit that the public service will be best promoted by providing that each presidency should be under the management of a separate governor, but without councillors; that neither the Governor-general nor any member of the Supreme Council should, in any way, participate in the government of any presidency or any other portion of territory; and that the governors should be selected by the Board of Management from among the ablest civil officers of the presidencies to which they are appointed, or other persons of suitable qualifications and local experience, due care being taken to supply vacancies by making provisional appointments. Your Petitioners also submit that to each government there should be a secretary, qualified, by his knowledge and experience in the revenue and judicial departments, to give useful advice to the Governor, whom it should be the duty of the Governor to consult, and who should be required to offer his opinion in writing to the Governor, in all matters; that in all important cases, in which the Governor may disregard the opinion of the secretary, both of them should record their opinions, for the eventual consideration of the Governor-general in Council or the Board of Management; and that, under the secretary, there should be a sufficient number of deputies in each department.

Appeals from the Governors.

19. That by sections 65 and 68 of the Charter, the several governments have been placed in dependency on and subjection to the control of the Governor-general in Council; but your Petitioners submit that to render that subordination of practical benefit, an appeal to the Supreme Government from the orders of the governors should be allowed under certain limitations.

Appendix D.

limitations. On the other hand, to allow public officers to perform their duties with confidence, it should be a rule that no officer directly appointed by Government shall be removable from office except after a regular trial before a competent court for official delinquency. On the same ground, your Petitioners are humbly of opinion that the power vested in the Court of Directors, by Section 75 of the Charter Act, to dismiss their officers and servants at pleasure, should not be maintained, as regards public servants in India, holding civil offices by the appointment of the local governments. The power of removing a public officer ought to be exercised only on public grounds. Therefore, officers of the several governments in India should not be removable by the Board for the Management of the Affairs of India, except upon grounds recorded by them previously to removal, and every servant so removed should have the right of appeal to the Privy Council.

Economy in the public service.

20. That all improvements in the administration, however urgently called for, are now postponed, on the ground of insufficiency of resources. It is also generally admitted, by all persons qualified to judge of the subject, that the higher offices in India are too highly paid, but the lower ones very inadequately. Your Petitioners submit, therefore, without raising any question as to the method in which the revenues of the country are applied, although such question is not unworthy the attention of your Right honourable House, that there should be a reduction of the salaries of the higher offices, and that the saving thereby effected should, in part, be applied to the increase of the allowances of the lower, which are confessedly inadequate to their duties and responsibilities, and, in part, to those improvements which the condition of the country has long demanded at the hands of its rulers. The salaries of the Governor-general, the members of Council, the local Governors, and the principal covenanted officers, are on an exorbitant scale, and susceptible of great reduction without impairing the efficiency of the service. The Governor-general, in addition to his munificent salary, has all his travelling expenses, to an enormous amount, paid out of the public treasury, without control or responsibility. Such a state of things may fairly be thought to operate as an inducement to the individual holding the office to leave the seat of government without sufficient reason. It seems, therefore, expedient that the Governor-general should not have his travelling expenses paid out of the treasury, without limit or restriction, but according to fixed rules, and that such allowances should be granted only when it may appear, from a resolution of the members of Council, that his presence is required by the exigencies of the state at a distance from the seat of Government. Much public treasure is also expended, without any corresponding advantage, in paying extravagant salaries to Residents in the courts of the princes of India and other political officers, and to a large staff of assistants, and in granting large allowances to those officers for keeping a table, and other useless purposes. As the inhabitants of the country who contribute towards the revenue which is thus lavishly expended derive no benefit therefrom, it is just and proper that the opportunity should be taken to introduce an unsparing economy in these and other branches of the public services, and to apply the proceeds to those public works which may promote free intercourse between distant places, and facilitate the transport of merchandise to the farthest extremities of the British dominions.

The civil service.

Haileybury.

21. That section 103 of the Charter Act declares it to be "expedient to provide for the due qualification of persons to be employed in the civil service of the Company;" but the only provision which it makes for fulfilling the purpose consists in regulating the number of candidates to be admitted into Haileybury College, and the number of students of the college who, after passing "an examination in the studies prosecuted in the said college," shall be "nominated to supply the vacancies in the civil establishments in India." No provision was made for giving public employments to any other description of persons, however qualified by their ability and local experience; and from the want of it the people were left to understand that the declaration in section 87 of the Charter Act was merely nominal, and that the natives of the soil, who, under former governments, were without distinction admitted to the highest posts, were ineligible for public office under the British rule. It is, however, acknowledged by most persons in India who are competent to judge, and not biassed by interested motives, that the present mode of filling the most important public offices is prejudicial to the interests of good government, and incapable of improvement, except by a radical change in the system. The civil servants selected by the Directors are sent out to this country before their capacity can be ascertained; the education they receive in England is insufficient to fit them for the various offices they are destined to fill; they are posted to important offices at an extremely early age, without the certainty, without even a reasonable probability of their possessing the requisite qualifications; they are removed from one office to another of a dissimilar kind, and from one province to another, different in respect to language and people, without being afforded opportunity to acquire sufficient experience; the certainty that they are to be provided for, and even promoted, by seniority or home influence, renders some of them indisposed to qualify themselves by diligent study of the laws and regulations, and the customs and manners of the natives; their inexperience and official inaptitude lead many to depend, to a late period of their public career, on their ill-paid ministerial officers; their peculiar advantages and connexion with each other, by birth or marriages, lead them frequently to regard themselves as a distinct and privileged class, and to treat the other classes of the community with arrogance and harshness, and support each other's errors and defaults; the charges preferred against them for corruption or official misconduct are not investigated in a public manner, or by a tribunal in whose impartiality the public have confidence, but, on the contrary, the general impression

sion is, that the preferring of charges is as much as possible discouraged; they are not liable to personal prosecution in the Company's courts for acts of injustice and oppression, and the Government have endeavoured to shield them from the consequences of prosecutions in Her Majesty's courts, by declaring, in the terms of Act XVIII. of 1850, that they are not to be held responsible if they believed themselves to have acted in their official capacity. The punishment inflicted on them by the Government for the grossest irregularities and faults are almost nominal, and, in most cases, officers removed from one department in consequence of misconduct, are merely transferred to another. There are, of course, many bright exceptions among the civil servants of the Company to the general description here given. Many of them would do honour to any service, both in point of ability and of conscientious discharge of duty. But your Petitioners are speaking of the system which admits of the evils they are pointing out. Your Petitioners are therefore of opinion, that the College of Haileybury, which is maintained for the education of civil servants, should be broken up, as an institution in no respect fulfilling the objects for which it was established, or, if maintained, that it should be made self-supporting; that if any portion of the patronage to offices in India is, for any reasons which may appear sufficient to your Right honourable House, to be continued in the future Board for the Management of the Affairs of India, it should be rendered conditional on the selection of persons of unquestionable fitness and capacity; that the rest of the offices in the country should be thrown open to the natives on the same condition, and that promotions should be made by the local governments, without respect to distinctions of covenanted or uncovenanted, European or native, but solely with reference to the talents and qualificatious of the parties, and thus effectually carry into effect the intentions of Parliament, expressed in the 87th section of the Charter Act.

22. That your Petitioners submit that not more than a moiety of the patronage should be vested in the Board for the Management of the Affairs of India, exclusive of appointments of Governors-general, Governors of presidencies, and members of the Supreme Council, and military and naval officers; and that the other moiety should be assigned to the Governors of the several presidencies, for the benefit, with some exceptions, of the natives, without reference to descent or creed. It should be provided, however, that instead of selecting youth whose character and abilities are not sufficiently developed, and who are afterwards to enter college, to prosecute studies which are deemed necessary to qualify them for office, the Board of Management and the Governors shall be at liberty to select those persons who have obtained a suitable education at their own expense, at any establishment which they may prefer, and who have given evidence of their proficiency by undergoing such examination as it may be determined to prescribe. By thus throwing open public offices to public competition by British youths in the United Kingdom, and by native youths in India, the expense of educating young men for public offices will be avoided; the temptation which now exists to confer patronage on grounds of family connexions, friendship or obligations will be taken away, and suitable persons will be chosen for offices, instead of offices being provided for men. Moreover, instead of providing for one examination as to fitness for admission into college, and another as to qualifications acquired there, which examinations are practically found to be (as it is generally supposed by reason of private interests) more nominal than useful, it will be necessary to have one set of examiners in England and one in India, and the test of qualification may be made as rigid as can be desired. Nor can it be alleged that many educational establishments will not be found in England and India, adapted to qualify young men for public service, by imparting to them education of the requisite standard, a fact which itself demonstrates the inexpediency of maintaining, at a great expense, the College of Haileybury. Such a system of public competition for admission into the civil establishments of India being established, the Board of Management may select, out of the candidates who pass a public examination in England, the number of persons they have the privilege of nominating, and such persons should, on passing an examination in India, in the vernacular languages, be eligible to the higher offices, with reference to their age, experience and talents, in common with those who have hitherto been sent out under covenants. In the same manner, the several Governors should have the right to select out of the natives who are declared eligible after examination in India, the number they are entitled to appoint. The selection of the Governors should be confined, except in special cases, to the natives; because, if a latitude is given, the result will be that the preference will, for the most part, be given on other considerations than merit, and the selection of natives will form merely an exception to the general rule. To provide for special cases, the Governors may be authorised, whenever they see need, to select for the higher offices others than natives, after they have undergone the examination prescribed; and whenever such special appointments are made, it should rest with the Board of Management to confirm them or not, according as they are satisfied as to the validity of the grounds recorded by the Governors for departing from the general rule. It should, however, be distinctly provided, that the salaries of Europeans and natives, who are appointed after passing the prescribed examination, should be equal, and the two classes should be in every respect on a footing of equality. It may be advanced that the natives, who are in their own country, do not require to be paid so highly as those who are sent out from the United Kingdom; and indeed this is the principle acted upon by the local governments, in pursuance, part no doubt, of the instructions laid down for their guidance. But a proposal to lower or raise the salary of an office, according as it is to be enjoyed by a person from the north or the south part of Great Britain, would justly be considered both absurd and invidious; and the adoption of it would be especially impolitic in India, where it

Appendix D.

it could not but have the effect of perpetuating distinctions between Europeans and natives, and introducing all the injurious consequences incident to distinctions of colour and creed.

23. That it being essential to the good government of the country, as already set forth, that full effect should be given to the provision of section 87 of the Charter, that all offices shall be open to all persons without distinction of caste, colour or creed, your Petitioners submit that the distinctions of covenanted and uncovenanted should at once be abolished, so far as may be consistent with the present arrangements, and with the rights which may be considered to belong to those who have been sent to India under covenants. The enactment of the rule just cited is a proof that the civil servants now on the establishment cannot claim the right to be appointed or promoted to particular offices, and that, without injury to their rights, any persons not of that service may be appointed to any offices for which they may be qualified. And your petitioners desire merely this, that appointments and promotions should be dependent strictly on qualification and merit; so that, on an office being vacant, such person only should be appointed to it as may be judged best deserving, whether he be a member of the civil service, or a person who has been selected after examination in England or India, or a person who has qualified himself by serving in any subordinate capacity. The same end may be effected by placing civil servants and other servants, as far as practicable, under the same rules in regard to their tenure of office and privileges, such as leave of absence and so forth. The distinctions at present existing on these points are as marked as they are unjust, such as that the covenanted servant cannot be dismissed without trial by a commission, while the uncovenanted may be removed without any proved misconduct, on the mere report or the pleasure of his superior officer; and that the covenanted officer should be allowed opportunity to recruit his health with small loss of salary, but the uncovenanted, in most cases, only on the condition of giving up his post. From the abolition of such distinctions, your Petitioners expect the most important benefits to India, not only as the means of imparting a healthy tone to all classes of public officers, but as the germ of freedom and independence among all ranks of the people. Keeping these circumstances in view, your Petitioners have entered into details which they would not otherwise have obtruded on the attention of your Right honourable House: and with reference thereto they would add, that persons who pass a successful examination in this country, but fail to be selected by the Government for the higher posts, within three years from the date of examination, should undergo a second examination to become again eligible for the higher posts, but they may be furnished with diplomas which shall entitle them to a preference over other untried candidates, in obtaining any inferior situations which they may apply for. Thus provision will be made for filling superior as well as inferior offices with duly qualified persons, who shall have constantly before them motives for further improvement, in the prospect held out to all, without exception, of rising to the very highest dignities.

The judicial system.

24. That the Company's courts are not so constituted as to render substantial justice to the natives, or afford them a just confidence as to security of life and property. It is a cause of further dissatisfaction that there should be one court specially for the Europeans, of which the judges are selected from among persons who have given proof of their legal fitness, and the advocates are persons who have undergone a course of legal training, and another court for the natives generally, of which the judges have no legal knowledge or experience before their appointment, and the pleaders are very insufficiently qualified for their important duties. That dissatisfaction is aggravated by the facts, that a special exception is made by section 46 of the Charter Act against granting to any of the Company's courts the power of life and death over British subjects, while the lives of natives are freely placed at the disposal of courts clearly implied to be ill-constituted; that while, owing to the numerous reforms required in the laws and forms of judicial procedure in this country, the objections of British subjects to the Company's courts and the Company's judges have been allowed, those courts and judges should be deemed quite good enough for them; and that, out of the large revenues which are yielded by the proceeds of their labour, a sufficient sum should not be appropriated towards rendering the courts really capable of affording them justice. Without desiring that British subjects should, by being subject to the local courts, be deprived of the benefit of good laws, administered by qualified judges and juries of their countrymen, your Petitioners humbly conceive that there should be equal laws and good courts for all classes of Her Majesty's subjects, without exception, and not one set of laws and courts for British subjects, and another set of laws and courts for natives. The appointment of a law commission, under the 53d section of the Charter Act, with the view that "a general system of judicial establishments and police, to which all persons whatsoever, as well Europeans as natives, may be subject, should be established in these territories at an early period," has been wholly inefficacious, and the commission has, consequently, been for many years in abeyance. The instructions contained in the 82d and four following sections of the Charter Act, to provide against any mischiefs or dangers that may arise from the free admission of Europeans into the territories administered by the Company, have also been inoperative; for although by an Act of the local legislature (IV. of 1837) it is declared that Europeans shall be subject to the laws under which natives acquire and hold property in land, it has been found that the penalties to which the latter are subject do not apply to the former, in consequence of their exemption from the criminal law of the country; so that while a native proprietor of land is punished by the magistrate, his European co-sharer in the same estate cannot be visited with any punishment.

25. That

Appendix D.

Inadequacy of native salaries.

25. That the civil courts of the country are composed of two classes, namely, those to which natives are usually appointed as judges, and those to which European civil servants are exclusively appointed. The highest grade of native judges, styled principal sudder ameens, receive salaries (400 rupees per month, and in special cases 600) not greater than are commonly given to clerks in public and private offices, without any prospect of promotion to a higher office, but are vested with power to try all civil suits for property of any amount, and also to hear appeals from the decisions of the lower courts. The civil servant is appointed on a salary of at least 2,000 rupees a month, with a prospect of rising to the highest posts, and is expected almost exclusively to decide those appeals which involve a value not exceeding 5,000 rupees. Being selected to be the judge of an appellate court, without having acquired any experience of judicial business or any knowledge of the forms of the lower courts, his decisions, whether passed under the dictation of the ministerial officers, or in accordance with his own notions, are devoid of weight. But while the decisions of experienced native judges are liable to be reversed by a single European judge, without any judicial experience, the decisions of the same judges regarding property of a higher value than that above mentioned are appealable to the Sudder Dewanny Adawlut, and cannot be reversed without the concurrent opinions of two judges of that court. The decisions of that court, as exhibited in their printed reports, show, that from 1845 to 1851, out of 2,667 appeals heard from the decisions of covenanted and uncovenanted judges, the decisions of the covenanted judges were confirmed in 215 instances, reversed in 167, and remanded for further investigation in 683, while those of the uncovenanted judges were confirmed in 559 instances, reversed in 238, and remanded in 667 instances, from which your Right honourable House will perceive that, on the whole, the decisions of the uncovenanted were more satisfactory to the Sudder Court than those of the covenanted, and that nothing can be more anomalous than the position in rank and emolument which the two classes occupy.

Appeals.

Criminal courts.

26. That the criminal courts of the Company are those of the magistrates and the sessions judges. The former act in the double capacity of superintendents of police and judges of cases not liable to a sentence exceeding three years' imprisonment. In the former capacity they have been acknowledged by their superiors to have a strong leaning towards the conviction of those who are brought before them for trial. In the latter capacity they are authorised, in certain cases, even to adjudge imprisonment and fine without appeal, and in general they exercise, according to the admissions of high authorities, powers which are not committed to magistrates in any civilized country, and for which they are disqualified by their youth and inexperience. Commitments made by them are tried by the sessions judge, with the aid of assessors, composed at his option of a Mahomedan law officer or two or more natives. The opinion of the law officer cannot be set aside except by the Nizamut Adawlut; but when other assessors are employed, the decision rests exclusively with the sessions judge. Cases involving capital punishment, and some others, are referred to the Nizamut Adawlut, and appeals from the sentences passed by the sessions judges are also heard by that Court. It will be evident to your Right honourable House, that when the trials have been held in the first instance before an officer not sufficiently qualified for the duties of his high office, without any of the securities to be found in the verdict of a jury, or even the presence of advocates qualified to act as a check on the judge, the transfer of the record of trial to a distant court, the judges of which, for the most part, hear the records, which are in a foreign language, read to them, either in their private dwellings or in court, cannot in any manner supply, but must rather increase the defects of the original trial. Nor can the people of this country understand, when every Briton is entitled to be tried by a jury of his peers, why they should not enjoy the same privilege.

Union of Supreme and Sudder Court.

27. That, for these and other reasons, your petitioners are desirous that both the civil and criminal courts of the country should be remodelled; and that, instead of the numerous, complicated and defective systems, there should be courts guided by uniform rules of procedure, presided over by judges qualified by education and legal abilities, and having full authority over all classes of persons without exception. To this end your petitioners submit, that the Sudder Court and the Supreme Court should be amalgamated as soon as possible; and that courts should be formed on the same principle for every district, having the same rules of procedure, with jurisdiction over all classes of the inhabitants, both at the presidency towns and in the country. The local laws should be the guide of the new courts, except as to questions of marriage, inheritance, and so forth, in regard to which the laws of the parties should be followed as heretofore. The courts formed on the principle alluded to at the presidency towns, should be courts for the hearing of appeals from the lower courts, and for controlling the proceedings of those courts. In the same towns, civil courts of first instance should be established under single judges, which should also be courts of sessions, in which trials should be held with the aid of juries. At Agra, where, though the seat of the new presidency, there is no Queen's court, a chief court should be established, similar to the new courts at the presidency towns, consisting of a number of judges of the Sudder and one judge on the part of the Crown. In framing rules for it, the technicalities of the English law should be avoided. Its proceedings should, as far as practicable, be in the vernacular language. As the wants of the judges of the Sudder Court at Calcutta are supplied by translators, who prepare English translations of the vernacular pleadings, so additional translators may be employed to facilitate a knowledge of such pleadings by judges of the new court, so as to relieve suitors from the expense of preparing pleadings in English, until, in course of time, judges can be found who are familiarly acquainted with the languages of the people. Oral pleadings may be carried on in English or the vernacular, according

Appendix D.

according as the pleaders employed are conversant with either language, following herein the rule which has been introduced since the admission of barristers to plead before the Sudder Court.

Courts in the interior.

28. That for the districts in each presidency, it is expedient to remodel the civil and criminal courts, to promote their efficiency and render them capable of affording justice to all classes. For the present, and with a view not to entail much expense at the outset, three grades of judges and courts may be established, having both civil and criminal jurisdiction,—moonsiffs, principal sudder ameens, and judges. The moonsiffs should have jurisdiction in civil suits, but extended from the present limit of 300 to 1,000 rupees, and on the criminal side they should be empowered to try misdemeanors and petty felonies, and to commit to the sessions cases beyond their competency to try. Their salaries should be raised, so as to be adèquate to their duties. They should have, according to extent of local jurisdiction, assistants, selected from diploma holders, on a sufficient salary, including travelling charges, who should be employed in the preparation of cases, and in holding local inquiries in the place of ameens, officers who are now employed in such duties. The commission which is paid to these may be carried to the credit of Government. The assistants will thus qualify themselves for judicial duties, and should be considered entitled to promotion after three years' service in the lower capacity. The principal sudder ameens should have jurisdiction, as at present, in all original suits for an amount exceeding 1,000 rupees. The salary of the office should be made proportionate to its importance, and the designation altered to that of junior judge. The judge should have jurisdiction as to original suits; but in trying appeals from the moonsiffs' decisions, he should sit with the junior judge, but, in case of difference, have the casting voice. When the two functionaries are unanimous in deciding an appeal, both as to the law and the facts, the special appeal to the superior court may be limited to points of law; but when they differ as to facts, the special appeal may be both as to the law and the facts. In such civil suits as affect the person or character, as for libel, assault, and so forth, either party may call for a jury. The verdict of the jury may, as suggested by the Commissioners on the Amendment of the Law, be given according to the opinion of three-fourths of the number if they cannot come to an unanimous conclusion before six hours, and such verdict should be binding on the judge. With reference to the relative powers of the judge and the junior judge, and the frequent chance of the decision of the latter, owing to his superior judicial experience, being better than that of the less experienced officer set over him, by the fortune of belonging to a privileged class, it is inexpedient that the decisions of the one should be appealable to the other. The decisions of the judge and the junior judge at their separate sittings should therefore be directly appealable to the superior court at the presidency. This arrangement will obviate the anomaly of one appeal being decided by a single judge, and another by three judges, for no other reason than that, in the former, the value of the subject of dispute may amount to 5,000 rupees, and in the latter to one rupee more. It will also diminish the number of special appeals which are now preferred, and which the Sudder Court are under the necessity of discouraging to avoid being swamped by them; it being obvious that, however cogent the reasons which induce the Government to place an officer who is wholly without judicial experience over one who has grown grey in the judicial office, they cannot prevent the people from being dissatisfied with the decision of the youthful superior, when it is counter to that of his older subordinate. For the same reasons, it is obviously improper that the judge should have to report annually on the qualifications and conduct of his junior colleague, and even be empowered, in conjunction with the commissioner of revenue, to recommend his dismissal. Both the officers should, therefore, be as much as possible on a footing of equality, such as exists between the chief and puisne judges of the Queen's courts, and placed directly under the control of their mutual superior court. It may not be out of place to add here, what has been suggested with regard to public officers in general, that no judicial officers, whether Europeans or natives, should be removable from office, except by a regular trial before a competent court. To ensure the offices of judge and junior judge being, in future years, filled by persons of judicial experience, not liable to the objection to which covenanted judges are open under the present incongruous system, such as the appointment of postmasters and superintendents of the opium, salt and abkaree departments to seats on the bench of appellate courts, without previous legal training, it should be provided that persons, who have, after examination, been sent out by the Board for the Management of the Affairs of India, or in a similar manner selected by the local Governments, to fill the higher civil offices, shall commence their career in the judicial line by being appointed as assistant judges, and attached, some to the court of the judge, and some to that of the junior judge, to be employed nearly in the manner mentioned as regards assistants to moonsiffs, and promoted after due probation, according to the aptitude they may display. As mentioned with regard to moonsiffs' decisions in civil suits, appeals from the sentences of those officers in criminal cases should be heard by the judge sitting together with the junior judge, whose order shall be final when both officers are agreed, but subject to special appeal to the Nizamut Adawlut when otherwise, in the same mode as is provided regarding civil cases. Persons committed to the sessions should not be tried with the aid of Mahomedan law officers, or with any of the descriptions of assessors sanctioned by the Regulation VI. of 1832 of the Bengal Code, but invariably by a jury of their peers, whose verdicts shall be taken in the mode suggested with regard to civil suits. In the trial of commitments, as of appeals, the judge should be joined with the junior judge. But the sentences passed should be subject to appeal to the superior court on points of law only.

29. That

29. That the police of the country has always been in a state not at all creditable to an enlightened Government, and has, indeed, been acknowledged by the servants of Government to be "as bad as can be."* The Court of Directors have, it is true, expressed themselves solicitous of the improvement of the police at any cost, but their solicitude has been without any effect. The Government, on appointing a Police Committee in 1837, to hold inquiries on the subject, strictly prohibited the suggestion of any reforms which should "involve any great increase of expenditure." From that date to this, no reforms have been attempted beyond the appointment of a few deputy magistrates, and, very recently, of a Commissioner for the suppression of dacoity in certain districts. Hence the utmost insecurity of life and property prevails in every district, and even in the immediate vicinity of the metropolis of British India. The Government have always possessed considerable resources for forming an efficient police, derived in part from the allowances or produce of lands which had been originally assigned for the police, but were resumed by the Government with a view to be applied to their legitimate purpose, but chiefly from the produce of the stamp tax, which was expressly imposed, with the exception of certain items, "for defraying the cost of the police." But out of an estimated revenue of thirty lacs of rupees so appropriable, not more than about seven lacs is actually expended on the police establishment of the whole of the Lower Provinces. The Government, however, instead of defraying a suitable sum for the maintenance of an efficient police, have recently published the draft of a law to convert the village watchmen, who are paid for immediately by the cultivators of the soil, into servants of the state, and to make the zemindars responsible for the default of the ryots in paying their private servants, a project which cannot but result in compelling the zemindars to pay twice over for the establishment of the police. Again, the zemindars, who have no necessary connexion with the police, have been arbitrarily burdened, by laws made without their knowledge or consent, with sundry duties which ought properly to be discharged by the covenanted servants and the subordinate police officers. The imposition of these duties, without being of any benefit to the country, is converted into an instrument of annoyance to the zemindars, by the magistrates and their ministerial officers, and of extortion by the darogahs. The zemindars are frequently summoned, though living at the other end of the province, to appear in the presence of the magistrate, to explain the cause of their not furnishing information of crimes of which they had, and could have had no knowledge; and the managers of their estates are frequently fined or even placed in duress for various alleged omissions of police duty, and in various other ways harassed by the ignorance or caprice of youthful magistrates. It has even been known that landholders residing at the distance of 50 or 60 miles from the scene of a dacoity, have been fined for not following and apprehending midnight robbers. The darogahs and other officers of police are furnished by the same ill-judged laws with means of practising extortions, by employing threats to report alleged instances of neglect of duty. The insufficiency of the police arises, not only from the small establishments maintained by the Government, but from the extensive jurisdiction of the magistrates, and the practice of appointing very young men to that office, and removing them to higher posts as soon as they begin to acquire experience. The extent of country which is to be travelled over to arrive at the station of the magistrate, the difficulty of obtaining access to that functionary, except through the medium of the ministerial officers, the necessity of presenting every petition in writing and on a stamped paper of the value of half a rupee (about four times the value of a labourer's daily wages), combine to render it a matter of impossibility to the poorer classes to obtain justice from the criminal courts. The large powers vested in the darogahs are liable to abuse, owing to the insufficient remuneration they receive, and the difficulty of exercising proper control over them. Their entrances into villages to trace out the perpetrators of heinous offences, or discover property alleged to be stolen, are regarded by the people as visitations. The fact is so notorious, that the Government have found it necessary to pass a law, the Regulation II. of 1832, to prevent the darogahs from investigating any cases of burglary, unless expressly desired by the party injured or directed by the magistrate. Hence it is difficult adequately to represent to your Right honourable House the actual situation of the poor in the interior, in consequence of the badness of the police system, since those who are most exposed to the attacks of the powerful and the lawless have most to dread the exactions of the officers of police, many of whom are actually in the pay of the rich, while some have been convicted of practising torture to attain their ends.

30. That, to remedy such a state of things, it is urgently required that a suitable augmentation of the police be made for the repression of dacoity and other crimes attended with violence, as well as that a sufficient number of magisterial officers, unencumbered with extraneous duties, be attached to every district. With reference to the increase of a sufficient police force, your petitioners desire to bring to the notice of your Right honourable House, as a most anomalous circumstance, that, according to the returns printed by authority, while the highest annual cost of the police of Bengal, which yields a larger revenue, and is more populous, was *Rs.* 10,24,142, the lowest annual expense incurred on the same account in the North-western Provinces was *Rs.* 17,30,000, and the highest *Rs.* 26,94,616. But whatever may be the requirements of the new presidency in this respect, your petitioners submit that a certain amount of the revenue expressly raised for the police should be spent for that purpose. The present system of village watch, which is entirely supported at

* *Vide* Police Committee's Report.

Appendix D.

at the cost of the ryots, is capable of being used as an auxiliary to the Government police; but the arrangements which may be considered necessary to adapt it to that end should be introduced with the approbation of the people generally, and without destroying the municipal character of the institution. Changes are also required in the office of the magistrate and his subordinates. The office of the superintendent of police for the whole of the Lower Provinces is inadequate to fulfil the objects for which it was re-instituted. The magistrates should perform the duty within their respective districts, but should have no judicial duties to perform. The office should also be everywhere separate from that of collector of revenue. At present a darogah is placed over a large extent of country, termed a thanna, but the arrangement is in many respects objectionable. The thannas should be broken up into a sufficient number of stations, with a jemadar and a certain number of burkundazes at each, according to local circumstances. A deputy magistrate should be placed over every two of the present thanna jurisdictions. The deputy magistrate should make the preliminary inquiry into every charge, and refer misdemeanors and petty felonies to the moonsiff's court for trial. Cases which appear to involve heinous crimes should be sent to the magistrate, who, if agreeing in the opinion of the deputy, should commit them to the sessions for trial. Cases referred to the moonsiff, which may be discovered by him to be of a heinous nature, should be committed by him to the sessions through the magistrate. The magistrates should be exclusively under the control of the Government, as now with regard to police duties, gaols, &c. It has been stated before that the magistrates act without being amenable to any tribunal for their irregularities. Your Petitioners therefore submit that the magistrates and their deputies should be liable for acts beyond their jurisdiction, and for undue exercise of authority, to actions for damages, which should be tried before the judge and the junior judge, with the aid of a jury. The proceedings of those officers should also be liable to be brought before the sessions courts by a writ of certiorari or other analogous proceeding.

Monopolies.

31. That the monopoly of the salt trade by the Company injuriously affects the poor, particularly those who inhabit the districts where only that manufacture can be advantageously carried on, as it interferes with their freedom of action and prevents saline lands, which are unfit for cultivation, from being appropriated by the owners to the manufacture of salt. Even the zemindars of such places are liable to severe fines, if unauthorised manufactures of salt are discovered on their estates, though unknown to them, so that they are compelled to act as revenue guards. A single zemindar has been known to be fined as much as 12,000 rupees at once. The selling price of salt is arbitrarily fixed by the Government, and is at all times so high that, though the country has abundant resources for the manufacture of the article, English merchants can afford to import it. The dearness of the article induces even those who live near the salt manufactures to use earth scraped from salt lands, while those who reside in the interior have recourse to the alkali found in the ashes of burnt vegetables. The officers employed in the salt department are vested with judicial powers, contrary to all principles of justice and policy, and necessarily employ them very irregularly and vexatiously. The subordinate officers are furnished with opportunities, on pretence of preventing smuggling, of harassing the carriers of salt and the refiners of saltpetre. Your Petitioners are of opinion that, among other reforms required in this department, it is desirable that the Government, if they cannot immediately afford to forego so odious a source of revenue, should fix an unvarying rate of impost on the manufacture of salt, say 200 rupees on every hundred maunds, whereby not only the poor will be greatly benefited, but the laws will be rid of the anomaly of judicial excisemen and the traders of the harassment caused by the subordinate officers of salt chowkees. But as salt is a necessary of life, the duty on salt should be entirely taken off as soon as possible. The monopoly of the opium trade is not injurious to the country, so far as regards the revenue realized by the Government, as the monopoly price is ultimately paid by the consumers in China. But it is a source of vexation to the cultivators, who are compelled to cultivate the poppy, and supply the produce to the Government at the valuation fixed by their own officers. Nor can it be otherwise than that the cultivators should be at a disadvantage, and be liable to oppression, when the other contracting party is armed with all the power and resources of the state. Justice therefore requires that the interference of the Government with the cultivation should cease, and that the revenue derived from the drug should be in the shape of fixed duties on manufacture and exportation, but principally on the latter, as is in some measure the case with regard to Malwa opium. By the adoption of this principle, the cultivators will possess that freedom of action which all men possess under governments that are not constituted on arbitrary and despotic principles; and whatever is lost by such an arrangement, will be more than made up by the saving that will ensue from the abolition of the expensive establishments which are now necessary.

32. That the abkaree duties, or revenue raised from the sale of spirituous liquors and intoxicating drugs, and the stamp duties, levied by obliging litigants and complainants to write their petitions on stamped papers, are highly objectionable in principle. The former are levied on the opening of shops for the retail of the means of intoxication, and tend to encourage the consumption of liquors and drugs by the lower classes, and the increase of all the pernicious consequences that result from it. The Government, by appointing commissioners of abkaree and a host of ambulent subordinates, termed superintendents of abkaree, whose zeal for the interests of their masters is measured by the amount of revenue yielded by their respective divisions, have, of late, largely contributed to the deterioration of the moral and industrial character of a portion of the population. Measures so pernicious cannot

cannot be too severely condemned or too soon discontinued, even though a larger revenue were to be derived therefrom than is really the case. The legitimate purposes for which duties are imposed on the sale of liquors and drugs, will be sufficiently answered by imposing them on manufacture and exportation. The stamp laws, by which the other class of duties is imposed, also require material revision. The use of stamps in judicial matters does not answer the object for which they are avowedly imposed, namely, the diminution of litigation. On the contrary, they contribute to prolong litigation, as they involve on the courts, from the lowest to the highest, the duty of deciding points extraneous to the merits of the suits before them. For the purpose of the stamp revenue, every suit has to be valued according to certain rules laid down by the Legislature, the application of which is liable to much doubt and uncertainty. Hence questions are frequently raised as to the observance of those rules, and the decisions of the Courts of First Instance are subject to appeals to the higher tribunals; and many suits are nonsuited or remanded for re-trial, merely because the amount of the stamp has not been correctly estimated, however honestly the plaintiff may have formed that estimate. In some cases, when the plaintiff would willingly forego a portion of his claim, which may not stand on so clear a foundation as the rest, he is afraid to do so, lest his suit be altogether defeated by the objection that he has undervalued his claim, and that his stamp is therefore defective. The decisions of the Superior Court in the matter of stamps are not unvarying, and many constructions and circulars are issued to regulate the questions which arise, which are often modified or rescinded, circumstances which greatly distract and embarrass pleaders and judges in deciding such questions. And it may be fairly stated that not less than 10 per cent. of the decisions of the Company's courts turn entirely on considerations connected with this most absurd and injudicious system of raising a revenue. The operation of the stamp laws is still more directly injurious to the poorer classes in their pursuit of justice. Before they can prosecute a suit of any kind, they must not only incur the ordinary expenses of other courts, but also lay out, at the very outset, a certain sum in the purchase of a stamped paper, which in the most trifling case is a rupee, or eight times the daily hire of a labourer. Your Petitioners submit that laws of this description should not be permitted to exist. If a revenue from judicial proceedings be necessary, it may, with propriety, be drawn from those who maintain vexatious or groundless claims, or resist just ones, by imposing on them fines calculated on the scale of the present stamp law.

Revenue officers.

33. That the system of revenue administration pursued by the Company's Government is a source of vexation to all persons who stand in any relation thereto. The laws enacted for providing for the revenue are inequitable in principle, inasmuch as they provide for the interests of the Government, without regard to those of the subjects, and forbid the interference of the courts of justice to determine the fairness of the decisions of the collectors as to the amount of revenue assessed by them. The officers of revenue are vested with multifarious powers, being authorised in some cases to act as magistrates and also as civil judges, and thereby led at times to mingle together their fiscal and judicial functions, while many of their duties are left to be performed by irresponsible subordinates, who make use of their delegated powers to practise every species of extortion. The management of the revenue may be simplified by having, as has been recently done, but one Board for all branches of the revenue, with a sufficient number of members, both European and Native, who may go into the interior on circuit by rotation, and thus do away with the office of commissioner of revenue for a number of districts, which is shown by experience to be unnecessary under the present arrangements. The Board and the collectors of revenue should be divested of all judicial powers on the principle embodied in the preamble of the Regulation II. of 1793. The collectors of revenue should have deputies under them, according to size of district and extent of business. The salary of the office should be reduced, with reference to the relief afforded by the separation of revenue and judicial offices.

Works of utility.

34. That though the revenue raised by the Company, both from the land and from other sources, far exceeds what was drawn from the country by its Mahomedan rulers, a very inadequate portion of it is devoted to improvements in the means of land or water communication. On the contrary, the funds which are raised expressly for providing the means of such improvements, such as the ferry funds and the tolls on rivers and canals, are usually carried to the credit of the Government. Accumulations of those funds, to the extent of several lacs, still remain in the public treasury, unappropriated to their specific purposes. Your Petitioners therefore submit that the funds in question, at the disposal of the Ferry Fund Committees, should be expended on local improvements, subject to the approval of Government, and also that judicial fines in the criminal department should be added to those funds. In the event of a surplus, after providing for necessary works of utility, a portion thereof may be placed at the disposal of the Government for general purposes.

Education.

35. That no provision has been made by the Company's Government on a suitable scale for the education of the natives. The sum authorised by Parliament to be expended on educational establishments was for years unappropriated. Since the establishment of the Committee of Public Instruction, several colleges and other institutions have been established in various parts of the country, partly with the public money and partly with the aid of endowments and other funds derived from private resources. But the education of the mass of the people has as yet been completely neglected, a sufficient indication of which will be found in the fact, that the total sum expended by the Government for the colleges and institutions in the Lower Provinces does not exceed three lacs per annum. Your Petitioners submit that the diffusion of education in the country, which can only be successfully attained through

Appendix D.

through the medium of the vernacular languages, should no longer be neglected. They further submit that the university plan proposed by Mr. Cameron, late president of the Committee of Public Instruction, (in the Committee's Report for 1845–46,) should be established in each presidency. The plan provides for the admission of those who receive degrees in the law and other departments to practise at the bar of the Supreme and Sudder Courts, and to be engineers in the Government service, and so forth. But it should be modified so as to provide for educated natives entering the medical service, on the same footing with persons who have hitherto been sent out as assistant surgeons by the Court of Directors. An express rule on the subject is necessary, as it is well known that the young men educated at the Calcutta Medical College, who obtained diplomas after examination in London, failed, notwithstanding the recommendations of several eminent persons, to obtain that position in the medical service, which they were entitled to from their qualifications and the declaration in the Charter Act.

Ecclesiastical establishment.

36. That the provisions in section 89 and other sections of the Charter Act, for providing an ecclesiastical establishment expressly for the advantage of British subjects, are out of place among the arrangements for the government of British India. That government is for a mixed community, the members of which are of various and opposite sects, and the majority is composed of Hindoos and Mahomedans. It is therefore manifestly inexpedient that the Government should have any connexion with the appointment of the ministers of any religion. All sects should accordingly be left to support the ministers of their respective religions in the manner they deem most suitable. Your Petitioners do not object to the appointment of chaplains to the European regiments that are sent out to this country, as is done in the United Kingdom, nor to the appointment of a chaplain-general in each presidency for the government of the chaplains, but to the support of bishops and other highly paid functionaries, out of the general revenues of the country, for the benefit of a small body of British subjects. They submit, accordingly, for the consideration of your Right honourable House, the expediency of discontinuing the connexion of the Government with the ecclesiastical establishment; and in order that this may be done at an early date, they suggest that the cost of these establishments be charged to those civil and military servants at each presidency town or station who enjoy the benefit thereof; and that an increase be made to the allowances of those servants to enable them to meet the additional expense imposed on them by this arrangement, but without being continued to their successors, who should be left to bear this expense among others incidental to their position in this country.

Your Petitioners, having thus briefly enumerated the points which they deem worthy of the consideration of your Right honourable House, in connexion with the Charter of the East India Company, now on the eve of expiry, and which, so far as they depend on questions of fact, they are prepared to support by evidence whenever required, humbly pray that your Right honourable House will be pleased to make such arrangements, for the government of British India, as to your wisdom and justice may seem fit.

And your Petitioners, as in duty bound, shall ever pray.

PETITION, complaining of certain Grievances, and praying for the Improvement of the Government of India, of Newcastle and Gateshead Commercial Association.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The Petition of the Newcastle and Gateshead Commercial Association,

Showeth,

That, as it is intended to submit to Parliament some measure for the future Government of India, your Petitioners record their dissatisfaction with the limited extent of our commerce with that country, and the little progress made in the development of its varied resources.

That your Petitioners are of opinion,

Firstly. That it be regarded as the imperative duty of the Government of India to promote the cultivation of the soil, and to remove all obstacles which impede the progress of industry.

Secondly. That beyond making useful experiments, the Government should not be permitted to becomecultivators, manufacturers or traders.

Thirdly. That the Government be compelled to expend a portion of the revenues collected in India in the development of the resources of the country, as well as to afford every facility for its profitable occupation; that with this view, such public works should be

be promoted as are calculated to facilitate intercourse with, or improve the physical condition of, the population, to increase the production of cotton and other valuable raw materials, as also to encourage a system of general industry.

Fourthly. That 10 per cent. of the revenues of India be applied to the public works above alluded to, such as the construction of trunk lines of railways, the formation and improvement of roads and bridges, the deepening and other improvement of rivers, the formation and care of reservoirs and canals, the erection of piers, and construction of harbours, breakwaters, lighthouses, and all other engineering agencies required in a civilized and commercial country, under the control of a Board of Works, nominated jointly by the Imperial Government and the Indian Executive.

Fifthly. That prompt attention be paid to the removal of evils now existing in India consequent upon the uncertainty of the due administration of justice and the prevailing ignorance of the people.

Sixthly. That an annual detailed report on all East India affairs should, as was formerly done, be laid before Parliament by a Minister of the Crown.

Your Petitioners commend these propositions to the favourable attention of your Honourable House, and humbly pray that they may have statutory effect in any legislation for the future Government of India.

And your Petitioners will ever pray, &c.

For and on behalf of the Association.

E. Wilson Challoner,
Chairman.

PETITION, praying that in any Legislation for the future Government of India, Provision may be made for its internal Improvement and the carrying on of Public Works in that Country, of the Master Cutler and Cutlers' Company of Sheffield, under their Common Seal.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The Petition of the Master Cutler and the Cutlers' Company of Sheffield and Hallamshire, in Meeting assembled.

Showeth,

That Her Majesty's Ministers, having announced an intention to submit to Parliament, during the present Session, some measure for the future Government of India, your Petitioners are anxious to record their dissatisfaction with the limited extent of our commerce with that country, and their regret that so little progress has been made in the development of its rich and varied resources.

That your Petitioners are of opinion that, in any enactment for the future Government of India, the following suggestions should be adopted:

Firstly. That it be regarded as the imperative duty of the Government of India to promote the cultivation of the soil, and to remove all obstacles which impede the progress of industry.

Secondly. That beyond making useful experiments, the Government should not be permitted to become cultivators, manufacturers, or traders.

Thirdly. That in conducting their financial operations, the Government should be forbidden to become purchasers of any kind of produce on their own account, or to receive by hypothecation, produce purchased by any other party.

Fourthly. That the Government be compelled to expend a portion of the Revenues collected in India in the development of the resources of the country, as well as to afford every facility for its profitable occupation; that with this view such public works should be promoted as are calculated to facilitate intercourse with, or improve the physical condition of, the population, to increase the production of cotton and other valuable raw materials, as also to encourage a system of general industry.

Fifthly. That 10 per cent. of the revenues of India be applied to the public works above alluded to, such as the construction of trunk lines of railways, the formation and improvement of roads and bridges, the deepening and other improvement of rivers, the formation and care of reservoirs and canals; the erection of piers and construction of harbours, breakwaters, lighthouses, and all other engineering agencies required in a civilized and commercial country.

Sixthly. That the application of the portion of revenue allotted to useful public works be under the control of a "Board of Works," established and conducted in India, the members of which should have full, extensive, but defined powers, and be nominated jointly by the Imperial Government and the Indian Executive.

 Seventhly.

Appendix D.

Seventhly. That the Government should give every facility for the permanent occupation of land by removing the objections so often urged to a fluctuating land-tax, by encouraging the purchase, for cultivation, of the waste and other lands of India, and by giving such certainty of tenure as will ensure the safe application of capital to the universal cultivation of the soil.

Eighthly. That prompt attention be paid to the removal of evils now existing in India, consequent upon the uncertainty of the due administration of justice, and the prevailing ignorance of the people.

Ninthly. That an annual detailed report on all East India affairs should, as was formerly done, be laid before Parliament by a Minister of the Crown.

Your Petitioners commend the foregoing propositions to the favourable attention of your Honourable House, and humbly and earnestly pray that the same may have statutory effect in any legislation for the future Government of India.

And your Petitioners will ever pray, &c.

MICHAEL HUNTER, Master Cutler. (L.S.)

PETITION for Repeal of the Act No. XXI. of 1850, of the Legislative Council of India, and of certain Regulations which interfere with the Enjoyment by the Hindoo Nation of their ancient Religion and Customs.

To the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the HINDOO Inhabitants of BENGAL, BEHAR and ORISSA, for themselves and the other HINDOO Inhabitants of the said Provinces,

Humbly showeth,

THAT your Petitioners and their Hindoo fellow-countrymen of the above-mentioned Provinces are greatly aggrieved in the enjoyment of their ancient laws and customs, in regard as well to rights of inheritance and property, as to religion, by an Act of the Legislative Council of India, being Act No. XXI. of 1850, intituled, "An Act for extending the Principle of Section 19, Regulation VII. of 1832, of the Bengal Code, throughout the Provinces of the East India Company," (a copy of which Act they annex to this their humble Petition); and having, by petition and memorial, and every means in their power, first endeavoured to prevent the passing of the said Act, and subsequently to procure its disallowance by the Honourable the Court of Directors, but without success, your Petitioners earnestly appeal to your Lordships against the said Act for such relief and redress as it may be in the power of your Lordships to give, and as the circumstances of the case may appear to require.

2. That from the Title and Preamble of the said Act, it might be supposed that the Act is a mere local extension to the other territories of the East India Company of a Regulation which was established in the year 1832 for Bengal; but that such is not the case, as your Petitioners will presently show.

3. That your Petitioners are advised and believe that the intention of the said Regulation was merely to protect from loss or forfeiture of property persons who should conscientiously change their religion, and especially such natives of India as should embrace the Christian religion. But the said Act, beside having this object, to which they object, for the reasons hereinafter given, extends to other objects not contemplated, as your Petitioners believe, by the authors of said Regulation.

4. Your Petitioners think it may be necessary to premise, for the information of your Right Honourable House, that all property of Hindoos, according to Hindoo law, descends, in case of intestacy, from the ancestor to the heirs, subject to the condition, that these shall, on the death of the former, make the necessary funeral oblations, and perform, during their lives, the periodical rites and ceremonies enjoined by Hindoo law and religion for the deceased line of ancestors; and the Hindoo's confidence in meeting death, and hope of a happy state after this life, depend on his assurance that this condition will be religiously and faithfully performed: and, by a just logical consequence, the Hindoo law confines the right of inheritance to such persons as are willing and able to perform, or join in performing, the said condition.

5. That

5. That by Hindoo law there are many other rights, and not merely relating to property, but also to other enjoyments, the possession and continuance of which depend on the performance of conditions derived from morality and religion; and in this pervasive connexion between private right and religious and moral obligation consist the vitality and strength of the Hindoo social organization: it is the common bond by which society has been preserved from dissolution during several periods of war, anarchy and convulsion, and is preserved in the present day under British rule.

6. That the said Act strikes at the foundation of this system of property and obligation, and that your Petitioners earnestly implore the attention of your Right Honourable House to a brief analysis of the said Act, which they offer with a view to demonstrate its extensive operation: on an analysis, it appears that it deals with certain persons and certain rights. The persons, in the words of the Act, are (1), persons renouncing the communion of any religion; (2), persons excluded from the communion of any religion; (3), persons deprived of caste. And in favour of these three descriptions of persons, the Hindoo law is to the following extent repealed; viz., that it shall cease to inflict on them any forfeiture, (1) of rights, (2) of property, and (3) that it shall cease in any way to impair or affect any rights of inheritance. Your Petitioners are advised and believe that these words, "rights," "property," and "rights of inheritance," though jurisprudentially ill selected and illogically arranged, comprise the whole body of civil and religious rights with which Hindoo law in any way deals in the case of the previously specified persons; and that the said designations of those persons comprise the whole body of persons whom Hindoo law regards as offenders in any way against Hindoo morality, law or religion. It is hardly necessary for your Petitioners to point out the great difference between these three classes of persons; in the first class the Christian convert may be reckoned, as he is a person renouncing the communion of the Hindoo religion; but persons who are excluded for other reasons besides that of embracing another religion, and, still more, persons who may, by Hindoo law, be deprived of caste, include persons guilty of all shades, from the faintest to the deepest of immorality and crime. On this plain analysis, therefore, your Petitioners humbly and confidentially say, that by the said Act every barrier which religion and law and custom have raised in the interest of Hindoo society is weakened or broken down.

7. Your Petitioners trust that they may, without abandoning their broad and general objections to the said Act, submit an illustration of the manner in which it may be made to operate on Hindoo social and family relations. A Hindoo widow is entitled, by Hindoo law, to maintenance out of her husband's or father-in-law's estate, and residence in the family house, if there be one; and if she has had an only son, who has died childless, she would be entitled to the inheritance, in the place of her son, of a third part; for example, if the estate was the joint estate of three brothers, her husband having been one, and if living as a joint family at the time of his death, she would be entitled to residence in the family mansion. According to Hindoo law, she would be liable to be deprived of caste by many kinds of immorality, say, for example, prostitution, if on being called to repentance and penance, she persisted in them; and, as a consequence of being deprived of caste, she would lose the said right to maintenance and right of inheritance: but by the said Act these rights are preserved to her notwithstanding. If her husband's brother were to sue for a partition, thereby recognizing the right given to her by the Act, she would still remain in the family mansion, in juxta-position with the virtuous matrons of the family, and their children and grandchildren, in apartments allotted to her under the partition, and by the Act made inalienably her own. One more illustration: a religious Hindoo having an only son, looks to that son as his assurance that those religious rites will be duly performed, on which he believes his salvation, and that of his immediate ancestors, to depend. If the son becomes a Christian, or, from any other cause, is deprived of caste, the father is entitled by Hindoo law to adopt another son, who would, by the same law, take the inheritance. The Act in question, by severing the inheritance from the adoption, and securing it to the original son, virtually and practically annuls the Hindoo right of adoption.

8. That it would be impossible for your Petitioners adequately to describe the manner in which the said Act may operate on Hindoo social relations: but the above illustrations are selected from a great variety which might be given, and they show, as your Petitioners submit, that the said Act is of a tendency subversive of the interests of morality and religion.

9. That, in the opinion of your Petitioners, the said Act involves a breach of faith on the part of Government towards the Hindoo nation, a persistence in which will affect the honour and glory of the British Crown. The first acquisition of the British in India having been made by or in the name of the East India Company, your Petitioners can only appeal to the Acts and declarations of that body in support of the above proposition; and these Acts and declarations have uniformly held out to the Hindoos the promise of the establishment of Hindoo law for Hindoos, and of their being made secure in the enjoyment of their ancient usages and religion. By such declarations and promises, the British Government has gained the confidence and allegiance of the Hindoo people, and that the said Act is inconsistent with them. That such was the early policy of the East India Company is attested by every respectable historian. That the administration or practice of the Government was in accordance with this, its professed policy, may be proved by authentic traditions, and is in the recollections of men still surviving a now by-gone generation, and is, besides,

Appendix D.

besides, strongly evidenced by the missionary literature of the present day, which is constantly endeavouring to bring obloquy on the officers of Government of former days for having respected the religion, laws and usages of the people; and your Petitioners beg to add, that, although the policy alluded to preceded all legislation, and was long maintained independently of legislation, and had a much wider scope than any legislation on the subject, it is fact supported by legislation. In Bengal, 1793, and in Madras in 1802, Regulations of Government were passed by which the Hindoo laws were established here, as the laws to be followed in all suits regarding succession, inheritance, marriage and caste, with regard to Hindoos, and the same in 1781 was intended by Parliament to be made the law of the Supreme Court for the natives of the Presidency towns. Referring, therefore, to this long and uniform course of policy, administration and legislation, your Petitioners feel warranted in considering the said Act as a violation of their established rights as a people whose virtually distinct nationality has been recognized by the British Crown, contrary to the good faith which the British Crown will maintain.

10. That your Petitioners are also advised, that the said Act is beyond the power and competence of the Legislative Council; but that, inasmuch as its legality cannot be disputed in the Courts of the East India Company, your Petitioners are remediless, except by the aid of Parliament.

11. That your Petitioners, having compared the said Act with the Regulation of which it professes to be an extension, beg your Right Honourable House also to compare it with the measure originally proposed prior to the said Act by the Indian Law Commission, and sanctioned by the Government. And, for the purpose of enabling your Right Honourable House to form a comparative judgment, your Petitioners beg to premise a brief narration.

In 1845 an Act was proposed by the Indian Law Commission, and published in draft by the Indian Government, for the purpose of establishing a substantive law of the place, under the name of the *lex loci* for the numerous classes in India, being neither Hindoos nor Mahomedans, respecting whom it was doubtful what kind of law applied to them. By the provisions of the proposed Act, as your Petitioners are advised, converts from the native to the Christian religion would have been placed under the *lex loci*, and by three sections (a copy of which is annexed to this Petition), provisions were alleged to be made, on the principle of the Regulation of 1832, for persons who should renounce, or be excluded from, the communion of any religion, meaning, as your Petitioners understood, natives who should become Christians. In the various Petitions and remonstrances of the Hindoo community against the measure alluded to, the Secretary of Government finally replied, by the following paragraph, in a public and official letter, par. 35: "It is the intention of Government, for the more convenient arrangement of the new law, to remove the other sections from the *lex loci* Act, and place them in a separate Act." The Hindoo community thereupon expected that the obnoxious law would be passed, but passed as proposed, and substantially in its integrity. The separate Act alluded to is Act XXI. of 1850; but it is not composed of the said three sections, and is not substantially the same measure; but, on the contrary, is in some respects new, and it more extensively outrages the feelings of the Hindoo people. Moreover your Petitioners would particularly point out to your Right Honourable House, that of the three proposed sections, one was restrictive, and to the effect, that the new law should not be specifically enforced, when it would be likely to outrage the religious feelings of any party against whom the courts of justice might be called on to apply it. The Act XXI. of 1850 contains no such restriction, nor even the qualification contained in the Regulation of 1832, by which it was provided that that measure should be carried out in conformity with "justice, equity and good conscience." And in considering this statement, your Right Honourable House will not fail to remark this important fact, that the much milder measure originally proposed was, in the opinion of the Indian Law Commission, adapted (as in fact it did) to outrage the feelings of the Hindoos, and was not a fit law to be passed without checks and restrictions.

12. That your present Petitioners are the inhabitants of three different Provinces, and, by reason of some local differences between the Hindoo law of Bengal from that of Behar and Orissa, they are not all necessarily affected by the said Act in the same manner. In Bengal, but not in Behar or Orissa, nor generally in the rest of India, the Hindoos may legally make a will of the whole of their property, and thereby they have the power of securing it to those who will respect its consecrated uses and the trusts to which it is subject for the benefit of ancestors. But all your Petitioners alike regard the Act in its entirety as subversive of Hindoo society.

13. That the objection of your Petitioners being to the general operation of the said Act, your Petitioners are disinclined to urge objections merely to its details; but they are struck with its great want of equity. The rights, or supposed rights, of its favoured classes have been abstractedly considered, and no regard has been paid to the eleemosynary and beneficiary interests which are recognized by all Hindoo families in the actual use and enjoyment of property: such interests ought to be specially provided for in any new distribution of property. Your Petitioners also beg incidentally to note, that, as Hindoo law will cease, to a great extent, to apply to the classes provided for by the said Act, a new body of law is required for the said classes, but is not provided by the said Act, and the omission may become extensively inconvenient to the Hindoo community.

14. That

14. That your Petitioners do not feel called upon to defend their ancient laws and religion: they are of great antiquity; they have been for ages the inheritance and possession of a hundred millions of people, and are so to the present day, and generally they remain in perfect harmony with the faith and feelings of the people. Your Petitioners, therefore, confidently submit, that these laws ought not to be altered or superseded in any one article, except at the imperative call of humanity, justice and reason united; and your Petitioners beg most respectfully and earnestly to add, that no such grounds exist for the said Act, and that your Petitioners regard the said Act as merely an encouragement to the spirit of religious proselytism, but at the same time going much beyond that object. Your Petitioners are not insensible to the peculiar case of such of their countrymen, especially the young and inexperienced, as have been gained over to professing to be Christians. But your Petitioners submit, their becoming Christians does not entitle them to the benefit of special legislation. Their desertion of the religion of their country opens to many of them a career of fortune in which their brother Hindoos cannot follow them, and no converts from the faith of a nation were ever so favourably circumstanced as are Hindoo Christians.

15. In conclusion, your Petitioners humbly pray your Lordships to take this their Petition into your most serious consideration, and to take such measures as to your Lordships may appear expedient to procure the repeal or annulment of the said Act of the Legislative Council of India, and said Regulation of the Bengal Government, and as also may be necessary to preserve to the Hindoo nation the enjoyment of their ancient religion and customs.

And your Petitioners shall ever pray.

SCHEDULE TO PETITION,

REGULATION VII. 1832.

VIII. SUCH part of clause 2, section 3, Regulation VIII. 1795, enacted for the province of Benares, which declares that "in causes in which the plaintiff shall be of a different religious persuasion from the defendant, the decision is to be regulated by the law of the religion of the latter, excepting where Europeans or other persons not being either Mahommedans or Hindoos shall be defendants, in which case the law of the plaintiff is to be made the rule contained in section 15, Regulation IV. 1793, and the corresponding enactment contained in clause 1, section 16, Regulation III. 1803, shall be the rule of guidance in all suits regarding succession, inheritance, marriage and caste, and all religious usages and institutions that may arise between persons professing the Hindoo and Mahommedan persuasions respectively.

IX. It is hereby declared, however, that the above rules are intended, and shall be held to apply to such persons only as shall be *bonâ fide* professors of those religions at the time of the application of the law to the case, and were designed for the protection of the rights of such persons, not for the deprivation of the rights of others. Whenever, therefore, in any civil suit the parties to such suit may be of different persuasions, when one party shall be of the Hindoo and the other of the Mahommedan persuasion, or where one or more of the parties to the suit shall not be either of the Mahommedan or Hindoo persuasions, the laws of those religions shall not be permitted to deprive such party or parties of any property to which, but for the operation of such laws, they would have been entitled. In all such cases, the decision shall be governed by the principles of justice, equity and good conscience; it being clearly understood, however, that the provisions shall not be considered as justifying the introduction of the English or any foreign law, or the application to such cases of any rules not sanctioned by those principles.

THE three Sections of the LEX LOCI ACT, originally proposed by the Honourable Mr. CAMERON and his Colleagues of the Law Commission, in favour of Converts from the Hindoo Religion.

XI. PROVIDED always, that no Hindoo or Mahommedan shall, in consequence of any thing in this Act contained, by renouncing the Hindoo or Mahommedan religion, lose any rights or property, or deprive any other person of any rights or property.

Appendix D.

XII. And it is hereby enacted, that so much of the Hindoo and Mahommedan law as inflicts forfeiture of rights or property upon any party renouncing, or who has been excluded from the communion of either of those religions, shall cease to be enforced as law in the Courts of the East India Company.

XII. Provided always, and it is hereby enacted, that if, in any case falling within the provisions of sections 11 or 12, it shall appear to the Court that the application of any of those provisions would outrage the religious feelings of any party against whom the Court is called upon to apply them, the Court shall state the facts of the case, and submit the statement for the decision of the Court of Appeal, who shall decide whether the provisions shall be applied or not, and with what modifications, and whether any and what compensation shall be given to any party for the loss which such party may sustain if the said Court of Appeal should decide that the said provisions should not be applied.

Act No. XXI. of 1850.

An Act for extending the principle of Section 9, Regulation VII. 1832, of the Bengal Code, throughout the Territories subject to the Government of the East India Company.

Whereas it was enacted by section 9, Regulation VII. 1832, of the Bengal Code, that "whenever in any civil suit the parties to such suit may be of different persuasions, when one party shall be of the Hindoo and the other of the Mahommedan persuasion, or where one or more of the parties to the suit shall not be either of the Mahommedan or Hindoo persuasions, the laws of those religions shall not be permitted to operate to deprive such party or parties of any property to which, but for the operation of such laws, they would have been entitled:" and whereas it will be beneficial to extend the principle of that enactment throughout the territories subject to the government of the East India Company; It is enacted as follows:

I. So much of any law or usage now in force within the territories subject to the government of the East India Company, as inflicts on any person forfeiture of rights or property, or may be held in any way to impair or affect any right of inheritance, by reason of his or her renouncing, or having been excluded from the communion of any religion, or being deprived of caste, shall cease to be enforced as law in the courts of the East India Company, and in the courts established by Royal Charter within the said territories.

PETITION for Amendment of the present Law for the Government of India.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the Liverpool, East India, and China Association, by their Deputy Chairman;

Showeth,

That your Petitioners are extensively engaged in trade with Her Majesty's possessions in India.

That your Petitioners, therefore, feel deeply interested in obtaining for the people of that country an Administrative Government, calculated to develope and extend the great commercial and agricultural resources of that important part of the British Empire.

That at this particular juncture, when the future Government of India is under the consideration of Parliament, your Petitioners humbly desire to draw the attention of your Lordships to several important matters, which, in the opinion of your Petitioners, are highly essential to the good government and prosperity of its people.

That your Petitioners cannot too forcibly impress upon your Lordships the vast importance which they attach to the necessity of providing improved means of internal communication for produce and merchandize to and from the sea-ports of India, the want of which, your Petitioners humbly submit, forms one of the main obstacles to the extension of trade, and to the increased cultivation of the land: And your Petitioners respectfully suggest, that it should be made imperative upon the future Government of India to make and keep in repair good and sufficient roads, bridges, water-tanks and works for irrigation at all times adequate to the requirements of trade and the public convenience; and to grant lands and otherwise to afford every encouragement for the formation of docks, quays and other appliances for the accommodation of all descriptions of shipping and craft, wherever such accommodation may be required.

That

That your Petitioners consider that the land-tax or rent paid by the cultivators of the soil in all parts of India is excessive; that it is injurious to the commercial and agricultural interests of that country, and highly detrimental to the moral and physical condition of the people.

That, owing to the imperfect system of collecting the tax, it is more injurious to the cultivators and less productive to the revenue than it might be if it were based upon sound financial principles; and that it is, therefore, in your Petitioners' opinion, expedient not only that the revenue system be improved, but that such laws be passed as may effectually protect the cultivators from oppression on the part of the collectors of taxes, zemindars and others, and enable them to recover from the proprietors of the land compensation for unexhausted improvements.

That your Petitioners humbly desire, also, to represent for the consideration of your Lordships the serious injury which private trade has long sustained from the mode resorted to by the Honourable the East India Company, of making advances of money in India upon the consignment of produce to this country for sale, a practice which your Petitioners have from time to time deprecated, and which is now all but universally condemned.

That your Petitioners, therefore, humbly submit that the East India Company should be expressly restrained from again making advances upon the hypothecation of merchandize, unless on the ground of necessity shown, and that if such case arise, notice of at least two months shall be publicly given in this country before application be made to the Board of Control to sanction the transmission to India of orders to make remittances in the objectionable mode now complained of.

That your Petitioners further desire to direct the attention of your Lordships to the state of the currency in India. Previous to the year 1835, gold equally with silver was a legal tender. In that year, an Act of the Governor-general in Council abolished the gold currency, and established the Company's silver rupee as the only standard of value throughout British India. In 1841, the Indian Government issued a proclamation, in virtue of which gold coined in the Company's mints was received at the public Treasuries in liquidation of the demands of Government; this practice, which mitigated the inconvenience of the abolition of the gold standard, remained in force till the 1st January of the present year, when the Indian Government issued a notification that the receipt of gold at the public Treasuries was prohibited. Your Petitioners are not aware that these interferences with the standard of value in India were necessary, and they believe they have been productive only of disadvantage. Viewed in connexion with the late enormous addition to the supply of gold, your Petitioners apprehend that the suppression of the gold standard may, if persisted in, lead to serious evils. The great importance of an abundant currency, free as much as possible from liability to disturbance and sudden fluctuation, is beyond question. Now, it is evident that occasional large imports of gold into India, acting on an exclusively silver currency, and causing a corresponding export of the latter, may at times occasion sudden and great contractions of the amount of the circulating medium, and so induce the disastrous consequences which always accompany such occurrences. These hazards would be obviated by re-establishing gold as a standard of value. It has been urged that this would be an injustice to the Indian fundholder. The fallacy of such an objection is manifest from the fact that, as yet, gold and silver in the general markets of the world retain their long-established relative values. The experience of France, the United States, and the majority of European States, shows that no disadvantage results from a double standard of value.

That your Petitioners also humbly invite the serious consideration of your Lordships to the necessity of providing for a better administration of justice throughout India. The need for vigorous reforms in this department is now so generally recognized, that any further notice of the subject here is, your Petitioners conceive, unnecessary.

That your Petitioners also desire to direct the attention of your Lordships to the generally defective state of the police in India, and of the necessity of such a re-organization of that body as may afford increased protection to person and property, and remove the imputation of inefficiency and untrustworthiness.

That your Petitioners have also to draw the notice of your Lordships to the want of promptitude in obtaining in India redress and decisions in cases of complaint, and in matters connected with the Customs and other departments of the public revenue; and generally, your Petitioners are informed and believe, that the delays complained of are in many cases owing to the necessity of making references to this country for the sanction of the home authorities. Your Petitioners, therefore, humbly submit that it is highly important to adopt such measures as shall effectually remedy this serious disadvantage.

That, considering the variety and magnitude of the reforms (some of which your Petitioners have herein alluded to) so urgently called for in the future administration of the general Government of India, your Petitioners believe that the accomplishment of so great a task must be hopeless, unless measures be adopted to strengthen the hands and stimulate the action of the Government in India. In what mode that may best be accomplished it is for the wisdom of your Lordships to determine; but if no fundamental change shall be made in the existing arrangements for the Government of India, your Petitioners would with all humility

Appendix D.

humility suggest the expediency of extending to India, in some form, the immediate authority and supervision of the Board of Control.

Your Petitioners, therefore, humbly pray that in legislating for the future Government of Her Majesty's possessions in India, your Lordships will be pleased to take into consideration the various matters herein set forth, and to adopt such measures thereon as to the wisdom of your Lordships may seem fit.

And your Petitioners will ever pray.

Signed, on behalf of the Liverpool East India and China Association, by

GEORGE MALCOLM,
Deputy Chairman.

Liverpool, 13 May 1853.

PETITION, praying that in any Arrangements for the future Government of INDIA, Provision may be made to permit English Salt to be imported into all Parts of British India upon the same Terms and Conditions as other Goods and Manufactures, of Inhabitants of NORTHWICH.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of the Town and Neighbourhood of NORTHWICH, in the County of CHESTER;

Showeth,

THAT on an average of several years past, not less than 600,000 tons of salt have been annually made from brine and rock salt in the salt districts of Cheshire, giving employment, by land and water, to at least 5,000 able-bodied men.

That a constant supply of salt, of good quality, and at reasonable prices, is of the utmost importance to the extensive population of British India, particularly the lower classes; but at present they are almost entirely dependent upon the article manufactured in that country, which is impure in quality, uncertain and insufficient in supply, and costly in price.

That if the salt manufactured in England could be imported into India upon the same terms as other produce, a sufficient quantity could be sent from the salt districts of Cheshire to meet the wants of that country, pure in quality, certain and sufficient in supply, and low in price.

That under no circumstances should any tax or duty be imposed on salt but in proportion to its value, compared with other articles of commerce taxed by the East India Company.

That the East India Company have imposed an import duty upon salt equal to 7 *l.* a ton, which of itself is not less than twenty times the value of the article, whereby the supply has become a monopoly in the hands of that Company.

That the imposition of such duty is contrary to the commercial policy of this country, and unjust and oppressive towards the Native population of India; and thereby the manufacturers of salt in Cheshire and elsewhere are shut out from the markets of that extensive country, or nearly so.

That the opening of the trade would materially benefit such manufacturers and others within such districts; and your Petitioners believe that the great saving in the cost of salt would lead to a much greater demand by the Native population of India for the cotton and other goods of English manufacture, and thereby greatly benefit the whole commercial and trading interests of this country.

Your Petitioners therefore pray, that in any Charter to be now granted to the East India Company, provision may be made, that English salt may be imported into all parts of British India, upon the same terms and conditions as other goods and manufactures.

And your Petitioners will ever pray, &c.

LEE P. TOWNSHEND, Chairman, Magistrate for Cheshire.
J. H. HARPER, Magistrate for Cheshire.
&c. &c. &c.

PETITION

PETITION for the discontinuance of all Government Grants of Money for the Support of IDOLATRY in India.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The Petition of the undersigned Ministers of the Gospel, resident in CALCUTTA;

Humbly showeth,

THAT your Petitioners, being members of various Protestant denominations, and most of them having resided several years in India, are deeply interested in the progress of divine truth in this country, and strongly participate in the conviction, now generally entertained, that the connexion of the Government of India with the Hindu and Mahommedan religions is both wrong in itself, and an obstacle to that spread of Christianity which your Petitioners are aiming to secure.

That your Petitioners willingly and thankfully acknowledge, that much has been done in recent years to release the Government from its active share in the ceremonies of those religions, and to leave their disciples to maintain them in their own way and from their own resources. They admit with pleasure that many of the most prominent evils which once existed have now been abolished; that oaths are no longer administered in the Company's Courts in the names of Hindu idols; that salutes in honour of those idols have been discontinued; that the pilgrim taxes at Gaya, Allahabad, Puri, and Dharwar, have been abolished; that in the Presidencies of Madras and Bombay, the Revenue Collectors are no longer active agents in maintaining idol worship; that the temple-lands are no longer under their charge; that they have ceased to appoint Brahmans to pray for rain in seasons of drought; to summon villagers to draw the idol cars; to sanction officially with their presence and authority the actual ceremonies of Hinduism, and to present clothes, jewels and fruit to idols in the name of the Honourable East India Company.

That your Petitioners believe that much still remains to be done before the Government of India shall be finally and fully severed from the religious systems which it has so long sustained. Under the arrangement which was reported in August 1849, Committees of Natives, or respectable individuals, have in numerous cases been substituted for the Revenue Collectors in the management of the shrines which the Government supported; but in some respects, the former direct connexion between those shrines and the Government has only been replaced by an indirect one, calculated to a certain extent to hide the real character of the alliance.

That your Petitioners have learned from the return made by the Government of India in 1849, that, at the present time and under the arrangement recently adopted, more than 16 lakhs of rupees, or 160,000 *l.*, are annually paid by the Government of India for the support of temples and mosques of Brahmans and Moulvies, of which about seven lakhs are expended in the Bombay Presidency, and eight lakhs in that of Madras. That, while your Petitioners admit that to some of these grnats the temples referred to have a strong claim (such grants being made in commutation for the revenue of lands still under the charge of Government, and which cannot be surrendered because their boundaries are unknown), they feel convinced that searching inquiry would prove the claims of others to be more than questionable. That the fact is well known that on several occasions when new territories have been annexed by the Government of India, and it has been found that certain voluntary contributions have been customarily made for religious objects by the former authorities, these donations have been continued by the East India Company, under the belief that treaties which guaranteed protection to the rights of the Natives of those territories, bound the Government also to perpetuate those gifts, although, being originally voluntary, they are so still, and ought to be withdrawn, on account of their injurious tendency. That in illustration of these remarks, your Petitioners can point to the celebrated temple of Parboti at Poonah, which was a mere private temple of the Mahratta Peishwa, and to the College of Brahmans at the same place; which two establishments, with other minor temples in that Collectorate, receive an annual gift from the East India Company of more than 10,000 *l.*

That your Petitioners have been informed that a custom formerly existed in the Agra Presidency, by which the Government of India presented addresses of honour to Mahommedan Cadis on the occasion of the Eed festival, and that such gifts have been commuted into money payments, and are continued to the present day.

That your Petitioners have heard on good authority that another custom has prevailed, by which, when the Governor-general and other high officers of state in travelling have approached celebrated Native shrines, offerings have been there presented which were paid out of the public purse, and that at Amritsir, Jwálá-mutshi and Tarantarow in the Punjab, such offerings have been presented within a recent period.

That your Petitioners have never observed any mention of these offerings in the Parliamentary returns upon the subject of Idolatry in India, and are aware of other cases which have in like manner been passed over. That for a long period a poojari or Brahman priest was employed, at an annual expense of about 200 *l.* (or 2,000 rupees) in the Salt Agency, at Hidgelee, whose duty it was continually to worship Lakshmi, the Hindu Goddess of Fortune, in the empty salt golahs, in order to secure the Company's trade against loss. That

Appendix D.

at the opium agency in Behar, a special gift was made to the Brahmans to secure good fortune on the sailing of the first opium boats every season towards Calcutta. That in the money advances at the beginning of the opium season, certain payments to Brahmans were regularly included; and that a similar practice existed in the salt agency at Hidgelee. That your Petitioners believe that these practices continued for a long period unknown to the heads of the respective departments; that they were never specified in the Parliamentary returns, being reckoned in the salt and opium agencies as regular current expenses. That these practices were recently brought to light, and then suppressed; and that your Petitioners mention them now, because they believe that searching inquiry would probably bring to light other practices of a similar kind.

That while solemn affirmations have been substituted for the oaths formerly taken by Hindus and Mussulmans in the Company's Courts, the law which permits this variation from former custom has not yet been extended to the Courts established by Her Majesty's Charters in India, and that oaths on the Koran and oaths in the names of Hindu deities continue to be administered in those Courts as in former days.

That your Petitioners have heard with regret, that notwithstanding the positive orders of the Court of Directors, the residents at Baroda and Nagpore have, within recent periods, recognized and attended in their official capacity idolatrous festivals celebrated by the Hindu Rajas of those territories, and that in the latter case such attendance was doubly painful from the fact that, in 1847, the acting resident at Nagpore, Captain Ramsay, compelled the Missionaries to give up to the Raja a young convert who had applied to them for baptism, on the ground that under the Nagpore treaty with the East India Company, he could not protect the Raja's "discontented subjects;" and your Petitioners remind your Right Honourable House that this view of the obligations of the Government of this country was formally sanctioned by the Government of India.

That your Petitioners believe that in the Madrissa College in Calcutta, and in various Sanscrit Colleges endowed by Government, the authoritative precepts, doctrines and ceremonies of the Hindu and Mahommedan religions are taught at the expense of the Government; that the explanations and reasons that have been offered respecting such an anomalous proceeding are insufficient to defend it; and that, in the case of these colleges, one of the most offensive and direct forms of the Government connexion with false religions exists, notwithstanding the expressed wishes of the Court of Directors and of your Right Honourable House, intact to the present time. Your Petitioners are aware of the value of these colleges as philological institutions, promoting the cultivation of the ancient and modern languages of India, and it is not, therefore, to this use of them that the objections above made have referred.

That your Petitioners have reason to believe, that by a despatch to the Governor-general in 1847, the Court of Directors prohibited their public servants from taking part in missionary undertakings, and thereby conveyed to many minds the impression that they would view with disfavour all who should not see it to be their duty to be entirely neutral in the great contest of Christianity in this country, and that your Petitioners consider such a prohibition, in contrast to the Court's own alliance with false religions, with feelings of surprise and sorrow.

Further, that in respect to one of the great obstacles to that full and complete disconnexion of the Government of India from the Hindu and Mahommedan religions for which they pray, your Petitioners would draw the special attention of your Lordships to the Regulations of the Indian Government respecting endowments for the support of those religions. That by Regulation XIX. of 1810, in Bengal, and Regulation VII. of 1817, in the Presidency of Madras, such endowments are recognised as "pious and beneficial;" the care of them is vested in the Boards of Revenue as "an important duty of Government;" and questions connected with them have hitherto been placed not under the jurisdiction of the ordinary civil courts, but under the officers of those Boards. That your Petitioners consider that several weighty reasons may be urged against those Regulations, inasmuch as they constitute the Government the trustee of such endowments, and treat them as if they were matters of great benefit to society, and of pecuniary interest to the Revenue authorities; inasmuch also, as to enforce them fully would bring the Government into more intimate connexion with those religions than they have ever yet held; and chiefly, because they now stand in the way of those very arrangements which the Government of India has recently been making for disconnecting itself altogether from those endowments. In the Madras Presidency, for instance, the collectors have been forbidden to interfere in the management of mosques and temples, yet the Regulation which commands them to interfere still continues on the statute book. While, at the same time, should breaches of trust in their management occur, the civil courts refuse to take them into consideration because that Regulation is unrepealed. That this anomalous state of things was brought to the notice of the Supreme Government of India by the Government of Madras several years ago, and that they have provided no new Regulations to meet the difficulty.

That your Petitioners feel the need of a searching inquiry into all these subjects. They fear that while public attention has been specially directed to the Temple of Juggernath, and to the donation which it annually receives, other matters not less important have continued almost unnoticed, although they have the authority of one of the members of the Supreme Council in India (Sir H. Maddock, in his published Minute of 1844) for saying, that "the Temple of Juggernath is only one of innumerable Hindu Temples receiving endowments from the Government of India."

That your Petitioners hailed with lively gratitude the draft of an Act which the Supreme Council

Council of India published in the "Calcutta Gazette" upwards of a year ago, for the final severance of Government from the Temple of Juggernath, and that your Petitioners hoped that a measure so wise and just, demanded alike by sound policy, public justice and Christian principle, would speedily be passed into a law; but that now they fear that the views and intentions of the Government of India have changed, and that the passing of this Act is extremely uncertain.

Your Petitioners, therefore, without dwelling on the very solemn subject of the evils of this connexion between a Christian Government and the shrines of false religions, respectfully pray your Right Honourable House to take into consideration such further measures as may be required for completing the entire severance of the Government of India from the Hindu and Mahommedan religions; to institute a searching investigation into the allegations of this Petition, and to have laid upon the Table of your Honourable House a copy of the despatch of 1847 above referred to, with a statement of its origin and intended aim. Your Petitioners especially pray, that your Right Honourable House will be pleased to call for a complete, distinct and detailed statement of every grant now directly or indirectly paid to the above religions, in every district and province of the Continent of India under English rule; to institute a rigid scrutiny into the ground and title upon which each one of these grants is claimed, whether it be to mosques or temples, to Brahmans or Moulvies, to idolatrous ceremonies, or the education of the young in the authoritative Shastras of those religions; and to cause every revenue official in India to report minutely on every fact that brings the Government into any connexion whatsoever with Mahommedanism and Hinduism in the district under his charge. They pray also that your Right Honourable House will direct the Government of India to repeal the two Regulations which your Petitioners have referred to, and to enact in their stead a Regulation applicable to all the Presidencies of India, by which the endowments of the Hindu and Mahommedan religions shall, like all other trusts, be placed under the jurisdiction of the civil courts.

And lastly, your Petitioners will ever pray, that the spirit of wisdom and of justice may be abundantly granted to your Right Honourable House, by that great and gracious God, who has said that "Righteousness exalteth a nation, but sin is a reproach to any people."

CARAPIET CHATER ARATOON, Baptist Missionary.
W. S. MACKAY, Missionary of the Free Church of Scotland.
&c. &c. &c.

PETITION, praying that the MONOPOLY of SALT exercised by the East India Company in India be abolished; that, if it should be considered still expedient to levy a Tax on this Necessary of Life, that it should be in such a form as to press less heavily on the Poor of India than the present System of Taxation.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the BRISTOL CHAMBER of COMMERCE,

Showeth,

THAT, in the opinion of your Petitioners, the Salt Tax imposed by the East India Company is cruel and oppressive towards the people under their rule, impolitic in a financial point of view, unjust and injurious to the manufacturing, commercial and shipping interests of this country, and inconsistent with the present policy of the Legislature.

That it appears from information which has been made public, that the cost of salt to the East India Company is at the rate of One farthing per pound; that the Company add to that a profit at the rate of Three farthings per pound, and that the Company suffer the dealers to traffic in the article, so that eventually the cost to the consumer is about Two-pence farthing per pound, or Twenty-one pounds per ton. That the tax imposed by the Company on salt imported into India is equivalent to the profit of Three farthings per pound, which they add to the contract price of the salt manufactured for them in India; and the operations of the dealers enhance the price of the imported article to the consumer to the amount already stated or thereabouts; and a monopoly is thus established, by means of which an extortionate price is obtained from the poor ryot of India for this prime necessary of life.

That the first cost of salt in this country does not exceed one-sixth that manufactured in India; that the price to the consumer here is but about Thirty shillings per ton, instead of Twenty-one pounds per ton, as in India; and if it were necessary to abolish the Salt Tax at home some years since, it appears to your Petitioners that the millions of Her Majesty's subjects of India have a much stronger claim for its remission in their case, wretchedly poor as they are, and essentially necessary as salt is to their daily sustenance, and to the prevention of disease in such a climate.

That it appears from statistical accounts which have been published, that the quantity of salt consumed in India is less than one-half that consumed in this country, relatively to the populations, it being about Twelve pounds per head per annum in the former, and Twenty-five pounds per head per annum in the latter.

That,

Appendix D.

That, but for the before-mentioned tax and monopoly, salt manufactured in England could be exported and sold in Calcutta at from Forty shillings to Forty-four shillings per ton, and the price would be reduced by the breaking up of the monopoly to about one-tenth the present rate to the consumer in India.

That the abrogation of the monopoly would tend greatly to benefit and give employment to the home manufacturers of the article, who are capable of producing an unlimited quantity, and also to the commercial, the shipping and the manufacturing interests generally.

Your Petitioners therefore pray that your Right Honourable House will be pleased to take such measures as will ensure the abolition of this monopoly, in any legislative measure which may be brought before your Right Honourable House during the present Session of Parliament, relative to the East India Company's Charter; or, if your Right Honourable House should deem it expedient to continue some tax on the article, that you will be pleased to place such restrictions on the Company and the dealers as will ensure the poor ryot of India having the full benefit of any reduction in the amount of the tax which you may be pleased to require.

Signed, on behalf of the Bristol Chamber of Commerce,

JAMES BUSH,
Chairman of the Committee.

PETITION, complaining of certain Grievances under which they, and the Community to which they belong, labour in the existing state of the Law, and praying for Relief, of East Indians of the Presidencies of CALCUTTA, MADRAS and BOMBAY, at present residing in London, at a Meeting held at the Residence of JOHN B. PHAROAH, Esquire, Ennore House, Lower Tulse-hill, Brixton.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of East Indians of the Presidencies of CALCUTTA, MADRAS and BOMBAY, at present residing in London,

Most humbly showeth,

1. THAT your Petitioners are natives of India, and members of a numerous and increasing class of subjects of the Crown of Great Britain, at present sojourning in this country.

2. That the community to which your Petitioners belong are chiefly descended from European fathers, and from natives of India on their mothers' side, and from intermarriages between the offspring of such connexions.

3. That your Petitioners' community forms a distinct one throughout the continent of India, and dates its existence long prior to the establishment of British rule there.

4. That, ever since Great Britain has acquired permanent possession in India, your Petitioners' community has increased in number more rapidly.

5. That your Petitioners, although at present remotely situated from their native land, feeling the deepest solicitude in the well-being and every particular touching the ordinary interests in life of their countrymen, cannot, therefore, refrain from manifesting their own heartfelt sense at the present juncture as regards the public administration of the affairs of British India.

6. That your Petitioners consider it imperative upon them to submit to your Right Honourable House the following grievances; and, although it may be urged that they have been virtually and positively removed by the East India Company's Charter of 1833, your Petitioners, nevertheless, beg leave most respectfully to assert, that in spirit or operation, that Charter, in relation to such grievances, remains up to the present time a dead letter.

7. That your Petitioners' community in India is entirely destitute of any rule of civil law. Those who are beyond the jurisdiction of Her Majesty's Supreme Court of Judicature, and who may be temporarily or permanently residing in the interior provinces, are there made amenable to the Mahomedan and Hindoo Criminal Laws.

8. That although a right of appeal is sometimes allowed to the superior tribunal, designated the Sudder Nizamut Adawlut of the East India Company, yet such is the extraordinary power it possesses, that it can increase punishment without allowing the common privilege of producing further evidence.

9. That as British subjects, and more especially as professing the Christian religion, it is extremely repugnant to the feelings of your Petitioners' community to submit to the Mahomedan or Hindoo code in the provincial courts.

10. That by Regulation VIII. of 1813, enacted by the East India Company, your Petitioners' community are expressly classed among native subjects of the British Government, and, consequently, subjected to all the disabilities of their Hindoo and Mahomedan fellow-subjects; and by Regulation III. of 1818, enacted by the local Government, they have been deprived of the protection of the Habeas Corpus Act, besides being liable to be taken up on mere suspicion, punished and imprisoned as state prisoners, without the slightest chance of legal protection, or hope of release, since the only channel of appeal is the local Government;

Government; and thus placing their property, their liberty, and even their lives, at the mercy of every public functionary who may happen to be vested with power or authority.

11. That, by Regulation III. of 1821, your Petitioners' community is subjected, in all cases, to be dealt with as Hindoo and Mahomedan natives of the lowest grade, by being fined, imprisoned, and subjected even to corporal punishment, not only at the discretion of the European Judges or Magistrates of the East India Company's service, but even of the Mahomedan and Hindoo officers of justice.

12. That the criminal code to which your Petitioners' community have been subjected is felt by them, not only as a direct outrage to the religion they profess, but as an act of positive personal degradation and gross injustice.

13. That, although the Act of the last Charter, namely, of 1833, throws open all offices of trust and emolument in the civil, military and other branches of the East India Company's service, "without distinction of caste, colour or creed;" yet the door to preferment is literally closed against your Petitioners' countrymen, when many of them are perfectly qualified to fill them; and they continue to be superseded by Europeans, quite inefficient both from their standing and inexperience, as well as from their want of general knowledge with respect to the manners, habits and notions of the people of the country.

14. That the Charter of 1833, not having realized the expectations of your Petitioners' countrymen by a fair distribution even of many of the subordinate appointments under Government in the gift of heads of departments, and which are almost invariably conferred on others, will be borne out by the fact of the paucity of your Petitioners' body holding any such places in all the Presidencies of India.

15. That your Petitioners cannot refrain from objecting to the *primâ facie* evidence recently given by some officials of the East India Company's Service before the Committee of your Right Honourable House, in terms no less unmeasured than disparaging, as they are galling to the feelings of your Petitioners and of their community.

16. Your Petitioners think it needless to cite minutely instances of the general efficiency or fitness of their community towards being raised to superior offices equally with Europeans, beyond the facts that General Jones, who was at the head of the Bombay Army in the years 1803, 1804 and 1805; General Lang, of the Madras Army; and the distinguished and celebrated Colonels Skinner and Gardener, and Colonel Stevenson, a late Quartermaster-general of the Bengal Army, belonged to the class of your Petitioners; and that the few who had been admitted prior to the prohibitory regulation, and others now belonging to the Military and Civil Services of the East India Company, were, and are, sufficiently reputed for their high integrity, superior qualifications and extensive information is abundantly testified by the Chronicles of India, the public testimony invariably borne in their favour by such eminent statesmen as the late Sir John Malcolm, the late Lord Metcalfe, the late Lord William Bentinck, the late Sir Alexander Johnston, and a host of other public characters, and is further attested by the several highly respectable and eminent members of our community who have adorned the bar, the pulpit and the faculty, and who are now heads of several banking and mercantile firms of the first respectability, and constitute living proofs of the general respectable capacity of your Petitioners' community, which must be well known to your Right Honourable House, and cannot require any further or lengthened illustration.

17. That your Petitioners finally, most humbly, and with the greatest deference, venture to state, that were the feelings, opinions or wants of their community consulted, they would one and all exclaim and demand that legislators should also be chosen from among their own body as well as from the various classes or tribes of the people, to fairly represent their diverse interests in the Councils of the future administration of India, as pre-eminently qualified by their local knowledge. And, although millions of the population of India have hitherto most patiently submitted to be taxed, neglected, misrepresented and misgoverned by an oligarchy, chiefly chosen by an unquestionably objectionable constituency of both sexes, and that, too, composed of a fractional atom of the great bulk of the talent, experience and respectability of the English nation, your Petitioners beg leave most respectfully to assure your Right Honourable House, that, whether the reins of the future Government of India are to continue to be vested in the hands of the East India Company, or to be placed immediately under the supreme control of Her Majesty's Government, your Petitioners do not feel solicitous of any change whatever beyond the desire of perfect equality of privileges, and justice being both practically and theoretically meted out to them, not only as British subjects, but as inheritors of their native land, and who, for loyalty and attachment, stand second to none in the British Empire, and who are still, and ever will be, found ready to defend the Empire of Great Britain.

And your Petitioners, in submitting the foregoing statement of their grievances to the serious consideration, wisdom and justice of your Right Honourable House, as in duty bound, will ever pray, &c.

Signed, on behalf of a Meeting of East Indians of the Presidencies of Calcutta, Madras and Bombay, at present residing in London, held at the Residence of John B. Pharoah, Esquire, Ennore House, Lower Tulse-hill, Brixton, near London,

JOHN WOLLASTON, Chairman.

Appendix D.

PETITION, complaining of certain GRIEVANCES, and praying for Relief, of East Indians, Inhabitants of CALCUTTA and the Provinces subject to the Presidency of FORT WILLIAM, in BENGAL.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the undersigned, East Indians, Inhabitants of CALCUTTA and the Provinces subject to the Presidency of FORT WILLIAM, in BENGAL,

Humbly showeth,

THAT your Petitioners are of the class called East Indians, being persons of mixed European and Asiatic parentage, and their offspring by intermarriages. A Petition from the same class was presented to your Honourable House in the year 1830, in anticipation of the Parliamentary investigations into the affairs of India which were expected on the expiration of the Act* by which the East India Company then held the possession and government of the British territories in India.

2. That their Petition of 1830 set forth in detail divers disabilities and grievances under which they were labouring, and showed that they were deprived of certain legal rights and privileges to which they were entitled as the descendants of Englishmen and as Christians, whereby they were placed as a body, although subjects of the British Crown, to which alone they recognize their allegiance to be due, in a position of social and political degradation.

3. That the Act† passed in the year 1833, for continuing the Government of the British territories in the East India Company, contained provisions designed and calculated to remove the disabilities of which the East Indians complained; but the just and humane intentions of the British Parliament have been in a great measure frustrated by the provisions in question of the Act of 1833 being wholly or partially disregarded in practice, and thus several, and the most serious, of the grievances which formed the subject of representation 20 years ago, to this day remain unredressed.

4. That the Act of 1833 provided for the formation of an Indian Law Commission, with a view to the enactment of "such laws as may be applicable in common to all classes of the inhabitants of the said territories." The Law Commissioners, in a letter addressed to the Governor-general in Council, dated the 3d October 1840, made the remarkable declaration, that "the Christian subjects of the British Crown, and of other nations coming into British India, not being Mahomedans, are, independently of all statutes and treaties, exempt from the operation of the Hindoo and Mahomedan laws;" but, notwithstanding this strongly expressed opinion of the Law Commissioners, and although practical relief was proposed by them in a draft Act, called the *Lex Loci* Acts, a body of laws "applicable in common to all classes of the inhabitants," has not been passed; and your Petitioners continue at the present time to be excluded in a greater or less degree from a community of legal rights with their British-born fellow-subjects, and of legal privileges with the natives. The Englishman claims and enjoys the protection and immunities of the law of England, the Hindoo has the benefit of the Hindoo law, and the Mahomedan of the laws of Mahomed; but your Petitioners, though Christians, assimilated in education, habits and opinions to Europeans, are still entirely destitute of all rule of civil law, and a large proportion of them still liable, out of the local jurisdiction of the Crown Courts, to be dealt with according to the degrading institutions of the Koran.

5. That another grievance, from which your Petitioners suffer, and which formed a subject of complaint in the East Indians' Petition of 1830, is their exclusion from superior covenanted offices in the service of the East India Company. The Act of 1833 contemplated the removal of this unjust exclusion, and declared "that no native of the said territories, nor any natural-born subject of his Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the said Company;" but this wise and just principle, laid down by the British Legislature, for the most part remains a dead letter as respects your Petitioners, because no adequate provision has been made for working it out. Superior offices, held by members of the covenanted service, are practically inaccessible to persons of your Petitioners' class. They are kept down in a perpetual state of official subordination, from which they cannot emerge, as, under the existing system, no amount of merit, nor any length of faithful service, or ability and experience in office, can avail. A gulf divides the subordinate from the dominant

* 53 Geo. 3, c. 155, "An Act for continuing in the East India Company, for a further Term, the Possession of the British Territories in India," &c.

† 3 & 4 Will. 4, c. 85, "An Act for effecting an Arrangement with the East India Company, and for the better Government of His Majesty's Indian Territories till the 30th day of April 1854."

nant class, which the former is not allowed to pass. In many cases experience and efficiency must submit to be ruled by a covenanted superior, possessing no previous knowledge or experience, while individuals of the lower branch of the public service, even when filling the highest post attainable by them, and after a lifetime of servitude, are less liberally remunerated than covenanted officers at the very commencement of their career. The natural consequence of this state of things is, that it not only directly tends to check honourable ambition, and discourage and degrade such of their number as belong to the Government service, but likewise operates most injuriously in regard to the moral and social position of others not so employed, and who are independent of the service of the State, by identifying them with a class virtually held in a state of degradation, and branded with permanent disqualification and proscription.

6. That your Petitioners, while subject to all the disqualifications under which the natives labour, are denied some of the advantages which have been extended to the latter. The educational arrangements of the State, made of late years for the benefit of natives, totally ignore the existence of the East Indian body, who, as a class, owe their being to the establishment of British supremacy in the East, and whose home is India. Colleges and schools have been provided for the education of Hindoos and Mahomedans respectively, but not for the Christian portion of the population. Even in the single public institution, the Medical College, the benefits of which Christians share with Hindoos and Mahomedans, an invidious distinction is observed, by which stipendiary studentships are open to natives alone. The advantages of an institution of the nature of a national University your Petitioners, in common with the natives, do not possess; but your Petitioners desire to record their opinion of the incalculable good that would flow to all classes of the Indian community were such an institution organised on an efficient scale.

7. That the grievances and wants above glanced at, being embraced in the Petition of the British and other Christian inhabitants of these provinces, which has already been presented to Parliament, your Petitioners abstained from a second time bringing their case distinctly to the notice of your Honourable House. In consequence, however, of misrepresentations, highly injurious to the entire body of East Indians, contained in certain evidence, more particularly that of Mr. W. W. Bird, given before the Committee of the House of Lords on Indian affairs, your Petitioners, debarred as they are from the opportunity of submitting counter evidence, are induced to solicit the attention of your Honourable House with the special object of furnishing an explanation, on the basis of well-authenticated facts, such as they hope will destroy the effect of those misrepresentations.

8. That the misrepresentations which your Petitioners desire to correct are mostly vague, general, intangible, and not easily reducible to distinct and definite propositions, but they have all one common tendency to disparage your Petitioners' class, and depict them to your Honourable House as deserving of no consideration. Your Petitioners will confine their explanation to only a few of the most explicit of those hostile statements.

9. That it is not true that the number of the East Indians is decreasing; on the contrary, there is every reason to believe it has more than doubled in the course of the last 30 years. The number has not only progressively increased according to the natural laws of population, but the growth of the East Indians, as a class, is accelerated by the annual influx of Europeans to this country, either belonging to the army, or as adventurers, many of whom form matrimonial alliances with East Indian females, so that the class of East Indians is in this way constantly receiving accessions to its numbers. The state of things in India is unfavourable to all statistical inquiry and information, and your Petitioners regret they have it not in their power to obtain a return of the actual number of which their class is composed. On the other hand, however, your Petitioners are not aware of any assignable cause why, while every other community is on the increase, the East Indians alone should be declining in number, and they confidently affirm that no person of any intelligence or local experience in this country believes that such is really the case.

10. That it is not correct that the East Indians are chiefly employed in the offices of Government as mere writers and copyists. Persons of their class are filling every grade of office open to them under Government with advantage to the State and credit to themselves, whether as uncovenanted Judges, Magistrates, Collectors or Superintendents, and heads of offices, &c. In every profession, trade and calling, in every honest and honourable pursuit, East Indians are to be found; as clergymen and missionaries, medical practitioners, lawyers, advocates, mariners, engineers, surveyors and artists, schoolmasters, apothecaries, merchants, artisans, manufacturers, shopkeepers, agriculturists, printers, musicians, accountants and clerks. When employed on account of others, whether the Government or private companies, private firms or private individuals, they have, by their intelligence, ability, honesty and industry, generally gained the commendation and confidence of their employers; while those following independent professions, trades or other callings, have, by their energy and assiduity, secured for themselves a fair measure of success. Although persons of your Petitioners' class did, 20 and 30 years ago, find extensive employment in Government offices, the increase of their numbers and the advance made by the natives in English education, as well as the free access to this country now allowed to Europeans, have conspired to disperse East Indians over all the various walks of life accessible to them; and it is a fact which they desire specially to bring to the notice of your Honourable House, that, notwithstanding the competition both of European and Native, and in spite of every disadvantage and disqualification under which they are placed, persons of your Petitioners' class still maintain a position of respectability, and a character for intelligence and usefulness—a fact which is generally admitted by those who, knowing them well, are best qualified to form an opinion on the subject.

11. That

Appendix D.

11. That in the injurious evidence in question, your Petitioners have been taunted with the statement that few of their number have been very eminent; but your Petitioners submit that it is given to very few persons of any class of men whatever, however high their privileges or advantages, to be "very eminent." Individuals are born to hold eminent positions, or are made eminent by circumstances, or earn eminence for themselves, by their talents and exertions; but whole classes and communities, comprising every conceivable degree of education and social gradation, are never "very eminent," or the contrary, in the mass; and the East Indian body certainly form no exception to the universal rule. Nor is the attainment of a lofty eminence necessary to entitle your Petitioners, or any class, to be protected from unjust exclusions, disqualifications and grievances, such as the East Indians suffer from. But a constrained admission contained in the evidence itself would go to show that some of your Petitioners' class have reached eminence; while your Petitioners confidently make the statement that, notwithstanding the legal disabilities of their position and the prejudicial effects of the proscription inflicted upon the entire body under the present system of Government, did the scope and limits of a Petition admit of it, your Petitioners might adduce numerous examples to show that East Indians have in past times, as in recent years, achieved "eminence" in the various pursuits of life in which they have embarked.

12. That it is incorrect that the East Indians "are not respected either by the Natives or the Europeans, generally speaking:" generally speaking, the reverse is the case. The members of the covenanted services, indeed, evince small consideration or respect for either East Indians or Natives, or even for Europeans out of the pale of those services. But an East Indian on the same footing, and possessing the same authority with a European, is not less respected by the Natives than is the European; while, on the other hand, whenever Europeans and East Indians are brought together in society on terms of equality, they mutually treat each other with cordiality and respect. The Petition of the British and other Christian inhabitants of Calcutta and the provinces was originated and signed by, as it embodied the united representations of, both Europeans and East Indians—a fact which may serve to show the cordiality that in general subsists between the two classes. An East Indian in any office, profession, trade or business, is not less respected than a European in the same position. An East Indian, who is a minister of the Gospel, or a missionary, does not command less respect than is ordinarily paid to the cloth. An East Indian physician does not in a less degree enjoy the confidence and respect of his patients, whether European or Native. An East Indian, as a legal practitioner, is not less trusted or respected by his clients. East Indians, as uncovenanted Judges, Deputy Collectors, heads of offices, &c., receive a due amount of respect from both European and Native. An East Indian superior has not less deference shown to him by his European or Native subordinate. East Indian masters do not command less obedience from their Native workmen or domestic servants. Thus in all the various relations of life, the fact receives abundant and constant exemplification that East Indians, as such, do not experience the want of respect from either Europeans or Natives spoken of in the disparaging evidence laid before your Honourable House.

13. That it is not true that East Indians are "not to be depended upon," still less that, as a class, they are inferior in personal character to an equal number of any other class. The facts and the circumstances already set forth for the consideration of your Honourable House, render any arguments on this point superfluous. But were it otherwise—were the class to which your Petitioners belong sunk in the degradation of immorality and crime, and did they figure prominently in the annals of the police of the country, it might, in a great measure, be ascribed to the situation in which they have been placed by the Government, and should rather act as an inducement for ameliorating their condition by the abolition of class distinctions, than furnish an apology for perpetuating a prospective policy.

14. That your Petitioners having thus brought to the notice of your Honourable House the points which they, as a class, feel to be grievances caused by the existing state of the law and the administration of the country, and which they are prepared to support by evidence, whenever required, in correction of the imperfect, erroneous and highly injurious information laid before Parliament; and adverting to the utter hopelessness of their long-standing grievances being redressed, except by the special interposition of your Honourable House on their behalf, pray for such relief in the matter as to your Honourable House may seem just and adequate. In particular, they pray that your Honourable House will be pleased to devise measures for removing the disabilities of your Petitioners' legal position, and for giving practical effect to the wise and liberal provision of Act 3 & 4 Will. 4, c. 85, that no disability to hold any office shall attach to the class of Her Majesty's subjects to which your Petitioners belong, a provision that has heretofore been rendered nugatory by the mode in which patronage is exercised under the existing system.

And your Petitioners, as in duty bound, shall ever pray.

A. Imlach.
John T. D. Cameron, L. R. C. P., Head Master, La Martinière.
&c. &c. &c.

PETITION,

PETITION, complaining of certain GRIEVANCES, and praying for Relief, of Members of the BOMBAY ASSOCIATION, and other Native Inhabitants of the Presidency of BOMBAY.

To the Right Honourable the Lords Spiritual and Temporal of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the Members of the BOMBAY ASSOCIATION and other Native Inhabitants of the Presidency of BOMBAY,

Showeth,

1. THAT your Petitioners have watched with much anxiety and interest the proceedings of your Right Honourable House, and its Committee, on the subject of Indian affairs, as bearing on the legislation about to be proposed for the future government of India.

2. The Report of your Committee, which sat during the Session 1852, having reached India, has been examined and analysed by your Petitioners with much care; and they observe, that the Members of that Committee have been so far satisfied by the evidence up to that time laid before them, that they direct the attention of your Honourable House to the favourable tenor of the evidence with respect to the operation of Act 3 & 4 Will. 4, c. 85, so far as regards the administration of the Government of India by the East India Company, as trustees under the control of the Crown.

3. The witnesses examined before the Committees of both Houses of Parliament amounted, in all, to 25 persons, five of these having been examined before both Committees: they consisted of Lords Ellenborough, Elphinstone, Hardinge; Sir T. H. Maddock, Sir G. R. Clerk and Sir George Pollock; Messrs. Bird, Willoughby, Reid, Millett, Melvill, Cameron, Robertson, Mill, M'Leod, Pringle, Hill, Shepperd and Prinsep; also General Macleod; Colonels Sykes, Taylor and Alexander; and Captain M'Gregor.

4. The whole of these gentlemen, excepting the three noblemen above-named, and Captain M'Gregor, have been more than 30, and some of them 40 years in the service of the East India Company; and, without desiring to cast the slightest disparagement on their testimony, still it must be borne in mind, that they are all to a great degree in the position of interested witnesses speaking indirectly to the favourable results of their own services, or at least of a system in which they have all borne a part. The majority of these gentlemen having spent the greater portion of their lives under the existing Government, and having freely participated in the advantages enjoyed by the covenanted service of the East India Company, have naturally become prepossessed in favour of things as they are; and although, upon a general view of the subject, the administration of the Indian Government may present to your Honourable House results very favourable to the honourable intentions of those to whom it has been confided by the Crown of England, still this conclusion leaves wholly untouched the important question, whether the main provisions of an enactment passed in the year 1834, investing the Rulers of India with powers almost irresponsible and despotic, and intituled, as it truly was, "An Act for effecting an Arrangement with the East India Company," constitute the best scheme, or all that is needed for the good government of these vast territories—all that the governed can justly demand, or should be reasonably satisfied with, in 1854.

5. Your Petitioners may well leave in the hands of your Honourable House, without observation from them, the construction of the Home portion of the Indian Government, only asking that it may be so framed as naturally and easily at all times to secure within it the services of the ablest and most experienced persons in Indian affairs; that it may be so simplified, that the people of India may know who really are their rulers, and who are responsible for measures of great importance, emanating from England. But with respect to the constitution of the local Governments, your Petitioners earnestly pray your Honourable House not to continue them as they exist, without a further and more searching investigation into their actual and daily operation of the existing system than your Honourable House now has, or is likely to have, before you, if the inquiries are to be so very general in their nature as they seem hitherto to have been, and are to be confined to the evidence of retired Indian official personages.

6. Your Petitioners rejoice to learn that an interest, and a spirit of inquiry respecting Indian affairs, have lately arisen in England, which have led to a mass of valuable information being placed before the public, of a nature that would never have reached your Honourable House from official lips, but which, nevertheless, your Petitioners respectfully would remark, deserves the utmost attention of your Honourable House, though it may form no part of the evidence collected by the Committee of your Honourable House, and may not be adverted to in their Reports. Your Petitioners may refer to many valuable papers published by highly competent persons now in England, very antagonistic to the interests of the East India Company, whose names, therefore, your Petitioners do not find amongst the persons summoned before the Committee to give evidence on Indian affairs; and they beg also to attract the attention of your Honourable House to a very valuable and instructive work recently published at Madras on the administration of justice in that Presidency, by George Bruce Norton, Esquire, Barrister-at-Law. As this gentleman is now at Madras, and cannot be

Appendix D.

be examined in England, your Petitioners have taken the liberty of annexing a copy of this work to their Petition, in the hope that your Honourable House will allow them, in this form, the benefit of that gentleman's testimony to the character of the administration of justice in Southern India—testimony which, however startling, is nevertheless unimpeachable, being based on the decisions of the Courts themselves; and your Petitioners regret to add, that the Courts of the East India Company in this Presidency are on no better footing, as regards judicial fitness and capacity, than those of Madras.

7. Your Petitioners are sensible that many of the evils which have hitherto retarded progress in India, can only be remedied through the medium of efficient and properly-constituted local Governments; and they look with confidence to your Honourable House giving this head of inquiry the fullest consideration.

8. Your Petitioners, speaking of the Government of their own Presidency, though they believe the remark to be equally true of the other Indian Governments, are of opinion that it is quite unequal to the efficient discharge of its duties, and that nothing but the impenetrable veil of secrecy with which even its most trivial acts are covered protects it from universal condemnation.

9. It consists of a Governor, a Commander-in-Chief, and two civil servants as members of Council. The business is conducted primarily by four Secretaries and two Deputy Secretaries, each Secretary having a separate department of his own, and being, in that, the adviser of the Governor; the latter, who, generally speaking, is without local knowledge or experience, is obviously in the hands of the Secretaries, and for the most part, from the mass of business to be despatched, compelled to adopt the minutes they place before him.

10. The Commander-in-Chief having the affairs of the Army to attend to, and not caring to trouble himself with the Civil affairs of the Presidency, with which he cannot be expected to be in the least degree acquainted, spends more than half his time away from the seat of Government, and enters the Council apparently merely to record his assent to the Minutes of the Governor. It has been stated in evidence before the Committee of your Honourable House, that it often happens that eight or ten boxes, full of papers on revenue and judicial matters, are sent to the Commander-in-Chief at one time, and that they have been returned from his house to the other members of the Government perhaps within one hour, allowing merely time for him to put his initials; and your Petitioners believe that it ever has been the case that the Commanders-in-Chief, though knowing nothing of the subjects in hand, have felt it their duty invariably to vote with the Governors.

11. The Civil Members of Council are not selected from the most able and distinguished of the servants of Government, though there have been some remarkable exceptions. The appointment is in the gift of the Court of Directors, and is always bestowed on some one of the senior members of the service about to close their Indian career. It is consequently canvassed for in Leadenhall-street, and falls to the lot of him who can command the greatest amount of personal interest with the members of the Court individually. A vacancy occurring but rarely, few members of the civil service can fill the appointment; and its gift is thus a matter of favour. They have no specific duties to discharge, and little or no responsibility; and as they may always be out-voted by the Governor and the Commander-in-Chief, they can scarcely be expected to take any prominent part in the current affairs of Government, indeed to give any very effective assistance, unless something out of the usual routine, or within the line of their past experience, should arise to excite their interest. The evil tendency of their position is, that, having no defined duty as a part of the Government, their own brief minutes, or their signatures, often put for the sake of conformity to those of others, carry with them a weight to higher authority, which should only attach to opinions deliberately formed, and the result of careful inquiry, made under official responsibility. The practical effect of a Government so constituted is, that for the most part each Secretary, in his own department, "is the Governor in Council." The Secretaries, with one exception, selected from the civil service, and generally, though not invariably, from its most able members, having passed their lives from boyhood on some one or more of the subordinate agencies of Government, are suddenly called upon to discharge the most onerous and important duties, for many of which their previous training does not at all qualify them; questions requiring for their solution a correct knowledge of the principles of finance, of political economy, of the systems of the country and of other countries, involving the rights and just expectations of classes of persons, and the cases and privileges of individuals with lighter matters crowd in rapid succession on them, and must be disposed of; and, however able and conscientious they may be, they have not the time to go through, with due care and attention, nor very frequently with the knowledge of the subject requisite to enable them properly to despatch the multifarious matters with which they are loaded. Government being thus undermanned, is necessarily compelled to throw off as much of its own duties as possible on the local officers, to act on their report as unimpeachable, and to shroud them in secrecy. The European local officers, on the other hand, scattered over the country at great distances from one another, and having large districts to attend to, far beyond their powers of supervision, and dependent to a very great degree on their subordinates, are compelled to dispose of the greater part of their business in a very imperfect manner; and their statements to Government, whether emanating from persons who it is known may be trusted, or from those in whose accuracy Government are aware no confidence can be placed, are, on system, accepted as equally trustworthy, and the official vindication of the acts of Government founded thereon. The necessary result of this system is, that the Government is one of first impressions; that, short-handed as it is, under the present system its chief difficulty, and its main object, is to keep down and despatch business; to despatch it well, if possible,

possible, but at all events to prevent it accumulating; that hasty superficial reports of local officers are, in regulating the conduct of Government, except on questions of money, of equal weight with those, the result of care and reflection. It is obviously necessary, therefore, to protect the acts of such a Government from public scrutiny and supervision, in order to preserve for it public respect; and the most rigid secrecy is consequently preserved in every department; so strictly is this enforced, that the members of the civil service are all under solemn oaths not to reveal anything connected with the business before them, and the Court of Directors have, even in modern days, noticed, with severe disapprobation, the publication of a very small portion of one of their despatches by, as it was supposed, a member of the civil service, relating to a suit at law with which he had been connected judicially. The same amount of secrecy is preserved in everything that comes before Government, whether it relate to a purely municipal matter, the establishment of a sailor's home, a principality, a jaghere, the conduct of a public officer, or hardship practised towards an individual, and even where wrong or injury are complained of by a large class of persons, or where merely private property is at stake, or the character and prospects of an individual are involved, still the same system prevails. If the parties against whom unfavourable reports have been transmitted by the local officers apply for copies, they are always refused; not the slightest opportunity is afforded them of correcting any misstatements that may have been made in these reports, and there consequently is, and naturally ever must be, a great inducement to resort to unfair means to procure that information from the records of Government which cannot be fairly obtained, but to which all the parties concerned are justly entitled, and which, on system merely, is withheld from them. The inevitable effect of this system is, that individual cases, occupying a large portion of the time of Government, the most cruel injustice, even with the best intention, is done. The individual concerned may have had a volume written against him behind his back—written with all the easy confidence of those who know that their statements will not be handed over to the party interested to reply to, and when the Presidency authorities consider matters sufficiently ripe, a few paragraphs, disclosing a small fragment of the case recorded against him, a tithe only of what he ought to be allowed to answer and explain, is sent to him, for such observations as he may desire to offer, and, on his reply to these, he is adjudged. It is difficult to exaggerate, or, on any more general view, fully to display the vicious operation of this system of Government. But it will be obvious to your Honourable House that, as a system, it is the very worst that could be devised, and the very last which good sense would indicate as adapted to strengthen British rule in India, by giving it a hold on the affections of the people. On the contrary, its obvious tendency is to engender and perpetuate amongst the young servants of Government an illiberal and despotic tone; to give full scope to the prejudices, the ignorance and the self-sufficiency of all; to discourage progress; to discountenance all schemes of improvement emanating from independent and disinterested sources, and not within the views of the officer to whose department they are referred, and to cramp all agricultural or commercial energy, all individual enterprise.

12. Your Petitioners, therefore, humbly entreat your Honourable House, in any new legislation which may be framed for India, to abolish councils as at present constituted, and in their place to create an useful and efficient Council, of which the Judges of the Supreme Courts, in judicial and legislative matters, and some of the European and native citizens, should form a part; also to put an end to that injurious system of secrecy, which at present is the ruling principle of vice in the Indian administration, and to allow the Council to call for the proceedings of Government and its local officers, except in cases in which the Executive shall declare that State policy requires secrecy to be preserved. Your Petitioners further ask, that on questions of great importance to individuals, and classes of persons coming up for the decision of Government, the valuable privilege of being heard by counsel be conceded to those who may be desirous of availing themselves of it in support of their interest. With these measures your Petitioners believe that it would be absolutely necessary to strengthen the hands of the Executive Government, and that it would be highly desirable that there should always be among the more prominent members some persons trained and experienced in the public offices of England, who can bring to the consideration of public affairs a more extended knowledge and wider views than are to be expected from those European gentlemen who have passed all their days from boyhood in the bad systems of this country, and know no other by which to compare and improve them.

13. Your Petitioners forbear to trouble your Honourable House with the details of such a change, which are of easy construction, if its propriety be once acknowledged; and they equally wish to avoid repeating what they have put forth in their former Memorial, already, as they believe, referred to the Committee on Indian Affairs; but they are anxious to recall the attention of your Honourable House to that narrow and injurious system which gives to those educated at Haileybury College a Parliamentary right "to supply the vacancies in the civil establishments of India." Your Petitioners believe that the existence of this exclusive service, bound together like the members of one family, is incompatible with a more open council, and an efficient and responsible discharge of public duties. At present the natives of this country, however respectable, trustworthy and qualified they may be, are excluded from the higher grade of judicial and revenue situations, and from the regular medical service, to which covenanted European servants sent out from England are alone appointed, such exclusion being impolitic, unjust and contrary to the letter and spirit of the 87th section of the Charter Act of 1834. Your Petitioners respectfully reiterate their prayer, that the invidious and unjustifiable distinction between the covenanted and uncovenanted services, which excludes the natives from the higher offices, be abolished, and that natives of India may

Appendix D.

may be allowed to fill all situations for which they may be qualified. By the adoption and practical operation of such a measure, a great stimulus will, your Petitioners feel convinced, be given to the cause of education and improvement in this country, a great deal of discontent will be removed, and inefficiency will be obviated. It is placed beyond controversy, by the testimony of official reports published by the local Governments, that the Grant Medical College at Bombay, and the Medical College at Calcutta, have recently produced as proficient and competent native surgeons and physicians as those sent out from England under "covenants."* Instead of admitting any of successful candidates into the regular medical service of Government, a new and distinct service has been created for them by the Indian Governments, the rank and emoluments of which are considerably inferior—a course which is calculated to lower this new medical service in the estimation of the public, and to perpetuate the distinction that has hitherto been preserved between Native and European agency, or uncovenanted and covenanted servants of Government. So rigidly is the line of separation preserved, that a native of India, named Dr. Chukerbutty, who recently left Calcutta to finish his medical education in England, where he greatly distinguished himself, and obtained the highest testimonials of proficiency, although recommended for an appointment as an assistant surgeon in the East India Company's medical service by the Right honourable Sir Edward Ryan and Mr. Cameron, gentlemen of eminent consideration for their past services, was, your Petitioners are informed, refused admission into the covenanted medical service by the Court of Directors, collectively and individually.

14. Your Petitioners cannot take leave of this important subject without requesting the favourable attention of Parliament to the suggestion made in their former Petition, with regard to the advisability of establishing a University or College, as proposed by that able and experienced servant of Government, Mr. Cameron, for the purpose of qualifying the natives for Government employ, of imparting profound and thorough judicial knowledge to native candidates for the bench, and of training up a superior and independent class of vakeels, or pleaders, who would elevate the character of the native bar, and be of great service in the efficient administration of justice in this country.

15. Your Petitioners would further ask, that, as regards the European servants of Government, a distinction, commencing in England, and preserved throughout, may be made between those who are destined to fill judicial offices in India and the executive officers of the Government; and that the former may be withdrawn from the operation of personal favour and individual patronage, and be selected, like the Judges in England, for their own merits and acquirements.

16. Your Petitioners believe, that if, whilst opening the highest judicial offices to the natives of this country, and fairly apportioning them between qualified natives and their European fellow-subjects, the office of Zillah Judge were thrown open to gentlemen of legal education, if no one were permitted to leave England for this purpose until twenty-six years of age, if a public committee, composed of four members named by the four Inns of Court, and two members by the Home Government, were appointed half-yearly to examine the candidates, selecting from them so many only as, according to the computed vacancies, were then required; if the course of examination, besides comprehending a knowledge of selected portions of the English substantive law, embraced the general principles of jurisprudence procedure, the law and constitution of India, and its modern history, a class of most able public servants to fill the office of Zillah Judge, and the higher grade, would be selected; and that a certain probation in India, ending with an examination of the candidates in two native languages, in the Hindoo and Mahomedan code, the local regulations, the tenures and customs of the country, would complete an education, and produce an efficiency, which would render the court of justice a blessing to the country, that would be heartily and gratefully acknowledged throughout the length and breadth of the land; and appellate courts, so constituted, would ensure to the English Government the firmest hold on the affections and interest of the people.

17. Your Petitioners, in their former Memorial, drew the attention of your Honourable House to the correspondence between the Board of Control and the Directors of the East India Company, contained in the 17th volume of the "Papers (printed in 1833, by order of the Court of Directors) respecting the Negotiation with His Majesty's Ministers on the subject of the East India Company's Charter;" and although well aware, from that correspondence, that they might justly have asked your Honourable House to discontinue the practice of periodically legislating for India, a practice exclusively connected with rights and privileges of the East India Company, put an end to by the arrangements made with them in 1833, still your Petitioners, not foreseeing the chance of arousing the interest and attention now bestowed on Indian affairs, petitioned your Honourable House to limit the period of existence of any future Government of India to ten years, but your Petitioners are now emboldened to ask your Honourable House not to debar them for any period of years from requesting a revision of what may be injurious in the coming India legislation; not to make them an exception to all British subjects in the distant colonies of the British Empire, who have all along been in the enjoyment of the privilege of approaching Parliament whenever the affairs of the colony have required imperial interference. It is simply necessary, Lord Broughton declared,

* *Vide* Appendix O. to the Report of the Grant Medical College for 1850–51. Dr. M'Lennan, Government Examiner and Physician-general, has publicly certified that, "as far as examinations can test fitness for engagement in medical and surgical practice, the graduates of the Grant Medical College have proved their fitness to as great a degree as I believe is ever done in Europe."

declared, in his speech in the House of Lords on the 1st March last, to pass an Act, providing for the best form of Government both in England and India, without limiting its duration to any number of years; an Act which, like any other statute, might, if deemed requisite, be modified, altered or repealed as occasion might require: and, carrying out the same principles still further, your Petitioners would respectfully observe, that it cannot be necessary to embrace all the subjects involved in the discussion of Indian affairs in one Act; and that the constitution of the Home Government, the constitution and powers of the several local Governments, the construction of a new judicial service, and each independent branch of inquiry, if made the subject of separate legislation, would, in all probability, receive more careful attention, and be more satisfactorily disposed of, than if the entire mass of Indian information be gathered together in one, and thrown into a single enactment.

18. Your Petitioners therefore humbly pray your Honourable House, that this Petition, like their former Memorial, may be referred to the Committee now sitting on Indian affairs, with a direction to them to have regard to its contents on any measures of legislation which the Committee may propose to Parliament; and that your Honourable House will be pleased, if necessary, to cause commissions to issue to disinterested and independent persons at the three Presidencies, to collect evidence on India as to the practical working of the systems of Government in operation; and that such Committees may be authorized to examine all Government servants of whatever rank, and to require the production of any of the records of Government, not connected with State policy, calculated to throw light on the subject of inquiry.

And your Petitioners, as in duty bound, will ever pray.

FUGONNATH SUNKERSETT.
BOMAUJEE HOMARJIE.
&c. &c. &c.

Bombay, 23 May 1853.

PETITION, praying that a thorough Inquiry may be made into all Points affecting the Welfare of INDIA, of MADRAS NATIVE ASSOCIATION, and others, Native Inhabitants of the Presidency of MADRAS.

To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble Petition of the MADRAS NATIVE ASSOCIATION, and others, Native Inhabitants of the Presidency of MADRAS,

Showeth,

1. THAT your Petitioners having read in the Parliamentary proceedings, as reported in the "Times" and other English newspapers, that Her Majesty's Ministry considers most of the subjects of their Petition "would be more properly left for the action of the local Government," your Petitioners beg to represent that the revenue system, against which your Petitioners have stated their strongest objections, was called into operation in consequence of the Fifth Report from the Select Committee on the Affairs of the East India Company, dated the 28th July 1812, and printed by order of the Honourable the House of Commons, which states, at pages 123-124—

"It appears to the Committee, from the examinations which they have made into the effects of the ryotwar principle of settlement throughout the modern possessions of the Company under the Madras Presidency, that it has greatly improved the situation of the cultivator, by limiting the bounds of the public assessment, and adjusting the actual demand on each person subject to such assessment, according to his ability to satisfy it, by relieving him from the oppressive exactions of the native revenue officers, and securing him in the protection of his property and rights. So favourable a change in their condition has necessarily excited a confidence among the ryots in the equity and justice of the Company's government; and this confidence has derived material strength from having periodically and frequently opened to them a ready and direct channel of communication and intercourse with the immediate representatives of Government on all matters connected with their interests and grievances, which has had the effect of binding them, as it were, to it, and of rendering them the real, instead of nominal subjects of the Company; while the natural consequences have been, that the ryots have received a new incentive to industry, cultivation has been gradually extended, by which an augmentation of the public revenue has been yielded, without an increase of assessment."

2. That this favourable opinion respecting the ryotwar was given at an early period of its trial on a small scale; and it appears, from the preceding paragraph of the Report, to have been derived from the opinion of three or four collectors, who had been instrumental to the introduction of the experiment, among whom was Sir Thomas Munro; but eight years afterwards—during which it had continued on an increasing scale, and in a modified or improved form, called field ryotwar—when Sir Thomas came out as Governor of Madras, he found it absolutely necessary, as stated in your Petitioners' former Petition, to reduce the amount of the assessment in the district in which ryotwar pressed lightest on the people, namely, the ceded districts: 25 per cent. on dry and wet lands, and 33 per cent. on garden lands. Sir Thomas

Appendix D.

Thomas died in India in the year 1827, at which period it was found that the public revenue from the land had then decreased to 42½ lacs, from a revenue of 57 lacs in the year 1807, a convincing proof that the new system up to that date had been a failure.

3. That your Petitioners have not the means of knowing the present revenue arising from the ryotwar; but they know that, under its operation, the ryots have been reduced to poverty and wretchedness; and your Petitioners pray that, as the Parliament has been the author of it, or that, at least, it has been established by its sanction—although in opposition to the opinion and wishes of the local authorities, who declared it to be contrary to the ancient national institutions, and unsuited to the condition and genius of the people—the same authority may now be the instrument of its abolition; not by acting upon the evidence of the Company's servants, taken in England, but by instituting a full and impartial inquiry into its merits and demerits, on the spot where it is in operation, and among and from the people who are suffering under its withering oppression.

4. That your Petitioners are convinced that by no other mode will your Right Honourable House be able to form a just and clear judgment on the question so momentous to the native subjects of the Crown in the Presidency of Madras; for, without reference in this place to the bias from which the servants of the Company cannot be supposed to free themselves, when speaking as to the effects of the favourite system of their employers, and which they have contributed to enforce and maintain, your Petitioners will advert to a particular instance of misinformation given by a gentleman who, without being suspected of bias, has given positive evidence, the contrary of fact, before the Committee of your Right Honourable House.

5. That the gentleman alluded to is Mr. Charles Hay Cameron, formerly the fourth or Law Member of the Council of India. This gentleman having been interrogated by the Committee which sat during the course of last year, regarding the *Lex Loci* of 1845, framed, as your Petitioners have reason to believe, by himself, and having admitted the receipt of a remonstrance against it from the Hindus of Madras, and Mr. Secretary Bushby's reply, is asked—

"No. 2098. What was the end of it?

"The law was not passed then, but it has been passed since.

"No. 2099. Was any reply made on the part of the remonstrants to the paper which you have read?

"No reply; I believe the justice of the doctrine was acquiesced in."

And in a subsequent examination the same gentleman is asked—

"No. 2359. Was there any reply received from the Petitioners after that document [Mr. Secretary Bushby's letter of the 24th May 1845] had been communicated to them?

"There was no reply received; there was another remonstrance of the same kind from some Hindoos at Calcutta, in reply to which we enclosed the answer that we had previously sent to the Madras Hindoos, stating that that contained our principles on the subject."

"No. 2363. After the passing of the *Lex Loci* had been suspended, in the manner which you have described on a former occasion, at what period was the subsequent law of the three articles introduced, proposing to re-enact those provisions with respect to the property of Christian converts?

"Legislative Consultations of the 2d August 1845, I find to be the marginal note on the draft made by me.

"No. 2364. Are you aware of any remonstrance, analogous to that from Madras, which had been previously addressed to the Government, having been repeated when those clauses were proposed as a separate measure?

"I have no recollection of any such remonstrance; I never heard of any after the two I have mentioned."

6. That Mr. Cameron had no intention to mislead the Select Committee of your Right Honourable House is clear, from his reply to question—

"No. 2366. Your evidence as to the appeal against the clauses applied to what occurred during your own stay in India?

"To what occurred during my own stay in India."

But as the fact of silence on the part of the Madras Hindoos seems to be implied by another evidence, Sir Herbert Maddock, who, when stating, in answer to No. 2239, that a remonstrance was made to Mr. Bushby's reply, points out (No. 2241) that it was from the Hindu inhabitants of Bengal, Behar and Orissa, the inference left on the minds of the Committee, your Petitioners apprehend, must have been, that the Madras Memorialists acquiesced in the justice of the doctrines, as stated by Mr. Cameron; and, as such an inference is not warranted from the facts of the case, your Petitioners deem it of consequence to explain the circumstances as they actually occurred.

7. That no reply was sent to Mr. Bushby's letter from the Hindus of Madras during Mr. Cameron's residence in this country, is undoubtedly correct; but as soon as the draft of the Act of "three Articles" was promulgated in the "Fort St. George Gazette," at this Presidency, in November 1849, a remonstrance was immediately forwarded against it to the Supreme Government, regarding which Mr. Bethune, who had succeeded to Council as Law Member, observes, "a great part of it is taken up with an elaborate argument in reply to Mr. Bushby's answer to the Memorial of 1845." This remonstrance was printed, along with other papers, by order of the Honourable the House of Commons, on the 7th May 1851;

1851; and your Petitioners beg to state that neither they nor the remonstrants, nor the Madras Hindu community, have ever acquiesced in the doctrines laid down by Mr. Bushby, but, on the contrary, they consider the legislation on the *Lex Loci* to be a direct infringement of their civil rights, and a positive violation of the Act of the Imperial Parliament, 21 Geo. 3, c. 70, ss. 17 & 18, as well as of the 53d section of the present Charter Act.

8. That your Petitioners allude to this circumstance chiefly to show the manifest uncertainty of the evidence taken before the Parliamentary Committees; and as the witnesses examined, without a single exception, are persons who have received, or are still in the receipt of, benefits from the East India Company, your Petitioners are compelled to believe that the actual state of things cannot be correctly ascertained, without sufficient evidence being admitted on both sides of the several questions which have to be determined; and your Petitioners therefore humbly represent, that nothing but a full and impartial investigation, in this country, accessible to the complainants, as well as to the defendants, can place before your Right Honourable House the real state of India, and the existence of the many and heavy grievances of which they have complained as regards the Presidency of Madras; they therefore respectfully request that a Royal Commission may be appointed, before which they may have the opportunity of substantiating the facts advanced in their former Petition.

9. That your Petitioners beg to represent that an Indian Commission is not altogether a novelty, there being a precedent in the one appointed in the year 1814, of which Sir Thomas Munro was the head, for the purpose of inquiring into and amending the judicial system then obtaining at this Presidency; but as not only the judicial system, but likewise that of the revenue, as also the various other complaints preferred by your Petitioners, imperatively demand investigation at this critical period, your Petitioners pray that the Commission they now seek may be constituted upon the widest practicable basis, to the end that the inquiry may be searching, impartial and complete; and that no permanent legislation for India may be undertaken until the fullest information possible shall have been laid before and fully discussed by, the Imperial Parliament of the United Kingdom.

10. That your Petitioners have already requested the continuance of the Councils at the minor Presidencies; and they now respectfully reiterate their prayer to have them constituted on the precedent of the Council of the island of Ceylon, in which your Petitioners' countrymen have enjoyed seats for a series of years; and, as your Petitioners understand that constitutions have been, or are on the eve of being, granted to the settlements of the Cape of Good Hope and New Zealand, admitting the natives there to the same electoral and municipal privileges as the European Colonists, they humbly and anxiously trust, that your Right Honourable House will not deem the barbarians of the former, and the cannibals of the latter colony more deserving or more fitting to be entrusted with a share in the management of their own affairs, than the inhabitants of a country which, for scores of centuries, has been renowned throughout the world for its civilization, literature and commerce, and which had its own sovereigns, governments and codes of law long before the English nation had a name in history.

11. That while your Petitioners acknowledge, and have asked for, the advantage of a reconstruction and improvement of the home and local administration of India, yet that alone will be of no avail to redress the grievances and reform the abuses of the local governments, so long as they are composed of two or three Company's officials, legislating in the utmost secrecy, and concealing with the most assiduous carefulness the whole of their transactions; secure not only from all check, but from the least shadow of knowledge on the part of the people, whose interests are unfortunately considered of not the slightest consequence to the Government, whose duty it is to legislate for their sole benefit.

12. That your Petitioners will consider themselves and their community deeply humiliated and deeply aggrieved if, after the open acknowledgments of persons high in office in this country and in England, that they are as capable to hold responsible employments as the members of the now exclusive civil service; that they are their equals on the bench, and successful competitors in the study of European arts, science and literature; they are longer shut out from the offices for which they are confessedly qualified, while the savage Hottentot and New Zealander are preferred before them.

13. That your Petitioners finally conclude with the expression of their earnest hope and prayer, that sufficient time may be granted for a thorough inquiry into all points affecting the welfare of this country, as distributed under the eight heads laid down by the Committee of your Right Honourable House; that the local Councils may be retained, and modelled upon the constitutional principle before adverted to; and that a Royal Commission, composed of Europeans and Natives conjointly, chosen partly in Europe and partly in India, may be issued to enter upon and complete the necessary investigation in this country.

And your Petitioners, as in duty bound, shall ever pray.

CHATEHUNSUARNHEE CHITTY, Chairman.
P. RYA CHITTY.
&c. &c. &c.

Madras, 21st May 1853.

Appendix D.

PETITION of Mr. GEORGE J. WATERS, late a Justice of the Peace in INDIA, and a Covenanted Civil Servant of the East India Company, on the MADRAS Establishment, now of CLEVEDON, in the County of SOMERSET, complaining of his Removal, without Cause, from certain Offices which he held in India.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The respectful Petition of Mr. GEORGE J. WATERS, lately a Justice of the Peace in India, and a Covenanted Civil Servant of the East India Company, on the Madras Establishment, now of Clevedon, in the County of Somerset,

Humbly showeth,

1. THAT your Petitioner twice passed the examinations of the College at Haileybury with credit, and (obtaining honourable mention of obedience to the rules of that institution) finally stood the fifth among eight of 120 students "highly distinguished;" also that he received a donation of 1,000 pagodas, or 400*l.*, in the College of Madras, for a knowledge of certain Native languages.

2. Rising through the minor grades of the judicial branch of the service, your Petitioner has held the office of Zillah and Civil and Sessions Judge, together with Her Majesty's Commission of the Peace, in various districts; also of Judge of Appeal and Circuit in all four divisions of the Madras territories, which no other civilian has ever done; during these circuits, which have necessarily subjected him to every vicissitude of a most trying climate, to a wandering life, separated from his family for many months, to extreme danger from sudden inundation and swollen rivers, to hazard of destruction in the northern division from the rebel chief, Pack Row; he has had, through a course of 800 miles, to clear calendars (especially in times of famine) consisting of at least 1,000 prisoners, with five times as many witnesses; the labour and fatigue, both in a bodily and mental point of view, attendant upon such vocations, and of subsequently transmitting to Madras, with translations into English, the records of trial in numerous cases of murder, &c., and in cases where there may have existed a difference of opinion between the Judge and Mahomedan law officer, is left to your Honourable House to imagine; receiving the repeated acknowledgments of different governments, your Petitioner (who has also acted in the Secret Department, under Sir Thomas Munro, and as Civil Auditor and Mint Master at Madras) was at length appointed First Judge of the Sudder and Fouzdary Udalut (or Chief Court of Civil and Criminal Judicature) at the Presidency, and naturally anticipated, in due course, a seat in Council.

3. Your Petitioner respectfully represents that, from the high and honourable position above designated, he was removed by the Marquess of Tweeddale (the then Governor), without cause, on the 20th of October 1846, and his hope of providing for a numerous infant family frustrated; also, that the Court of Directors of the East India Company, to which body he looked for redress, confirmed the act of the Marquess on the 20th January 1847, in utter disregard of the facts of the case, and unmindful of a long, faithful and (it is hoped) efficient course of service of 35 years.

4. In laying before your Honourable House the reasons assigned by the aforesaid authorities for an act which all who have seen the papers utterly condemn, your Petitioner, who is unable to meet the expenses attendant upon legal proceedings, and who has striven in vain to induce the Court of Directors to reconsider the case, and to draw the attention of the Proprietors of India stock to a matter so deeply involving (in its consequences) their very existence as a body, humbly and fervently implores your Honourable House to grant him a patient hearing: unless this prayer be acceded to, the door of justice must remain closed to him (and to many dependent upon him) for ever in this world.

5. A simple perusal of the official acts of the Marquess of Tweeddale in this matter will (it is believed) lead your Honourable House to conclude that he was not qualified by previous pursuits to realise the facts of the case, or to deal efficiently with its circumstances, consequently, that many of the mistakes apparent upon his writings, may be attributed to errors of judgment. This cannot be said of the Court of Directors; their duty was to have fully informed themselves, and to have set matters right.

The facts, divested of Indian phraseology and technicality, are briefly these:—

6. In the year 1845, the three Judges of the Sudder Court (Messrs. Waters, Lewin and Boileau) officially disagreed: 1st, upon a construction of law, originating with serious outrages perpetrated by the Heathen upon the Christian converts of Tinnavelly: 2d, upon the propriety of furnishing the Government with certain judicial information which they had called for; and, 3d, upon the expediency of forwarding a protest against such call to the Court of Directors. This state of things was well known to the Government of Madras; and your Petitioner, on the 25th June and 2d of July, and subsequently (or on the 8th July and 2d and 11th of August 1846), the other Judges officially informed the Marquess to the effect that the energies of the Court were paralysed, the administration of justice in the provinces suspended at the fountain head, and numbers of men lying in gaol whose cases could not be adjudicated upon; consequently that his orders were immediately necessary.

Now

Now, it will be obvious to your Honourable House, that, "had the Government not neglected the letters above mentioned, and, forgetful of its duty, allowed the administration of justice to be placed in abeyance, the matter might at once have been set at rest." Instead of this, nothing effectual was done or communicated to the Judges for months, or until September and October 1846, when the Marquess broke up the Court, and removed the Judges, with Mr. Philips, the Registrar, from office.

7. Such procrastination and procedure certainly manifested no regard for the interests of the people, and no sense of humanity or justice towards the Judges and their families; it, moreover, left the great legal question which had divided the Court undecided. The order, too, of the Marquess stands in direct opposition to two Acts of the Imperial Parliament of Great Britain, namely, Act 39 & 40 Geo. 3, c. 79, s. 12, and Act 3 & 4 Will. 4, c. 85, s. 59, which placed him (as residing upon the Nillgherry Hills, and absent from his Council) in the position of a private individual, and lodged the powers of government in the hands of Mr. H. Dickenson, the Counsellor then at the Presidency. The Marquess may not have been aware of this; not so the Court of Directors, who affirmed the act, for your Petitioner brought it to their notice in a letter, dated the 1st January 1849, and Mr. Sullivan, formerly a member of Council at Madras, had (it is said) brought forward the fact during the government of Mr. Lushington; and the temporary or "three months" Act 1 of 1835, passed by the Legislative Council of India (possibly in consequence), can, under no circumstances, annul any Act of Queen, Lords and Commons. It is undoubtedly the fact that the Court of Directors have presumed, practically, to abrogate two Acts of the Imperial Parliament, and through such medium deeply injured your Petitioner.

8. The dissensions which occurred in the Sudder Court might have been obviated from the beginning, had not the Marquess appointed Mr. Boileau as third Judge. This gentleman, since deceased, a kind and warm-hearted man, but not qualified to sit in a Court vested with authority to pass sentences of death, without appeal, and to decide civil claims in the last resort, unlimited in extent, himself told me (not in any confidence), that when his appointment to the Sudder Court was proposed, Mr. Dickenson, the junior Counsellor, had placed upon record a minute noting his incapacity to fill the said office, and that he had, notwithstanding, been forced into it! The arrangement, to quote from his memorial, appears to have been made to save money; it runs thus: "His Lordship desires me (one of the assistant Secretaries) to point out to you that, as you are at present drawing a salary above the amount now fixed for Sessions Judges, a reduction to that extent would most probably follow your refusal of the present offer," that is, of a seat in the Sudder Court.

9. In the very order of the 17th September 1846, by which the aforesaid gentleman was removed from the Sudder Court, on the grounds that he was wanting in discretion and judgment, and in the independence of mind and character essential for the efficient performance of the important duties devolving on the Court" (the very thing which, it must be presumed, had been previously recorded in Council), he was promised another early appointment in the judicial branch of the service! Accordingly, at an early period he was appointed to the situation of Civil and Sessions Judge, a situation embracing vast power (though subordinate in some, not in all respects, to the Sudder Court), and calling for great "discretion and judgment." And this appointment the Court of Directors (who, for reasons assigned, had confirmed the removal of the third Judge from the Sudder Court) virtually affirm. In mercy to the millions of Hindostan, your Honourable House is requested to look into these things. Decrees, proceedings and orders have frequently come officially in appeal before your Petitioner (who can supply you with much valuable and astounding information), most disgraceful in their character, passed by men utterly incompetent to fill the office of a Judge, and often unacquainted with the laws, especially where removed from the revenue branch.

10. As regards your Petitioner, who had conscientiously sided with the Government in the matter of their call for papers and the protest, and, in consequence, been led to record minutes opposed to the sentiments of the Second and Third Judges, his removal from office involved an enigma which astonished every person (even the second and third Judges), and Mr. Dickenson (then by Acts of Parliament the Governor) suspended the order for a full month, and recorded minutes against it. Mr. Chamier, the senior Counsellor, then absent on sick leave upon the Hills, is said positively to have refused to join the Marquess in his proceedings. Your Honourable House is implored to call for papers: the proceeding is very serious in its character.

11. The Marquess, in his order of the 20th October 1846, for the removal of your Petitioner, adduces no corrupt practices, no act of disobedience or neglect of duty, or of incapacity; no crime or moral offence or failure in respect to the social or relative duties of life; nothing, in short, is adduced but alleged "irregularities," to justify the measure, and which, if they were such, should have been noted at the time when they were brought officially to his notice by your Petitioner himself. He ought not to have been left to suppose that his measures were approved by the Government, perhaps to repeat the irregularity in consequence, and after the expiration of months to find himself degraded and removed from office; surely humanity, independently of still higher principles, should have been permitted to plead at least in behalf of the children of one who had faithfully toiled amidst death and suffering for 35 years in such a climate as India.

12. Your Honourable House will fully understand the force of this argument (and, it is hoped, adopt a similar resolution), if you will turn to the decision of Lords Langdale, Brougham, Campbell and Sir A. Johnstone, of Her Majesty's Privy Council, who condemned and reversed the order of the Judges of the Supreme Court at Madras for the removal

Appendix D.

removal of Mr. Minchin, who filled some honourable post under the Judges. It was ruled, upon the occasion in question, that if Mr. Minchin was in error, he ought to have been told so at the time, seeing that the Judges had long been cognizant of the matter.

13. Your Petitioner will apply this. The Marquess, in his order of the 20th of October 1846, assigns as one irregularity, that your Petitioner had refrained from placing a certain letter, addressed by him to the Government on the 25th June 1846, upon the records of the Court. Now, this very fact, which your Petitioner himself brought to the notice of the Second and Third Judges in Court, and to the knowledge of the Chief Secretary, then with the Marquess upon the Hills, he also communicated officially to that nobleman on the 14th of July 1846. In this letter the Marquess was requested to bring the fact, if necessary, to the knowledge of the Court of Directors, and informed that, if the letter were placed on record, it would probably, like many others, be sent with very injurious effects to the newspaper by some one in the office, and, perhaps, excite tumult among the natives. The minutes of the Second and Third Judges, or all they had to say upon the subject, accompanied. Now this proceeding was before the Marquess for more than three months; and if there existed any irregularity, why did he not say so at the time, especially as the Court of Directors had been referred to?

14. Your Honourable House will learn with great regret that this letter of the 25th of June 1846, made upon such extraordinary grounds the medium of his removal from office, was acknowledged by the Marquess, and acted upon in his minute of the 24th of July 1846, and when the letter of the 14th of July (above noted) must have been before him. The Marquess is here clearly shown, with knowledge of all circumstances, to have, as it were, adopted the very letter on account of which your Petitioner, months afterwards, was removed by him from office. Such removal, were it just, virtually pleaded for the removal of the Marquess also, as the Court of Directors must have perceived.

15 The Court of Directors, speaking of this, call it a "secret transaction." How secret, when all were told of it? Minutes forwarded, the Court of Directors referred to, and reasons assigned, which, if deemed unsatisfactory, should have led the Marquess to have ordered it to be placed instantly upon the records, and not at a subsequent period. This nobleman himself, obviously annoyed at the remark of the Directors as reflecting upon himself, says, in his minute of the 23d of March 1847 (no doubt referring to your Petitioner's letter of the 14th of July 1846), "There was nothing in it to indicate that it was intended to partake, or did in any way partake, of the character of a private or secret accusation." What conceivable object, it may be asked (for none has been assigned), could your Petitioner have had but the legitimate and humane object he from the first set forth, namely, that of preventing the possibility of revolt and bloodshed in connexion with the Tinnavelly outrages, and of preventing the further spread of the bitter animosities which then agitated the Presidency?

16. The Court of Directors, in remarking that your Petitioner should have communicated with the Judges, have altogether overlooked the fact that his sentiments were already before them in a case precisely analogous, and where compliance with the orders of Government had been attended with the happiest result. They have also (though both circumstances were communicated to them) deemed it right to pass over the fact that the Third Judge, who had coincided with your Petitioner, and endorsed upon the letter from Government, "This requisition (that is the Government requisition for papers) should be conformed to without loss of time," suddenly changed his mind, and embraced the views of the Second Judge. Thus thwarted, and placed in a minority by a gentleman who ought not to have been appointed to the Court, your Petitioner deemed it the proper course to address, not the Second and Third Judges, who knew his sentiments, and had placed their determination upon record, but the Government. If in this respect he erred (which is not admitted), he ought to have been told so at the time.

17. Another "irregularity" noted is, that your Petitioner had used the words "Heathen and Christians" in his public writings. Now, in a minute dated the 23d of March 1847, the Marquess himself admits that he had frequently done the same thing, and objects to the censure of the Court of Directors passed against him, on the grounds that they ought, at an earlier period, to have noticed the circumstance. Had the Marquess extended this consideration to your Petitioner, he would not have been necessitated to seek redress from your august tribunal.

18. Another "irregularity" adduced is, that your Petitioner had, on the 16th of July 1846, addressed a letter to a certain newspaper in "self-defence," when slandered in the newspapers. Now, your Petitioner, on the 23d or 24th of July, informed the Government that he had done so. If incorrect, why was he not then rebuked, instead of being left, perhaps, to repeat the "irregularity," and meet with dismission months afterwards? Your Petitioner gave publicity to no official document, and, consequently, committed no offence. So strictly, indeed, was his letter confined, as the Marquess admits, to "self-defence," that the public were requested to suspend all judgment till the truths, in deference to Government orders, could with propriety be made known. It was the duty of the Government themselves, by the Bengal letter of the 30th of August 1843, to have protected your Petitioner upon other occasions when attacked by writings in the office; but this they utterly neglected to do. The letter in the newspaper was signed, it is remarked, in a feigned name. Yes, to prevent a paper war among the editors throughout the Presidency, and to prevent the spread of uncharitable remark and ill-will, it was so signed; and, seeing that it was solely written "in self-defence," what does it signify how it was signed?

19. The Marquess adverts, also, to an altercation which took place (not in the court, but in chambers).

chambers). Such altercation, had he [*vide* paragraph 6] attended to the letters of the Judges, would have been altogether avoided. It is sufficient to remark, that your Petitioner regrets having, in an elevated tone of voice, asked for information (when denied) respecting an injurious letter; and no doubt Mr. Lewin regrets having, when excited, used expressions which otherwise would not have been thought of. As to remarks about religious expressions indicating weakness of judgment, style of writing, and animosity, they merit no attention; if aught upon such grounds became apparent, and was deemed objectionable, it should have been checked at the time. The consistent walk of your Petitioner, as a gentleman and a Christian, can be deposed to, were it necessary, by many men of high rank, both among the clergy and the laity; and to the last moment of his life he will rejoice in the fact that he advocated the cause of the Christians of Tinnavelly, whose houses and schools were plundered by hundreds of armed midnight ruffians from the Heathen, who also violated their females, and perpetrated every possible outrage. As to animosity, if anything could sanction such a principle, it would be the conduct he has experienced at the hands of the Directors; but he cherishes no such feeling; it is abhorrent to his principles.

20. Your Petitioner has every reason to believe that the onerous and responsible duty of dealing with such important matters, and the merit of crushing the first Court in the Madras Presidency, devolved not upon the 24 members who in October 1846 constituted the Court of Directors, but upon a secret committee, two members alone having signed the despatch of the 20th of January 1847. Be this as it may, the injustice is the same. Possibly a perusal of this paper may excite some compassion and regret in the hearts of those who perpetrated it.

21. Your Honourable House will deeply regret to learn in addition, that your Petitioner's removal was sanctioned before his Memorial (written without delay) reached England, that is, without any opportunity being allowed him of making any defence, or even of presenting an answer. In the face of a proceeding not adopted even in the case of the most abandoned criminal, an appeal preferred to the Court of Directors, subsequently to his reaching England, obtained no other notice than that the case had been "deliberately considered." Surely this falls little short of adding insult to injury. "Deliberately considered," without permitting the accused to offer explanation or defence, and without detecting the weakness and rectifying the errors so self-evident upon the proceedings of the Marquess.

22. Assured, as mentioned in his Memorial, that the Court of Directors must necessarily restore him to the Sudder Court as soon as the case reached England, your Petitioner, for the sake of his family, accepted a subordinate situation in the interim; when, however, the proceedings of the Marquess were confirmed, and the full salary drawn by him previously to entering the Sudder Court was refused, though granted to the Third Judge, Mr. Boileau, he felt constrained to resign the service. It is submitted that no man of proper feeling could act otherwise.

23. Your Petitioner, as one of Her Majesty's Justices of the Peace for not less than 20 years, was also a servant of the Crown, as well as a servant of the East India Company; he may, therefore, it is hoped, under section 51, c. 85, Act 3 & 4 Will. 4, claim with greater confidence the intervention of Parliament, to which high authority it is "reserved to control, supersede, or prevent all proceedings and acts whatsoever of the Governor-general in Council," and, of course, of the minor Presidency of Madras; and the more so, because his removal was not opposed to justice merely, but, as shown in the seventh paragraph of this Petition, to two Acts of the realm. In being deprived, upon grounds almost unintelligible, of a situation of 5,000 *l.* per annum, he cannot but feel that he has experienced deep ingratitude and shameful wrong, which it is the duty of his country, so long and faithfully served, to redress.

24. Lastly, your Petitioner respectfully requests that you will, if necessary, call him to your Bar, to reply to any remarks which may be made, to produce or point out his documents, and to name his witnesses. Your Honourable House is further entreated, after due consideration, to pass such final orders as may appear in your wisdom to be just and proper, or, with the consent of Her Majesty, to direct his appointment, under the last clause of section 61, Act 3 & 4 Will. 4, c. 85, to any office which past pursuits may qualify him to fill, under such form of government as may prospectively be determined upon for India.

And your Petitioner will ever pray, &c.

GEORGE J. WATERS.

Clevedon, 28 June 1853.

Appendix D.

PETITION, complaining of the Evidence given before the Select Committee of this House on the Government of Indian Territories, on the Subject of Newspapers in India, of Doctor George Buist, Editor of the "Bombay Times."

To the Right Honourable the Lords Spiritual and Temporal of Great Britain and Ireland, in Parliament assembled.

The Petition of Doctor George Buist, Editor of the "Bombay Times," Secretary to the Geographical Society, Founder and Superintendent of the School of Industry, late Sheriff of Bombay, and formerly in charge of the Astronomical, Meterological, and Magnetic Observatories of the East India Company at Bombay, formerly Secretary to the Agricultural Society of Western India, and in charge of their Experimental Gardens,

Showeth,

That your Petitioner has been close on twenty years connected as editor with the newspaper press, for a third of that period as editor and proprietor, having for nearly eight years conducted with credit and success newspapers in the central counties of Scotland, Forfar, Perth and Fife, and for more than twelve been editor, and for six editor and principal proprietor of the oldest and most extensively circulated journal in Western India, the "Bombay Times," and that for the whole of this long period he has had constant occasion to study most carefully newspapers from nearly all parts of the world, those of London in particular, to some of which he has been a large and highly paid contributor, having occupied his closest attention.

That the "Bombay Times," one of those three daily papers published at the Presidency, was brought into existence in 1838, shortly after the passing of the Charter Act (1834) and the removal of the disabilities of the press by Lord Metcalfe (1835), and with the express view of advocating public improvement, and devoting itself to the interests of the country, to the discussion of the views and policy of Government, and the examination and diffusion of those opinions, facts and doctrines, the circumstances of the occasion, the exigencies and prospects of the period rendered expedient, with the cordial approval of Sir Robert Grant, the Governor of the time, and countenance and support of the most distinguished servants of Government. Its projectors and proprietors comprised amongst them eleven of the principal European houses in Bombay, the oldest and most distinguished native merchant, two of the most eminent barristers before the Supreme Court, and the most distinguished private medical practitioner in Western India. That they selected as their editor Dr. Brennan, a lecturer of eminence on anatomy in Dublin, whose health rendered a warm climate desirable, and who, on his arrival at Bombay, was elected to the then responsible office of Secretary to the Chamber of Commerce, besides being Editor of the "Times."

That the proprietors of the "Courier," the principal paper in Bombay up to 1838, and long the recognised organ of Government, were equally eminent as those of the "Bombay Times," and that the paper had engaged from time to time the services as editors of many of the most talented servants of Government.

That the first editor of the "Bombay Times," Dr. Brennan, having died in 1839, the paper was for a time conducted by Professor Henderson, of the Elphinstone College, a servant of Government. Afterwards by Dr. Knight, at present Residency Surgeon, Khota, and of the Bengal Medical Service; and that your Petitioner, having been selected, from the eminence he had attained as a provincial journalist in Scotland, to the editorship of the "Bombay Times," entered on his duties in May 1840, and has continued to conduct the paper ever since, with the highest approbation of his employers, on the principles on which it was originally started.

From the constant fluctuations in the mercantile community in Bombay, numerous changes in the proprietary have from time to time taken place, and the "Times," having always yielded, as it continues to yield, from 30 to 40 per cent. of dividends annually on the amount originally invested, a number of the most distinguished servants of Government became proprietors soon after the promulgation of the permission of the Court of Directors, for its Civil and Military servants to connect themselves with the press. In 1847, its principal proprietors, after your Petitioner, were the Puisne Judge of the Suddur Adawlut, the Collector of Customs, the Deputy Quartermaster-general, now Quartermaster-general of the Bombay army, the Secretary to the Medical Board, afterwards Physician-general, and the Medical Storekeeper, now Superintending Surgeon at the Presidency; and, with two exceptions, one from retirement from the service, and the other from promotion: these gentlemen still continue principal proprietors of the paper.

That your Petitioner has not only devoted the columns of the "Bombay Times" to the advancement of good government; to the spread of education, of improvement and economy; to the denunciation of those bloody and superfluous wars, which within these twelve years have cost us thirty millions sterling; and that policy which, under the name of expediency, disregards the principles of truth and justice, and sets up a standard of morals for statesmen opposed to the principles of Christianity, and the evils of which to our name and character, as Wellington has so well remarked, cannot be compensated by the most brilliant victories, but, as far as circumstances permitted, endeavoured, in his private capacity, to promote the improvements he, as an editor, recommended, a circumstance to which numerous letters of acknowledgment received from Government bear ample testimony.

Under

Under these circumstances, it is with much surprise, mortification and chagrin, that your Petitioner has seen it stated in the evidence laid before the Committee of your Honourable House, that the newspapers in India, with the exception of a Bengal Journal called the "Friend of India," are uniformly and universally hostile to Government, and are continually engaged in impugning and slandering its proceedings, and that though they admit of corrections when made to them, still their tendency is that of unceasing and continual hostility to the authorities.

That, so far is this from being the fact in the case of your Petitioner, that he has been frequently charged by his brethren with being the organ of the local Government; and in the majority of cases coming under discussion, his views and those of the Government have coincided with each other; that, being averse to needless aggression, and uncalled-for war, he was opposed to the general policy of the Government from 1840 to 1845; that since then he has been a warm supporter and ardent admirer of the proceedings of Governors-general of India almost throughout. Your Petitioner was as one with the Bombay Government in the deposition of the Rajah of Sattara, in their views of the war in Affghanistan, and in the conquest of Scinde, in their views of the conduct of the Nuffoosk Commission, the Court of Directors having in 1841, expressed themselves in nearly the same terms as were used by your Petitioner on the subject in the previous year; that your Petitioner highly applauded the revenue arrangements of Government, their anxiety to promote the improvements in the culture of cotton, their desire to advance the native education, by conferring Government appointments on the most distinguished of the native scholars, and the employment of natives more extensively than before in the public service, in their appointments of the Residents at Sattara and Baroda, and the Commission in Scinde, and in the great majority of other arrangements, an evidence at once, it is hoped, of the merits of the Government, and the independence and soundness of the views of your Petitioner.

Your Petitioner, at the commencement of his editorial career, strongly condemned the existing state of the Post-office arrangements, and, in recommending their improvement, collected with great labour and care, and published, a vast mass of steam and mail statistics, which he found scattered about in a hundred different quarters, and which your Petitioner, for the first time, put into a convenient and popular form, and the desired changes were in a great measure brought about in the course of two years; that your Petitioner, in 1840, condemned the arrangements then made for the reception of sick soldiers from Aden, and a general order was a few weeks afterwards issued securing the remedies suggested; that your Petitioner was opposed to the Government in the discussions on Baroda matters, but had a very large number of the Court of Directors on his side, and, but for the principle of supporting the authorities, would most likely have had them all of his opinion; that your Petitioner has been all along hostile to the existence of sinecure sheriffships, and the appointment has accordingly been abolished; that in 1849 your Petitioner pointed out the enormous sums expended in the Affghan war, and the derangement of our commercial relations which the transmission of so much specie into a country from which it would not for many years return, must occasion; and the views of your Petitioner were fully borne out by the state into which the finances of India had been brought by 1841, when the Honourable Mr. Bird, then President in Council, stated to Sir Henry Willock, that the shutting of the Treasury in September had been contemplated; by the statement made by the late Sir Robert Peel, in assigning this as one of the reasons for the imposition of the Income Tax, and by the accounts of the Honourable East India Company since then published, and that, in like manner, in the great majority of occasions in which your Petitioner has chanced to be opposed to some one division of the authorities, his views have been borne out by the others, and have been afterwards shown to be in consonance with fact. He considered the annexation of the Punjaub unwise and unjustifiable in 1846, and it was left in the hands of the Seikhs, and he deemed its annexation inevitable in 1848, and in 1849 it was annexed.

That your Petitioner has observed, that, in the examination of Mr. John Stuart Mill, of the India House, before the Committee of the House of Lords, it is insinuated, "that the press of India is inferior to that of England in its tone; that in England the tone of newspaper writing is in general superior to that of ordinary conversation; that in India it is the reverse, to such an extent, that a most erroneous view of English society would be taken were it judged of by the press; that newspapers in India are of very little use to Government, unless in promoting inquiry; that the English newspaper press in India is only the organ of English society, chiefly of the part of it unconnected with Government, and has little to do with natives, or the interests of the country."

The groundlessness of the last of these imputations will be apparent, when it is recollected that there are seven daily and 20 or 30 tri-weekly or bi-weekly newspapers in India, and that there are not as many Europeans in the country altogether, not connected with Government, as could provide subscribers or supply intelligence for a single daily newspaper.

That, in point of fact, a large number of the newspapers are principally or wholly the property of servants of Government, and are conducted by retired or invalid officers from the Queen's or Company's army. That your Petitioner is prepared to prove, what must be well known to many Members of your Honourable House, who have long been readers of the "Bombay Times," that however inferior the best of the newspapers of India may be to those at home in point of talent, that in point of propriety of expression and decorum of language, and in point of amount of space devoted by them to important subjects of discussion, or in point of the magnitude and importance of these as bearing on the interests of the country, they are second to no newspapers in existence.

Appendix D.

Setting aside the space required for advertising, for Military and Shipping Lists, General Orders, and Prices Current, a full third part of the area of the Journals of India is occupied by extracts from the very best home publications; from the Edinburgh, Quarterly, North British and Westminster Reviews, from Blackwood's, Fraser's, Tait's, and other Magazines; from the Athenæum, Literary Gazette, Chambers' and Hogg's publications, together with carefully selected extracts from the very best of the London daily and weekly newspapers. The fact of papers being got up at home, affords room for selections they could not otherwise command. That so far from directing less space to the cause of good government, the spread of education and public improvement, than is devoted to these subjects by the papers at home, they devote a vast deal more, if dealing with statistics, agriculture, police, municipal, sanitary, commercial, and other such like matters, bearing directly on the improvement of the country and welfare of the people is to be considered such, where party politics are things unknown, rather than the political controversies and factious disputes and abuse from which the columns are exempt; that by means such as now related, a vast quantity of valuable and interesting information, much of it gathered from printed public documents, but transmitted into a condensed, popular and readable form, is diffused amongst the members of the service, and more intelligent of the native community; the former of whom are in India very apt to lose habits of reading altogether, the latter of whom require still in a great measure to acquire them, both turning to the local newspapers as the chief sources of supply.

That it is difficult to define what the precise tone of conversation is amongst the reading classes either in England or in India, and, therefore, impossible to compare the one with the other, or to ascertain the precise relation the tone of newspaper speculation bears to that of conversation in the one country or in the other; but your Petitioner has already shown that the newspapers in India are in no respect, save talent and magnitude, behind their English brethren, the chief imperfections with which they are chargeable being due to the enormous postage charges imposed upon them, and the limited size to which they are restricted, these two combining to induce them to concentrate more of their attention on, and devote more of their space to, local incidents of little general importance than they otherwise would do; that they are not even in this respect behind the spirit of the age, may be judged of from the recommendation of the Report of the Post-office Commissioners, now under the consideration of Government, to the effect, that such an additional postage be imposed on newspapers imported from England as virtually to exclude them from all parts of India but the Presidencies.

That not only is the newspaper press of India at least equal in its tone to that of England, but it is a vast way superior to it, and, in general, to the statesmen of the day in the possession of important and accurate information, as will presently appear. On the 23d of June 1842, Sir John Hobhouse stated, in the House of Commons, in opposition to the motion of Mr. Bailey, for the production of the papers in an unmutilated form on which the Affghan war was granted, that Lord Palmerston and his colleagues considered the explanations of Count Nesselrode in reference to the proceedings of Russia in connexion of the affairs of Herat, "satisfactory, because they were carried into effect," and Count Limonich and Lieutenant Vicovich were recalled. According to the official despatches published by Parliament, the satisfaction to the Russian Cabinet here referred to, was intimated to Count Nesselrode, under date 1st November 1838, the re-call having first been made known on the 5th of March 1839,—discrepancy duly exposed at the time by your Petitioner. About the same time, Lord Fitzgerald and Vesey, the President of the Board of Control, affirmed, that his predecessors had not unfairly garbled the "Blue Book" of 1839: the papers of Sir Alexander Burnes having been published entire by your Petitioner, by desire of the relatives of that lamented officer, show, as is now universally admitted, instances of garbling, such as find no parallel in history. In June 1841, Lord Palmerston, in addressing the electors at Tiverton, described the whole of Affghanistan as in a state of such unexampled tranquillity, that an unarmed Englishman might ride as safely through the midst of its wilds as he could have ridden from Tiverton to John O'Groat's house, the name of a British officer being a passport everywhere. That at this very time your Petitioner had published an enumeration of 33 actions, in 13 of which, our troops had been unsuccessful, which had taken place within the twelvemonth: and the Board of Control, of which the Noble Lord was a member, must have had in their hands documents giving accounts of Shelton's operations in the Naziam Valley; the general discontents in Kohistan, the three separate expeditions then on foot betwixt Khandahaar and Ghuznie; the actions of Farrington and Woodburn, on the Helmund; the preparations for Griffin's expedition; the Nooskey expedition; the unhappy affair of Kojjuck; the general movements of troops in Scinde and Shawl, with the universal marching and counter-marching of detachments throughout the country occupied, as we then were in five simultaneous or immediately consecutive campaigns around Jellalabad, Khelat-i-Ghilzie, Ghirisk, Moosting and the Sebee country. In the "Overland Times" for July 1841, estimates of the expenses of the Affghan war up to that date was published by your petitioner, so closely approaching the statements afterwards given from official authority by Sir Henry Willock and Sir Robert Peel, as to show the close approaches that could be made to truth by those who earnestly sought after it; and from these and other inquiries your Petitioner came to the conclusion, which he published about the period referred to, that to maintain the Dooranee Alliance was next to impossible; the attempt to maintain ourselves in Affghanistan, a folly, which could not but issue in the most frightful disasters. Had the warnings he then gave been attended to in time, the events of Cabool, which six months afterwards justified the soundness of his views, might have been avoided, and the darkest chapter in our history

left

left unwritten. In 1842 Lord Palmerston taunted Sir Robert Peel with the supposed intentions of the Ministry to abandon the Dooranee Alliance, and retire from Affghanistan, in obvious ignorance of the resolution come to by Lord Auckland on the 3d of December 1841, and known to the Board of Control, that in the event of the loss of Cabool, no attempt should be made to renew the occupation of Affghanistan. That in 1843 your Petitioner, who had been one of the most ardent admirers of Lord Ellenborough while he professed nothing but peace and improvement, and of Sir Charles Napier before he attacked the Amers, pointing out the monstrous injustice of our invasion of Scinde, he prepared an estimate, now fully justified by fact, that it could not be maintained with less than an augmentation of 8,000 men, and accordingly betwixt 1843 and 1841 the Bombay army was increased by 13,605, from 51,694 to 65,299, the latter number not being likely hereafterwards to be diminished, even though Aden is now garrisoned by Madras troops. At the same time he estimated the annual expense it must impose upon us at about half a million sterling, thus falling about a third or fourth short of fact. That at both these periods the journals at home, and leading speakers of the time, seemed in ecstacies with the imagined wisdom that had been displayed, and the rare good fortune that had attended it, when in reality our misconduct was drawing down upon ourselves the heaviest calamities that could have befallen us. All these things are now matter of history, as much beyond the reach of remedy as of dispute; that had the press or the politicians of England examined or believed the statements then set forth by your Petitioner, and all since fully verified, the blot which Scinde throws upon our good name might have been obliterated, and the disgrace and mischiefs it has occasioned us, avoided.

That shortly after the liberation of the press, Lord Auckland most wisely expressed his anxiety to encourage the servants of Government to connect themselves with the newspapers, and that Government should afford journalists all the information that could be given them under the secret system insisted on from home, desiring thereby to increase the predisposition that he knew must exist to speak favourably of Government, when present or former Government servants were the speakers, and those still in Government employment the listeners. In March 1842 and August 1843 all this was put an end to by the order of Lord Ellenborough; and the Court of Directors, who were understood to have disapproved of nearly every other measure under his Lordship's administration, have permitted the most objectionable of them all to pass uncensured.

That from the time the measure of Governor Metcalfe deprived Government of the power of deporting editors for re-printing the Reports of Parliament or articles of intelligence of the Home newspapers, and of indulging, as they did, most freely in persecution of the press, scarcely surpassed by those of France of the present date, there seems to have been a constant desire to slander those who could not be reached by Lord Auckland, and those around him proving honourable.

That on the 12th of February 1841, Mr. Hume called the attention of the House of Commons to certain obnoxious statements made by correspondents in the "Agra Akbar" and "Bombay Times," in reference to the death of a trooper of the 2d Bengal cavalry, said to have been shot in a corn-field near Ghuznie in July 1839, while supposed marauding, in reference to which the conduct of Lord Keane was severely blamed. The chairman of the Board of Control, then bringing forward a Motion for a pension of 2,000 *l.* a year to his Lordship and his descendents, stated, that the moment he observed the reports in the newspapers on the subject, he made the most diligent inquiries as to its truth at the India House, the India Board, and of parties who had shared in the Affghan campaign, and found that the statements in the newspapers, which he termed rascally, were false; that the trooper had been shot at night by the videttes, under the order of the Provost Marshal, strict directions having been given to protect the corn-fields from depredation, and that the report had never been heard of till after Lord Keane had quitted India.

That your Petitioner, who had just then (May 1820) arrived in India, and could individually have no knowledge of the matter, and no bias in favour or against any one, received his information from a distinguished staff officer of Lord Keane's army, and who is still alive, and your Petitioner is in a position to prove that the trooper was shot during the day, not by the videttes at all, as the regimental records will show that he was wounded by small shot, never used in the army, and that the piece was fired by Lord Keane's own hand, who naturally, of course, prevented any official report from being furnished to Government, though authentic information must exist regarding it in the hospital returns of the regiment; and in the records of the Bengal Medical Board, instead of never being noticed till after Lord Keane had quitted India on the 31st of March 1840, it was fully discussed in the "Agra Akbar," and most of the other Indian newspapers in August 1839, and in the "London Spectator" of February 1840, having sufficient time for making inquiries at the proper quarter, before the pension discussed came on. That Lord Keane was himself not slow in noticing what appeared in the newspapers, may be gathered from the action in which he was cast against the "Bombay Gazette" in July 1836, for having re-published from the "Englishman" a letter, accusing him of having caused a trooper condemned at Deesa to be hanged without the sanction of the Government, required by the Regulations; and the fact of his having passed the present charge (pronounced so grossly libellous in the House of Commons) by unnoticed, indicates that he felt its truth: the names of the newspaper writers, though, according to custom, withheld from the letters, were perfectly well known; the manuscripts of some of them are still in the hands of your Petitioner, and there is no reason to doubt that, if called upon, they would not be unwilling to substantiate their statements, the truth of which no one in India ever doubted.

On

Appendix D.

On the same occasion, and with the view, apparently, of throwing further discredit on the press, it was stated by Sir John Hobhouse, "that the House was aware that in the last campaign (that is, the campaign under Lord Keane in 1839, then being considered by the House) a disaster had befallen our troops, under command of Major Clibborn, while endeavouring to relieve a fort," the two subjects getting mingled up in the debate, and both forming grounds of obloquy on the press; that a Commission had been appointed to inquire into the disaster, the reports of which had been surreptitiously obtained and published by the newspapers just before the departure of the mail of the 1st of December.

In point of fact, the trooper of the 2d cavalry was shot in July 1839, near Guznee, in the centre of Affghanistan, 60 days' march at least from the pass of Nuffoosk, where Major Gibborn was repulsed on the 31st of August 1840, 13 months afterwards, nine months after Lord Keane had quitted command in Affghanistan, and five months after he had left Bombay for England. The report of the Commission, which bears date 22d of November 1840, obtained publicity through the instrumentality of General Brooks, its chairman, subsequently deprived of his command of the troops in Scinde, as a punishment for this; it appeared in the "Bombay Courier," on the 19th of December, that paper being blameless in the matter, not as stated immediately before the despatch of the mail, or with any view whatever to the injury of the prospects of Lord Keane, who could in no shape be affected by it, and in reference to whom it was not known that any debate was impending, but 12 days beforehand, leaving abundance of time for the commentaries which were made upon it in the "Bombay Times," and which were sent home along with it by your Petitioner, which expressed the very same sentiments in almost the same words as those expressed by the Bombay Government six months, and by the Court of Directors nearly a twelvemonth afterwards.

On the same occasion Lord John Russell spoke of Lord Keane's crossing the Indus on his advance as an event of sufficient importance to be coupled with his march through the Bholan Pass. Lord Keane and the Bombay column in reality marched through Scinde by Larkhana, to the mouth of the pass, and never crossed the river at all.

In July 1843, a letter from General Nott appeared in the English newspaper, bearing date Lucknow, 4th of April, and which must have been sent home direct, for publication, in reply to one from Sir James Lumley, Adjutant-general to the Bengal Army, of 29th March, calling upon him by direction of the Governor-general to report upon certain excesses said to have been committed by the British troops in Affghanistan: the letter of Sir James Lumley has never appeared in print, and its tenor can only be gathered from the terms of the reply, written as it is in a wild, declamatory tone, apparently, from the first, intended for the press, and as unlike as possible the calm and temperate style of official correspondence between an old Major-general and the Adjutant-general of the army. It would appear that General Lumley, by direction of Lord Ellenborough, had asserted, that certain very infamous imputations had been made against the army by the newspapers, and these were pronounced to be "gross and villanous falsehoods." In reality they were never made by any one, or heard of in India, until General Nott's letter, denouncing them, appeared and the conclusion, that the whole affair was got up with the view of giving a blow to the character of the press, is inevitable. General Nott's letter was forwarded to England through the Secret Department, and was not made known to the Court of Directors by the Secret Committee till after its publication, of which no notice seems ever to have been taken by the Government of India, although severely blamed in the official despatch of the Court to the Governor-general, under date 2d August 1843. Yet so averse at this time was the Government of India to all communication of its servants with the press, that Mr. Erskine, of the Bengal Civil Service, had the previous year been punished, by loss of employment, for sending to the "Friend of India" an extract from a private note from his kinsman, Sir William Macnaughten; and the publication in the "Bombay Times" of the letter from Colonel Sleeman, Resident at Bundelkund, correcting some misstatements in reference to his proceedings, called forth the most stringent general order against all communications with the press.

The extent to which the newspapers of India are indebted to the servants of Government for support, instead of being prepared for, and maintained by those unconnected with, the services, as asserted, is easily susceptible of distrust, and specific proof from the subscription list of the newspapers themselves, which will be produced, if required, or by the examination of the editors: in 1848 the "Mofussilite" printed a list of all its subscribers, from which it appeared that four-fifths of these were members of the public service; and in a classified list of its subscribers, lately laid before the proprietors of the "Bombay Times," and which is at the service of the Committee, it appears that out of 1,000 subscribers, assuming that to be the number on the list, (123) one hundred and twenty-three were civil servants of the Government, (179) one hundred and seventy-nine messes and regimental libraries, (317) three hundred and seventeen military men, (52) fifty-two British merchants, (36) thirty-six banks and public corporations, (26) twenty-six were Natives, (243) two hundred and forty-three were private individuals, uncovenanted servants, tradesmen, &c.; the rest clergymen, lawyers, native rajas, and the like, or in all 719, or two-thirds of the whole were officers of the Crown, or covenanted servants of Government. It may safely be assumed that the maxim which holds good all over the world will obtain in India, and that the amount and nature of commodities brought to market will speedily adjust themselves to the demand. That newspaper proprietors will supply, and newspaper editors write, what is deemed most popular and acceptable amongst the newspaper reading classes, and what they are best disposed to pay for, that the returns on such things are ample, will be seen from a paper published in 1850, when the "Bombay Times" changed its proprietors; by this it was shown,

shown, that during the previous ten years your Petitioner had earned, as remuneration for himself, or free profit for his employers, the sum of 33,000 *l.* sterling in cash, besides meeting all the charges of the establishment, and extending its strength and efficiency.

The picture presented to your Committee of the press of India, representing as it does journalists lately or still practising at the bar, connected as Professors, with our colleges, or belonging to the legal or medical or military profession, indulging from pure perversity in false, low, vulgar, profligate and worthless writing, such as must shock and disgust the readers for whom it is provided, and who form a newspaper constituency unparalleled for selectness, would be, were it faithfully locuted, an anomaly unexampled in the world.

On the examination of Mr. Melvill in the Committee of the House of Lords, their Lordships have most wisely pointed out the great mischiefs occasioned by the apathy of the people of England, in reference to Indian affairs, and suggested the importance of endeavouring to confer greater consequence and order on the meetings and debates of the Court of Proprietors; with this object in view, yet a dead set seems to be made from all quarters against the press of India, through the means of which alone the people at home can be enlightened as to the current events of the day, there being no other organs which now exist, or are likely to be brought into existence, for public information; the mistakes of the Home Journals, whenever they venture beyond the information supplied them from the East, forming the most fruitful subjects of ridicule in India, of which the recent alarms in reference to the war in Burmah, the progress of which had been so faithfully traced beforehand by the Indian newspapers, forms an example, and the errors of public men occurring by accident, being enhanced by those which are intentional, as in the case of the papers of Sir Alexander Burnes of 1838, and the despatches from Sale's Brigade in 1841, leaving no source of information open for the public to resort to that is now unobjectionable, save that the press of India supplies.

That the source of these aspersions, or misapprehensions, seems to be in the misconduct of a small proportion of the journals of India, for the most part conducted by men fresh arrived from newspaper offices at home—journals which do not more fairly represent the press of India in general than do the "Satirists," "Ages" and "Towns" of London represent the newspapers of England, the existence of which, at all times precarious and short-lived, might seem inconceivable, were it not, from the diversity of tastes amongst us, such as that manifested by the late Commander-in-Chief, Sir Charles Napier, who mentioned the "Gentleman's Gazette," in his public letters, as the only upright, respectable paper in India, that journal having been pronounced by the unanimous voice of the Indian Press, a disgrace to it.

That the officers of the Indian army, and members of the civil service, who may be supposed to be tolerable judges of such matters, send home by every mail 3,000 or 4,000 copies of Indian newspapers for the use of their friends, although these cost from two to three times the cost of the newspapers published in London, professedly devoted to Indian subjects, and which embody at least twice the amount of the printed matter Indian newspapers afford; that the character of our newspapers throughout the Continent must be very different from that the witnesses before your Committee confer on it, may be inferred from the fact that your Petitioner has long had on his subscription list a considerable proportion of the Courts or leading statesmen throughout the east of Europe.

Your Petitioner therefore humbly prays,

That your Honourable House will give instructions to your Committee, now assembled for the investigation of Indian affairs, that, instead of accepting, as hitherto, evidence on the state of the press emanating, as in the case of Mr. Mill, either from gentlemen who profess to possess no personal knowledge on the subject, but are made to assent to the most obnoxious and injurious insinuations interwoven in the questions put to them, or who may of themselves become prejudiced against the press from strictures made by it on their own public conduct, or may consider it, as a vast number of public servants still do, the grossest impertinence in newspapers to presume to make any remark whatever on the conduct and condition of the privileged classes, that they will summon before them gentlemen, and cause them to be duly interrogated, from India, or at home now, or formerly connected with the press in the east, who alone can speak with authority on this most important subject.

The Indian newspaper press is now on its trial; the great measure of Lord Metcalfe has come into operation since last Charter Act was passed; the fears expressed by Serjeant Spankie, and other distinguished men, 25 years ago, of the frightful consequences of unlicensed journalism in India, have proved as visionary as the alarm of Mr. Melvill and others at the consequences of free trade; the ignorance prevalent regarding it, even amongst men of the highest talent connected with India, will be seen from the grievous misstatements in Thornton's History, in the articles written by a distinguished Bengal civilian in the "North British Review," 1845, in Mr. Campbell's book, and Mr. Mill's evidence, which has not only been shown to be untrue, and without foundation, but to involve the absurdity of upwards of 100,000 *l.* a year being spent by the servants of the Company, or officers of the Queen's army, on what is described as the most contemptible literary rubbish that can be produced, when the very best might have been on the same terms procured by them; and for many a day to come the newspaper press of India must furnish the sole means by which the community at home can become enlightened as to what is passing in the east, in reference to which the published despatches and ministers of the Crown so often mislead them so fearfully. The extent to which English education is now spreading amongst the native community is rapidly introducing habits of reading not before in existence, and which will, of course, seek gratification from the English newspapers, as being most readily attainable and at hand, and it is therefore of the utmost importance both to England and to India that

Appendix D.

that no misapprehension shall exist as to the position the newspaper press actually occupies; if it should prove to be the mean, vile and contemptible thing it is described, some means should be taken to qualify it for all the important tasks it is to perform, and the lofty destinies that seem to await English journalism in every part of the world; if, as your Petitioner maintains, it be otherwise, the delusion apparently at present so general, ought not to obtain additional weight or countenance from the results of the investigations before the Committee of your Honourable House.

That your Petitioner is unwilling to intrude any personal or private considerations in a subject possessed of sufficient public importance to claim the attention of Parliament; but your Honourable House will admit, that few things can be found more unjust, cruel or intolerable than for the only body of professionally literary men existing in the east, labouring with the utmost earnestness and singleness of purpose as public instructors, and for the public good, often individually devoting an amount of time, labour and thought to benevolent enterprises such as might put highly-paid servants to shame, and whose great ambition themselves is to deserve and secure the approbation of their countrymen, stigmatised, without a shadow of excuse or foundation, as coarse, untrustworthy, vulgar, slanderous writers, worthy of no respect or estimation whatever, and whose statements are entitled to no weight or consideration.

That your Petitioner, in seeking redress for himself, has restricted his complaint and assertions to the "Bombay Times," simply because he had no authority to include the grievances of his contemporaries amongst his own, although the grounds of his complaints are general. He claims no peculiar excellencies for the paper he conducts over those of his brethren, from the columns of which many of the most important facts he has had to deal with have been drawn, and he has no doubt that they will claim, as they justly may, for themselves and their journals as great an amount of consideration at the hands of your Honourable House as your Petitioner claims for himself and for his.

That your Honourable House will take these things into your early consideration, and adopt such measures for procuring the redress that is desired as may in your wisdom seem meet, is the prayer of your Petitioner.

And your Petitioner will ever pray.

George Buist,
Editor of the "Bombay Times."

Bombay, 17 November 1852.

PETITION, complaining of certain Acts of the Government of India, and praying for Redress, of Jevanjee Pestonjee and Rustomjee Viccajee, British Subjects, and Parsee Inhabitants of Bombay.

To the Right Honourable the Lords Spiritual and Temporal, in Parliament assembled.

The humble Petition of Jevanjee Pestonjee and Rustomjee Viccajee, the Sons and Representatives of Viccajee Merjee and the late Pestonjee Merjee, British Subjects, and Parsee Inhabitants of Bombay, lately carrying on the Business of Bankers and Merchants at Hyderabad, in the Deccan, as well as in Bombay, and other Places in British India,

Most humbly showeth,

That your Petitioners, as well as their fathers, who are British subjects, have suffered, and have been for more than eight years suffering under grievous wrongs done them by his Highness the Nizam's government, involving as well personal injuries as pecuniary losses, wrongs which your Petitioners confidently believe no British subject, other than those under the government of the East India Company, would be allowed to undergo with impunity to the wrong-doer. For the redress of those wrongs and losses, your Petitioners, as well as their fathers, have appealed to the British Government in India, and to the authorities in England, to whom the administration of affairs in India has been confided; but your Petitioners and their fathers, in spite of their acknowledged rights as British subjects, have unhappily failed to obtain redress, which they could with all ease have procured for themselves had they been subjects of the Nizam's government, or the subjects of any other Native State in India, as your Petitioners will hereinafter show; and your Petitioners now humbly approach your Right Honourable House as the last means of obtaining redress for the cruel wrongs and injuries they have sustained, for which, in consequence of their being subjects of the British Crown, they have hitherto been unable to obtain any compensation.

In order to explain the circumstances which led your Petitioners' fathers, Viccajee Merjee and Pestonjee Merjee, to go to the Nizam's territories, they beg to premise that Viccajee Merjee and Pestonjee Merjee, according to the usage of their ancestors for several generations, were employed in the administration of districts in the northern Concan, under the Paishwa's dynasty. From the time the British took possession of the country, Viccajee Merjee and Pestonjee Merjee, in the very beginning, assisted the British Government in the management

management of the revenues of a portion of that part of the country, and were afterwards entrusted by that Government with the farm of land and sea customs, which they held up to 1836, when it was extended from the Candeish collectorate as far as the precincts of Goa, the Portuguese settlement. The manner in which they fulfilled this important trust has been appreciated by the Government of Bombay in one of their letters to your Petitioners' fathers, dated 28th March 1836, at the time of abolishing the land customs, in the following words: "The correctness and punctuality displayed by you in your extensive dealings with Government entitle you to every consideration." The result of these extensive dealings has been recorded by one of the officers of Government in his letter to the Revenue Commissioner, dated 31st August 1835, in the words following: "Viccajee Merjee, on the contrary, takes an honest pride in showing the extent to which, by his enterprising spirit, he has not only more than doubled the resources of Government during the short space of seven years, but accumulated for his descendants a competency; and he may well boast of never having given Government a single cause to regret their having given to him, a private individual, the management of an extent of territory, and a sum of money, never before equalled in the records of any Government;" to this your Petitioners could add many other testimonies equally pointed and conclusive.

In 1836, when the land customs were abolished, Viccajee Merjee and Pestonjee Merjee were of necessity unemployed, and as they were excluded from all occupation suitable to their birth, position and abilities in the British territories, they were induced to repair to the Nizam's country, which is bordering on the Bombay Presidency, with the object of increasing the cotton trade from Berar to Bombay, which they had the honour of first opening during their farm of the land and sea customs entrusted to them by the British Government. On this occasion the Nizam's minister, the late Rajah Chundoolall, repeated an offer which he had previously made, to put certain cotton districts of Berar under their management; and on their agreeing, after obtaining possession of those districts, to give loans to the Government, Viccajee Merjee and Pestonjee Merjee, according to the policy invariably pursued by the English Government in India, having no chance of obtaining employment in the British territories suitable to their rank and position, accepted the offer, and agreed to give, and did give, the loans required by the Nizam's Government, it being an express condition, on their making the said advances, that they should hold possession of certain districts in Berar.

The demands for such loans grew gradually more pressing from day to day, and in 1841 seriously alarmed your Petitioners, as well as their fathers, and those towards whom they themselves had contracted engagements, in order to obtain the means to meet the demands of the Nizam's government. However, at this time Viccajee Merjee and Pestonjee Merjee, as security for the loans made, a security in which many British subjects had a deep interest, held possession of certain of Berar districts, yielding a gross revenue of 23 lacs of Hyderabad rupees, or 200,000 *l.* On this occasion they submitted to the Nizam's Minister the circumstances which had put their credit in danger, and it was thereupon agreed, with the consent of both parties, namely, of Viccajee Merjee and Pestonjee Merjee, and the Nizam's government, that they should give up possession of nearly half of the districts then held by them, and should retain that of the other half on the condition that an instrument should be deposited in the British Residency, specifying the districts that were to remain in their possession; and that such possession should be confirmed and continued until the claims of the firm of "Pestonjee Viccajee" were liquidated in full. This arrangement was accordingly carried into effect, the instrument or deed giving effect to it bearing date the 18th October 1841, which concludes in these words, that "it has been decided by the Government that, until the liquidation of the aforesaid sum, with interest, the possession of the districts is confirmed and will be continued to him (Pestonjee Viccajee)," was deposited by the Nizam's government in the British Residency; and on the execution of such deed, the possession of nearly half of the districts held by the firm was then, and not till then, given up by them to the Nizam's government. By this arrangement your Right Honourable House will observe, that if there had been no meaning in the condition, that the instrument in question should be deposited in the British Residency for the security of the possession of the districts specified in it, which were of the gross revenue of 13 lacs of rupees, your Petitioners, as well as their fathers, would not have agreed to the arrangement specified above in preference to the actual possession of the whole of the districts, which were of the annual value of 23 lacs of rupees. The cession of the districts, yielding a revenue of 10 lacs of rupees, was solely made for the sake of obtaining what your Petitioners, as well as their fathers, considered the specific security of the British Government, or at least the recognition by that Government of the transaction.

The original instrument now lies in the British Residency, and your Petitioners' fathers were furnished with an authenticated copy of it by the Resident, "for the satisfaction of their creditors," as by himself notified to the Nizam's government in his letter of the 19th October 1841, before sending a copy to your Petitioners' fathers.

Your Right Honourable House will observe, that your Petitioners and their fathers were aware that, as British subjects, they could not have recourse to those means of resistance to the unjust violence of the Nizam which the subjects of the Nizam employ without scruple, and invariably with success, and therefore your Petitioners' fathers provided, as they conceived, for their security and the security of their creditors, by depositing the aforesaid instrument in the British Residency representing the British Government in India, and by obtaining a copy of it from the Resident under his official authentication, "for the satisfaction of their creditors."

Appendix D.

Now, your Petitioners beg to show how much confidence they and their creditors had in this arrangement and in this "satisfaction," and in what manner subjects of the British Crown in India have endured wrong, because they have faithfully performed their duty by claiming the mediation and relying on the protection of their own Government in preference to any attempt to obtain redress by violent resistance to the unjust and illegal conduct of the Nizam.

The financial position of the Nizam's government becoming every day more critical, by reason of continuing demands upon it for the pay of the British contingent, and for other equally urgent State purposes, while the government treasury became every day less able to meet them, the government was on several occasions obliged to have recourse to the firm of Pestonjee Viccajee, who again assisted it in its difficulties, by making the necessary advances, with a stipulation in writing, from the Nizam's government, bearing date the 5th of May 1843, in the words following: "That until the liquidation, with interest, of your claims, former and present, agreeably to the signed accounts, the possession of the said districts is confirmed and will be continued to you, of which you may rest satisfied." The last sum that was advanced by the firm was only five lacs of rupees, given to the Nizam himself, on his solemn assurance of good-will, and on his engagement to repay it in six months.

Just four months after this, towards the end of June 1845, the Nizam's government, then indebted to the firm to the extent of about 300,000 *l.*, acknowledged by the government, issued orders to its own troops to wrest the mortgaged districts from the possession of the firm: these orders were in such direct contradiction of the aforesaid arrangement and "satisfaction," that it may be asked what could have led the Nizam's government to such outrages, and breach of faith pledged to British subjects, through the mediation of the British representative, by an instrument deposited in his residency?

Your Petitioners beg to state, that the Nizam's government, instead of assigning any reason for such a breach of faith, even assured the British Resident, at the time the orders of violence were issued, by a letter, dated 30th June 1845, that the claims of the firm would be paid in cash, by six lacs of rupees annually, through the Resident, until they were liquidated, which promise, however, has never been fulfilled, but has shared the same fate as the mortgage arrangement and the "satisfaction." But your Petitioners have every reason to believe that this breach of faith on the part of the Nizam emanated from a conviction that a British subject, in consequence of his allegiance to the British Government, could not follow the example of his Highness's own subjects, and enforce justice for himself, by taking the law into his own hands.

Your Petitioners would here point out how the subjects of the Nizam compel their government to do them justice. It is a fact well known to the British Residents and officers who have resided in the Nizam's country, and of course through their reports to the Government of India, and a fact attested by a letter now in possession of your Petitioners, from the English officer in command of the contingent troops stationed in the districts, that when the Nizam's government issues orders to its own troops to sequestrate districts held by its own subjects for the liquidation of their claims on the government, they, the district holders, resist the Nizam's troops by all possible means, maintain possession of their districts, and thus compel the government to act in conformity to its engagements and agreements. During a period, dating from a year previous to the dispossession of your Petitioners from their mortgaged districts, up to the present time, such instances of the district holders offering open resistance to the Nizam's government have occurred more than ten times under the eyes of the British authorities there, a fact which your Petitioners are ready to prove, if required.

If these district holders have been able to protect their property against the violence of the Nizam, though their districts were of much less extent in value than those assigned to the firm, and being much less beloved by the inhabitants of those districts than your Petitioners' fathers, it is reasonable to suppose that your Petitioners and their fathers, who had the possession of a part of the Berar districts, yielding 13 lacs of Hyderabad rupees, or 110,000 *l.* per annum, and extending from the eastern frontier of the Nizam's territories as far as the western, could (and the fact is so) have maintained possession of the country mortgaged to them, in defiance of the illegal orders and violence of the Nizam. But the fact of their being British subjects imposed on them the necessity of submitting to wrong, instead of following the example of others, by taking the law in their own hands.

Your Petitioners' fathers, therefore, as British subjects, appealed to the British Government for protection, by a Petition, dated the 24th June 1845, at the very moment the orders of violence were issued by the Nizam's government at Hyderabad, and handed that Petition to the British representative at his Highness's court.

The Resident, before despatching the Petition to the Government of India, considered it his duty to endeavour, in the first place, to prevent the injury and wrong being inflicted on your Petitioners and their fathers, and with that view interfered by addressing a letter of remonstrance to the Nizam's government at the very time the orders of violence were issued; but it had no effect; the Resident, therefore, despatched the Petition to the Government of India for further orders, together with the copies of the correspondence on the subject.

In the meantime the Nizam's troops wrested the possession of the mortgaged districts from your Petitioners' fathers by violence and bloodshed, the particulars of which were duly reported by them to the Resident by two letters, dated 2d and 9th August 1845, and by the latter to the Government of India, for consideration, in continuation of the appeal which they had already made.

Soon

Soon after your Petitioners and their fathers had thus been unlawfully and forcibly dispossessed of the districts formally transferred to them as security for the advances made by them to the Nizam's government, and after having had their servants remorselessly murdered (no pretext for such violence and cruelty having been afforded by resistance on their part to the troops of the Nizam), your Petitioners and their fathers had the disappointment of receiving a letter, on the 9th of August 1845, in reply to their aforesaid Petition, refusing all protection or interference on the part of the British Government.

Your Petitioners humbly implore your Right Honourable House to consider the ruinous consequences to them of this refusal on the part of the Indian Government to extend to them that protection which they humbly ventured to think they were, as British subjects, entitled to demand, and they would hope not the less so from the confidence and reliance they had always placed in the disposition, no less than in the power, of the British Government to protect all its subjects from acknowledged injury and wrong, and the consequent determination of your Petitioners, as well as their fathers, to abstain from those means of obtaining redress for themselves which would have been sanctioned by the lawless practices and customs of the Nizam's dominions, but which would have been plainly at variance with their duty and allegiance as subjects of the English Crown.

Since that period, namely, June 1845, up to the present time, namely, August 1853, your Petitioners, as well as their fathers and their creditors, being British subjects, have incessantly submitted their wrongs and claims to the consideration of the British Government, both in India and England, at the several times hereinafter stated :—

1. Petition to the Government of India from the Hyderabad firm of Pestonjee Viccajee, dated the 24th June 1845.
2. Petition to the Government of India from the Bombay firm of Viccajee Merjee, dated 7th July 1845.
3. Petition to the Government of Bombay from the Bombay firm of Viccajee Merjee, submitting the above Petition of the 7th July 1845 for transmission to the Government of India, with a recommendation on behalf of the Petitioners.
4. Petition to the Government of India from the Hyderabad firm of Pestonjee Viccajee, dated 4th March 1848.
5. Petition to the Government of India from the Hyderabad firm of Pestonjee Viccajee, dated 11th May 1848.
6. Petition to the Government of India from the Bombay creditors of the firm of Viccajee Merjee, dated 13th March 1848.
7. Petition to the Government of Bombay from the Bombay creditors of the firm of Viccajee Merjee, dated 28th February 1848.
8. Petition to the Government of India from the creditors of the firm of the Calcutta Branch, dated 15th March 1848.
9. Memorial to the Court of Directors from the Hyderabad firm of Pestonjee Viccajee, dated 9th November 1850, submitted through the Government of India.
10. Memorial to the Court of Directors from the creditors of Viccajee Merjee and Pestonjee Merjee, made on their behalf by their trustees, dated Bombay, 29th October 1850, submitted through the Government of India.
11. A brief statement of facts laid before the Court of Directors by a letter, dated London, 23d April 1851, from Jevanjee Pestonjee and Rustomjee Viccajee.
12. Petition to the Government of India from the firm of Pestonjee Viccajee, submitted by their agents in Calcutta, dated 18th February 1852.
13. Petition to the Government of India from the firm of Pestonjee Viccajee, dated 26th May 1852.
14. Memorial to the President of the Board of Control from the firm of Pestonjee Viccajee, submitted by their agents in London, accompanied with a case, dated 21st March 1853.
15. Letter to the President of the Board of Control from Jevanjee Pestonjee and Rustomjee Viccajee, dated 9th June 1853.
16. Letter to the President of the Board of Control from Jevanjee Pestonjee and Rustomjee Viccajee, dated 21st July 1853.

Nevertheless your Petitioners, as well as their fathers and their creditors, have unhappily hitherto failed in getting redress. No reason whatever is given by the President of the Board of Control for denial of protection to British subjects in India, as prayed by your Petitioners in their memorial to him; but your Petitioners believe that the argument which the Court of Directors urge is, that they have laid down a principle of non-interference in Native States in India, lest the interference of the irresistible power of the British in the weak state of the Nizam may be supposed to give the force of dictation to their representations. Your Petitioners, however, humbly submit to your Right Honourable House, that whereas in their case a very weak power has committed a very grievous wrong with perfect impunity, to which their duty, as British subjects, has compelled them to submit without resistance, it follows conclusively that if the policy adopted by the authorities in India shall be maintained, the consequence of being a subject of the British Crown in India must be, that such subject must either desist from all transactions with the government of a Native or Foreign State, or must consent to be the unresisting victim of the violence or oppression practised upon him.

Your Petitioners beg the attention of your Right Honourable House to a principle adopted by one of the most distinguished men whom India has ever produced, namely, Lord

Appendix D.

Lord Metcalfe, who held the office of British Resident at the Court of Hyderabad, and with whose views and opinions none of the authorities of his time, either in India or in England, were known to differ. Lord Metcalfe, when Resident at Hyderabad, wrote in a despatch, dated 31st August 1822, to the Government of India as follows: "I suppose our interference in his Highness's affairs to be not merely a right, but a duty, arising out of our supremacy in India, which imposes upon us the obligation of maintaining the tranquillity of all countries connected with us, and consequently of protecting the people from oppression, as no less necessary than the guaranteeing their rulers against revolution."—"Interference in the internal concerns of States under our protection is neither desirable nor generous when it can be avoided, and should only then be resorted to when it is clearly necessary for the preservation of the people from the misery and destruction which must ever attend oppression and misrule."—"In every case where we support the ruling power, but more especially in such a case as that last described (supporting the minister of the Nizam), we become responsible, in a great measure, for the acts of the government, and if they are hurtful to the people, we aid in inflicting the injury." Your Right Honourable House will further observe, that the Court of Directors, in their despatch to the Government of India, dated 21st January 1824, have issued instructions in the words following: "We agree with Sir Charles Metcalfe, that 'a system of non-interference, founded on regard to the rights of an independent Sovereign, if practicable under the circumstances of our intimate connection with the Nizam's government, would have great and decided advantages, and is that which we ought to endeavour to establish, provided always that the irresistible strength which our protection affords to the government be not converted to the oppression of the people.' The concluding consideration in the foregoing passage is most important, and constitutes in our mind the strongest objection against our withdrawing from all interference in the concerns of a government which we are bound by treaty to protect, however tyrannical and oppressive may be its proceedings." Such was the policy of the authorities in India and in England, based upon sound, moderate and just principles, while Lord Metcalfe was in India; and your Petitioners do not hesitate to state the subsequent deviation by the Court of Directors from the very principle laid down by a statesman of great experience and undoubted ability in the organization of Indian politics, and adopted by the authorities of his time in India and in England, has been the very direct and immediate cause of anarchy, oppression and tyranny over millions of human beings in that country, whose only refuge, when intolerably oppressed, is in emigration or insurrection, the former of which they sometimes adopt with the greatest pain, and the latter of which they could not, and dare not have recourse to, whilst their Sovereign and his government are supported by the irresistible power of the British. It is clear that the experience and knowledge of that great and good man, Lord Metcalfe, acquired and formed upon the spot, as well as that of those who concurred with him, have had no weight with the authorities situated at so great a distance who have latterly laid down the principle of non-interference, even in cases of the utmost hardship, such as that of your Petitioners. However this principle may be defended as a general rule, it will be found, if invariably carried out, to be based on unwise and unjust presumptions, and to sanction indirectly acts of oppression and of wrong, utterly repugnant to the spirit and practice of English Government.

It may be said, that as your Petitioners and their fathers hazarded their fortunes in a foreign State, they must run the risk and abide by the consequences arising therefrom. Your Petitioners humbly beg to assure your Right Honourable House that nothing but the invariable internal policy of the English in India which deprived them from having any share in the government of their own country as enjoyed by their ancestors, induced them to leave their native land, the Bombay Presidency, and hazard their fortunes in a foreign State; that there your Petitioners did not give loans on mere drafts upon revenues, but solely upon the security and possession of certain landed property; and if when there, while your Petitioners are under the duty of allegiance to the British Government, at the same time they are denied protection in return for that allegiance, for the sake of the external policy now laid down by the Court of Directors, the condition of the natives of India under the British rule could not be better, but would be worse than slavery elsewhere, which the English Government have so long endeavoured to abolish.

Your Petitioners need not remark how much more in this case the interests of the rulers of British India have been thought of than their duty in respect to the subjects under their rule. The duty of allegiance is enforced against British subjects by their rulers; instead, however, of giving them protection in return, the rulers of British India in 1851 did actually enforce from the Nizam, by means of intimidation and threat of confiscating his territory (which included nearly two-thirds of the districts mortgaged by the Nizam's government to your Petitioners' fathers) a payment in cash of about 333,000 *l.* on account of the debt due to the East India Company, by the Nizam, a debt incurred for a purpose similar to that of the claims of your Petitioners, viz., the pay of the British contingent, and thus, in preference to fulfilling the most solemn duty imposed on every State, and which binds it to its subjects in consideration of their allegiance, the British Government paid themselves. Not only so, but the last mail from India has brought intelligence which exhibits the conduct of the rulers of British India towards their subjects in a still more striking light. It is to the effect, that on account of the arrears and claims for the pay of the British contingent, the Governor-general has demanded from the Nizam (to which demand his Highness has acceded) a cession of that part of his territories, viz., the Berar Valley, which includes two-thirds of the districts mortgaged by the Nizam's government to your Petitioners' fathers. These districts were placed in their uncontrolled possession; upon them they gave loans to his Highness; and when they were deprived of them by violence, your Petitioners and their fathers,

fathers, as British subjects, have incessantly appealed to the British Government in India and in England for restitution and redress. The Government being fully and minutely acquainted with all the facts of this remarkable case, has deliberately thought it just and proper to pursue the course of paying themselves by the seizure of the property mortgaged to its own subjects, a course which would have been impossible, had it not been for the irresistible power vested in the hands of the rulers of British India by the British Crown and Legislature, but who are by their constitution responsible for the ill use of that power.

If anything could add to the sense of injustice under which your Petitioners, as well as their fathers and their creditors, are now labouring, it would be found in the fact, that the advances in exchange for which they received security by a mortgage on the districts in question were almost entirely required for and spent in the payment of the British troops, as the bills now in the hands of the firm signed by the officers in command prove beyond dispute. This money was advanced at a most critical period before the war in Affghanistan, and during that war. The refusal of the advance by the firm of Pestonjee Viccajee would beyond all doubt have provoked a mutiny, and the consequences of that mutiny would have been most serious and full of danger to British interests; and now the East India Company, whose troops have been paid by the money advanced by Pestonjee Viccajee, has taken possession of a large portion of the district mortgaged to Pestonjee Viccajee, for the repayment of those advances, and refuses to pay any portion of the debt secured upon those very districts.

These are the facts which are submitted to the mature and deliberate consideration of your Right Honourable House, and which will be found to prove,—

First. That your Petitioners and their fathers are acknowledged subjects of the British Crown in India, and therefore bound by the duty of allegiance to the British Government.

Secondly. That they are denied protection, and that the property mortgaged to them, after being plundered by the Nizam, is arbitrarily taken possession of by the British Government, in payment of their own claims. To preserve the rights and property of your Petitioners inviolate, they should either receive protection from those who claim their allegiance, or they should be allowed to protect themselves. Your Petitioners are confident that they could do so by following the example of the subjects of the Nizam. But before taking the law into their own hands, your Petitioners, as loyal subjects of the British Crown, consider themselves in duty bound to have the question of their allegiance settled; and they desire, as a bare act of justice, to be informed, whether they can proceed to enforce their own claims on the Nizam, (and if necessary, by violent means), without being guilty of a misdemeanor, and being liable to punishment for violation of the law. If your Petitioners follow the example of the Nizam's subjects, it may excite revolt, and it may possibly disturb the peace and tranquillity of the neighbouring British provinces; for when hostilities once begin, no one knows where they will end.

Your Petitioners are therefore unhappily constrained, in their last extremity, to lay their humble Petition for assistance and redress before your Right Honourable House, and to pray that, if the British Government have a right to claim the allegiance of your Petitioners and their fathers to their laws, they should reinstate your Petitioners, as well as their fathers, in possession of the districts solemnly pledged and assigned to them, with all the rights as vested in them at the time when the Nizam, by violence, and a military force, dispossessed them, or that the British Government should allow your Petitioners and their fathers to follow the example of others in taking the law into their own hands; and that the British Government should not interfere in the matter whilst your Petitioners and their fathers thus seek redress for wrongs, and attempt to repair the injuries done them. And your Petitioners humbly pray for such further assistance and redress as your Right Honourable House may think fit to grant.

And your Petitioners, as in duty bound, will ever pray.

(signed) Jevanjee Pestonjee.
